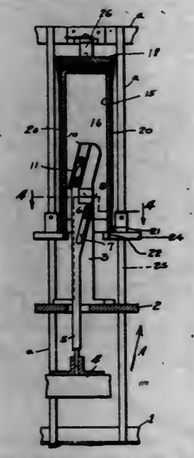
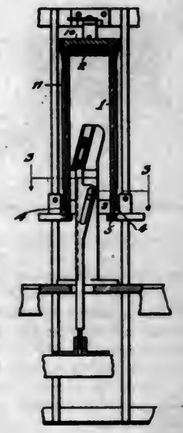
In an apparatus having a distilling chamber for extracting hydrocarbon oils from shale and similar material, means for introducing shale in successive charges to the upper end of said chamber, said means comprising a receiving passageway, a plurality of horizontal gate



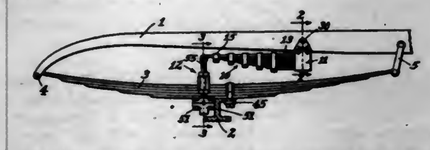
valves in spaced relation with each other disposed in said passageway, means for removing spent shale from the lower end of said chamber, said means comprising a discharge passageway, a plurality of horizontal gate valves in spaced relation with each other disposed in said passageway, a vertical rotatably driven crank shaft positioned adjacent to said apparatus, and means on said shaft adapted to engage said gate valves to alternately operate said valves for the admission and discharge of shale.

1,482,678. FISHERMAN'S DRY FLYLEAF BOOK. NEWTON C. FIGLEY, Los Angeles, Calif. Filed Feb. 6, 1923. Serial No. 617,206. 6 Claims. (Cl. 43—38.)



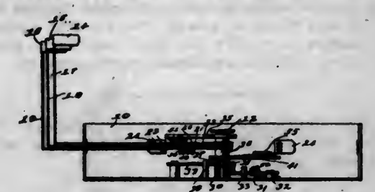
1. In a device as disclosed, a leaf provided with slots, teeth mounted on said leaf in the rear of said slots, said teeth being slit downwardly from their upper ends, which ends rest slightly below the upper ends of said slots to facilitate entrance of the fly hooks through said slots and through the slits in said teeth to hold the flies in position on said leaf, and to facilitate removal of the flies from said slots and slits, and from the leaf.

1,482,679. EMBROIDERING MACHINE. JOSEPH C. GILARDONE, Reading, Pa., assignor of one-third to Solomon S. Miller and one-third to Gehrke Knitting Mills, a Copartnership, both of Reading, Pa. Filed Feb. 2, 1923. Serial No. 616,455. 3 Claims. (Cl. 112—95.)



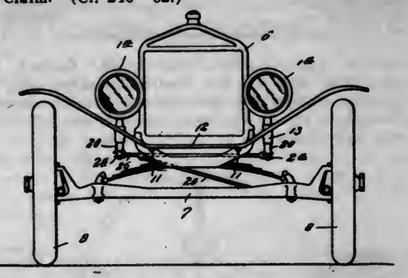
2. In an embroidering machine, the combination of a series of shuttles, carried by a shuttle bar and supported on shuttle posts carried by said bar, said posts having enlarged heads provided with angularly arranged slots, pins on which the slotted posts ride, means for conveying an angular reciprocating movement to the shuttle, a casing or frame over which a stocking may be placed without cutting, means for securely holding the stocking in position on the frame, and means for embroidering the stocking on both sides without removing the stocking from the frame.

1,482,680. STOCKING-HOLDING FRAME FOR EMBROIDERING MACHINES. JOSEPH C. GILARDONE, Reading, Pa., assignor of one-third to Solomon S. Miller and one-third to Gehrke Knitting Mills, a Copartnership, both of Reading, Pa. Filed Feb. 2, 1923. Serial No. 616,456. 3 Claims. (Cl. 112—103.)



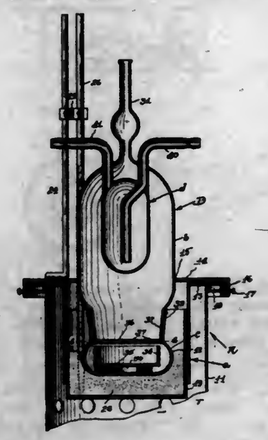
3. A stocking holding frame for embroidering machines, comprising a body of substantially rectangular form, having open front and rear portions, a pair of hooks located at opposite points in close proximity to its lower end, a pair of positioning pins depending from the lower end of the body, a cap adapted to fit over the top thereof, and a pair of depending clamping arms, carried by the cap, and whose lower ends are adapted for engagement by said hooks, whereby a stocking may be held in position on the frame while presenting two opposite points thereof to an embroidering needle.

1,482,681. SHOCK ABSORBER. JOSEPH GRIJALVA, Los Angeles, Calif. Filed Apr. 30, 1923. Serial No. 635,606. 1 Claim. (Cl. 227—45.)



A shock absorber for automobiles comprising a spring, a bracket formed with a lower horizontal member and a vertical member, upstanding from said horizontal member, the inner portion of said horizontal member resting against the under flange of said chassis, and said vertical member resting against the outside of said chassis, said lower member being provided with grooves, bolts resting in said grooves, hooks on the inner ends of said bolts for engaging the inner edge of the lower flange of said chassis, a clamp on the outer part of said lower member through which the outer ends of said bolts extend, nuts on the outer ends of bolts for engaging said clamp to clamp one end of said spring, and means for connecting the other end of said spring to the automobile axle.

1,482,682. MUSIC-LEAF TURNER. EUCLID P. GOODCHILD, Spokane, Wash. Filed Dec. 24, 1920. Serial No. 433,013. 5 Claims. (Cl. 84—310.)



1. A music leaf turner comprising a casing, a vertical shaft rotatably mounted in said casing, a plurality of leaf clips, leaf clip carrying arms extending exteriorly of said casing, a driving arm fixed to said shaft, a sleeve loosely mounted on said shaft, a driving arm fixed to said sleeve, means for rotating the shaft including a pinion fixed to said shaft and a horizontally disposed segmental gear meshed with said pinion, means for rotating the sleeve oppositely with respect to said shaft including a pinion fixed to the sleeve and a horizontally disposed segmental gear meshed with said sleeve pinion, retractile coil springs engageable with said segmental gears for urging said gears to initial position, transfer mechanism for transmitting the motion of said driving arm to the proper leaf clip carrying arm, and controlling means including operating levers and flexible elements connecting said operating levers with said segmental gears.

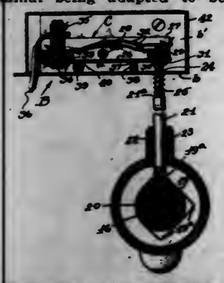
1,482,683. DIRIGIBLE HEADLIGHT CONSTRUCTION FOR MOTOR VEHICLES. ORA C. HUGHES, Villa Ridge, Ill. Filed Mar. 22, 1923. Serial No. 626,747. 1 Claim. (Cl. 240—62.)

A dirigible headlight structure for motor vehicles comprising a bar secured at its intermediate portion to the under side of the radiator and having upwardly and outwardly inclined end portions disposed over the fender and secured thereto, bearing sleeves mounted upon the inclined portions of the bar and disposed in alinement with each other at the opposite sides of the inclined portion, the sleeves having parallel end bearing edges which are disposed horizontally, angular arms having diametrically reduced end portions provided with threaded extremities, the said reduced end portions and the threaded extremities passing through the bar and being disposed within the sleeves and spaced from the inner surfaces thereof, means operatively connecting the arms together, lamp posts having reduced lower end portions disposed in the upper sleeve and spaced from the walls thereof and engaging the threaded extremities of the arms, said posts being provided with flanges which extend over the upper edges of the upper sleeve and close the openings through the sleeves, lamps mounted upon the posts, bearing balls interposed between the inner surfaces of the upper sleeves and the reduced portions of the posts and lying under the flanges and bearing balls interposed between the lower portions of the reduced parts of the arms and the lower edges of the lower sleeve.

1,482,684. SUBLIMATOR. JULIUS HORTVET, Minneapolis, Minn. Filed Feb. 19, 1923. Serial No. 619,952. 11 Claims. (Cl. 23—3.)

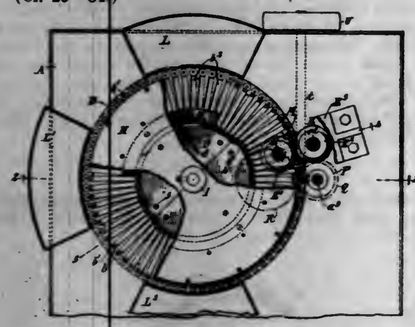
1. In a device of the class described, a vessel adapted to contain a substance in the bottom thereof to be treated, means for heating the lower portion of the vessel, said vessel having an elevated opening therein for the exhaustion of air therefrom and an accumulator within said vessel presenting a surface for the deposition of material sublimed from said substance under heat, within the vacuous interior of the vessel.

1,482,685. HAT PAD. SAMUEL JAFFE and SAMUEL KANNER, New York, N. Y. Filed May 22, 1923. Serial No. 640,679. 2 Claims. (Cl. 2—32.)



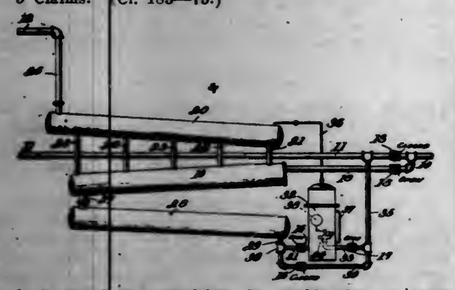
1. A hat pad consisting of a stiffening member decreasing in width from its central portion to its ends, a backing for the stiffening member, a metallic securing band attached to said stiffening member, a body of yielding filling material vertical on one side and curved on its opposite side, in cross section, bearing against said stiffening member, and a yielding covering enclosing said filling material and secured at its margin to said stiffening member.

1,482,686. TIMER FOR INTERNAL-COMBUSTION ENGINES. FREDERICK JULSON, Willmar, Minn., assignor of one-half to Martin O. Sweiven, Danube, Minn. Filed Jan. 2, 1923. Serial No. 610,209. 7 Claims. (Cl. 200—27.)



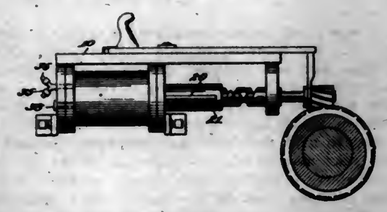
1. In a timer for an internal combustion engine having a horizontal cam shaft and an annular depression in the engine frame concentric with said shaft, a cam for said shaft, an upright frame including an open ended cylindrical housing, for said cam, the open end of said housing being adapted to be seated in said depression, upright circuit making and breaking rods reciprocably guided in said frame, the lower extremities of said rods

reaching through said housing and operably engaged with said cam, a plurality of terminals, one for each rod, each terminal being adapted to be engaged from



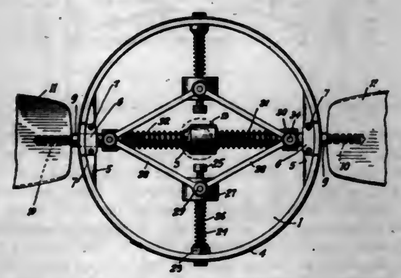
beneath by its respective rod, a support common to all of said terminals and means for moving said support to provide for contact between said rods and terminals earlier or later in the contacting thrusts of said rods.

1,482,687. MACHINE FOR ASSEMBLING VALVE PARTS. HENRY PHILLIP KRAFT, Ridgewood, N. J. Filed July 5, 1921. Serial No. 482,865. 21 Claims. (Cl. 29—84.)



3. A machine for assembling valve parts, comprising a rotatable feeding dial provided with a series of openings each adapted to receive the parts to be assembled in the following sequence, the valve-pin, the valve spring and the spring cup, means for retaining said parts in said openings, means for projecting the valve pins above the face of the dial after passing a fixed point, means for swaging the exposed ends of the valve pins, and means for ejecting the assembled parts from the feeding dial.

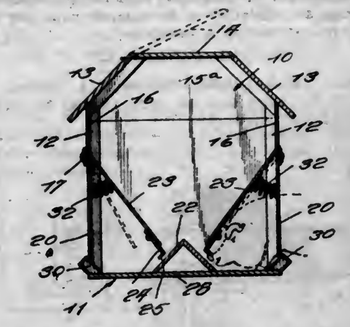
1,482,688. GAS TRAP. DANIEL W. KYGAR, Ponca City, Okla., assignor to Kay County Gas Company, Ponca City, Okla. Filed Aug. 2, 1922. Serial No. 579,216. 5 Claims. (Cl. 183—75.)



1. A gas trap comprising, in combination, a downwardly inclined cylinder adapted to have its higher end connected to the outlet of a well, a second cylinder adjacent and diverging upwardly relative to said first named cylinder, a conduit connecting said cylinders at points adjacent the higher end of the first and the lower end of the second named thereof so arranged that the second cylinder may drain by gravity into the first named cylinder, means to connect the upper and lower cylinders respectively with gas and liquid receiving means.

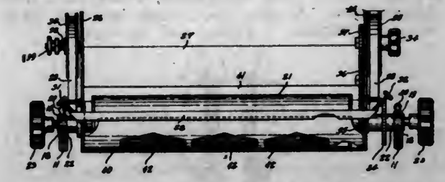
1,482,689. TIRE PUMP. J HERBERT LANDES, Norristown, Pa. Filed Aug. 20, 1921. Serial No. 493,847. 1 Claim. (Cl. 230—27.)

A tire pump comprising a bracket, a cylinder mounted on said bracket, a piston in said cylinder, a hollow rod secured to the piston, a rotatable shaft having a bearing in said bracket and projecting into said rod, said shaft having reversely arranged helical grooves thereon terminating in common curved paths, a follower secured to the rod and projecting into said grooves, a worm gear slidably secured to said shaft, a crank shaft positioned at substantially right angles to said rotatable shaft, a member longitudinally slidable on said bracket for throwing said worm gear into and out of engagement with said spiral gear, and a spring catch for holding said member in selected position.



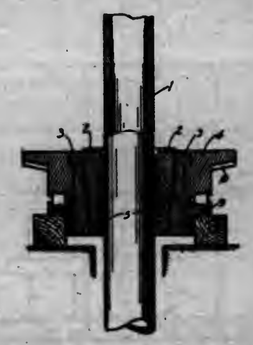
1,482,690. AEROPLANE PROPELLER. GEORGE LANZIUS, New York, N. Y.; Evelyn Elizabeth Fairbanks Lanzius executrix of said George Lanzius, deceased. Filed Feb. 10, 1919. Serial No. 275,959. 3 Claims. (Cl. 170—162.)

1. In a propeller, the combination comprising a hub, a pair of spindles carried by the hub having their inner ends juxtaposed, a sleeve secured on one spindle and arranged to receive the other spindle, a securing member on the other spindle, a securing member loosely disposed on the other spindle and secured to the sleeve, and friction-reducing means disposed between the securing members.



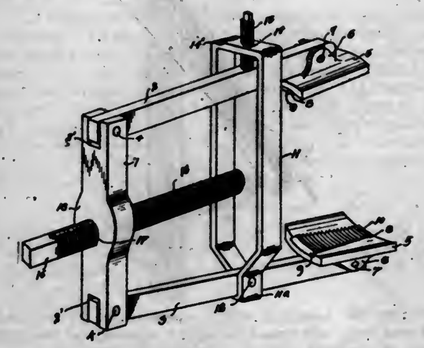
1,482,691. APPARATUS FOR FEEDING HOGS. PETER LIEFFRING, Wathena, Kans. Filed July 5, 1923. Serial No. 649,607. 1 Claim. (Cl. 119—53.)

In hog feeding apparatus, a storage compartment comprising side and end walls, side walls terminating in spaced relation to the bottom of the compartment, hopper walls inclining inwardly from the side walls, a V shaped baffle carried by the end walls and toward which said inclined hopper walls are directed, feed regulators



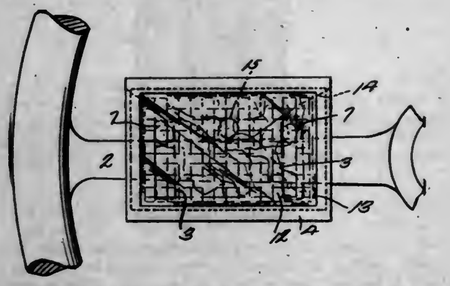
carried by said hopper walls and adjustable toward and away from said baffle, said plate being provided at its lower end with an angular flange directed away from said hopper.

1,482,692. PAPER SEPARATOR FOR TYPEWRITERS. CLIFFORD W. MARSH, Bridgeport, Conn. Filed Jan. 8, 1923. Serial No. 611,221. 12 Claims. (Cl. 197—126.)



1. The combination with the printing devices of a typewriter having a reciprocating mechanism, of a carrier comprising in combination as a unit, a platen, means for carrying transfer material at one side of said platen, a separator arranged to direct work sheets to the opposite sides of the transfer material, and means to removably connect said carrier unit with said reciprocating mechanism.

1,482,693. DRILL-PIPE SLIP. GEORGE W. MOLLENBERG, Huntington Beach, Calif. Filed Mar. 17, 1923. Serial No. 625,797. 3 Claims. (Cl. 24—263.)



1. A set of drill-pipe slips of the class described, comprising a set of sockets positioned in the said drill-pipe slips; grooves positioned in the sides of the respective drill-pipe slips; individual teeth sections, adapted to be inserted in the said sockets; flanges formed on the end portions of the said teeth, adapted to fit into the said grooves; a clamping means, adapted to hold the said flanges in the said grooves, as set forth.

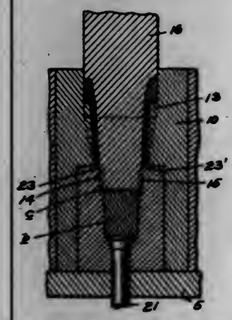
1,482,694. WHEEL PULLER. PERCY G. NEILL, Bonners Ferry, Idaho. Filed Sept. 23, 1922. Serial No. 590,033. 3 Claims. (Cl. 29—85.)

1. The combination with a cross bar, of a pair of pivoted arms, a yoke pivoted on one arm and embracing the other arm, a set bolt in the end of the yoke adapted to engage the free arm, pivoted jaws on the free ends of the arms, threaded plates detachably fixed in said jaws, and a screw bar having a bearing in said cross bar.

1,482,695. MAP AND HOLDER. WALTER NELSON, Oberon, N. Dak. Filed Apr. 18, 1923. Serial No. 632,893. 1 Claim. (Cl. 35—6.)

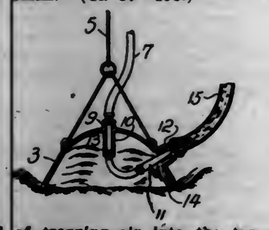
The combination with a spoke of a steering wheel, of a map container carried thereby, the underside of said map container being provided with resilient straps adapted to extend under the spoke, means carried by said straps at their free ends whereby they may be attached to the underside of the container, a partition wall disposed within the container and dividing the same into a map section receiving compartment adjacent the underside of the container and a map receiving compartment adjacent the upper side of the container, and a transparent member carried by the upper side of the container and forming the upper wall of the last named map receiving compartment.

1,482,696. DEVICE FOR OPERATING AND LOCKING A SWINGING WINDOW SASH. SIDNEY H. NEWBERRY, Chester, Pa. Filed Aug. 6, 1921. Serial No. 490,281. 5 Claims. (Cl. 292—267.)



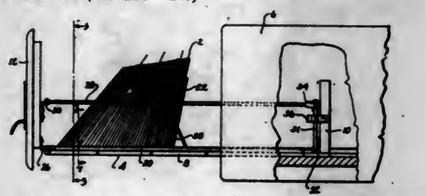
1. A device for operating a swinging window sash consisting of a bar pivotally connectible with one sash,

a plate on the other sash, said bar being freely engaged with said plate and slidable in the arc of a circle



whereby the swinging sash is operated by the movement of said bar, and means pivotally mounted on the under side of the said bar for locking the same.

1,482,697. METHOD OF FORMING DRAWBAR YOKES. HERBERT P. ORR, Indiana, Pa., assignor of one-fourth to Henderson B. Douglas, Pittsburgh, Pa., and one-fourth to Andrew Christianson, Butler, Pa. Filed Feb. 24, 1922. Serial No. 539,018. 5 Claims. (Cl. 29—167.)

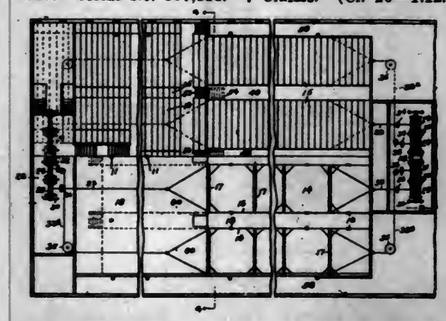


1. A method of forming draw bar yokes which comprises forcing a plunger entirely through a billet to form a hollow head with a substantially even surfaced opening extending completely through the head, and subsequently subjecting the end opposite the head so formed to extrusion to produce side straps thereon.

1,482,698. PUMP AGITATOR. ANDREW PETERSON, Brooklyn, N. Y. Filed July 24, 1923. Serial No. 653,526. 1 Claim. (Cl. 37—195.)

The method of trapping air into the top of an inverted and submerged air chamber open at the bottom and resting upon the material to be pumped, the subsequent and repeated discharge of said trapped air causing pulsating action of the water contained in the lower part of the submerged air chamber, said action breaking up and mixing the material to be pumped with the water entering the submerged air chamber.

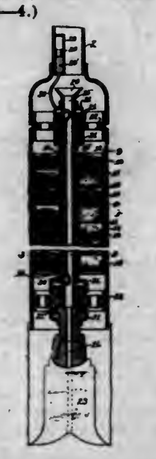
1,482,699. CARD INDEX. RICHARD A. PICARD, New York, N. Y. Filed Oct. 24, 1922. Serial No. 596,577. 8 Claims. (Cl. 129—16.)



1. A card index having, in combination, a series of index cards, means for supporting the cards in a substantially vertical position so that one face of each card may be inspected, arranged to allow the cards to be shifted to a substantially flat position, and means to cause the cards to assume a relatively overlapping relation with the outer margin of one face of each card exposed when shifted to the latter position.

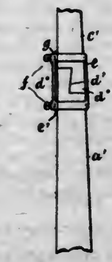
1,482,700. MOLD FOR CONCRETE CURBING. JOHN RATZESBERGER, Altoona, Pa. Filed Apr. 24, 1923. Serial No. 634,254. 1 Claim. (Cl. 25—118.)

1. A mold of the class described comprising a pair of plates provided with eye bolts on the outer faces thereof and arranged in vertical spaced relation, rods extending vertically through certain of said eye bolts, means on said rods for engagement with the upper outer edges of said plates, clamping means receivable on the upper ends of said rods and adapted to rest on said last mentioned means, and bracing elements associated with the other eye bolts at one end and adapted to receive anchoring means in their opposite ends.



1,482,701. MOVABLE-SEAT CONSTRUCTION. VICTOR A. RIGAUMONT, Pittsburgh, Pa. Filed June 30, 1919. Serial No. 307,818. 7 Claims. (Cl. 20—1.12.)

1. A movable seating arrangement comprising, in combination, a smooth main floor, a movable seating floor section mounted on long supporting rollers enlarged

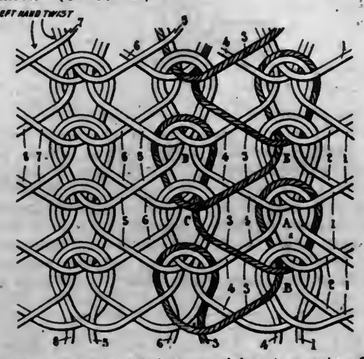


portions of which travel directly on said floor, guide rails, sockets embedded in the floor below the top surface thereof, members extending through the guide rails into said sockets for removably securing the rails to the floor, the reduced portions of the rollers being provided with grooves engaging the sides of said guide rails, and mechanism for moving said floor sections.

1,482,702. FLUID-OPERATED WELL-DRILLING APPARATUS. CHARLES C. SCHARPENBERG, Bakersfield, Calif. Filed Oct. 9, 1922. Serial No. 593,287. 7 Claims. (Cl. 255—4.)

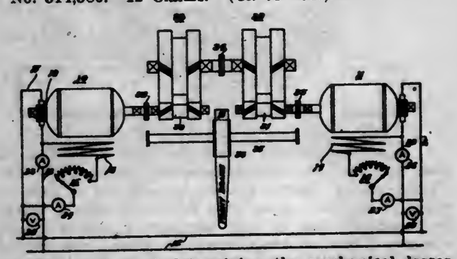
5. A well drilling apparatus comprising a shell non-rotatably suspended within the well; means for passing a stream of fluid under pressure through said shell; a rotatable shaft within said shell; a plurality of interlocking sleeves surrounding said shaft, the lowermost of said sleeves being fixed upon said shaft; a set of power vanes projecting outwardly from each sleeve; a plurality of interlocking rings fitted within said shell, the lowermost ring being secured to said shell; a set of guide vanes projecting inwardly from each ring and lying between adjacent sets of power vanes, said guide vanes being so disposed as to direct the fluid stream against said power vanes to cause the rotation of said shaft; and a drill bit caried by the lower projecting end of said shaft.

1,482,703. PICKER STICK. BERNARD W. SCHUTZ, Haledon, N. J. Filed May 20, 1922. Serial No. 562,316. 3 Claims. (Cl. 139—157.)



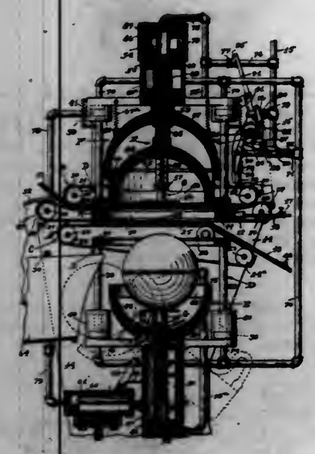
1. A picker stick for looms including two alined stick sections having an interlock preventing their separation longitudinally of the stick without displacement of one of them transversely of the other and clamping means embracing the sections and uniting each rigidly to the other.

1,482,704. DOOR HANGER. MORRIS SCHWARTZ, Chicago, Ill. Filed Mar. 6, 1922. Serial No. 541,433. 6 Claims. (Cl. 16—128.)



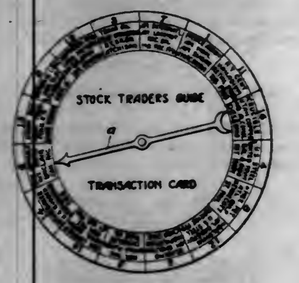
1. In combination with sheet metal door and jamb, both made with apertures made by slitting the metal and curving the edges of the slits inward, of hinge members made from sheet metal folded to provide a cylindrical body from which extend flanges lying close together and slit, the center portion of the flanges bent outward at right angles to the end portions, the latter pressed through said slits and clinched, the center portions resting against the front of the door and jamb, the cylindrical body seated in said curved edges.

1,482,705. WARP KNIT FABRIC AND METHOD OF MAKING SAME. AUGUSTIN SERRA, Essomes-sur-Marne, France. Filed Dec. 5, 1923. Serial No. 678,787. 3 Claims. (Cl. 66—4.)



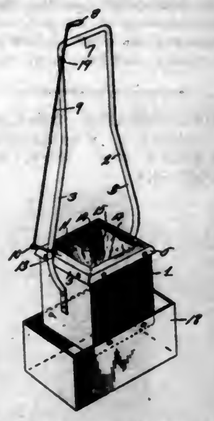
2. A warp knitted fabric comprising two sets of left-hand twisted threads in which each individual thread is formed into a series of closed loops, each node is formed by the intermeshing of a plurality of loops of separate threads, and the threads are all pulled tight at the nodes.

1,482,706. METHOD OF AND APPARATUS FOR TESTING GEARS. IRA SHORT, Essington, Pa., assignor to Westinghouse Gear and Dynamometer Company, a Corporation of Pennsylvania. Filed Nov. 10, 1921. Serial No. 514,380. 12 Claims. (Cl. 73—51.)



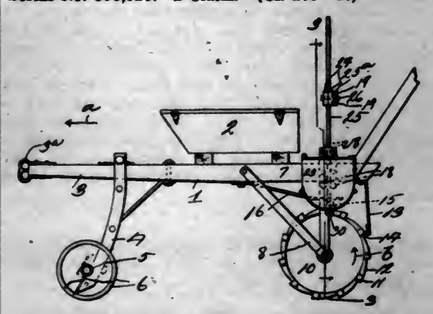
1. The method of determining the mechanical losses in a gear train which comprises connecting gear train between a driving means and a loading means, in determining the difference between the energy applied by the driving means to the gear train and the energy applied by the gear train to the loading means, and in returning at least a portion of the energy applied to the loading means to the driving means.

1,482,707. MACHINE FOR AND PROCESS OF MAKING HOLLOW RUBBER ARTICLES. FRANK W. SKINNER, Minneapolis, Minn. Filed Dec. 12, 1921. Serial No. 521,617. 19 Claims. (Cl. 18—19.)



3. The process of making hollow rubber articles, which consists in clamping portions of sheets of rubber at their margins against a spacer element and in position covering opposite sides of an opening therein, simultaneously inflating said portions of the rubber sheets with a fluid medium introduced into the opening in the spacer element, supporting certain sections of said portions against stretching following initial inflation, joining endless zones of the inflated portions and severing the inflated body thus formed from the sheets of rubber.

1,482,708. GAME. EUGENE W. SMALL, New York, N. Y. Filed Oct. 1, 1921. Serial No. 504,614. 2 Claims. (Cl. 46—56.)

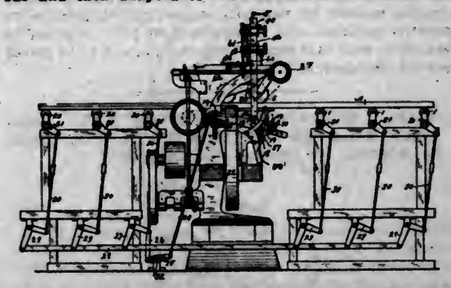


1. A game comprising a dial, an arrow adapted to be spun over its face pivotally mounted thereon, said dial divided into a desired number of segments in each of which the trading names of a desired number of stocks are inscribed, each of such segments numbered out of numerical order of arrangement, in combination with a result card, horizontally inscribed with the same number of spaces as the segments of the dial but arranged in numerical order, each of the spaces containing a set of numbers equal to those on the dial, but also arranged out of numerical order, and inscribed so that a designated portion of such numbers show rise, change, or no change by points, and others of such numbers show decline, change or no change by points.

1,482,709. POWDER DUSTER. DANIEL D. SMITH, Valdosta, Ga. Filed July 24, 1923. Serial No. 653,481. 3 Claims. (Cl. 43—145.)

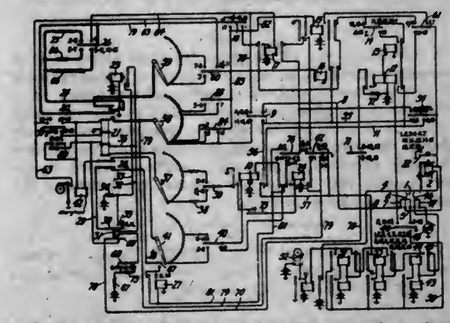
1. The combination with a powder dusting machine comprising a casing, a powder bag disposed therein, a weight carried by said bag, a handle member extending upwardly from said casing, of means for intermittently raising and dropping said weight, said means comprising a lever rockably mounted on the handle member and having one of its arms disposed over the bag, a flexible member connecting said lever and said weight, a vertically movable rod connected to said lever, said rod terminating adjacent the upper end of the handle member.

1,482,710. POWDER-DUSTING MACHINE. DANIEL DARLEY SMITH, Valdosta, Ga. Filed Nov. 2, 1922. Serial No. 596,528. 1 Claim. (Cl. 275—2.)



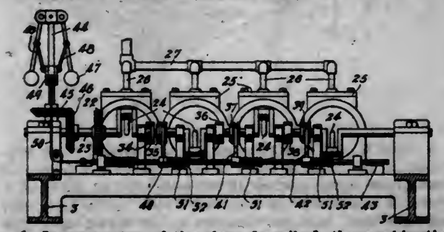
A powder dusting machine, said machine comprising a beam, draft attaching means at the forward end of the beam, a vertically movable rod extending through the rear end of the beam and adapted to reciprocate, a leaf spring secured to the beam and having its free end disposed beneath the lower end of the vertically movable rod, powder receiving receptacles supported by the vertically movable rod, a roller caried by the free end of the spring, and a ratchet wheel disposed beneath the roller and with which the roller engages.

1,482,711. ADJUSTING MECHANISM FOR RESAWING MACHINES. JOHN SORENSON, Rhinelander, Wis. Filed Aug. 9, 1920. Serial No. 402,185. 9 Claims. (Cl. 143—5.)



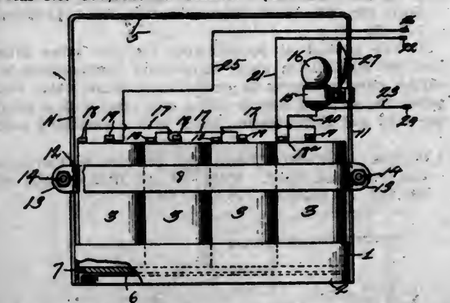
1. The combination with the table adjusting lever of a re-sawing mechanism, of a bar operatively connected with said lever, two sets of opposed friction rollers between

which said bar passes, power connections for driving one roller in each set to rotate them in the same direction, said power driven rollers being on opposite sides of the bar and each adapted to actuate the bar in a direction



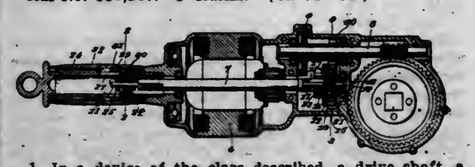
opposite to its movement when actuated by the other power driven roller, and a manually operable lever controlling the position of the other rollers of the respective sets to selectively press the bar against either of the power driven rollers.

1,482,712. TESTING SYSTEM FOR AUTOMATIC EXCHANGES. FRANKLIN A. STEARN, Paterson, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 3, 1919. Serial No. 328,207. 8 Claims. (Cl. 179—175.)



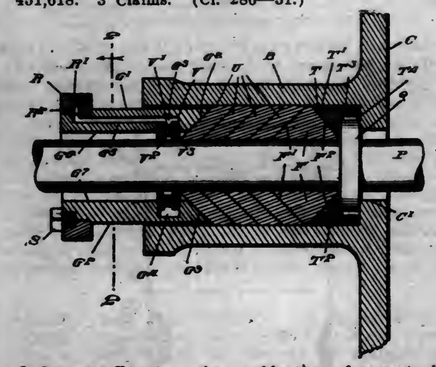
7. In a testing system, a relay to be tested, a circuit for said relay, automatic means to successively close said circuit through bridges of various resistance values, and means to test the proper operation of said relay each time a bridge of new resistance value is introduced into said circuit.

1,482,713. APPARATUS FOR RECOVERING POWER FROM TIDES AND WAVES. SAMUEL P. STEIN, Newark, N. J. Filed June 26, 1920. Serial No. 391,959. 4 Claims. (Cl. 192—48.)



1. In apparatus of the class described, the combination of a plurality of machines to be driven, an independent drive shaft for each of said machines, clutches between adjacent ones of said drive shafts, and automatic means for successively connecting and disconnecting said drive shafts through said clutches.

1,482,714. AUTOMOBILE CIRCUIT TESTER. EDWARD C. STILLGER, Burlington, Colo. Filed Oct. 3, 1922. Serial No. 592,080. 2 Claims. (Cl. 204—38.)

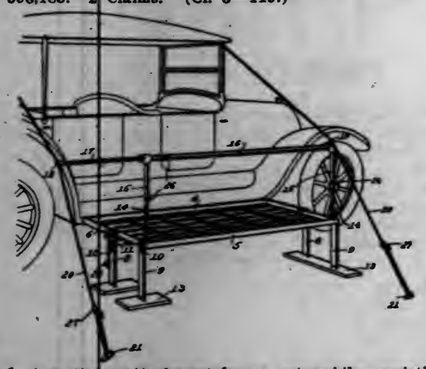


1. A battery tester comprising a frame, a plurality of batteries disposed in said frame, a handle member carried by the frame and arching over the upper ends of the batteries, a vertically adjustable light supporting bracket carried by the handle, oppositely disposed separable U-shaped clamping members for clamping said batteries in the frame, one of said U-shaped members being fixed to handle member.

1,482,715. EXPANDING RING CLUTCH. CLARENCE STRAND, Mahnomen, Minn. Filed Jan. 27, 1922. Serial No. 532,217. 8 Claims. (Cl. 74—58.)

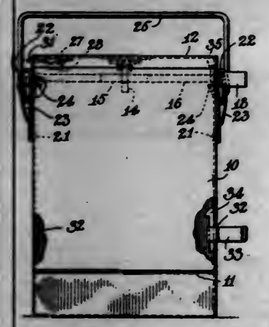
1. In a device of the class described, a drive shaft, a driven shaft, fixed gears on one of said shafts, gears slidably carried by the other of said shafts, a pin slidable longitudinally of the said other shaft, a connection between said pin and said slidable gear, and means operating automatically upon the slidable gear reaching the limit of its movement in either direction for establishing a driving connection between said gear and said shaft.

1,482,716. PISTON-ROD PACKING. WILLIAM SUDEKUM, Nashville, Tenn. Filed Mar. 11, 1921. Serial No. 451,618. 3 Claims. (Cl. 286—31.)



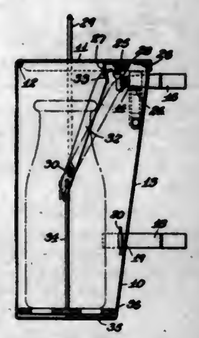
2. In a stuffing box, the combination of a seat ring provided with an interior face; a groove in said face; a vibrating ring in said groove; a packing gland provided with an interior face; a groove in said face; a vibrating ring in said groove; and a compressible packing medium between said seat ring and said gland.

1,482,717. PROCESS OF PREPARING FILMS. ALBERT F. SULZER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 31, 1922. Serial No. 598,202. 4 Claims. (Cl. 18—57.)



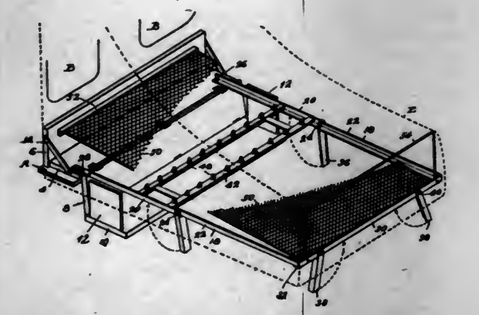
1. The method of preshrinking cellulose ether films, that are insoluble in water at ordinary temperatures but shrink after treatment in photographic baths, which comprises the steps of first treating said films with a swelling bath and then treating them with a shrinking bath.

1,482,718. AUTOMOBILE BED. FRANCIS X. VAN AUSDAL, Pasadena, Calif. Filed Oct. 23, 1922. Serial No. 596,183. 2 Claims. (Cl. 5—119.)



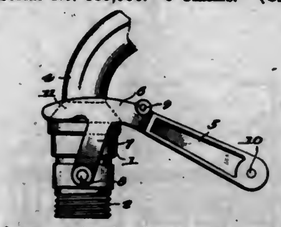
1. A mattress attachment for an automobile consisting of an inner frame section having means on its inner side for hinging the same to the running board of the automobile, an outer frame section with pivoted connections attaching its ends to the ends of the inner frame section, inner legs pivotally attached respectively at the said pivotal connections on the outer side of the ends of the inner frame section, and constructed to fold into line with the ends of the inner frame section, distance washers between the ends of the two frame sections at the said pivoted connections, outer legs pivotally attached respectively at the outer sides of the ends of the said outer frame section, said outer frame section operating to fold into juxtaposition over the inner frame section with the outer legs in the space between the ends of the frame sections and in line with the said washers, and means attached to the said pivotal connections having means for detachably connecting to the side of the automobile to hold the folded frame sections in a substantially vertical position.

1,482,719. THEFTPROOF RECEIVER BOX. LOUIS WILKE, Morsemere, N. J. Filed Dec. 7, 1921, Serial No. 520,506. Renewed Oct. 5, 1923. 13 Claims. (Cl. 232—42.)



1. A receiver box of the class described provided with a closure member, a lock mechanism for said closure member, said lock mechanism being provided with a part adapted to be placed between a door and the door frame when the door is in its closed position for retaining said lock mechanism in its operative position, means involving a spring member for normally supporting said part in its operative position, and a supplemental part mounted in connection with said receiver box and adapted to be placed between the door and door frame.

1,482,720. THEFTPROOF RECEIVER BOX. LOUIS WILKE, Morsemere, N. J. Filed Feb. 24, 1923. Serial No. 620,903. 14 Claims. (Cl. 232—42.)

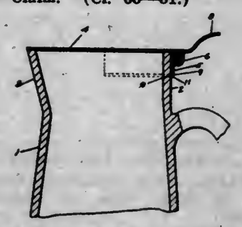


1. A receiver box of the class described provided with members adapted to be placed between a swinging member and stationary support therefor, said members being reversible on the receiver box, and one of which constitutes a part of a lock mechanism and extends transversely through the receiver box and the closure of the receiver box being provided with a catch device adapted to cooperate with said last named member for retaining the closure in a closed position.

1,482,721. FOLDABLE TOURIST BED. LONZA A. WINDSOR, Pittsburg, Kans. Filed June 9, 1922. Serial No. 567,157. 1 Claim. (Cl. 5—119.)

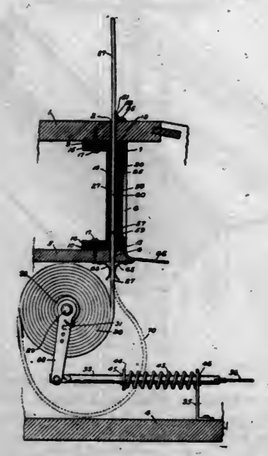
A foldable bed consisting of a case adapted to be supported on the running board of an automobile, a head rail fixed to the upper portion of the back wall of the case, a foot rail, a mattress secured at its ends to the head rail and said foot rail and adapted to be rolled upon the latter when the bed is not in use, legs pivoted to the foot rail to fold against the same, side rails hinged intermediate their ends and adapted to fold within the case, studs depending from the rear ends of said side rails and adapted to detachably engage the foot rail, and legs foldably connected to the hinged portions of said side rails.

1,482,722. HOSE COUPLING. JOHN JAMES ARMSTRONG, Los Angeles, Calif., assignor of one-half to Robert B. Booth, Honolulu, Territory of Hawaii. Filed Jan. 21, 1922. Serial No. 530,906. 6 Claims. (Cl. 285—181.)



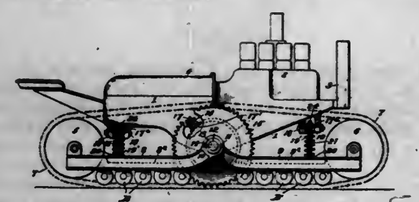
1. In a hose coupler for faucets, the combination with a faucet discharge element provided with an annular camber adjacent to its end, of a socket member to receive the cambered end of the faucet discharge element and provided with a hose connection, and a lever pivoted transversely of said socket member and comprising a main part and opposite cam members in approximately linear extension of said main part, said cam members being operative by the lever to engage the annular camber on opposite sides of the faucet discharge element seated in the socket member.

1,482,723. BATHING CAP. LOUIS AUSTER and MARIE AUSTER, New York, N. Y. Filed Sept. 4, 1923. Serial No. 660,797. 8 Claims. (Cl. 2—106.)



8. An elastic water guard for the head of a bather having ear receiving openings at its opposite sides, ribs entirely surrounding the openings, and snugly conforming to the inequalities of the human head entirely around the ears.

1,482,724. LIQUID CONTAINER AND TOP. CHARLES S. BARON, Tiffin, Ohio. Filed Feb. 27, 1923. Serial No. 621,574. 1 Claim. (Cl. 65—31.)

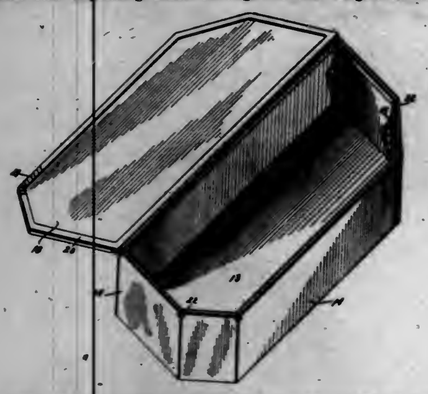


A device of the class described comprising in combination, a container provided with a narrow groove in its outer surface spaced from its mouth, a flat segmental band of spring metal forming a clip partially encircling and gripping said container without covering any portion of the mouth thereof, said band having its lower edge inturned to form a flange closely fitting into said groove, ears projecting from said band, and a lid pivotally connected to said ears.

1,482,725. TARGET FOR AMUSEMENT DEVICES. ARCHIE H. BECHTOL, Memphis, Tenn., and WALTER A. TRATSCH, Chicago, Ill. Filed Nov. 30, 1923. Serial No. 677,738. 9 Claims. (Cl. 124—15.)

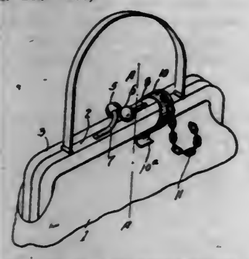
1. In an amusement device, the combination of a firing means; a target provided with a movable portion; connections between said movable portion and said firing means; means associated with said movable portion adapted to leave an imprint on said movable portion when a shot strikes said target; and means whereby said movable portion may be positioned with reference to said target.

1,482,726. TRACTION ENGINE. CLARENCE LEO BEST, San Leandro, Calif., assignor to C. L. Best Gas Traction Company, San Leandro, Calif., a Corporation of California. Filed Nov. 5, 1920. Serial No. 422,109. 13 Claims. (Cl. 305—9.)



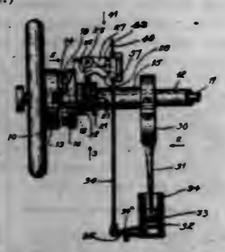
1. In a tracklaying tractor, the combination of a main frame, and tractor truck mechanism including a truck frame having adjoining sections pivotally connected at their adjacent end portions with the main frame for independent swinging movement, yieldable load-supporting connections between the main frame and the swinging truck frame sections, idler elements on the outer end portions of the truck frame, an endless tread engaging the idler elements and a driving sprocket located intermediate the ends of the truck at the adjacent pivotally connected end portions of the truck frame sections and operatively engaging the lower active run of the chain.

1,482,727. BOX AND METHOD OF MAKING THE SAME. JULIUS BOACHERS, New York, N. Y. Filed May 3, 1921. Serial No. 466,474. 1 Claim. (Cl. 229—6.)



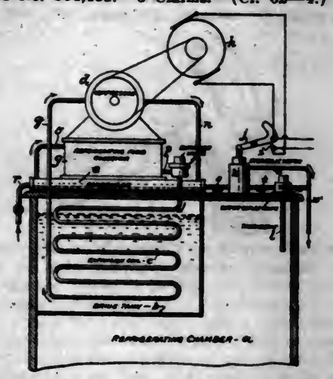
A box-blank, comprising an outer covering and an inner lining, each including a bottom, sides, a cover and triangular corner folds, lines of stitching uniting said outer covering with said inner lining along the lines of junction of said bottom, sides, cover and corner folds,

interposed stiffening pieces in the bottom-, sides-, and cover-portions of the blank, each corner fold being united with two adjoining sides throughout the length of two



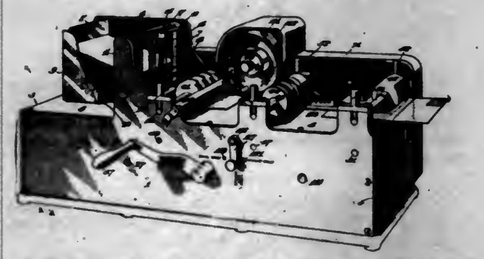
of its edges and having a free edge connecting the free edges of the respective sides, said corner folds being foldable centrally on a line intersecting the point of junction of adjoining sides.

1,482,728. SATCHEL CLIP. ROSE F. BRACCO, Chicago, Ill. Filed Feb. 23, 1922. Serial No. 538,611. 2 Claims. (Cl. 150—29.)



1. The combination with a shopping bag of a clip, a chain extending from said clip for projection through the material of the bag, and a member within the bag for engagement with the projecting end of said chain.

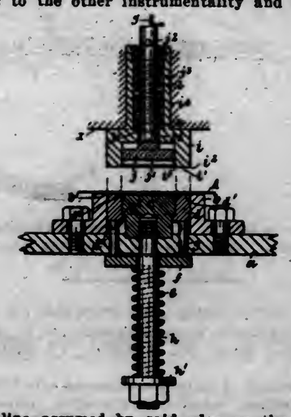
1,482,729. BRAKING MECHANISM FOR WHEELED VEHICLES. HENRY C. BUCHWALD, Baltimore, Md. Filed Dec. 21, 1920. Serial No. 432,180. 5 Claims. (Cl. 188—90.)



1. A combination with a wheel, of a clutch member secured thereto, a cooperating clutch member, means for engaging said members, a cylinder, an imperforate piston in said cylinder, an eccentric driven by said second named member for reciprocating said piston, a passage from said cylinder to the atmosphere and a valve in said passage.

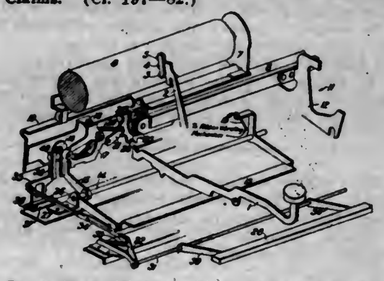
1,482,730. REFRIGERATING SYSTEM. ROBERT A. BURFORD, Jr., Birmingham, Ala. Filed Aug. 26, 1922. Serial No. 584,431. 6 Claims. (Cl. 62—4.)

1. A refrigerating system having a compressor, an electric motor for driving the compressor, an electric switch for controlling the current for the electric motor, a cooling fluid supply for the system, a valve for controlling the flow of fluid through the system, a temperature actuated device for opening and closing the valve, a fluid pressure actuated motor for opening and closing the switch actuated by the cooling fluid, and an automatic valve for controlling the admission of fluid to and exhaust from the pressure motor arranged to be actuated by the cooling fluid to cause the fluid pressure motor to close the electric switch when cooling fluid is passing through the system and to open the switch when the fluid control valve is closed.



1,482,731. STAMP-AFFIXING AND ENVELOPE-SEALING MACHINE. HARRY J. BUAH, New Hartford, N. Y., assignor to Postcraft Company, Inc., Utica, N. Y., a Corporation of New York. Filed Aug. 19, 1920. Serial No. 404,645. 15 Claims. (Cl. 216—3.)

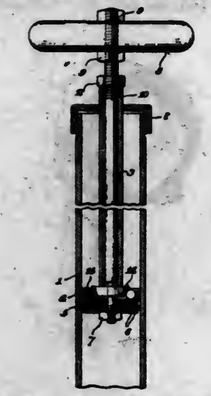
1. In a machine of the character described, a stamp affixing mechanism, an envelope sealing mechanism including a flap moistening device, means for feeding envelopes through said mechanism and manually operated means for switching the envelope flaps around the moistening device at pleasure.



1,482,732. APPARATUS FOR FORMING SHEET-METAL CAPS. AMOS CALLESON, Brooklyn, N. Y. Filed Aug. 15, 1922. Serial No. 581,963. 2 Claims. (Cl. 113—46.)

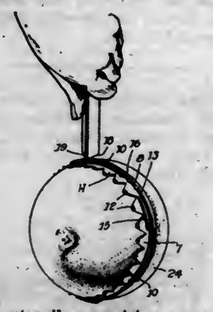
1. Apparatus for forming from a disk a cap with its edge deflected including a pair of opposed substantially concentric instrumentalities for clamping the disk with a slip-grip in a line substantially concentric with its edge, means coactive with said clamping instrumentalities while they are so clamping the disk to draw the latter into one of said instrumentalities into the form of a cap having its edge withdrawn from between them and left projecting at an angle to the plane originally occupied by the clamped disk, a die having its die surface inward of and extending along a line substantially concentric to the other instrumentality and in registry

with the line assumed by said edge as thus left projecting and in cross-section presenting obliquity to said edge, and means after the cap is formed to effect movement as between it and the die one relatively to the other, whereby on account of the obliquity of said die surface to said edge the latter will wipe over the same during such movement and be thereby altered in diameter.



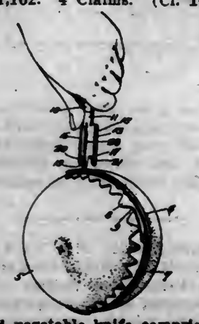
1,482,733. TYPEWRITING MACHINE. GEORGE W. CAMPBELL, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 11, 1920. Serial No. 409,584. 7 Claims. (Cl. 197—82.)

2. In a typewriting machine the combination of a case-shift frame, a movable carriage, printing devices, a universal bar independent of said case-shift frame and actuatable by said printing devices, ribbon-vibrating mechanism connected to said universal bar, carriage-escapement mechanism including a dog-rocker mounted on, and movable with, said case-shift frame, an actuator to be operated to engage said dog-rocker directly and operable by said universal bar, a space-bar, and a separate connection between said space-bar and said dog-rocker, said connection comprising a second actuator to engage said dog-rocker directly to enable the latter to be operated independently of said ribbon-vibrating mechanism.



1,482,734. PUMP. CLAUDE C. CARROW, Philadelphia, Pa. Filed Mar. 16, 1921. Serial No. 452,702. 2 Claims. (Cl. 74—109.)

1. In a pump having a cylinder, the combination of a cup-shaped expandible valve washer disposed in the cylinder, a plunger extending through the washer and outside of the cylinder, means carried by the plunger and contacting with the outer face of the washer to afford support thereto, a split ring disposed within the washer, a conical adjusting disk disposed on the plunger and adapted to enter the ring, a sleeve surrounding and longitudinally movable relatively to the plunger, and means disposed outside of the cylinder for effecting relative movement between the sleeve and the plunger to

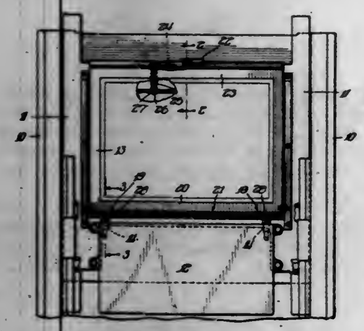


force said disk into the ring to expand the washer against the wall of the cylinder.

1,482,735. KITCHEN UTENSIL. JAMES CATSULES, West Hoboken, N. J., assignor of one-half to Rudolf Feiser, West Hoboken, N. J. Filed Apr. 18, 1923. Serial No. 632,910. 7 Claims. (Cl. 146—203.)

1. A kitchen utensil comprising an expansible ring adapted to fit about an article of food and having a fancy edge, and a knife having an edge conformable with respect to the edge of said ring and adapted to be driven down radially into the fruit guided by the fancy edge of the ring.

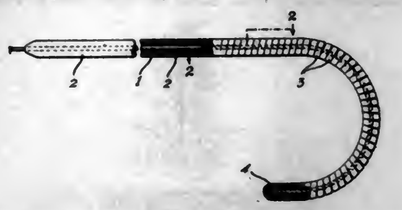
1,482,736. FRUIT AND VEGETABLE KNIFE. JAMES CATSULES, West Hoboken, N. J. Filed Oct. 27, 1923. Serial No. 671,162. 4 Claims. (Cl. 146—3.)



1. A fruit and vegetable knife comprising a web, side wings and outturned flanges, said web, wings and flanges having projecting prongs with sloping sharpened surfaces.

1,482,737. TIRE ALARM. HAL H. CLARKE, Cherokee, Okla. Filed Jan. 19, 1923. Serial No. 613,654. 5 Claims. (Cl. 116—34.)

3. A tire alarm, including a vibratory sounding plate, a sounding box associated therewith, means to affix the same to the tire rim, a secondary element adapted to be placed against a tire, means to adjust the same to right position, means carried in conjunction with the secondary means for actuating the sounding plate to cause distortion thereof and create a sound to be transmitted to the sounding box.



1,482,738. CHASE MOUNTING. EDWARD F. DUDLEY, Oak Park, Ill., assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 22, 1922. Serial No. 555,954. 5 Claims. (Cl. 101—390.)

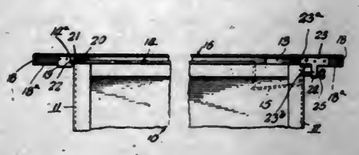
1. In a printing press, the combination of a support, a chase, a jack stud adjustably mounted in said support and on which said chase is mounted whereby the latter may be adjusted, and means for yieldably locking said chase whereby the latter may be adjusted while it is locked.

1,482,739. TEMPLE FOR SPECTACLES AND THE LIKE. GEORGE H. DU PAUL, Southbridge, Mass., assignor to Du Paul Young Optical Co., Southbridge, Mass., a Corporation of Massachusetts. Filed July 7, 1923. Serial No. 650,003. 3 Claims. (Cl. 88—52.)

1. A temple for spectacles and the like comprising a metal core having a relatively straight shank portion and a loop portion, and a non-metallic covering for said core consisting of a single tubular member having a flexible loop covering portion coextensive with a helically

disposed cut extending through the wall thereof, one end of said covering having the free end of the loop embedded therein.

1,482,740. CATALYZER AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J. Filed May 27, 1918. Serial No. 236,660. 17 Claims. (Cl. 23—28.)

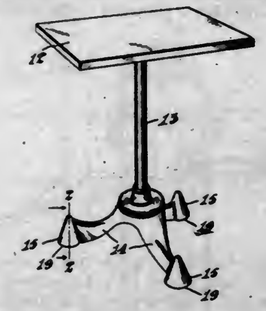


1. The process of making a catalyzer which consists in mixing solutions containing equivalent proportions of nickel sulphate and a soluble formate capable of reacting therewith, in evaporating to dryness and in heating the dried product to about 240° C.

1,482,741. DENTIFRICE MATERIAL. PAUL MILLER GIEST, Plainfield, N. J., assignor to E. R. Squibb and Sons, New York, N. Y., a Corporation of New York. Filed Aug. 18, 1922. Serial No. 582,832. 3 Claims. (Cl. 167—9.)

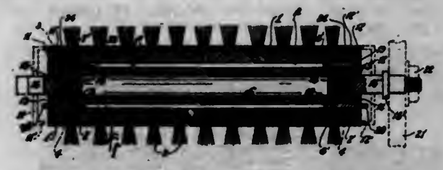
1. A dentifrice material containing sodium biborate and sodium chloride in proportion so that when 185 parts by weight of the dentifrice is dissolved in 10,000 parts by weight of water a 1% solution of sodium biborate in a physiological salt solution is formed.

3. A dentifrice material containing approximately 100 parts by weight of sodium biborate and approximately 85 parts by weight of sodium chloride in tablet form adapted to be dissolved in water to provide a wash.



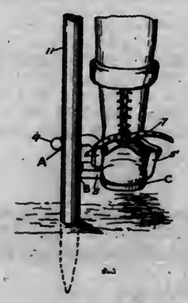
1,482,742. COMBINATION WASHING MACHINE AND TABLE. JOHN F. GILCHRIST, Chicago, Ill., assignor to Federal Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 27, 1921. Serial No. 510,938. 2 Claims. (Cl. 45—31.)

1. A table top adapted for detachable engagement upon a support, said table top comprising a flat plate with depending side and end flanges, pairs of opposing blocks attached to the inner faces of said side flanges at points spaced to span the top of said support, one pair of blocks being provided with recesses for detachable engagement with a fixed part at one end of the support, and adjusting screws to engage said support carried by the other pair of blocks.



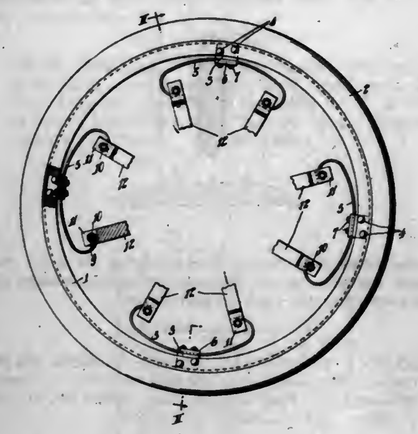
1,482,743. SAFETY PEDESTAL. CHARLES R. GROVER, Nashua, N. H. Filed Aug. 23, 1923. Serial No. 658,963. 1 Claim. (Cl. 45—137.)

A pedestal having its feet provided with hooded roller-bearing casters, edge portions of the hoods extending nearly to the plane of the floor-engaging surfaces of the casters, said pedestal being characterized by the fact that when it is tilted, edge portions of the hoods engage



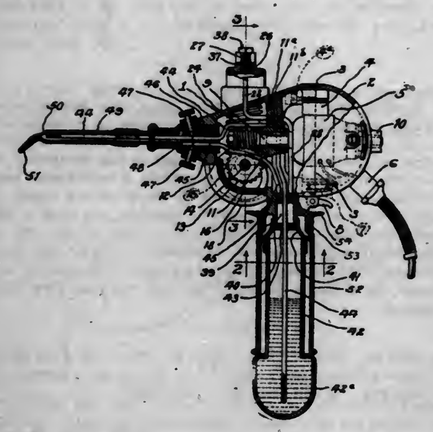
the floor before the pedestal reaches an inclined position that would permit gravity to cause it to fall.

1,482,744. BRUSH. WILLIAM H. HEFFERNAN, North Adams, Mass., assignor to Heffernan Brush Company, Inc., Adams, Mass., a Corporation of Massachusetts. Filed May 12, 1921. Serial No. 468,845. 7 Claims. (Cl. 15—179.)



4. In a device of the kind described, the combination, of a bristle carrying member, a tubular shaft member extending through the said member, plates at the ends of said member having threaded openings therethrough, threaded bearing parts for supporting the shaft member and located in the threaded openings of the plates, and means for securing the parts in the openings.

1,482,745. POLE-SETTING DEVICE. GILLMANN ALBERT HEID, Goble, Oreg. Filed Jan. 22, 1923. Serial No. 614,170. 3 Claims. (Cl. 254—1.)

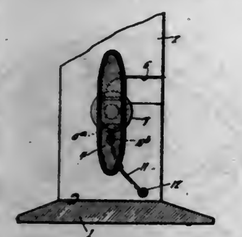


1. A pole-setting device comprising a stirrup having thereon integral vertical members positioned apart to receive and retain the human foot between them, also having an integral double angled gripper near one end, the outer free arm of said gripper extending above and parallel with the opposing stirrup end for a suitable distance to allow a pole to be engaged between said end and gripper arm.

1,482,746. SPRING WHEEL. MILTON H. HEINICKE, Port Ivory, N. Y. Filed Feb. 20, 1923. Serial No. 620,253. 9 Claims. (Cl. 152—49.)

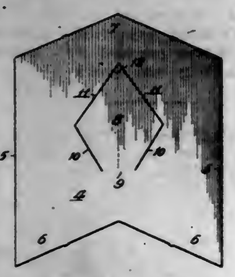
1. A spring wheel comprising, a felly, spokes, and semi-elliptic springs provided with scrolls at each end connecting the felly and spokes.

1,482,747. SPRAYING OUTFIT. FRANK MORGAN HOWE, New York, N. Y. Filed Nov. 26, 1921. Serial No. 518,003. 12 Claims. (Cl. 299—89.)



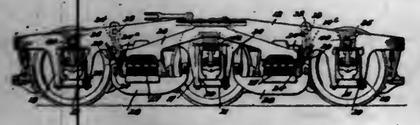
1. A hand portable machine comprising a casing having a depending handle, a motor mounted in said casing at one side of the axis of said handle, and an air compressing mechanism mounted in said casing at the other side of said handle.

1,482,748. DISPLAY STAND FOR BELTING AND LIKE MATERIALS. JAMES G. JOHNSTON, Jr., Chicago, Ill., assignor to Warren Featherbone Company, Three Oaks, Mich., a Corporation of Michigan. Filed Apr. 8, 1921. Serial No. 459,579. 4 Claims. (Cl. 211—18.)



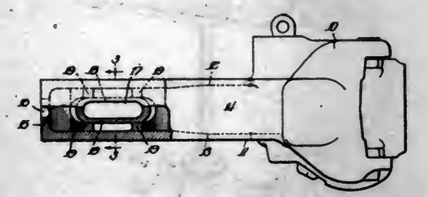
1. In a device of the character described, the combination of a frame, a spindle journalled in said frame and

capable of removal therefrom, and a yieldable member surrounding a grooved portion of said spindle, and con-



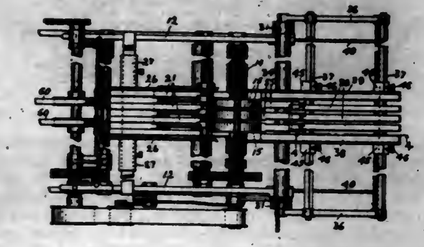
nected with said frame, thereby acting to exert frictional resistance to the free rotation of said spindle, and for connecting the same to said frame.

1,482,749. TOILET-SEAT COVER. ARTHUR JULINE, Chicago, Ill., assignor of one-half to Oliver C. Dennis, Wilmette, Ill. Filed July 16, 1919. Serial No. 311,127. 1 Claim. (Cl. 4—243.)



A toilet seat cover consisting of a thin flexible sheet having substantially parallel side edges, a central hole to fit over the hole in the seat and its front and rear edges conformably V-shaped, so that it can be formed by consecutive V-shaped cross cuts from a continuous web, the rear edge having the apex of the V at the center of the sheet to cover the central portion of the back of the seat, the front portion having the apex of the cut at the center of the sheet so as to leave flaps at the front corners of the sheet which will depend downwardly and cover the front portions of the seat adjacent the sides thereof.

1,482,750. SIX-WHEEL TRUCK. WILLIAM F. KIESEL, Jr., Altoona, Pa. Filed Nov. 25, 1922. Serial No. 603,204. 11 Claims. (Cl. 105—195.)

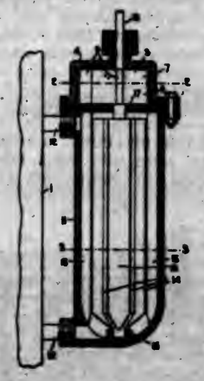


1. In a six-wheel truck, in combination, a pair of one piece side frames each having three pairs of pedestals receiving the journal boxes, and transverse rods connecting said frames being secured to said frames between the center and outer pedestals, said rods having sufficient flexibility to permit said frames to move out of alignment when required by irregularities of the track, the end portions of said frame being unconnected.

1,482,751. COUPLER. EDMUND P. KINNE, Alliance, Ohio, assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 5, 1922. Serial No. 592,520. 3 Claims. (Cl. 213—62.)

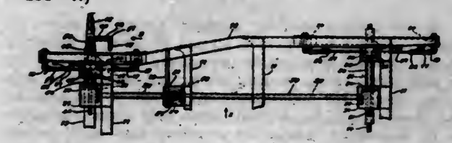
1. A coupler having a hollow shank with a key-hole therein, there being a wall of metal entirely surrounding the key-hole, and a plurality of reinforcing portions extending in the same direction between said wall and the opposite outer walls of the shank for reducing the set therein and preventing reduction in the length of the key-hole longitudinally of the shank under compressive forces.

1,482,752. BLANK FEEDER. LEON E. LA BOMBARD, Chelsea, and MELVIN H. SIDEBOTHAM, Cliftondale, Mass., assignors to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed Feb. 6, 1920. Serial No. 356,702. 15 Claims. (Cl. 271—39.)



1. In mechanism of the character described, a blank hopper, a combing wheel for forwarding blanks from the hopper, a retard and a support therefor in proximity to said wheel, means for adjusting the angle of said support relatively to the wheel, and means for adjusting the retard longitudinally in a straight line upon its support.

1,482,753. ENDLESS-RIBBON CARRIER AND FEED MECHANISM. WILLIAM W. LASKER, Brooklyn, N. Y., assignor, by mesne assignments, to Powers Accounting Machine Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 19, 1919. Serial No. 346,122. 8 Claims. (Cl. 197—151.)

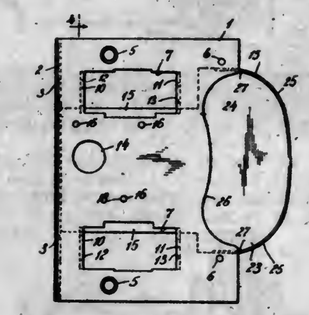


1. In combination, a paper support, a roller; a guide roller; said rollers being adapted for carrying a ribbon in front of the support; a loosely mounted drive shaft laterally movable relative to the guide roller; a friction device on the shaft; and a yieldable means engaging the drive shaft for pressing the friction device against the ribbon on the guide roller.

1,482,754. LIQUID-FEED REGULATOR. MYRON PENN LAUGHLIN, Lowell, Mass. Filed Aug. 7, 1920. Serial No. 402,012. 9 Claims. (Cl. 137—101.)

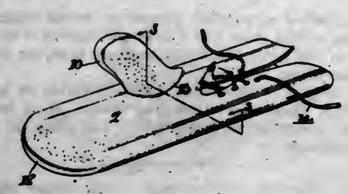
1. In a liquid level controller, the combination with a container, of a conduit to supply liquid thereto, a movable device in the conduit which permits liquid to flow through the conduit when said device is moving, and means for varying the rate of movement of said device in accordance with variations in the liquid level in the container.

1,482,755. LUBRICATING SYSTEM FOR AUTOMOBILES. EDWARD W. LEECH, Jr., Baltimore, Md. Filed Apr. 6, 1921. Serial No. 458,921. 4 Claims. (Cl. 184—7.)



4. In a lubricating system, the combination of a plurality of casings connected to a plurality of parts to be lubricated and lubricant in said casings, of means in said casings for forcing said lubricant to said parts, flexible shafts each having one end connected to one of said means for operating same, gears connected to the other ends of said flexible shafts, unitary operating means and connections from said operating means to said gears.

1,482,756. BALL-AND-SOCKET JOINT. BENJAMIN LIEBOWITZ, New Rochelle, N. Y. Filed Nov. 14, 1921. Serial No. 514,867. 5 Claims. (Cl. 287—90.)

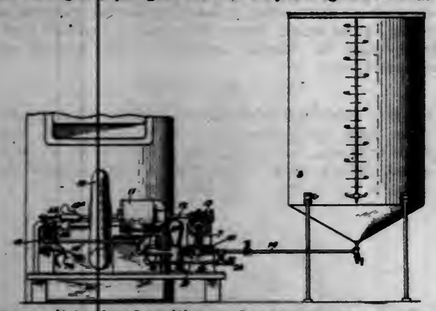


2. A ball and socket joint comprising a casing having a bore, a socket piece slidably fitting in the bore, a spring in the bore pressing against said socket piece, a second socket piece secured to the exterior of the casing and having an external spherical surface, a ball inclosed by the combined socket pieces and having a shank projecting through an opening in the second socket piece, and a gasketed sleeve encompassing the external spherical surface of said second socket piece.

1,482,757. VEHICLE DOOR-LOCK CASING AND COVER. CARL MACK, Long Island City, N. Y., assignor to Mack Lock Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Jan. 17, 1923. Serial No. 613,175. 4 Claims. (Cl. 292—337.)

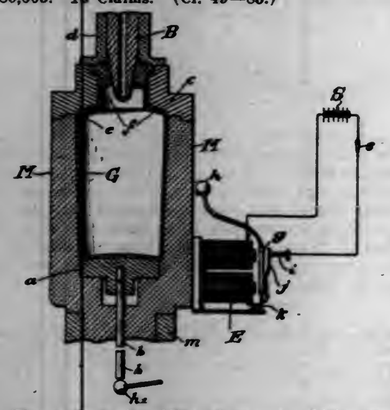
4. A door-lock casing and cover therefor, comprising a main front plate provided with a door lock-style flange having bolt-receiving holes and bolt-bearing lugs, a cover mounted on said casing with a space between the two, the inner end of said cover overhanging the inner end of said casing and provided at its inner edge with a rim provided at its ends with counter-sinks for receiving the adjacent edge of said casing to bring the two parts flush with each other.

1,482,758. MITTEN AND METHOD OF MAKING SAME. JAMES E. MCFARLAND, Lamont, Nebr. Filed Sept. 11, 1922. Serial No. 587,485. 5 Claims. (Cl. 18—56.)



1. The method of manufacturing a mitten which comprises cutting an appropriate length from an inner tube of an automobile tire, shaping the end thereof, applying a thumb piece thereto, applying a fabric lining, and vulcanizing the same to produce a substantially unitary article.

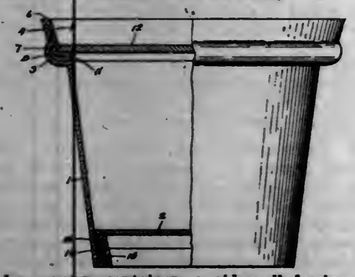
1,482,759. APPARATUS FOR BURNING OIL. SIDNEY E. MEYERS, Buffalo, N. Y., assignor to George W. Smith, Buffalo, N. Y. Filed Nov. 7, 1921. Serial No. 513,291. 16 Claims. (Cl. 158—36.)



1. In an oil burning apparatus, the combination with a burner, means for supplying oil to said burner, and means for supplying air to said burner, and having an operating shaft, of means for maintaining the oil and air supplied to said burner in a determined ratio and including a valve arranged in the oil conduit between the oil supply means

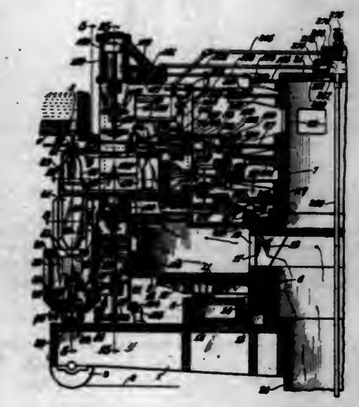
and the burner and adapted to open said conduit to greater or less degree, spring means normally acting on said valve

to move it to closed position, and governor means for automatically controlling the position of said valve in accordance with the speed of said operating shaft.



1,482,760. METHOD OF MOLDING GLASSWARE. JOHN A. MILLIKEN, Bayonne, N. J., assignor to John E. Marsden, Philadelphia, Pa. Filed Aug. 9, 1922. Serial No. 580,603. 13 Claims. (Cl. 49—85.)

1. The method of molding glassware, which comprises introducing molten glass into a mold and causing it to take the form of the mold, and simultaneously applying to the mold a succession of blows.

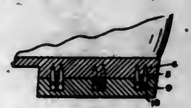


9. The method of producing a smooth finish on glassware, which comprises introducing molten glass into a mold, and vibrating the mold while the glass is in a plastic condition.

1,482,761. PAPER CONTAINER. ARLINGTON MOORE, Boston, Mass. Filed Mar. 23, 1921. Serial No. 454,768. 10 Claims. (Cl. 229—5.6.)

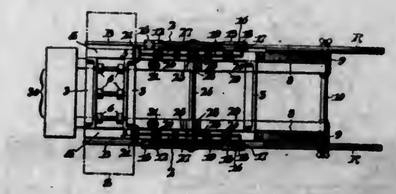
1. In a paper container, a side-wall having a re-inforced neck formed from a continuation of the stock thereof, and comprising inner and outer cap-retaining portions, oppositely folded inner and outer rim-portions extending from one to the other of said cap-retaining portions, and a terminal portion extending reversely from said inner cap-retaining portion between the same and said outer cap-retaining portion and terminating adjacent said rim portions, the folds forming said rim portions being consolidated with each other, and the inner and outer cap-retaining portions being consolidated with said terminal portion.

1,482,762. GLASS-SHAPING MACHINE. THOMAS C. MOORSHEAD, Alton, Ill. Filed July 26, 1918. Serial No. 246,879. 70 Claims. (Cl. 49—5.)



46. In a glass shaping machine having a source of supply adapted to deliver a stream of glass, a traveling frame, a mould mounted for movement with and relative to said frame, glass shaping mechanism mounted on said frame, means for maintaining said mold in the path of the glass stream to be filled, while said frame continues in its movement, means for elevating said mold, means for moving the filled and elevated mold into cooperative relation with said shaping mechanism, and means for returning said mold to a depressed position, laterally of said shaping mechanism

62. In a glass shaping machine having a source of supply adapted to deliver a stream of glass, a mold mounted for movement into and out of the path of the glass stream, and means movable with said mold, adapted to retain the cut part of the stream flowing into the mold against lateral movement.

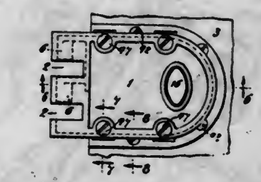


70. In a glass shaping machine having a source of supply adapted to deliver a stream of glass to a mold, a pair of cooperating cutting elements having downwardly projecting ledges spaced from their cutting edges, adapted to retain the cut part of the stream upon movement of the mold.

1,482,763. FASTENER. JOHN E. O'NEILL, Bronxville, N. Y. Filed Aug. 15, 1922. Serial No. 581,947. 7 Claims. (Cl. 36—36.)

1. In combination, an integral pronged base and a bifurcated projecting portion, a base into which said pronged portion projects, an attachment having a hole into which said bifurcated portion projects, and a rod projecting laterally through said attachment and said bifurcated portion.

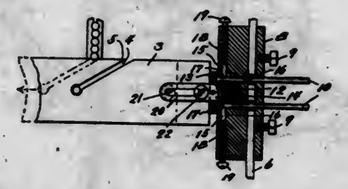
1,482,764. PACKAGE-BINDING MACHINE. GEORGE RITTER, Perth Amboy, N. J., assignor to The Barber Asphalt Paving Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Jan. 31, 1920. Serial No. 355,425. 11 Claims. (Cl. 100—31.)



1. A machine of the character described, comprising means for supporting a package to be bound to permit the end portion of a binding strand to be wrapped about the package; means for holding said strand fast at a point intermediate the supply and said package; and means for engaging the strand and taking up on it, to draw it tight about the package, between the point where it is held fast as aforesaid and the package.

1,482,765. MOLDED ARTICLE. JOHN B. SANBORN, Evanston, Ill., assignor to Associated Trading Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 20, 1922. Serial No. 555,705. 9 Claims. (Cl. 16—121.)

1. A molded article having therein a recess to receive an attaching member and an abutment within said recess against which the member may be driven to effect clenching of the latter for securement within said article.

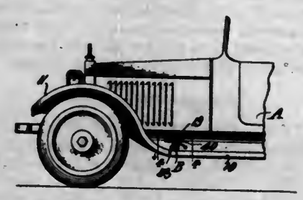


1,482,766. ADJUSTABLE LOCK CASING. SAMUEL SEGAL, New York, N. Y., assignor to Segal Metal Products Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 7, 1921. Serial No. 459,258 15 Claims. (Cl. 70—46.)

1. In a lock, a casing mounted on a support, a locking bolt mounted in said casing, an actuator for actuating said locking bolt and means connected to said actuator and extending through a wall of said casing and adapted to cause said actuator to function, said actuator being adapted to permit of the adjustment of the relative positions of said casing and said connecting means while retaining the connection between said means and actuator.

1,482,767. TACK-FEEDING APPARATUS. JOSEPH SHLIEKR, Haverhill, Mass. Filed May 11, 1923. Serial No. 638,206. 5 Claims. (Cl. 1—6.)

2. In a machine of the character described, a frame having a declining tack raceway therein and a tack separator reciprocally movable transversely of the raceway at its lower end, a striker movable between striking and a retracted position, a spring arranged to actuate the striker to jar the raceway when released, means controlled by the movement of said separator to move the striker to its retracted position during the operative

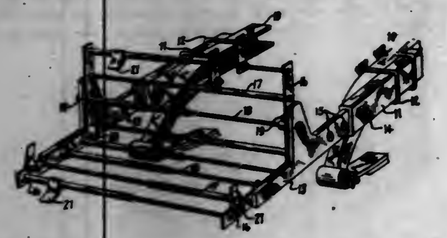


movement of the separator, means to retain the striker in its retracted position against the spring action thereon during the return movement of the separator and means to release said striker at the end of said return movement.

1,482,768. PEDAL ATTACHMENT. BUDD E. SLADE, Cheyenne Wells, Colo. Filed June 16, 1923. Serial No. 645,846. 1 Claim. (Cl. 74—81.)

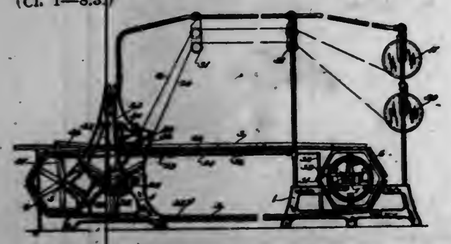
A pedal attachment of the class described including a bar, a pair of rigid jaws on the bar, and a bendable rod attached intermediate its ends to the bar and adapted to form jaws all in the manner and for the purpose specified.

1,482,769. MUD-GUARD LIGHT. WILLIAM H. SUTTON, Eugene, Oreg. Filed Jan. 11, 1923. Serial No. 612,044. 2 Claims. (Cl. 240—7.)



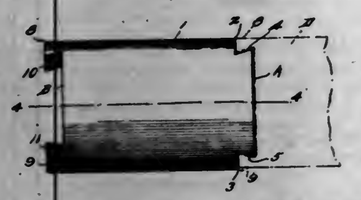
1. A light attachment for motor vehicles for casting rays of lights laterally and rearwardly of a motor vehicle including a casing, having transparent side and rear walls, an L-shaped reflector in the casing, electric lamps carried by the L-shaped reflector, and a pivoted opaque cover for the casing for preventing the casting of light rays upwardly.

1,482,770. LUGGAGE CARRIER FOR MOTOR VEHICLES. SAM TERRELL, Detroit, Mich., assignor of one-third to Charles B. Jackson, Detroit, Mich. Filed July 26, 1922. Serial No. 577,561. 2 Claims. (Cl. 224—29.)



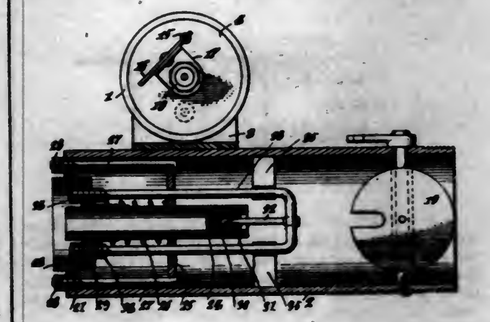
1. In a motor vehicle having side frame members, a luggage carrier comprising a pair of longitudinally extensible side members adapted to be detachably secured to the side frame members of the vehicle to extend rearwardly thereof, said side members held in spaced apart relationship by transversely-extending longitudinally-adjustable reach

rods, a luggage rack supported on said reach rods comprising a bottom section and a back section, said rack



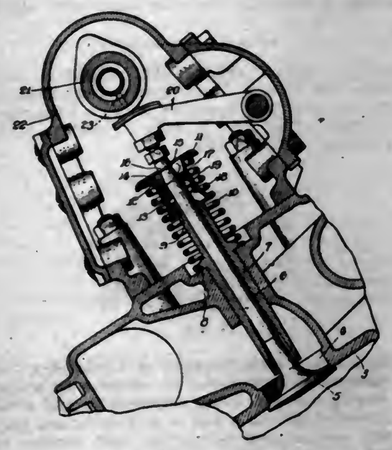
adjustable lengthwise on said rods and provided with means for being releasably secured at adjusted positions thereto.

1,482,771. MACHINE FOR USE IN MAKING BOXES. OSCEOLA C. THOMPSON, Rockaway, N. J., assignor to Wirebounds Patents Company, a Corporation of Maine. Filed Dec. 16, 1920. Serial No. 431,133. 19 Claims. (Cl. 1—8.3.)



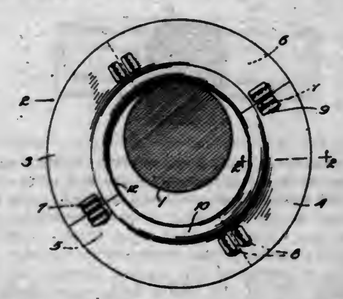
19. A machine for use in making wirebound boxes comprising, in combination, an endless work-holder to receive and position box parts; binding-wire-applying means including fastener-setting mechanism; means to feed said work-holder in steps of varied length to locate fasteners at selected points in the work comprising a motion imparting device adapted to propulsively engage notches formed in the work-holder relative to the selected fastener-receiving points in the work, said feeding means operating without interruption to feed the endless work-holder through a plurality of uniform cycles.

1,482,772. CONCRETE-PIPE JOINT. HAROLD M. TSCHIRGI, Independence, Iowa. Filed Feb. 24, 1923. Serial No. 620,935. 2 Claims. (Cl. 285—143.)



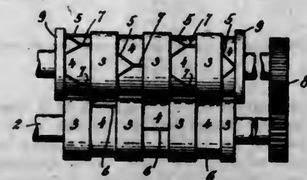
1. A pipe section of the class described including a body, a pair of diametrically opposed trapezoidal tenons projecting from one end, one of said tenons being smaller than the other, the other end of said body being provided with a pair of diametrically opposed mortices, aligned at right angles to the alignment of the tenons and one of the mortices being smaller than the other, the said mortices being trapezoidal in shape, the ends of the larger tenon and mortice being provided with sides converging toward the center of the body and the smaller tenon and mortice being provided with parallel sides.

1,482,773. CARBURETOR. ELZA L. WALTERS, Anderson, Ind. Filed Apr. 11, 1919. Serial No. 289,226. 1 Claim. (Cl. 261—50.)



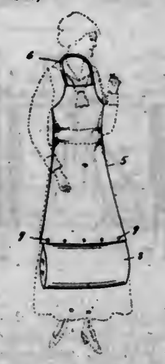
In a carburetor, a mixing tube having an air opening, an air tube, means for supplying fuel to the air tube, a fuel regulating valve, a valve seat adjustable in the air opening, an air valve seated on the valve seat and mounted on the air tube, an expansible helical spring mounted on the air tube and holding the air valve seated, a bridge for supporting the air tube and engaging one end of the spring, means for adjusting the bridge to vary the tension of the spring and means adjustably connecting the air and fuel valves and adapted to be guided in its movement by said bridge.

1,482,774. VALVE MOUNTING. CHILDE HAROLD WILLS, Marysville, Mich. Filed Nov. 3, 1920. Serial No. 421,551. 8 Claims. (Cl. 251—132.)



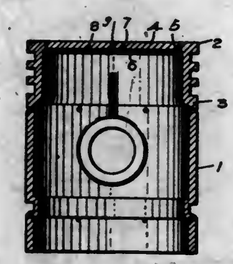
8. A valve stem, a valve spring retaining annulus associated therewith, means adapted to retain the stem and annulus in predetermined relation and a washer interposed between the stem and annulus and adapted to prevent passage of oil, a valve stem guide surrounding the valve stem, a depending skirt portion of the annulus overlapping the outer end of the guide, the outer end of the guide being beveled, the bevel being such that an acute angle is formed adjacent the valve stem adapted to shear excess oil from the stem during its reciprocation.

1,482,775. SHAFTING CLEANER. LUCIEN I. YEOMANS, Chicago, Ill., assignor to Pioneer Production Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 5, 1920. Serial No. 421,871. 9 Claims. (Cl. 64—29.)



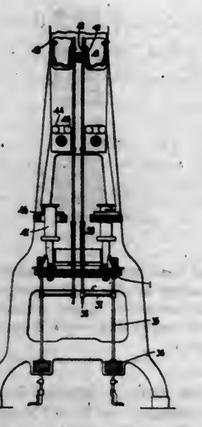
1. In a device of the class described, a body portion having an opening through which a shaft is adapted to extend, a fibrous surface surrounding said opening, said surface being adapted for wiping engagement with the shaft to clean the same upon rotation thereof.

1,482,776. SHINGLE MACHINE. HERBERT ABRAHAM, New York, N. Y., assignor to The Ruberoid Company, a Corporation of New Jersey. Filed Feb. 19, 1921. Serial No. 446,419. 2 Claims. (Cl. 164—28.)



1. In a shingle machine, a pair of rolls each having alternating zones of different diameters respectively, each roll carrying cutting-dies circumferentially of the zones of lesser diameter, the rolls being arranged with the zones of greater diameter of one in alinement with the zones of lesser diameter of the other.

1,482,777. APRON. IDA M. BECTON, East Rutherford, N. J. Filed Aug. 15, 1923. Serial No. 657,510. 5 Claims. (Cl. 2—54.)

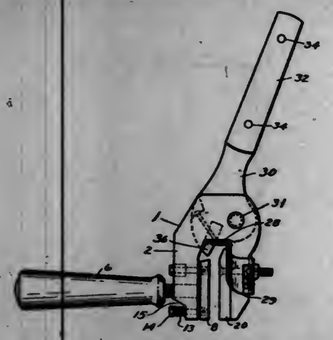


1. An apron, combined with a cushion attached thereto and relatively located to support both knees of a wearer when in a kneeling position.

1,482,778. INSULATING HEAD FOR PISTONS. GERSHON BOWMAR, Toronto, Ontario, Canada. Filed Aug. 3, 1922, Serial No. 579,469. Renewed Nov. 6, 1923. 2 Claims. (Cl. 74—108.)

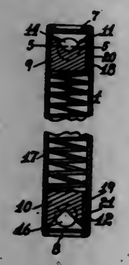
1. In a piston, a head having the central portion located within the side walls of the piston removed to form a separate disc having its exterior edge slightly spaced apart from the body of the piston, and a cupped member having its wall inserted between the disc and the body of the piston so that the parts may be electrically welded together.

1,482,779. STOP MOTION. EDWARD E. BRADLEY, Stonington, Conn., assignor to Atwood Machine Company, Stonington, Conn., a Corporation of New Jersey. Filed Aug. 26, 1922. Serial No. 584,427. 22 Claims. (Cl. 118—6.)



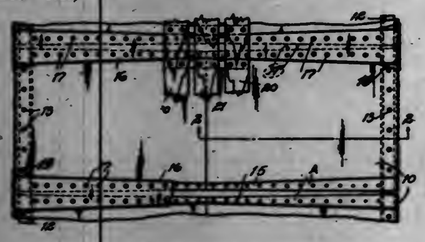
1. A spindle driving belt, a stationary brake, a laterally movable spindle normally held away from the brake and in contact with the belt, and stop-motion controlled means for automatically moving the spindle away from the belt into engagement with the brake.

1,482,780. SAW SET. PETER A. BUGGE, Seattle, Wash. Filed Jan. 3, 1922. Serial No. 526,528. 4 Claims. (Cl. 76—63.)



4. A device of the type described embodying an inverted U shaped casing the vertical legs of which form jaws between which a saw may be clamped; a lever pivotally mounted in the upper side of the casing with a projection on its lower end; plates on the inside of each of the jaws of the casing; bolts and springs suitably arranged to support one of these plates and hold it against the inner surface of the casing; a screw in a threaded hole in the casing behind the center of this plate; a bolt in a slotted hole in the opposite side of the casing for supporting the other of said plates on this

side; a washer under the head of the bolt with lugs on it to fit into notches in the side of the casing; and a guard with a slot in one side and a hole in another side,

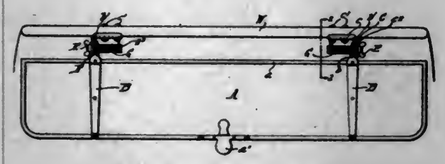


which guard has flanges in the upper side which project over the center of the space between the two plates on the inside of the jaw of the casing.

1,482,781. BOOK-LOCKING DEVICE. CHARLES L. BLODGETT, Alameda, Calif., assignor of one-half to Mary L. Larsen, Oakland, Calif. Filed Aug. 16, 1920. Serial No. 403,888. 3 Claims. (Cl. 129—24.)

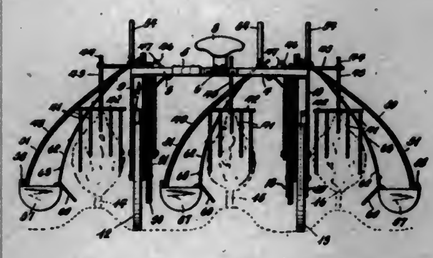
1. A locking post including a hollow member, inwardly projecting flanges at the ends thereof, latches slidably mounted in the member, means whereby said latches are normally urged outwardly, said flanges serving as stops for the latches.

1,482,782. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed June 30, 1922. Serial No. 572,064. 7 Claims. (Cl. 108—5.4.)



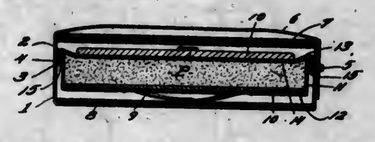
1. A rigid car roof comprising metal roof sheets whose adjacent marginal portions are spaced apart and provided with upstanding flanges, and cap strips connecting the spaced upstanding flanges of adjacent sheets and positively secured thereto to form hollow upstanding seams or joints.

1,482,783. PAPER BAG. DONAT F. BOUCHER, Northbridge, Mass. Filed Mar. 7, 1922. Serial No. 541,783. 1 Claim. (Cl. 229—62.)



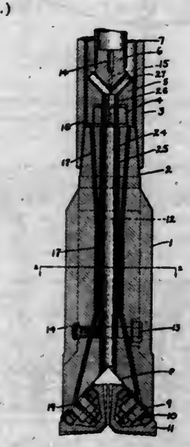
In a packaged article, a container of flexible material having an integral tab formed on one side of the mouth thereof and of equal width thereto, said tab being of approximately double the front to rear dimension of the container and being doubled upon itself within the mouth of the container the outwardly facing part of the tab having a coating of glue applied thereto, the lip on the opposite side of the mouth being glued down upon this outwardly facing part of the tab.

1,482,784. HINGE FOR VEHICLE VISORS. HENRY R. CHURCHILL, Buffalo, N. Y. Filed June 29, 1922. Serial No. 571,826. 2 Claims. (Cl. 296—95.)



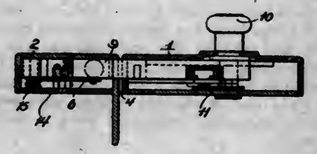
1. The combination with a vehicle and a visor therefor, of a friction hinge connecting the visor with a stationary part of the vehicle, and including a relatively stationary part secured to a fixed part of the vehicle and a movable part secured to said visor, a friction washer interposed between said hinge parts, a pivot bolt connecting said parts and having an elongated portion terminating in a head, and a coil spring on said elongated portion held in place by said head, said coil spring having arms engaging said stationary and movable hinge parts to exert an upward pressure on said movable hinge member to counteract the weight of said visor.

1,482,785. COTTON-BOLL-WEEVIL EXTERMINATOR. CHARLES R. COOLIDGE, Helena, Ark. Filed July 5, 1922. Serial No. 572,905. 11 Claims. (Cl. 43—141.)



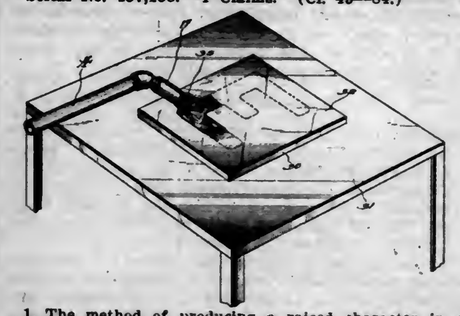
1. A machine of the character described comprising a wheeled frame, fan mechanism disposed in said frame, means for driving said fan mechanism, means for adjusting said fan mechanism substantially vertically within the frame, and striker mechanism disposed in said frame laterally of said fan mechanism and directly in advance thereof.

1,482,786. VANITY BOX. CARROLL E. DODSON, Kansas City, Mo. Filed July 2, 1923. Serial No. 648,888. 3 Claims. (Cl. 132—83.)



1. A vanity box, a powder container in said box, comprising a wall having its lower edge inturned, a follower bottom resting on said inturned edge, a screen closing the upper end of said wall, a clamp ring encircling the upper edge of the wall and clamping said screen in position.

1,482,787. EARTH-BORING DRILL. HAROLD W. FLETCHER, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Sept. 13, 1920. Serial No. 410,035. 7 Claims. (Cl. 255—71.)

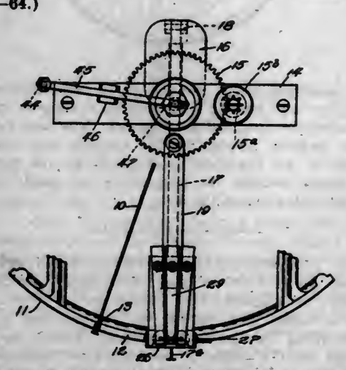


1. In a rotary earth boring drill, the combination of a longitudinally divided head, cutters on the forward end thereof, reaming rollers mounted in a recess extending diametrically through said head, a removable water course mounted in grooves in the meeting faces of said divided head and extending longitudinally through said recess, and a collar at the upper end of said head having channels connecting with said removable water course.

1,482,788. LOCK. JOHN B. FREYSINGER, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed June 2, 1922. Serial No. 565,334. 2 Claims. (Cl. 70—15.)

1. In a lock, the combination of a lock casing having socketed ears at one end, a keeper having a part to enter the space between said ears, spring retracted dead-locking bolts mounted within said keeper, and a main bolt mounted in the lock casing and cooperable with the dead-locking bolts in the keeper to force said dead-locking bolts into dead-locking relation to the socketed ears on the lock casing.

1,482,789. METHOD OF MAKING GLASS LETTERS. EUGENE C. GMELIN, Chicago, Ill. Filed Mar. 30, 1921. Serial No. 457,158. 4 Claims. (Cl. 49—84.)



1. The method of producing a raised character in a sheet of glass, which includes the providing of a die having on its surface a depression corresponding to the character to be formed, the placing of a sheet of glass on the die to cover such depression, and the applying of a flame from a blow-torch downwardly and directly on to the portion of said glass over such depression and with such pressure as to heat, soften, and force said glass mainly thereby into such depression.

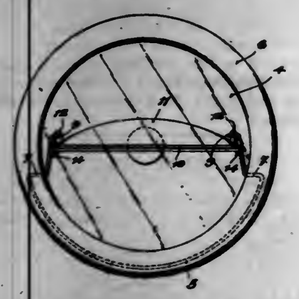
1,482,790. ILLUMINATED SIGN. EUGENE C. GMELIN, Chicago, Ill. Filed Apr. 21, 1923. Serial No. 633,627. 7 Claims. (Cl. 40—133.)

1. A double-face sign comprising a casing having its sides formed with character-bearing plates of light-transmitting material and presenting inner light-reflecting surfaces, an opaque partition extending in the casing between said sides to divide it into chambers, and having an opening therein extending from its upper edge and approximating in size and shape an illuminating unit to be centrally placed therein and an illuminating unit interposed in the partition opposite said character-bearing plates to illuminate said chambers and reflect the light back and forth from said surfaces and those of the partition.

1,482,791. REGULATOR. GUY M. HAFER, Detroit, Mich., assignor to Hoskins Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 14, 1921. Serial No. 500,716. 6 Claims. (Cl. 204—64.)

1. In an electric pyrometer for furnaces, a galvanometer having an oscillating needle, a pin carried by said needle, a ledge over which said pin oscillates, a member

having a plurality of plungers slidably mounted therein, said plungers overlying the path of said pin, means for periodically depressing said member to cause said pin to actuate one of said plungers, an electric circuit having a switch which may be closed by one of said plungers as it is actuated, and means operable by said circuit for varying the temperature of said furnace.

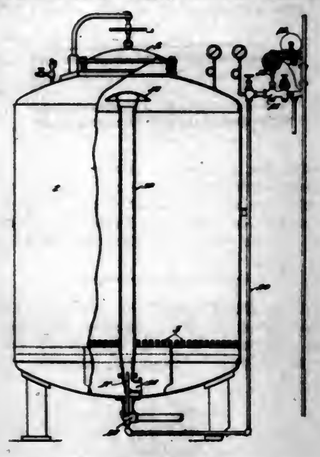


1,482,792. PROCESS OF TREATING THE SURFACES OF CRYSTALLINE MINERAL MATERIALS. MINER L. HARTMANN, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed May 12, 1920, Serial No. 380,763. Renewed July 17, 1922. Serial No. 575,637. 9 Claims. (Cl. 252—1.)

1. The process of treating the surface of crystalline mineral material which consists in heating said material in contact with a halogen salt to a temperature sufficient to produce a surface reaction between said material and said salt but insufficient to produce glazing of the surface of said material.

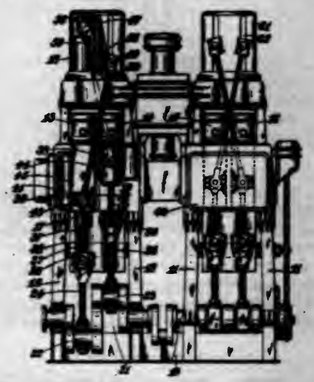
1,482,793. PROCESS FOR TREATING SURFACES OF CRYSTALLINE MINERAL MATERIAL. MINER L. HARTMANN, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed July 16, 1921. Serial No. 485,289. 6 Claims. (Cl. 252—1.)

5. The process of improving the bonding quality of crystalline mineral materials, which consists in moistening the material with a surface pitting acidic substance and heating to a temperature sufficient to produce a surface pitting reaction, but insufficient to produce glazing of the surface of the crystals, substantially as described.



1,482,794. HEADLIGHT SHADE. FRANCIS A. HOLTSINGER, Ottumwa, Iowa. Filed Apr. 5, 1922. Serial No. 549,929. 7 Claims. (Cl. 240—48.6.)

1. A headlight shade comprising in combination with the reflector and lens of a headlight, a support clamped in its operative position between the lens and reflector, a shade element pivoted to the support and overlying the lamp of the headlight, and means on the rear edge of the shade element for supporting the shade element at its rear edge above the lens.

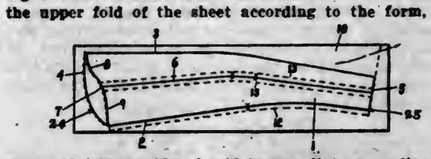


1,482,795. VOMITING KIER. EUGENE D. JEFFERSON, Boston, Mass. Filed Nov. 23, 1920. Serial No. 425,995. 3 Claims. (Cl. 8—18.)

1. A vomiting kier, having, in combination, a vessel for containing the goods to be treated and the liquor for acting on the goods, a vomiting pipe connecting the top and bottom portions of the kier, a steam injector for operating the vomiting pipe to convey liquor from the bottom of the kier to the top thereof, and an automatically operated valve for intermittently opening and closing the steam supply for the injector to vomit

predetermined small quantities of liquor at frequent intervals on the top of the goods irrespective of whether the liquor level in the kier be high or low.

1,482,796. ENGINE. KARL OTTO KELLER, Sunderland, England, assignor of one-half to Robert Pile Doxford, Sunderland, Durham, England. Filed July 8, 1920. Serial No. 394,681. 5 Claims. (Cl. 121—117.)

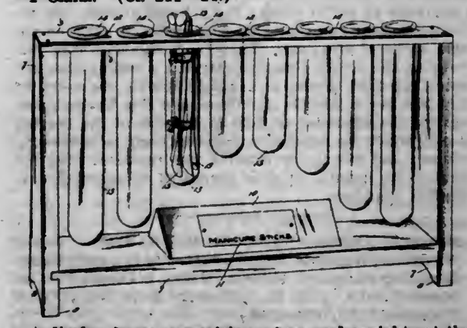


1. In an engine of the type described, the combination of pistons, jointed linkage cross-connecting two pistons which reciprocate in different parallel lines and comprising a first link which is in the plane of the axis of and approximately parallel to the axis of one of the pistons and jointed to that piston, a second link jointed to the first link and to the other piston, and guiding means which constrains the joint connecting the first and second links to move in a line parallel to the piston strokes of that one of the two pistons with which the first link is in immediate connection when it reciprocates with the piston.

1,482,797. SLEEVE FORM. HARRIETT L. KELLEY, Oakland, Calif. Filed Sept. 19, 1918. Serial No. 254,844. 2 Claims. (Cl. 33—12.)

1. The method which consists in taking a sleeve form having inner, outer and end edges, an intermediate seam line, and a sleeve hole line placing a sleeve form on a folded sheet, drawing a line on the upper fold along the

inner and end edges of the form, cutting the sheet on a line outside of the line drawn along the inner edge of the form and along the lines drawn along the ends of the form, placing the form within the folds of the sheet with the inner and edges of the form in register with the corresponding cut edges of the upper fold, marking the intermediate seam line and sleeve hole line on the upper fold of the sheet according to the form, cut-

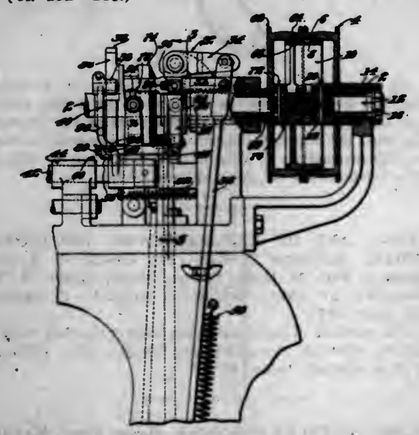


ting said fold outside of said intermediate seam line and along said sleeve hole line, drawing the remaining part of the upper fold over the outer edge of said form, marking the intermediate seam line, the sleeve hole line, and the wrist end line on said upper fold part according to the form, cutting said upper fold part outside said intermediate seam line along said sleeve hole line, and along said wrist end line.

1,482,798. VALVE. JOHN J. KENNEY, Pittsburgh, Pa., assignor to Lawson Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 31, 1919. Serial No. 334,835. 2 Claims. (Cl. 277—32.)

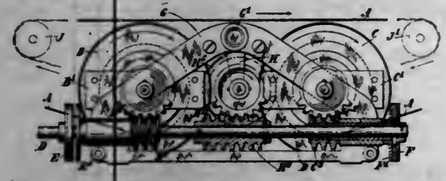
1. The combination with a valve body having a tapered bore and gas port leading thereinto, of a tapered plug extending through and fitting said bore and open from end to end and having a port adapted to cooperate with the body gas port, an abutment member non-rotatably mounted on the small end of said plug and bearing against the end of said body, a member threaded into the small end of said plug and having a flange engaging said abutment member and provided with an opening and a valve member co-operating with said opening and carried by a member threaded into the large end of said plug for controlling the maximum flow through the device.

1,482,799. DISPLAY RACK. OTTO J. KORHUMMEL, Chester, Conn., assignor to C. J. Bates & Son, a Firm composed of Carlton J. Bates and Hamilton C. Bates, Chester, Conn. Filed May 2, 1922. Serial No. 557,950. 1 Claim. (Cl. 211—14.)



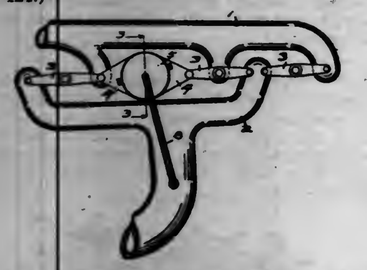
A display frame, comprising a base and uprights at the opposite ends thereof, a metal plate formed on opposite sides with downwardly-extending flanges, the ends of said plates set over and secured to the upper ends of said uprights, said plate formed with a series of perforations combined with a series of glass containers adapted to be passed through the said perforations in the said plate and be supported thereby.

1,482,800. SHUTTLE CHECK AND BINDER. ARTHUR T. LARIN, Waltham, Mass. Filed Jan. 30, 1922. Serial No. 532,871. 6 Claims. (Cl. 139—185.)



3. The improved shuttle-check comprising, in combination with a binder-bar having its outer portion reversely bent and formed at its inwardly-extending extremity with a bearing-eye 6 by which said bar may be mounted pivotally upon a loom-lay, a yieldable strip 10 fastened to the said bar, extending outward beyond the position of said bearing-eye for coaction with the shoulder of a shuttle, and adapted to swing away from and toward the bar, a pin slidably mounted in holes in the two branches of the bar and engaging by its rear end with said yieldable strip, a spring engaging with said slidable pin between the said branches and acting with a tendency to project the pin and the strip rearwardly, and means to vary the effect of the spring.

1,482,801. DRIVING AND STOPPING MECHANISM. ROBERT H. LAWSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Oct. 18, 1918, Serial No. 258,677. Divided and this application filed Feb. 7, 1919. Serial No. 275,610. 16 Claims. (Cl. 192—146.)



1. A driving and stopping mechanism having, in combination, a shaft, a high speed driving mechanism therefor, a low speed driving mechanism therefor, means under the control of the operator for throwing out the high speed mechanism, and means for throwing in the low speed mechanism at a predetermined point in the rotation of the shaft after the high speed mechanism is thrown out and for thereafter throwing out the low speed mechanism and stopping the shaft at a predetermined point in the rotation thereof, said means including an oscillating lever, the movement of which in one direction effects said throwing in of the low speed mechanism.

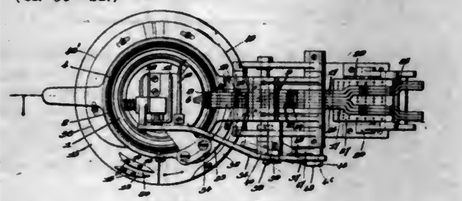
1,482,802. FEED MECHANISM FOR MOVING STRIP CHARTS. EDMUND WOODWARD LEWIS, London, England. Filed Sept. 21, 1922. Serial No. 589,598. 5 Claims. (Cl. 40—42.)

1. In a strip-chart feed-mechanism, the combination of a delivery spool and a take-up spool for a strip, a driving roller arranged to press against the strip on the take-up spool with sufficient grip to control the rate of feed of the strip, means for rotating the driving roller, a friction-drive for rotating the take up spool in the direction for winding up the strip and arranged to have less grip than the said driving roller has on the strip, but to have a speed such that it at all times tends to overrun the driving roller, and retarding means tending to retard the rotation of the delivery spool, substantially as described.

1,482,803. AUXILIARY AIR VALVE FOR AUTOMOBILES. RANDLE O. LOUGHEED, Montpelier, Ohio. Filed July 31, 1922. Serial No. 578,543. 6 Claims. (Cl. 123—124.)

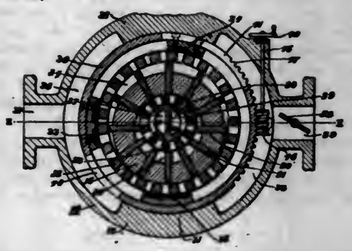
1. In an automatic auxiliary air valve for an internal combustion engine, a cup connected with the intake manifold of the engine, a cover substantially fitting the interior of the cup, the cup and cover formed of material having dissimilar expansivity to close and open the cup according to the temperature of the cup and cover.

1,482,804. ART OF MANUFACTURING ISOPROPYL ETHER. MATTHEW D. MANN, Jr., Roselle, N. J., assignor to Seth B. Hunt, trustee, Mount Kisco, N. Y. Filed Oct. 27, 1921. Serial No. 510,821. 5 Claims. (Cl. 260—151.)



1. The method of manufacturing isopropyl ether which comprises reacting upon isopropyl alcohol with sulfuric acid of a strength below 85%.

1,482,805. SILENCER FOR GUNS. HIRAM PERCY MAXIM, Hartford, Conn. Filed Feb. 21, 1921. Serial No. 446,822. 3 Claims. (Cl. 89—31.)

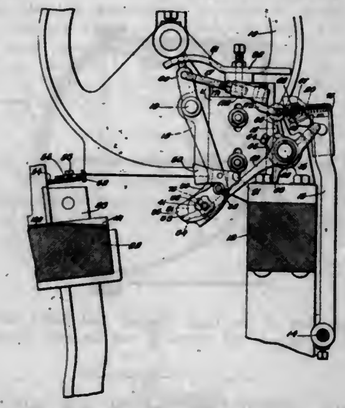


1. In a gun silencer, a tubular casing having a bore open at one end and provided with a shoulder spaced from its other end, an apertured washer against said shoulder, a plurality of baffle members within said bore, the innermost member being in engagement with said washer and all of said members and said washer being removable through the open end of said casing, and an apertured nut threaded into the open end of said bore for retaining said baffle members and washer therein.

1,482,806. KNITTING MACHINE. MAX C. MILLER, Cumberland Hill, R. I., assignor to Jenckes Knitting Machine Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed Mar. 12, 1917, Serial No. 154,190. Renewed Aug. 21, 1922. Serial No. 583,357. 13 Claims. (Cl. 66—12.)

1. A knitting machine having, in combination, a rotary needle cylinder, a series of yarn changers for feeding the yarn to the needles at the same point, means continually moving in time with the needle cylinder for operating the yarn changers to insert or to withdraw their yarn, and mechanism for controlling the action of said means to render it selectively active on the yarn changers to either insert an inactive yarn or to withdraw an active yarn.

1,482,807. REGULATOR FOR ROTARY PUMPS AND MOTORS. HUGH W. NEWBERG, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 31, 1921. Serial No. 497,177. 10 Claims. (Cl. 103—120.)

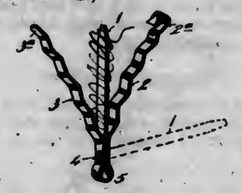


5. In combination in an apparatus of the character described, a casing member having inlet and outlet means; a ported cylindrical ring; a rotatable element disposed within and eccentric to the cylindrical ring and carrying a plurality of radial vanes; the cylindrical ring, the rotatable element and the vanes cooperating to form an annular series of expansible chambers; a regulator ring surrounding the ported ring and carrying a sealing shoe adjacent the inlet means arranged to inhibit the entry of fluid into the expansible chambers, said ring having openings for the admission of fluid at the side of the bearing shoe on which the expansible chambers begin to increase in volume; and means for rotating the regulator ring for varying the amount of fluid permitted to enter the expansible chambers.

1,482,808. THREAD-PARTING MECHANISM. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Mar. 17, 1921. Serial No. 453,028. 5 Claims. (Cl. 139—264.)

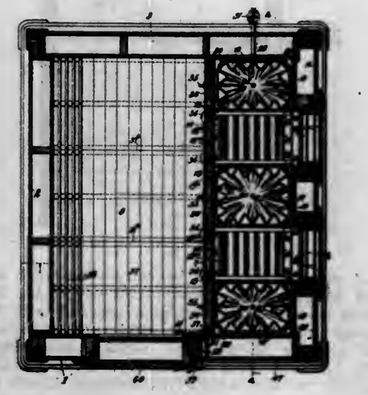
1. A weft replenishing loom having, in combination, weft replenishing mechanism including a hopper arm, a shuttle feeler, a movable knife pivoted thereon, a cutting

blade cooperating with the knife, a knife holding plate, a spring washer cooperating with the holding plate to yieldingly hold the knife in any position to which it may



be moved, a lever pivotally mounted on a stationary portion of the machine, and a bypass pawl carried by the hopper arm adapted to engage the lever to open the knife upon operation of the hopper arm.

1,482,809. POULTRY HOVER. JOHN G. POORMAN, Tinley Park, Ill. Filed Oct. 9, 1922. Serial No. 593,266. 1 Claim. (Cl. 119—33.)

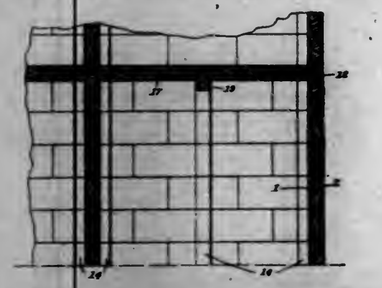


A poultry hover comprising a body formed of enclosing sides, and a top-portion provided with feathers depending therefrom into the interior of said body and containing openings therethrough adjacent its front and rear edges for ventilation, the feathers depending from said top-portion stopping a sufficient distance from the front edge of said top-portion to provide a runway between said feathers and the front of the structure.

1,482,810. HAIR WAVER. LOUIS POTEMKIN, Brooklyn, N. Y. Filed Dec. 31, 1921. Serial No. 526,162. 1 Claim. (Cl. 132—41.)

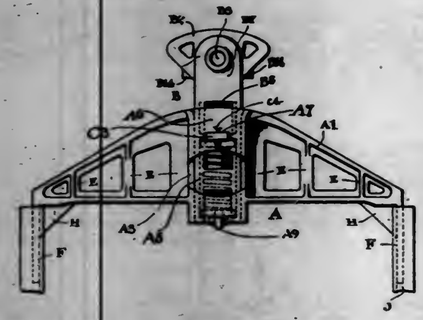
A hair waver comprising opposing bars secured together at corresponding ends and extending divergently therefrom, one of said bars having a return end portion extending over said bar, said end portion having an inner recess opening through the edge of said end portion, and provided with side webs, the corresponding end of the other bar being reduced to fit in said recess between said webs, said bars having an outward spring tendency to retain said reduced end in said recess, and a third bar pivoted between the first-named ends of the other bars.

1,482,811. COMBINED FREEZER AND COOLER. REMER RAIMOND REID and FREDERICK NEUDORFF, Atlanta, Ga. Filed Dec. 15, 1922. Serial No. 607,160. 19 Claims. (Cl. 62—61.)



1. A refrigerating device having top, bottom and side insulating walls, a freezing compartment therein having top, bottom and side walls spaced from the first-mentioned walls and each formed of slatted openwork to permit free circulation of air through and around the compartment, and tanks on opposite sides of said compartment for containing a cooling medium.

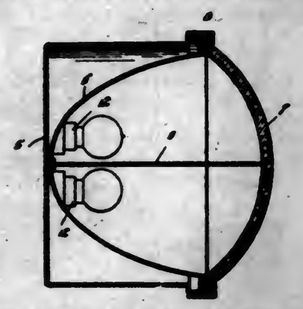
1,482,812. APPARATUS FOR DRYING DIVIDED MATERIALS. WILLIAM E. ROBERTS, Lompoc, Calif. Filed Dec. 14, 1921. Serial No. 522,253. 5 Claims. (Cl. 34—34.)



1. An apparatus for drying divided materials, comprising material supporting means consisting of opposing walls formed of downwardly converging inclined louvre plates separated to provide openings therebetween, said walls forming a vertical chute adapted to receive the material and to confine and support same by such inclined surfaces, while permitting descent of the material by gravity, means for passing drying medium through said openings so as to pass transversely through material confined between said inclined surfaces and a vertically reciprocating agitating means extending vertically between the opposing louvre plates to agitate and loosen the material.

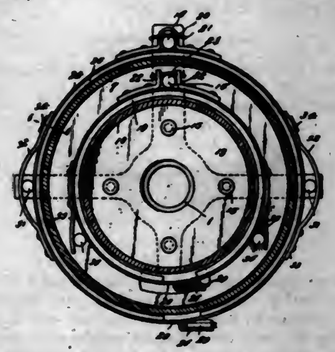
1,482,812. REENFORCING FRAME FOR CONCRETE BUILDING STRUCTURES. MANSOUR SAMANA, Atlantic City, N. J. Filed Mar. 18, 1922. Serial No. 544,769. 4 Claims. (Cl. 72—15.)

1. A concrete structure, including an exterior metallic casing composed of opposite skins comprising box-like sections having upturned flanges, provided with tapered openings presenting inclined edges, said sections being fitted together in staggered relation simulating wall blocks, interconnecting rods having headed terminal portions bent at right angles and arranged in the tapered openings and engaging the inclined edges thereof to draw the sections together, and a plastic filling poured between the sections of the opposite skins.



1,482,814. RAILWAY CAR. HUGH W. SANFORD and GEORGE H. JONES, Jr., Knoxville, Tenn., assignors to Sanford-Day Iron Works, Knoxville, Tenn., a Corporation of Tennessee. Filed May 10, 1921. Serial No. 468,254. 5 Claims. (Cl. 105—364.)

2. In a structure of the kind described and in combination with the longitudinal sills, a one-piece casting comprising an end sill extending across the end of the car from one of said longitudinal sills to the other, the ends of said sill having corner stiffeners for connection with said sills providing a rigid frame to prevent twisting, a bumper formed integral with said end sill and projecting outwardly therefrom, and a draw bar socket opening through the aforesaid bumper, substantially as described.



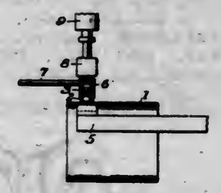
1,482,815. VEHICLE HEADLIGHT. PETER SATHER, East Stanwood, Wash. Filed Mar. 13, 1923. Serial No. 624,692. 1 Claim. (Cl. 240—41.)

A headlight lamp structure comprising a casing, a concavo-convex lens closing the forward end of the casing and disposed with its intermediate portion in advance of the forward edge of the casing, a concaved reflector housed within the casing and having its forward edge in contact with the edge portion of the lens, a plate disposed in the median vertical plane of the casing and housed within the reflector and the lens, and dividing the area therein into tow compartments, the forward portion of the plate being disposed in advance of the

forward edge of the lamp casing, and bulbs located in the compartment and disposed one at each side of the plate.

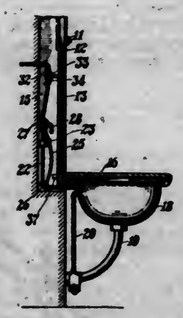
1,482,816. BRAKE MECHANISM FOR MOTOR VEHICLES. DAVID H. SCHALL, Canton, Ohio. Filed Oct. 4, 1922. Serial No. 592,262. 3 Claims. (Cl. 188—77.)

1. In a brake mechanism of the class described, the combination with the rear axle housing and the ground wheel journaled upon the outer end of said housing, of brake drums secured to the inner side of said ground wheel concentrically of the axis thereof and to each other, brake bands encircling said drums, respectively, means carried by the rear axle housing and supporting said brake bands about said drums, each brake band being split at its lower portion and cam levers connected to the split portions of said brake bands and operable to contract the bands.



1,482,817. MILK-CAN-IDENTIFYING MEANS. GEORGE H. SHAW, Los Angeles, Calif. Filed Feb. 5, 1921. Serial No. 442,707. 2 Claims. (Cl. 40—11.)

1. Milk can identifying means comprising a plate of metal having return shipping directions stamped thereon and being conformed to the curvature of the can to which it is applied and having ledges at its bottom, ends and top; the bottom and end ledges forming grooves to



receive an identification slip having shipping directions thereon, and said ledges being spaced apart to form an open-sight space and to form drainage outlets at the corners; the top ledge being adapted to prevent accidental removal of the identification slip, and being spaced from the end ledges to allow the identification slip to be inserted to give shipping directions and to obscure the return shipping directions and to be removed to expose the return shipping directions.

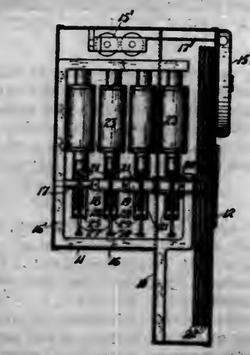
1,482,818. METHOD AND APPARATUS FOR WELDING. WILLIAM P. SHIPMAN, Pittsburgh, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Apr. 23, 1921. Serial No. 463,918. 19 Claims. (Cl. 78—92.)

1. In the method of welding metal members together while heated and in welding position, the step consisting in interposing a third member between the welding pressure producing means and the point of weld to transmit the welding pressure approximately to the point of weld and at a point intermediate the length of one of the members in the direction of welding pressure, substantially as described.

1,482,819. HAIR DRESSING, WASHING, AND SHAMPOOING EQUIPMENT. LEO B. SIMONSON, New York, N. Y. Filed July 13, 1923. Serial No. 651,285. 6 Claims. (Cl. 45—38.)

1. A device of the class described, adapted to be secured to a wall having a recess formed therein, a pair of vertical guide elements on said wall one on each side of the said recess, a frame slidable in said guide elements, a table fixed to said frame and projecting laterally from the said wall, a washbasin normally covered by said table, said recess containing water pipes for supplying water to said basin, and hand valves for said water pipes located in the recess and accessible by raising the said fame and table.

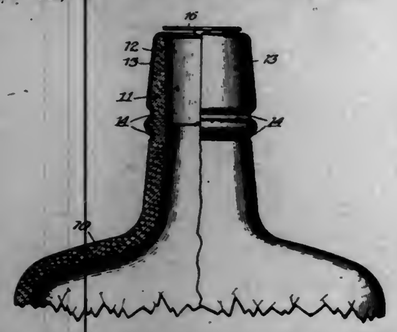
1,482,820. ADVERTISING MANIKIN. LEO B. SIMONSON, New York, N. Y. Filed July 13, 1923. Serial No. 651,288. 4 Claims. (Cl. 40—139.)



1. A display device comprising a base, a manikin movably mounted thereon, a motor, and an operative connection between said motor and manikin whereby oscillatory movements of successively varying extent are imparted to the manikin.

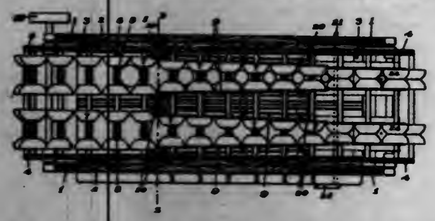
1,482,821. COLLAR PIN. EUGENE SIXT, Springville, N. Y. Filed July 27, 1923. Serial No. 654,110. 1 Claim. (Cl. 24—87.)

A pin fastener for holding the points of a soft collar in adjacent relation comprising a slightly curved bar having spaced S-shaped pins rigidly fastened to the ends thereof, the free ends of the pins projecting inwardly towards each other with the free end portions of the same in close proximity to the rear surface of said bar, said pin members being provided with end portions inserted in sockets in the end of the bar and soldered therein.



1,482,822. DIRECTION INDICATOR FOR AUTOMOBILES OR OTHER VEHICLES. DAVID U. STANAGH, Oakland, Calif. Filed May 8, 1919, Serial No. 295,628. Renewed Oct. 21, 1920. Serial No. 418,505. 2 Claims. (Cl. 177—329.)

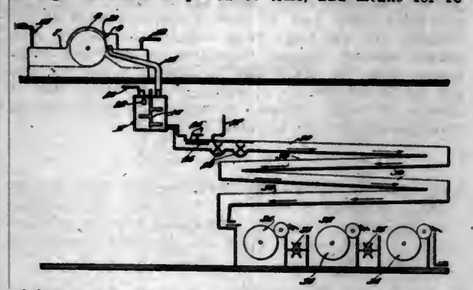
1. In an indicator of the class described, a cylindrical casing having an enlarged and a reduced portion, a substantially C-shaped support within the casing provided



with an extension secured to the wall of the enlarged portion of the casing, solenoids depending from the upper horizontal arm of the support, a shaft journaled in the vertical arms of the support and extending longitudinally of the casing, rotatable sleeves of increasing length on the shaft and carrying indicating vanes thereon within the said enlarged portion of the casing and means for selectively operating the solenoids to rotate the said sleeves.

1,482,823. SEAL FOR BOTTLES. WALTER A. STATTMANN, Chicago, Ill., assignor to Hugh R. Adams, Oak Park, Ill., and Hollis B. Wilcox, Glencoe, Ill. Filed Dec. 23, 1922. Serial No. 608,767. 2 Claims. (Cl. 215—38.)

1. A seal for a bottle comprising a thimble adapted to be secured over the mouth of the bottle, a disk cut from the top of said thimble except for a plurality of narrow bridges, the opening uncovered by said disk being greater than the opening in the neck of the bottle whereby the cork of the bottle may be withdrawn through the opening when said seal is broken.

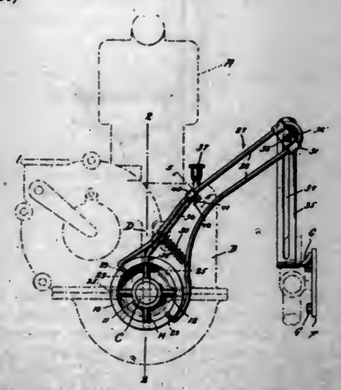


1,482,824. SIZING APPARATUS. FRED STEBLER, Riverside, Calif., assignor to Stebler Parker Co., Riverside, Calif., a Corporation of California. Filed Sept. 25, 1923. Serial No. 664,696. 11 Claims. (Cl. 130—32.)

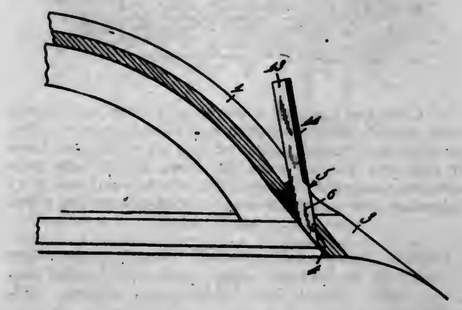
1. A machine for sizing and grading articles comprising endless conveyors carrying a multiplicity of sizing elements, yielding means for holding said sizing elements in operative relation and adjustable guiding means for said sizing elements in frictional contact with which said elements are maintained by said yielding means.

1,482,825. APPARATUS FOR TREATMENT OF WASTE PAPER. JOHN STEVENS, 3d, Boston, Mass., assignor to Arthur D. Little, Inc., Cambridge, Mass., a Corporation of Massachusetts. Filed Nov. 20, 1920. Serial No. 425,541. 4 Claims. (Cl. 92—7.)

1. An apparatus for the treatment of waste printed paper comprising means for forming a hot pulp solution, means for thereafter mixing the solution with an alkaline detergent, a trough into which the pulp discharges after treatment with the detergent and of sufficient length to cause the detergent to remain in contact with the pulp during a substantial period of time, and means for receiving and washing the pulp after its discharge from the trough to remove ink and dirt therefrom.

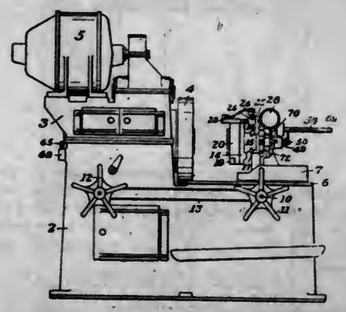


1,482,826. SAFETY HOOK. KARL HJALMAR STOLSTEDT, Centralia, Wash. Filed July 7, 1923. Serial No. 650,158. 2 Claims. (Cl. 24—230.)



1. A safety hook including a shank provided with an opening and a bill extended toward the shank, and a ring rotatably mounted in the opening of the shank, said ring being adapted to pass the bill in one angular adjustment thereof, said ring being engageable with the underside of the bill and the opposite portion of the shank to close the opening between the extremity of the bill and the shank and also being adapted to be swung up on the shank away from the bill to leave the opening between the extremity of the bill and the shank free and unobstructed.

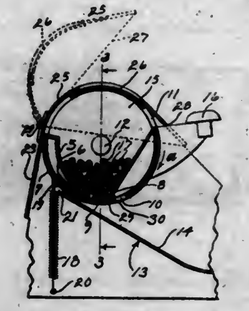
1,482,827. THRUST BEARING FOR CRANK SHAFTS. BARTLETT F. VAVRUSKA, Prairie du Chien, Wis. Filed Dec. 8, 1922. Serial No. 605,674. 8 Claims. (Cl. 64—49.)



1. A thrust bearing structure for the crank shaft of internal combustion engines, comprising a pulley secured upon the crank shaft and replacing the usual pulley, said pulley being formed with a reduced extension carrying a roller bearing structure, a stationary member disposed against the front of the engine and having a threaded periphery, and a nut ring screwed onto said threaded periphery in engagement with the roller bearing structure and provided with means for engagement by a wrench.

1,482,828. PULVERIZING ATTACHMENT FOR PLOWS. STROTHER WATSON, Gallatin, Tenn. Filed Apr. 8, 1922. Serial No. 550,629. 6 Claims. (Cl. 97—117.)

2. The combination with a mold board, and a plow share of a plurality of pulverizing blades, said board, share and blades having cooperating means whereby the blades are held in operative position without the use of fasteners.



1,482,829. THREADING MACHINE. EDGAR H. WILSON, Chartiers Township, Allegheny County, Pa., assignor to Taylor-Wilson Manufacturing Company, McKees Rocks, Pa., a Corporation of Pennsylvania. Filed Jan. 21, 1921. Serial No. 438,829. 19 Claims. (Cl. 10—89.)

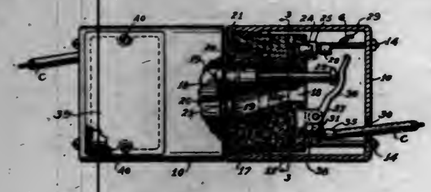
1. A threading machine, comprising devices for gripping the work to be threaded, a thread-cutting device movable toward and away from the periphery of the work, power means for operating said device, means for automatically controlling said means to move said cutting device away from the work after a thread of predetermined length has been cut thereon, and means controlling said first mentioned means for moving said cutting die away from the work at any time during the operation of the machine, substantially as described.

1,482,830. DISPENSING DEVICE. WILLIAM G. WOODS and NELSON T. SHAW, Los Angeles, Calif. Filed July 31, 1922. Serial No. 578,690. 1 Claim. (Cl. 206—21.)

In a dispensing device, the combination of a chute having side and rear walls and a floor, a receptacle rotatably mounted on the side walls and provided with spaced walls having slots in offset relation, a slotted member connected with the side walls of the chute and extending between the hollow walls, means to yieldingly

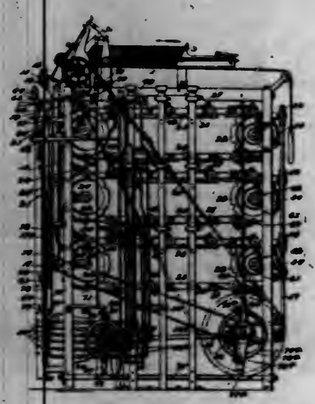
hold the receptacle in position with one of its slots registering with the slot in the stationary member, and means to rotate the receptacle to position with its other slot registering with the slot in the stationary member.

1,482,831. METHOD OF PRODUCING STAGE EFFECTS. WALTER L. ACKERMAN, Hollywood, Calif., assignor of one-half to Yale Corporation, Los Angeles, Calif., a Corporation of California. Filed June 13, 1921. Serial No. 477,132. 5 Claims. (Cl. 88—16.)



4. In the method of producing stage effects, the combination of steps consisting in illuminating mainly from the rear a three dimensional object whose silhouette corresponds to that of another three dimensional object of an entirely different appearance when illuminated from the front, and illuminating said first object from the front to disclose it in its three dimensions.

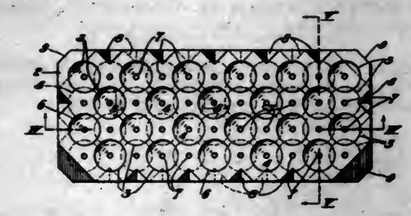
1,482,832. FOLLOWER-BLOCK MOUNTING. HARRY L. ATKINSON, San Francisco, Calif. Filed Mar. 14, 1923. Serial No. 624,949. 4 Claims. (Cl. 129—27.)



1. In combination with a filing receptacle, a follower mounted therein, a guideway in the bottom of the receptacle, a follower mounting in said guideway and connected to the follower, said mounting operable by vertical movement of the follower to clamp the follower to the bottom of the receptacle or release it to permit it to be longitudinally adjusted therein.

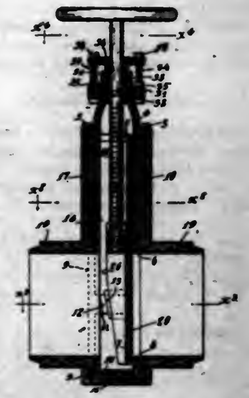
1,482,833. ELECTRIC COUPLER. REX G. AVERILL, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed June 7, 1919. Serial No. 302,428. 14 Claims. (Cl. 173—332.)

2. An electric coupling unit adapted to be connected to a like unit for extending a train line circuit, comprising a terminal in said unit for each side of a circuit, electrical cross connecting means engaging both the terminals and normally dead conducting means mounted on said unit for disengaging said electrical connecting means from one of the terminals and conducting current to the like member in the cooperating unit when connected thereto.



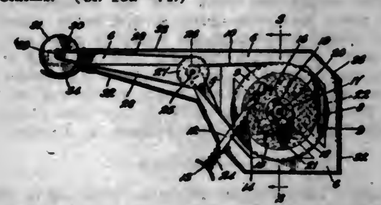
1,482,834. MAIL-DISTRIBUTING APPARATUS. WILLIAM BARRY, Oswego, N. Y., assignor to The Auto Mail Distributer, Inc., Syracuse, N. Y., a Corporation of New York. Filed Aug. 13, 1912, Serial No. 714,923. Renewed June 16, 1922. Serial No. 568,821. 44 Claims. (Cl. 214—11.)

1. Mail distributing apparatus, in combination with mechanism for individually weighing the pieces of mail matter and indicating the weight thereof.



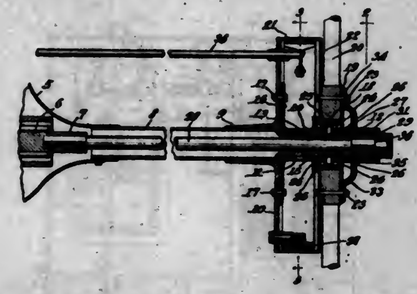
13. In mail distributing apparatus, in combination, an endless conveyer provided with a series of individual letter holders, means for successively opening said holders when at the letter receiving position, operating means for said conveyer to bring said holders successively to the letter receiving position, means for delivering letters to said holders, a series of means arranged along the path of said conveyer for delivering the letters from the holders thereof, said series of means being normally inoperative for removing letters, and devices whereby the means of said series are operated to cause delivery of letters from said holders and whereby the delivery point of each letter is predetermined.

1,482,835. DIES. ERNST BOLEY, Cleveland, Ohio, assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed June 9, 1922. Serial No. 567,166. 7 Claims. (Cl. 205—29.)



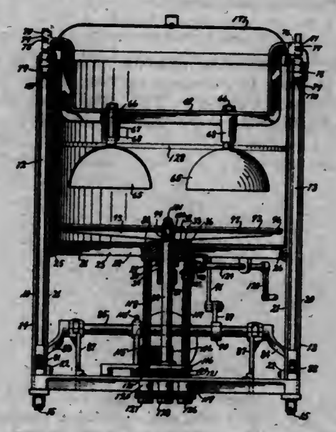
1. A die plate having a plurality of rows of tapering holes therein, each succeeding hole of said rows of holes entering from opposite sides of said plate, and the holes of each row entering from the same side of said plate being in staggered relation with the holes of the next adjoining rows entering from the same side of said plate.

1,482,836. IRRIGATING VALVE. HENRY J. BRUBAKER and JOHN B. BRUBAKER, San Dimas, Calif. Filed Jan. 24, 1921. Serial No. 439,532. 12 Claims. (Cl. 251—57.)



1. A valve comprising a skeleton frame of the valve body embedded in concrete and cooperating with the concrete to form a valve chamber having inlet and outlet openings, the frame having a valve seat within the chamber, and valve mechanism cooperating with the valve seat.

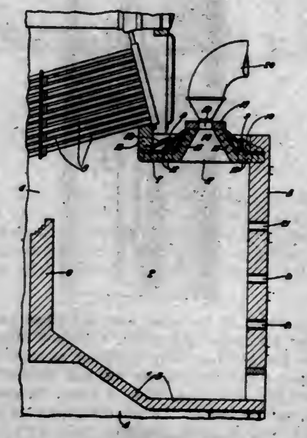
1,482,837. MANICURING DEVICE. DAVID D. BUCK, Flagler, Colo., assignor of one-half to O. C. Lovett, Flagler, Colo. Filed Feb. 27, 1923. Serial No. 621,590. 5 Claims. (Cl. 132—74.)



1. In a manicuring device, a rotatable abrasive wheel; a stationary curved guard member adjacent the periphery of said wheel; a motor; and connections between said motor and wheel for rotating the latter at a relatively high speed.

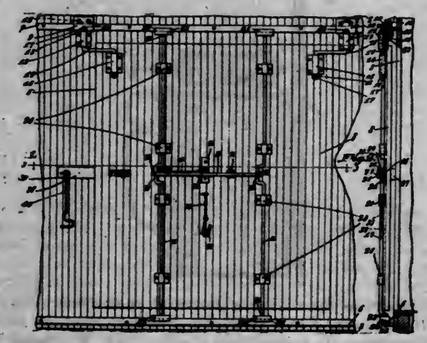
1,482,838. REAR-AXLE CONSTRUCTION. ANTONIO J. CASALE and JOSEPH B. SIMPSON, Takoma Park, D. C., assignors to National Differential Manufacturing Company, a Corporation of Delaware. Filed Dec. 4, 1920. Serial No. 428,277. 3 Claims. (Cl. 180—88.)

1. In a rear axle construction, a tubular spindle having a portion adapted for insertion upon the tubular extension of a disk, means to hold the spindle upon the extension, a wheel embodying a tubular hub mounted upon the tubular spindle, a hub coupling embodying a cap portion secured to the hub and a tubular portion having a bore which is polygonal in cross section, a bushing removable within said bore and having its exterior polygonal in cross section and having a bore which is polygonal in cross section, a cap detachably engaging the tubular portion of the hub coupling, and an axle section extending through the tubular spindle and through the bore of the bushing.



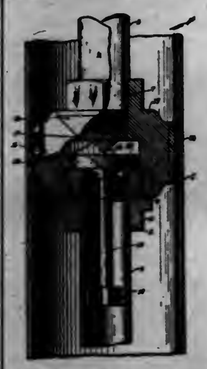
1,482,839. LAUNDERING MACHINE. WALTER H. COTTON, Chicago, Ill. Filed Sept. 10, 1919. Serial No. 322,884. 11 Claims. (Cl. 68—19.)

1. In a device of the class described, in combination, a vat, washing means operable in said vat, a shaft projecting through the bottom of the vat, a revoluble clothes supporting table fixed upon the shaft within the vat, and means to impart intermittent motion of rotation to the shaft.



1,482,840. STEAM-BOILER FURNACE. FREDERICK J. CROLIUS, Munhall, Pa. Filed Jan. 14, 1922. Serial No. 529,294. 3 Claims. (Cl. 110—28.)

1. A boiler furnace comprising a main combustion chamber having front, side, top and bottom walls, and a back wall terminating short of the boiler tubes, a sub-combustion chamber formed in the top wall of said combustion chamber, said sub-chamber having downwardly and outwardly diverging side walls, a combined air and fuel inlet entering the upper end of said sub-chamber, said combined air and fuel inlet being adapted to direct a mixture of air and fuel through said sub-chamber and downwardly on a vertical line within said main combustion chamber, said diverging side walls of said sub-chamber being adapted to become incandescent due to the

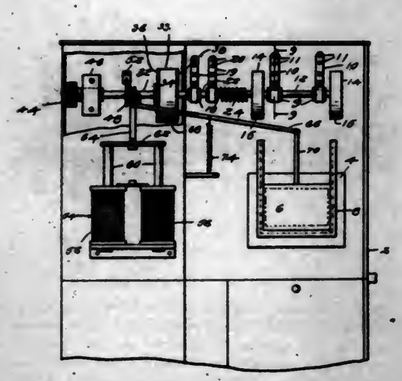


combustion of the air and fuel mixture within said sub-chamber, and said air and fuel mixture being adapted to expand within said sub-chamber and sweep over said incandescent surfaces, and a plurality of air inlets formed in said front wall adapted to direct air into said main combustion chamber at right angles to the flow of partially combusted fuel from said sub-combustion chamber.

1,482,841. SLIDING DOOR FOR CARS. JACOB L. CROOK, Topeka, Kans. Filed Jan. 26, 1920. Serial No. 354,160. 1 Claim. (Cl. 20—23.)

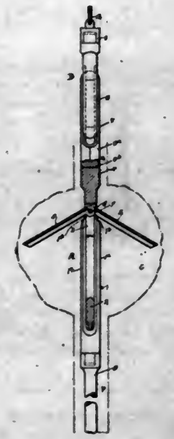
In a sliding door operating mechanism, an upper track section and a lower track section, a laterally movable closure disposed between the track sections, and having cleats, securing rods operating in the cleats and having offset end portions, shoes movable on the track sections and having openings to receive the offset end portions of the rods, an arm connecting the supporting rods, a controlling lever having pivotal connection with the arm, a bracket member secured to the door, said lever having pivotal connection with the bracket member, said arm and controlling lever having registering openings to receive a locking member, and said controlling lever adapted to operate to move the door laterally.

1,482,842. COMBINATION PUMP-ROD GUIDE, COUPLING, AND VALVE CAGE. JOHN G. DORWARD, San Francisco, Calif. Filed Mar. 9, 1922. Serial No. 542,345. 12 Claims. (Cl. 103—202.)



1. In a pump of the character described the combination with the discharge casing, a hollow pump rod and a hollow plunger rod, of a coupling member connecting the pump rod and the plunger rod and formed to prevent fluid entering the pump rod, a valve interior of said coupling, and means on the coupling forming a guide for the valve and a guide for the rods with relation to the discharge casing and permitting flow of fluid through the coupling member for passage between the casing and the pump rod.

1,482,843. LUBRICANT CONTAINER. WALTON FJELDSTROM, Kenaston, Saskatchewan, Canada. Filed Aug. 1, 1921. Serial No. 488,994. 1 Claim. (Cl. 221—52.)



A device of the character described, comprising a lubricant container, a lead pipe located externally of the container, but communicating at the lower end therewith, a relatively large cover closing the upper end of the container and having a port therethrough, a fluid pump comprising a cylinder mounted on the cover, means supporting the cylinder above the cover, removable covers for the end of the cylinder, a piston slidably mounted in the cylinder and manually operated in one direction, a spring operating the piston in the opposite direction, a pipe connecting the cylinder with the port in the cover and disposed directly over the said port and over the control valve and a spring control valve mounted on the lower face of the cover and removable therewith and coacting with the port, the cover, the pump and valve being removable as a unit from this container said pump being disposed entirely outside the container.

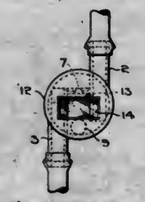
1,482,844. MOTION-PICTURE APPARATUS. ROY M. FORSYTH, Gouverneur, N. Y., assignor of one-half to Otto F. Pattberg, Gouverneur, N. Y. Filed Mar. 31, 1923. Serial No. 629,087. 3 Claims. (Cl. 88—17.)

1. In a fire trap operating mechanism for moving picture machines, in combination with the frame thereof, having a film opening and a gate therefor, a friction roller mounted in bearings on said machine frame adjacent the film opening, a rotary permanent magnet journalled on said machine frame and having a driving connection with said friction roller, an armature drum concentric with but in spaced relation over said magnet, an electric circuit including an electromagnet, means operated by said armature for opening and closing said circuit, and means operated by said electro magnet for raising and lowering said gate.

1,482,845. OIL-WELL AGITATOR. THOMAS H. GALLAGHER, Crafton, Pa., assignor to Twin Packer Oil and Gas Company, Pittsburgh, Pa. Filed Sept. 29, 1922. Serial No. 591,360. 2 Claims. (Cl. 166—18.)

1. In a tool of the character described, a lower jaw, agitating members carried by said jar and disposed to be forced outwardly away from the jar during downward movement of the same, and an upper jar permanently secured to said lower jar.

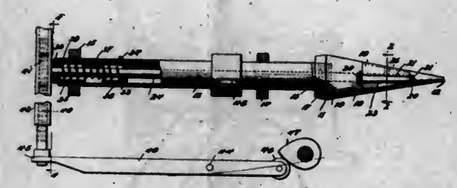
1,482,846. POLE PUSHER. PHILIP J. HARRAH, Bloomfield, Ind. Filed June 28, 1922. Serial No. 571,486. 5 Claims. (Cl. 254—133.)



1. In a pole pusher, two telescoping sections in longitudinal alinement, the upper section to engage a pole and consisting of a cylinder, and the lower section to be anchored to the ground and comprising a bar projecting into said cylinder, and a runner movable on said bar and constituting a seat for said cylinder.

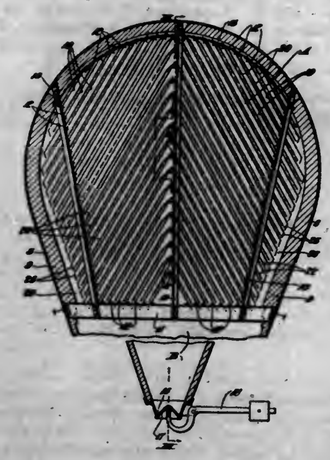
1,482,847. COMPOSITION FOR NONMETALLIC GEARS. HERBERT L. JOHNSTON, Troy, Ohio, assignor to The Hobart Manufacturing Company, Troy, Ohio, a Corporation of Ohio. Filed July 12, 1920. Serial No. 395,464. 2 Claims. (Cl. 106—22.)

1. A new and useful material comprising sponge impregnated with a phenolic condensation product, the same being subjected to great pressure under influence of heat such as will convert the phenolic product into a solid.



1,482,848. CUT-OFF DEVICE FOR VACUUM PIPE LINES. JOHN FRANK JOHNSON, Eketahuna, Wellington, New Zealand. Filed Jan. 18, 1923. Serial No. 613,539. 3 Claims. (Cl. 31—97.)

2. A device for the purpose specified comprising a body; nipples extending into the latter from opposite sides; a valve operating between the inner portions of said nipples; a cross passage between the outer portion of the body and an inner wall therein, containing a port; and a valve seating containing niches surrounding said port on the inner side of said cross wall.

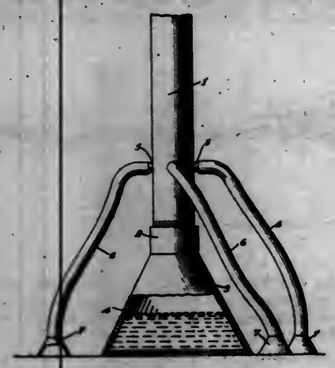


1,482,849. CONE-WINDING MANDREL. GIBSON H. KENNEDY, Cedartown, Ga., assignor, by mesne and direct assignments, to Sonoco Products Company, Hartsville, S. C., a Corporation of South Carolina. Filed July 25. 1922. Serial No. 577,410. 22 Claims. (Cl. 93—79.)

1. A device for winding a flexible sheet into the form of a cone comprising a mandrel having a conical outer surface on which the sheet winds the end portions of said mandrel being continuous circularly and a gripping member extending longitudinally between said end portions only having its outer surface in the lines of the conical surface of the mandrel and having slight rela-

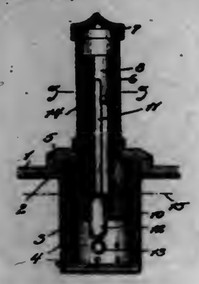
tive rotary movement thereon to cooperate with the mandrel in gripping the central portion of the edge of the sheet or releasing it and means extending through the end of the mandrel for operating said gripping member to cause the relative rotary movement in either direction.

1,482,850. DUST CATCHER. FRED E. KLING, Youngstown, Ohio. Filed Aug. 4, 1022. Serial No. 579,682. 3 Claims. (Cl. 183—111.)



1. A dust catcher comprising a casing, a plurality of spaced plates extending from the center of said casing downwardly and outwardly toward the side walls thereof, means for supporting said plates, said plates being arranged in pairs and terminating short of the side walls of said casing so as to permit dust to travel downwardly along the side walls of the casing, the upper plate of each pair of plates being provided with perforations through which dust may fall and the lower plate being unapertured, and an inlet and outlet for the gases adapted to cause a flow of gas across said plates.

1,482,851. DREDGE. LOUIS E. KLINGON and ELDRIDGE M. GATHRIGHT, Bridgeport, Conn. Filed Nov. 2, 1921. Serial No. 512,288. 4 Claims. (Cl. 262—2.)

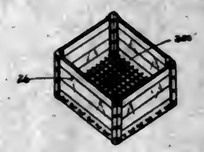


1. In a device for collecting heavy metals from beneath the surface of a body of water, a main suction conduit and an auxiliary suction conduit branched from the main conduit, the main conduit being completely closed at its lower end to form a receptacle for the heavy metals collected, the main conduit being of greater cross sec-

tional area than the auxiliary conduit, to provide for a reduction of the speed of flow in the main conduit, as

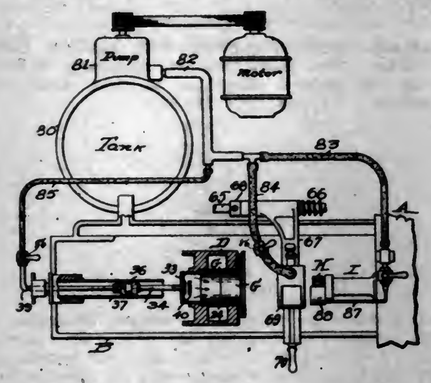
compared with the speed of flow in the auxiliary conduit, and to provide for the depositing of all of the heavy metals in the receptacle.

1,482,852. COMBINED HYDROMETER AND LIQUID-LEVEL GAUGE. VALENTINE C. KLOEPFER, St. Louis, Mo., assignor of one-half to A. J. Kessinger, Detroit, Mich. Filed May 9, 1921. Serial No. 467,916. 2 Claims. (Cl. 265—45.)



1. A combined quantity and quality gauge for fluid containers comprising, in combination, a tube, a float including a stem disposed for movement lengthwise within the tube, a hydrometer movable with and relatively to the float and its stem, and means including indicia upon both the stem and the tube for visibly indicating the respective fluid actuated quality and quantity positions of the hydrometer and float.

1,482,853. BRAKE SHOE OR DRUM. SAMUEL B. LEITZELL, Butler, Pa. Filed Dec. 12, 1921. Serial No. 521,796. 1 Claim. (Cl. 188—77.)

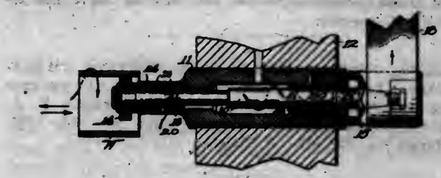


In a brake construction, a drum formed with a peripheral groove, the walls of the groove being inclined, a brake band supported adjacent to the periphery of the drum and having threaded openings, a brake shoe including a plurality of sections, each section being substantially triangular in cross section to fit within the peripheral groove of the drum, said shoe having openings, and securing screws extending through the shoes and having their threaded ends positioned in threaded openings of the brake bands, the heads of the screws moving in the peripheral groove of the drum.

1,482,854. CORNER PIECE FOR MILK CRATES AND THE LIKE. STANLEY M. MCINTYRE, Cincinnati, Ohio. Filed Jan. 20, 1923. Serial No. 614,003. 5 Claims. (Cl. 217—69.)

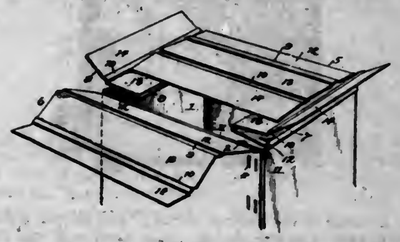
1. A corner piece of the class described comprising a flap and a lap extending in substantial parallelism, a bottom ledge spacing the lap and the flap at one end, an upper inside flap extending in substantial parallelism with the lap, an upper ledge spacing the inside flap and the flap and disposing the inside flap adjacent the flap, a second flap carried by the first flap and extending longitudinally of the first flap, the second flap having an upper and a lower ledge disposed at its opposite ends, an upper inside flap carried by the upper ledge and a lower inside flap carried by the lower ledge, the ledges spacedly supporting the two last mentioned inside flaps in substantial parallelism with the flap, and a second lap carried by the first lap extending at an angle to the first lap, and in substantial parallelism with the second mentioned flap.

1,482,855. MECHANISM FOR SUPPLYING LIQUID TO GRINDING MACHINES. RALPH L. MORGAN, Worcester, Mass., assignor, by mesne assignments, to Greenfield Tap and Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed Feb. 3, 1921. Serial No. 442,260. 8 Claims. (Cl. 51—267.)



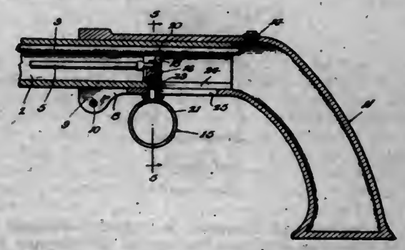
1. In an internal grinding machine, means for supplying liquid to the bottom of the work, a grinding wheel, and a partial cylindrical guard surrounding the wheel and arranged so that the wheel will act to carry the liquid around between the same and the guard.

1,482,856. BEARING FOR GRINDING SPINDLES. RALPH L. MORGAN, Worcester, Mass., assignor of one-half to Greenfield Tap & Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed Dec. 15, 1922. Serial No. 607,227. 6 Claims. (Cl. 64—10.)



1. In a grinding machine, the combination with a grinding wheel spindle and a housing in which it is

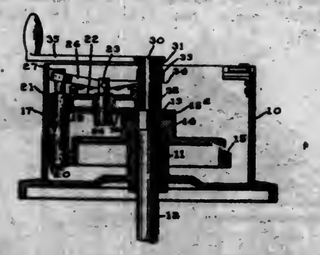
journaled, of segmental bearings located near the ends in the housing, segmental bearings arranged centrally in



alignment with the main bearings and capable of yielding, and means for conducting a lubricant to the surfaces of the shaft at all points co-extensive with said bearings.

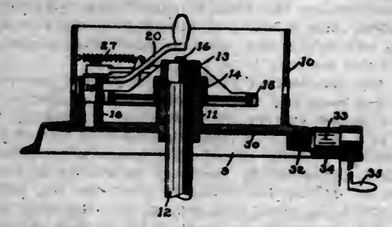
1,482,857. BOX OR CONTAINER. JOHN A. MOORE, Louisville, Ky., assignor to The Mengel Company, Louisville, Ky., a Corporation of New Jersey. Filed Sept. 18, 1919. Serial No. 324,324. 7 Claims. (Cl. 229—45.)

1. A box having four closure flaps arranged in opposite pairs with the flaps of one pair each twice folded once upon itself, and the second fold embracing the sides of the other pair of flaps when the latter are turned inwardly, and fastenings extending through such folded flaps and the embraced portions of the other flaps.



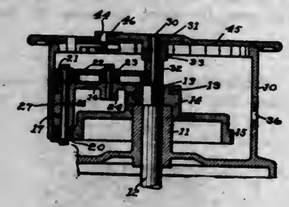
1,482,858. HANDLE-BAR GRIP FOR MOTOR CYCLES. WILLIAM K. NIGH and BENJAMIN H. SCHAFF, Hagerstown, Md. Filed Apr. 25, 1922. Serial No. 556,410. 9 Claims. (Cl. 74—82.)

1. The combination of a motorcycle or bicycle handle bar grip having a downwardly deflected hand grip member and controls supported by the grip in position for actuation one by the thumb and another by another finger of the hand grasping the said hand grip member.



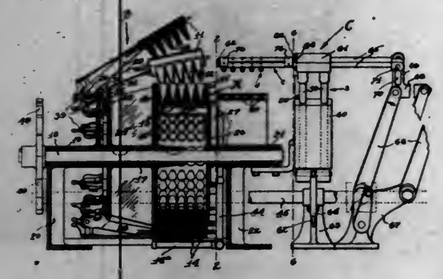
1,482,859. STRINGING-UP OR DRAWING-THROUGH DEVICE FOR WIREDRAWING DRUMS. CHARLES H. OSLUND, Worcester, Mass., assignor to The O & J Machine Company, a Corporation of Massachusetts. Filed June 15, 1921. Serial No. 477,814. 11 Claims. (Cl. 205—16.)

1. In a wire drawing machine, the combination with a drum for receiving wire on its surface, of a shaft on which the drum is centered but with respect to which the drum is relatively rotatable, a gear fixed to said shaft, a shaft mounted to rotate with the drum, a pinion on said shaft meshing with said gear, and means for



rotating the last named shaft on its own axis, whereby the drum will be forced to rotate independently of the driving shaft.

1,482,860. STRINGING-UP DEVICE FOR WIREDRAWING DRUMS. CHARLES H. OSLUND, Worcester, Mass., assignor to The O & J Machine Company, a Corporation of Massachusetts. Filed May 22, 1922. Serial No. 562,601. 6 Claims. (Cl. 205—16.)

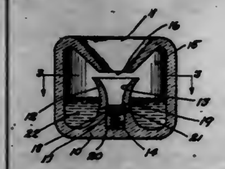


1. In a stringing up device for a wire drawing machine, the combination with a driving shaft and a drum, of means within the drum for rotating the drum positively from the shaft, said means being movable to inoperative position, and a hand operated device outside the drum and at the side thereof for rotating the drum positively independently of the driving shaft at any desired speed.

1,482,861. SLOW-STARTING WIREDRAWING BLOCK. CHARLES H. OSLUND, Worcester, Mass., assignor to The O & J Machine Company, a Corporation of Massachusetts. Filed May 22, 1922. Serial No. 562,602. 5 Claims. (Cl. 205—16.)

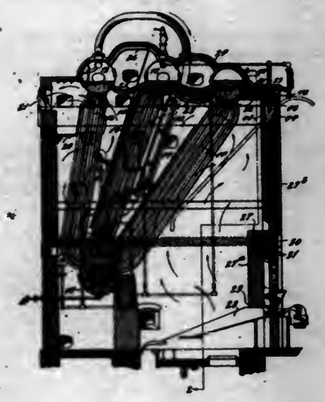
1. The combination with a wire drawing drum, of a shaft on which the drum is centered, the shaft and drum being relatively rotatable, a positive power transmitting member fixed with respect to said shaft, a hand wheel, means carried by the hand wheel for transmitting the motion of said member to the drum positively, said means being movable to inoperative position, the hand wheel being connected for positively rotating the drum when the first named means is in inoperative condition, and means for rendering the hand wheel inoperative.

1,482,862. MACHINE FOR MOLDING AND BAKING PASTRY CONES. FREDERICK A. OST, Minneapolis, Minn., assignor, by mesne assignments, of forty-nine fiftieths to L. F. Young, St. Paul, Minn. Filed Dec. 18, 1919. Serial No. 345,792. 18 Claims. (Cl. 107—58.)



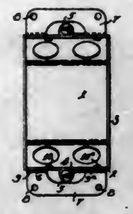
1. In a device of the class described, a mold, a support, a core threaded in said support and designed to seat thereagainst, said core being adapted to register with the mold to form a hollow pastry cone, means for heating the mold, actuating means connected with the core for turning the same to unseat and free it from the pastry and independent actuating means also connected with said core to turn the same in a counter direction and reseat it in said support.

11. The combination with a mold, a core removable from said mold and adapted, when inserted therein, to form a hollow pastry cone and means for heating the mold, of a carrier, a yielding grip supported thereon and comprising a plurality of self expanding members adapted to adjust themselves to the inner peripheries of cones, means for shifting the carrier to direct the grip into a cone within the mold, then remove the same from said mold, and mechanism to compress the yielding members of the grip, whereby the cone is released from the grip.



18. In a device of the class described, a battery of molds, a battery of cores for said molds, a core supporting bar into which said cores are threaded and adapted to seat, said cores being arranged in two parallel rows, the cores in one row being threaded oppositely with respect to the cores in the other row, all of said cores being designed to register with their respective mold members to form hollow pastry cones, means for heating the molds, a pulling device extending between the rows of cores and attached to adjacent sides thereof, said device being adapted to turn the cores collectively and thereby slightly withdrawing the same from the molds, a wire for each mold attached thereto to the side opposite said pulling device and individual yielding means connected with each wire for severally and individually turning said cores to reseat the same in molding positions.

1,482,863. INKWELL. ANTONI PIORKOWSKI, Somers, Conn. Filed Feb. 28, 1922. Serial No. 539,818. 3 Claims. (Cl. 120—65.)



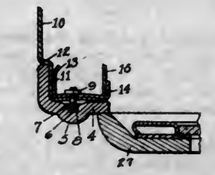
2. A fountain ink stand comprising an integral hollow casing having a top depressed at the center, and an annular raised boss integral with and extending upwardly from the center of the casing bottom, a well having outwardly curved sides forming an inverted cone, there being an annular recess below said well having by-passes connecting therewith, and a spring pressed disc operative in the mentioned recess, said disc having a pen receiving depression.

1,482,864. STEAM BOILER AND SETTING THEREFOR. ARTHUR D. PRATT, Short Hills, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed May 13, 1921. Serial No. 469,167. 9 Claims. (Cl. 110—99.)

1. A boiler of the general Stirling type, having a front setting wall extending to the upper portion of the front bank of tubes, a roof arch resting on the front setting wall and extending rearwardly from the front wall toward the bank and metallic supports for said arch arranged to allow for relative movement.

1,482,865. SWITCH BOX. CHARLES RAUS, Cleveland, Ohio, assignor, by mesne assignments, to E. E. Lawrence, Fairport Harbor, Ohio, trading as Standard Electrical Manufacturing Company. Filed May 29, 1920. Serial No. 385,115. 10 Claims. (Cl. 247—21.)

1. A box of the character described comprising an end having a pair of slots therein, an ear having a pair of projections adapted to be inserted into said slots and to engage the inner wall of such end, and a screw carried by said box and adjustable toward a cooperating portion of such ear thereby to engage such portion and anchor the said ear upon such end.



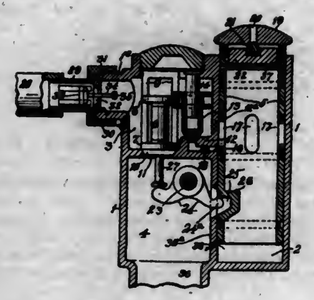
1,482,866. OVEN. ALFRED J. REEDY, Battle Creek, Mich., assignor to A-B Stove Company, Battle Creek, Mich. Filed Nov. 11, 1922. Serial No. 600,246. 9 Claims. (Cl. 126—39.)

9. In an oven, the combination of a front frame of angled cross section disposed to face inwardly and comprising top and side members, the outer arms of the frame side members providing seam members, side walls having seam members at their forward edges engaged in said seam members of said frame, said side walls having seam members on their upper edges, and a top having seam members on its side edges engaged with

said seam members at the top of said side walls, the front edge of the top being engaged with the outer arm of said frame top member.

1,482,867. STOVE. ALFRED J. REEDY, Battle Creek, Mich., assignor to A-B Stove Company, Battle Creek, Mich. Filed Nov. 11, 1922. Serial No. 600,245. 15 Claims. (Cl. 126—39.)

15. A stove body comprising a frame member of angle cross section disposed with the angle facing inwardly, one arm of said frame having a longitudinal raised rib struck up therefrom providing an internal channel, and attaching members disposed in said channel.

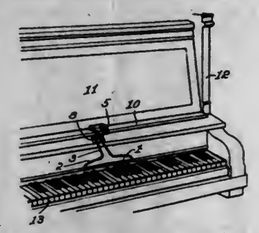


1,482,868. PISTON. EUGENE C. RICHARD, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 29, 1922. Serial No. 547,724. 7 Claims. (Cl. 74—108.)

1. In combination with a hollow piston having a transversely extending piston pin, a groove in its peripheral surface extending circumferentially thereof and across the ends of the piston pin, and a hole arranged substantially at right angles to the axis of the piston pin and extending through the piston wall and into the groove aforesaid; a split ring located within said groove; a plunger extending through said hole and engaging the inner surface of said ring; and a U-shaped spring member the sides of which are supported by said piston pin and the middle portion of which is operatively connected with said plunger.

1,482,869. FLUSHOMETER. JOHN ROGERS, Devon, Conn. Filed Sept. 6, 1921. Serial No. 498,854. 4 Claims. (Cl. 137—93.)

1. A flushometer of the character described comprising a casing having three communicating chambers, a reciprocating hollow plunger in one chamber having an air vent, a float adapted to close the vent, a flush and relief valve in the second or valve chamber, said relief valve operatively connected with the flush valve, a lever located in the third or flush chamber in touch with the flush valve and plunger so that the inward movement of the plunger will actuate the lever to open both of said valves and temporarily hold the plunger in its inward position to permit the greater volume of water to pass from the valve chamber into the flush chamber, while a smaller volume of water passes through the relief valve into the interior of the plunger to return the

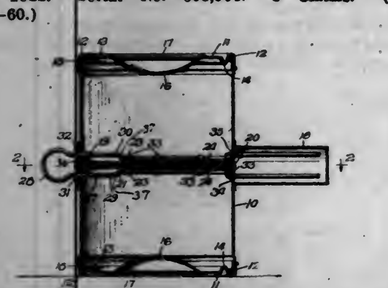


same to its normal position and close the air vent and permit the inlet water pressure to close both valves, and means whereby the water from the plunger is discharged into the flush chamber.

1,482,870. STREET OR STATION INDICATOR. MIKE SLAWIENSKI, Camden, N. J. Filed Mar. 2, 1923. Serial No. 622,238. 4 Claims. (Cl. 40—89.)

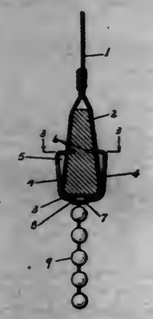
1. A street or station indicator including a pair of rolls, an apron bearing street or station indications wound upon said rolls with their ends fixed to the rolls, a spring for rotating one of the rolls and rotating the other roll through the medium of the apron, a ratchet wheel associated with the other roll, a check pawl cooperating with the ratchet wheel to prevent retrograde movement of the rolls, a primary operating lever, a primary pawl pivoted to said lever and coacting with the ratchet wheel to advance the same, and means to temporarily disengage the primary and the check pawls from the ratchet wheel to permit a retrograde movement thereof.

1,482,871. CHILD'S MUSIC RACK. LULU TEETER SMITH, Waterloo, Iowa. Filed Dec. 1, 1922. Serial No. 604,352. 2 Claims. (Cl. 45—58.)



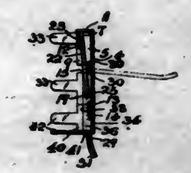
1. A child's music rack, consisting of a single elastic rod medially bent into a substantially horizontal elongated loop the forward longitudinal reach of which is slightly bowed upwardly to serve as a front stop for music sheets, end parts of the rod being angularly projected from said loop in one direction slopingly upwardly with their terminals recurved upon themselves with extremities in alinement to provide resilient clips.

1,482,872. STORAGE BATTERY. LOUIS G. STECKER, Philadelphia, Pa. Filed Oct. 11, 1922. Serial No. 593,735. 8 Claims. (Cl. 204—29.)



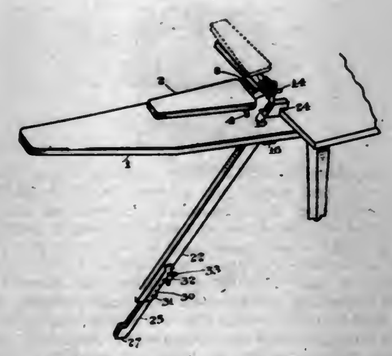
1. In a storage battery, the combination with negative plates having slots opening through their bottoms, of other negative plates having slots opening through their top and end negative plates, whereby said negative plates can be assembled to form polygonally shaped compartments, and positive plates in said compartments.

1,482,873. SIFTER. GEORGE J. ULLRICH, deceased; by Alice Ullrich, executrix, Chicago, Ill., assignor, by mesne assignments, to Ullrich Tinware Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1922. Serial No. 608,904. 5 Claims. (Cl. 83—60.)



1. A sifter comprising a hollow cylinder having a sifter screen extending transversely of said cylinder and dividing the interior thereof into two compartments, covers for the ends of said cylinders having depressions in the outer faces thereof, and handles for said covers extending across said depressions and substantially in the planes of the ends of said cylinders.

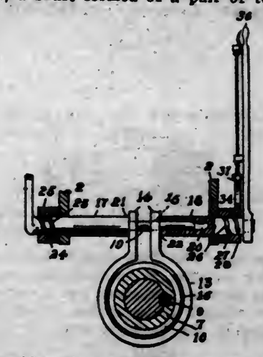
1,482,874. SHADE PULL. THADDEUS S. WAIT, Sturgis, Mich. Filed Aug. 3, 1923. Serial No. 655,493. 5 Claims. (Cl. 156—40.)



5. A shade pull comprising a U-shaped sheet metal clip adapted to be clamped upon the bottom bar of the shade, the arms of said clip having inturned edge flanges, and bar engaging brads projecting from the edges of said flanges.

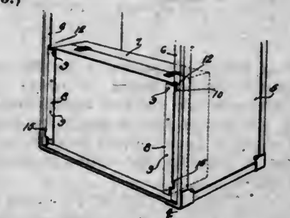
1,482,875. CATCH. WILLIAM WALKER and HENRY H. WEBER, Newark, N. J., assignors to Rosenband M'f'g. Co., Newark, N. J., a Corporation of New Jersey. Filed Nov. 23, 1922. Serial No. 602,743. 6 Claims. (Cl. 292—249.)

1. A catch comprising a main chambered member, provided with longitudinally extending wall-flanges, a U-shaped spring within said member having its free end-portions respectively secured to said longitudinally extending wall-flanges, means within said chambered member with which the bowed portion of said spring is in retained engagement, a hasp-plate pivotally connected with said main chambered member, a cam-member connected with said hasp-plate in movable engagement with said spring within said main chambered member, and a hasp-plate engaging member provided with means with which the said spring-actuated hasp-plate is adapted to be brought into locked engagement.



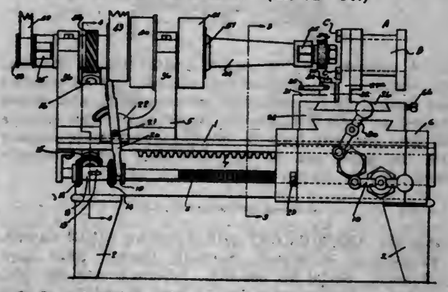
1,482,876. IRONING BOARD. HARRY WARR, Montreal, Quebec, Canada. Filed Aug. 29, 1921. Serial No. 496,527. 1 Claim. (Cl. 68—10.)

In an ironing table, a pivot post, a sleeve on said post provided with a set screw for adjustably holding said sleeve in position and with a pair of parallel lugs, a bracket having front and lateral horizontal projections, a downward extension forming a leg, and a rearward extension pivoted between said lugs and a sleeve board mounted upon said projections.



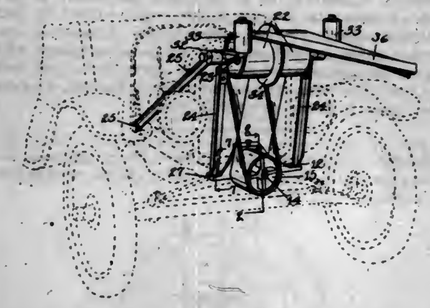
1,482,877. TRACTOR BRAKE. JAMES WHYEL, Pittsburgh, Pa. Filed Oct. 15, 1921. Serial No. 507,856. 2 Claims. (Cl. 188—77.)

1. A brake for a tractor comprising a brake drum adapted to be mounted on the transmission worm of the tractor, a band encircling the drum and provided with a pair of lugs, a shaft formed of a pair of telescopic sec-



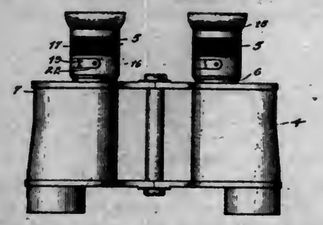
tions, one of said sections extending through said lugs, and means whereby either of said sections can be actuated to tension the band with respect to the drum.

1,482,878. RECEPTACLE RETAINER FOR TRUNKS. CARL P. ALBERT, Racine, Wis., assignor to Greene Mfg. Co., Racine, Wis., a Corporation of Wisconsin. Filed Apr. 3, 1922. Serial No. 549,037. 4 Claims. (Cl. 190—13.)



1. In a wardrobe trunk having a plate projected inwardly from each side thereof, a receptacle, plates secured to the receptacle one adjacent each edge and projected therebeyond to overlie the trunk carried plates when the receptacle is positioned within the trunk, projections extended inwardly from each receptacle carried plate near the upper end of the receptacle, said projections being insertable through sloits in the trunk carried plates, and parts carried by the projections and engageable behind the trunk carried plates to removably secure the receptacle in the trunk.

1,482,879. BORING MACHINE. JOHN E. ARTHUR and CHARLES L. MOODY, Lane, Ill. Filed Sept. 17, 1920. Serial No. 410,867. 2 Claims. (Cl. 51—50.)

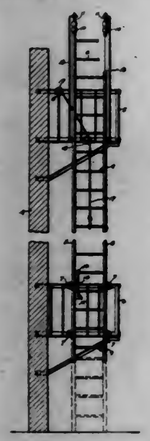


1. In a boring machine, in combination, a bed, a driving head thereon, a grinding member connected axially with said head, a table movable longitudinally of the bed, a second table movable on said first table and transversely of the bed, a cylinder block support having a detachable connection with said second table and provided with horizontally disposed openings spaced equal to the openings in the cylinder block, and also provided with vertically disposed openings spaced equal to said horizontal openings, and means to enter said vertical openings to lock the second table and cylinder block support in adjusted positions relative to said grinding member.

1,482,880. POWER ATTACHMENT FOR MOTOR VEHICLES. BEN D. BARTON, Jackson, Mich. Filed Nov. 11, 1922. Serial No. 600,460. 13 Claims. (Cl. 180—53.)

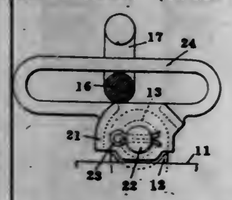
1. The combination in a structure of the class described, of a chassis frame provided with a front cross member, a supporting bracket secured to said front cross member, a pulley supporting frame having a longitudinally disposed pulley spindle bearing and laterally projecting arms detachably secured to said bracket, a belt, a driving pulley provided with a spindle disposed in said bearing, a driving shaft, a clutch connection for said shaft and spindle comprising jaw clutch members on said shaft and spindle and an axially movable clutch member shaft having jaw clutch members thereon coacting with the clutch members of said driving shaft and spindle, the clutch members being held in engagement when said pulley supporting frame is mounted on said bracket, a spring for yieldingly holding said clutch member shaft in its clutch disengaging position when said pulley supporting frame is removed, a pair of idler pulleys, a shaft therefor disposed above and transversely of said driving pulley, idler shaft supporting uprights detachably engaged with said arms and provided with bearings for said idler shaft, and disengageable braces connecting said idler pulley shaft to said chassis frame.

1,482,881. TELESCOPE ADJUSTMENT. PER JOHAN BEAGGREN, Chicago, Ill. Filed Feb. 24, 1919. Serial No. 278,920. 3 Claims. (Cl. 88—34.)



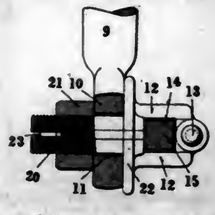
1. In a device of the character set forth, the combination of a cylindrical member having a circumferential spiral groove therein, a sleeve telescoping with said member and fitting closely thereover, said sleeve having an integrally formed yielding tongue lying entirely within the same plane as the wall of said sleeve and having a projection for engagement with said groove.

1,482,882. FLOAT FOR STEAM TRAPS AND THE LIKE. JOHN ROWLAND BROWN, Cleveland, Ohio, assignor to The Reliance Gauge Column Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 5, 1921. Serial No. 505,524. 3 Claims. (Cl. 137—104.)



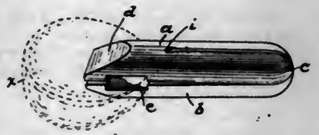
3. In a device of the character described, the combination of a hollow core having an aperture, a depression being formed in the wall of said core surrounding such aperture, a plate fitted in such depression and formed with an inwardly directed hollow boss received in such aperture, and a threaded nipple providing external connecting means for said core, said nipple being formed with a head of polygonal cross section received in such boss and the latter being crimped inwardly at its base, whereby said nipple is firmly secured thereto.

1,482,883. DROP LADDER. JOSEPH HENRY BULGER, Los Angeles, Calif. Filed Nov. 23, 1922. Serial No. 602,710. 4 Claims. (Cl. 227—5.)



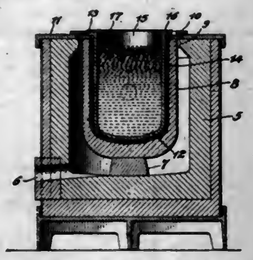
1. A drop ladder slidably mounted on a support and having closed hollow upright posts joined by rungs, said posts being adapted to be filled with fluid, piston rods fixed to said support and slidably extending into said posts, and check pistons secured to said rods.

1,482,884. COUPLER RELEASE RIGGING. STERLING H. CAMPBELL, St. Louis, Mo. Filed Sept. 23, 1922. Serial No. 590,063. 2 Claims. (Cl. 213—168.)



1. In a device of the class described, the combination, with a vertical plane coupler provided with a lock pin, of a shaft therefor mounted for rocking movement only and having an operating arm, and a housing adapted to fit over the upper end of said lock pin, said housing being provided with an elongated auxiliary eye through which said arm passes.

1,482,885. COUPLER RELEASE RIGGING. STERLING H. CAMPBELL, St. Louis, Mo. Filed June 22, 1923. Serial No. 646,995. 6 Claims. (Cl. 213—170.)



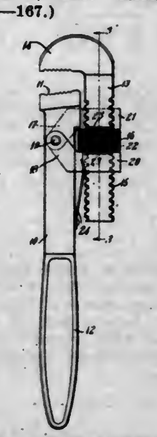
1. In a device of the class described, the combination with a coupler lock pin, of an operating arm therefor, a link extending between said parts, and a connector formed of two parts adapted to be applied to the stem of the link and engaging the operating arm.

1,482,886. HOLDER FOR CLEANING DEVICES. MARTHA S. COLT, Mount Wolfe, Pa. Filed July 1, 1922. Serial No. 572,176. 3 Claims. (Cl. 15—147.)

1. A holding device comprising a handle formed of two substantially similar pieces, a spring extending around said pieces at one end and longitudinally of the body thereof, one end of said spring being anchored in each of said pieces at points spaced from the ends thereof, and means to maintain said spring in position relative to said pieces.

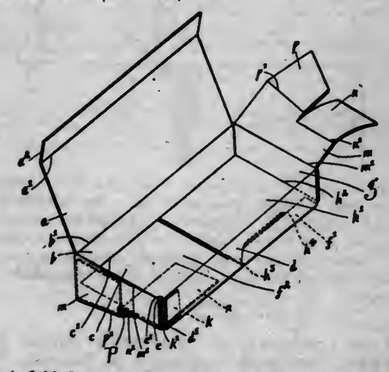
1,482,887. CRUCIBLE. CHARLES S. COLLINS, New York, N. Y., assignor, by mesne assignments, to The Bellis Heat Treating Company, New Haven, Conn., a Corporation of Connecticut. Filed Aug. 30, 1920. Serial No. 406,870. 14 Claims. (Cl. 263—48.)

1. A crucible open at its top and having an external wall resistant to oxidizing atmospheres, and an internal wall neutral to the action of chemical salts, and means adapted to extend within the upper end of the crucible and into the salt bath to prevent atmospheric contact with the upper end of the inner wall, which extends above the level of the bath.



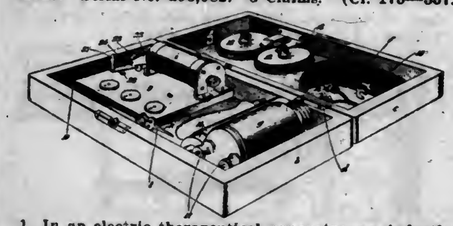
1,482,888. INSTRUMENT FOR TIPPING SHOE LACES. FRANCIS B. CONVERSE, Norwalk, Conn. Filed Mar. 29, 1920. Serial No. 369,494. 8 Claims. (Cl. 81—15.)

1. A tool for applying tips to laces comprising a pair of jaws movable toward and from each other, said jaws being provided with registering grooves and a recess in one of the grooves having its outer face extending tangential to the outer face of the coacting groove when



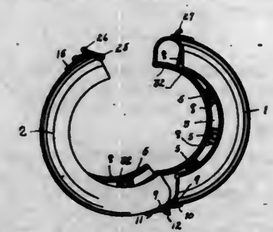
the grooves are brought into registering relation for engaging the straight portion of the partially curved tip blank.

1,482,889. PIPE WRENCH. JOHN F. DELANEY, Boston, Mass. Filed Feb. 7, 1923. Serial No. 617,477. 7 Claims. (Cl. 81—167.)



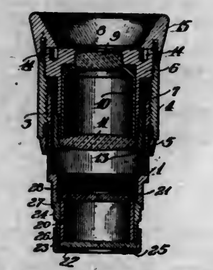
1. A wrench having, in combination, a main shank with a jaw thereon, an auxiliary shank with a jaw thereon, a nut having screw-threaded engagement with said auxiliary jaw, a yoke comprising two independent separable arms and means securing said arms to the main shank, the free ends of each of said arms engaging opposite ends of said nut.

1,482,890. CARTON. HENRY FUERTE, Cincinnati, Ohio, assignor to The United States Printing and Lithograph Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 6, 1920. Serial No. 401,677. 9 Claims. (Cl. 206—44.)



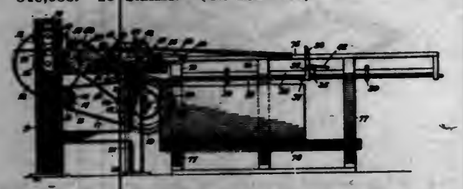
2. A folded carton comprising a back, an end ply attached to the back, a flange on the end ply, a tongue on the flange, a support ply on the flange, an outer bottom ply, and an inner bottom ply, the support ply being adapted to be turned upon the flange and be secured between and in contact with the flange and the end ply by inserting the tongue between the outer bottom ply and the inner bottom ply.

1,482,891. FARADIC MEDICAL APPARATUS. JOHN JOSEPH GHEGAN, East Orange, N. J. Filed Apr. 28, 1919. Serial No. 293,082. 6 Claims. (Cl. 175—357.)



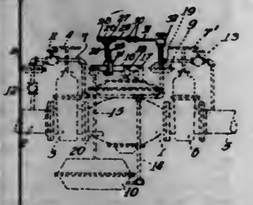
1. In an electric therapeutical apparatus, an induction coil, in combination with a single point vibrating contact, a manually operated switch for blocking or releasing said vibrating contact, and means, independent of the vibrating contact, for accelerating the releasing action of the manually operated switch.

1,482,892. COVER FOR TIRES. FREDERICK R. GOEHNER, Utica, N. Y. Filed Feb. 24, 1922. Serial No. 538,037. 2 Claims. (Cl. 150—54.)



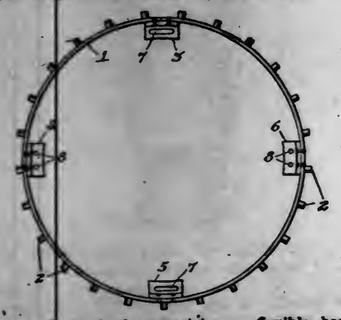
1. In a cover for a tire, semicircular members for enclosing said tire, a member having a recess formed on one of said semicircular members, another member having a hook formed on the other one of said semicircular members, whereby said semicircular members will demountably engage each other to enclose a tire, and pieces of felt having V-shaped grooves disposed at intervals within said semicircular members, whereby to form an air space to prevent the rotting of the tire.

1,482,893. LENS MOUNT FOR OPTICAL INSTRUMENTS. EDWIN HART, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 20, 1920. Serial No. 418,152. 9 Claims. (Cl. 88—32.)



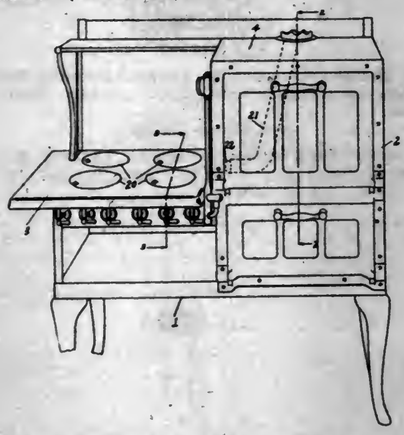
1. In a lens mount for optical instruments, the combination of front and rear combination lenses, a tube for spacing said lenses, and means for retaining said lenses in position on said spacing tube, said means comprising a tube adapted to engage the front combination lens and having an inwardly projecting externally threaded sleeve surrounding the spacing tube and an internally threaded sleeve surrounding said tube and the rear lens and adapted to retain the rear lens in position on the tube.

1,482,894. MACHINE FOR MAKING CORRUGATED BOARD. BERG HEINRICHS, Anderson, Ind., assignor to Mid-West Box Company, Anderson, Ind., a Corporation of Indiana. Filed Aug. 18, 1919. Serial No. 318,088. 13 Claims. (Cl. 164—49.)



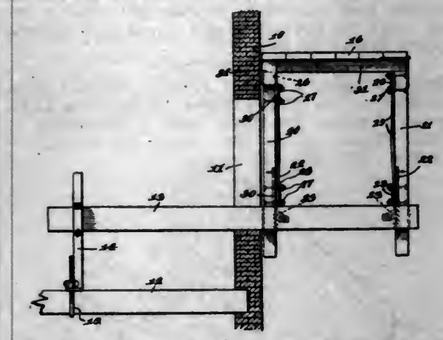
1. In a machine of the character described, the combination of mechanism for continuously feeding a web of flexible material, such as corrugated board, power operated cutter mechanism for severing sheets from the web, and means for controlling the operation of the cutter mechanism comprising an element which is sufficiently sensitive to be shifted by and which engages the edge of the flexible web without buckling and connected to start said mechanism, and power-operated means to automatically restore said element to a predetermined normal position after each operation.

1,482,895. GAS REGULATOR. CHRIST HENRICHSEN, Jr., Wilmette, and EDMUND A. LUNEY, Evanston, Ill. Filed Feb. 4, 1921. Serial No. 442,439. 12 Claims. (Cl. 50—10.)



8. The method of delivering gas at a variable pressure from a Reynolds type valve having a main valve and a regulator controlling the same, which comprises varying the load of the regulator as a function of the opening of the main valve.

1,482,896. SPROCKET WHEEL. HIRAM H. HUNTINGTON and EDWARD H. CURETON, Richmond, Ind. Original application filed Aug. 20, 1919, Serial No. 318,630. Divided and this application filed Apr. 17, 1922. Serial No. 554,307. 2 Claims. (Cl. 74—31.)



1. A sprocket wheel comprising a flexible band bent into circular form and provided with sprocket teeth struck out radially therefrom and a plurality of supporting brackets fixed to the inner side of the band at spaced points in its circumference, one of which has the united ends of the band fixed thereon.

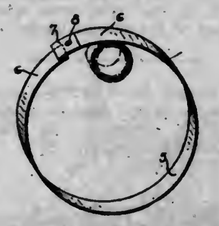
1,482,897. GAS STOVE. GEORGE W. HOWES, Dowagiac, Mich., assignor to The Beckwith Company, Dowagiac, Mich. Filed July 19, 1923. Serial No. 652,503. 3 Claims. (Cl. 126—39.)

3. The combination in a gas stove, of an oven comprising spaced inner and outer walls providing a circulating passage, there being a flue discharge for said passage, a burner chamber disposed at the side of said oven and provided with a grid top, and a discharge flue for said second burner chamber disposed in said circulating passage.

1,482,898. SCAFFOLD. FRANK B. JOHNSTON, New York, N. Y., assignor to American Safety Device Company, a Corporation of New York. Filed Jan. 11, 1922. Serial No. 528,567. 9 Claims. (Cl. 304—26.)

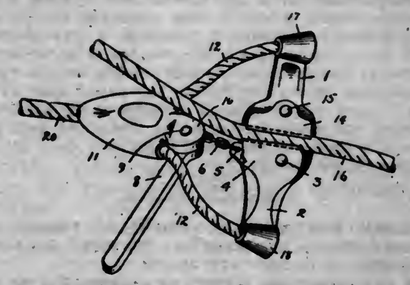
1. In a scaffold, outriggers, inner and outer uprights mounted for vertical adjustment upon the outriggers, a platform adapted to be removably supported across the outriggers, and braces carried by the uprights adapted to be folded into positions above the outriggers for supporting said platform at various elevations above the outriggers.

1,482,899. PROCESS OF PURIFYING CRUDE SYNTHETIC CAMPHOR. JOHANNES M. KESSLER, West Orange, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 16, 1920. Serial No. 351,936. 10 Claims. (Cl. 260—133.)



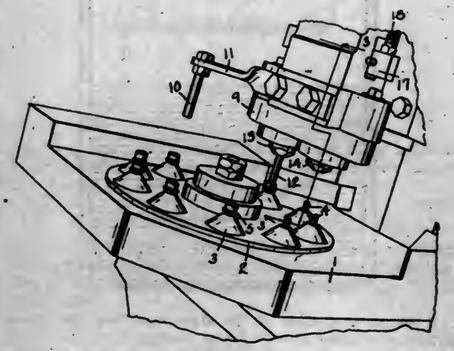
1. The process which comprises heating crude synthetic camphor for from about 20 to 30 hours at a temperature above 190° C. and below that at which camphor itself begins to decompose.

1,482,900. CAR BASKET RACK. JOHN KIRBY, Jr., Dayton, Ohio, assignor to The Dayton Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed June 26, 1922. Serial No. 571,012. 2 Claims. (Cl. 224—29.5.)



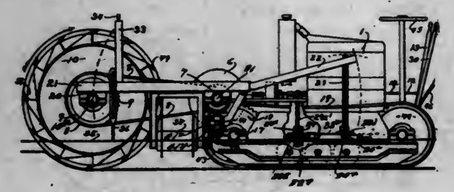
1. In a basket rack, end brackets having provision for attaching the same to a suitable support, supporting lugs adjacent the rear ends of the brackets, and screw threaded members at the front ends thereof; said lugs and said members projecting laterally from the sides of the brackets, in combination with a bottom-section between said brackets the rear of which is supported upon said lugs clear of the brackets, horizontally disposed covering lugs projecting from the sides of the brackets above said bottom-section adapted to prevent upward movement of the latter, and means for coupling the front of said bottom-section to said screw threaded members.

1,482,901. RIM LINER. ABRAHAM I. LEVIN, Far Rockaway, N. Y. Filed May 28, 1923. Serial No. 641,806. 1 Claim. (Cl. 152—20.)



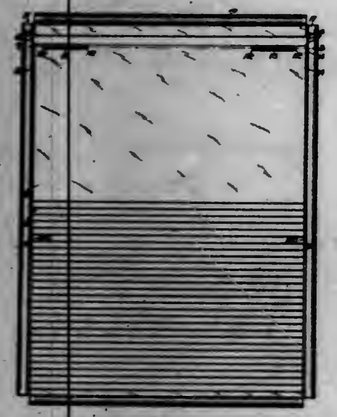
A rim liner consisting of a fabric band, adapted to be placed around the rim of a wheel, the ends of said band being adapted to be joined and held together by an adhesive substance, and one of said ends being reinforced.

1,482,902. CABLE CLAMP. JOHN MARTINSON, Wrenshall, Minn. Filed June 18, 1923. Serial No. 645,939. 3 Claims. (Cl. 24—132.)



1. A cable take up comprising in combination a holding cable, a spider permanently attached to the end of said cable having resilient bridle arms extending therefrom, and two pivotally united cable gripping elements suspended upon the free termini of the bridle cables.

1,482,903. MACHINE TOOL AND METHOD OF MANUFACTURING NUTS AND THE LIKE. WILLIAM R. MORGAN, Jackson, Mich. Filed July 24, 1922. Serial No. 577,140. 6 Claims. (Cl. 10—77.)

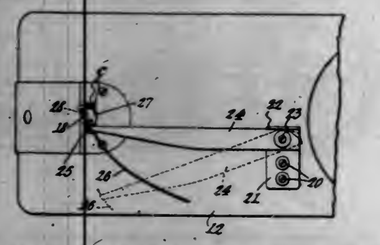


4. In a structure of the class described, the combination with a plunger head, of a work table, a plurality of work holders on said work table having studs adapted to receive the work, roughing and finishing cutters mounted on said plunger head, said cutters being mounted so that they act successively on the work as it advanced by said table, a stripper coacting with said roughing cutter to prevent the withdrawal of the work from the holder on the retracting movement of the roughing cutter, and a stripper coacting with said finishing cutter for ejecting the work therefrom on the return stroke of the plunger.

1,482,904. ROAD-SURFACING MACHINE. JAMES R. MOORE and THOMAS B. MOORE, Wichita, Kans. Filed Nov. 15, 1921. Serial No. 515,237. 2 Claims. (Cl. 37—108.)

1. In a tractor driven road surfacing machine, a horizontal transverse driven shaft rotatably mounted thereupon; a driven drum horizontally rotatable at the forward end of said machine; a driven conveying mechanism transversely arranged directly in rear of said drum, knife elements on said drum leading from end to end thereof, and recessed shoveling elements under said knives; and means for rotating said shaft, drum and conveyor whereby under intermittent forward movements of the tractor, the knife and recessed elements of the drum are rotatable towards the transverse conveying mechanism from above.

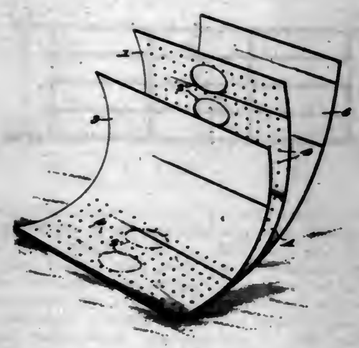
1,482,905. FILING AND INDEXING EQUIPMENT. JOHN T. QUIGLEY, Boston, Mass., assignor to Costmeter Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 2, 1918. Serial No. 260,845. 14 Claims. (Cl. 129—16.)



2. In an equipment of the class described, the combination of a sheet provided with perforations, sheet-holding means comprising two individually distinct members mounted to slide into and out of said perforations, and means providing supports for said members.

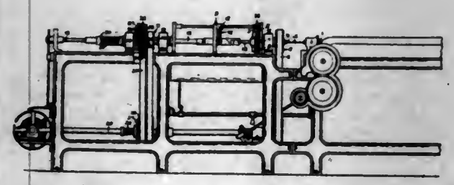
1,482,906. POWDER FOR REDUCING IRRITATION. WILLIAM H. ALLEN, Detroit, Mich. Filed July 28, 1922. Serial No. 578,232. 4 Claims. (Cl. 167—9.)

1. The process of preparing a powder for reducing the irritation of human skin, which consists in moistening powdered talc with a solution of basic chromium sulphate and then drying the mixture, the amount of chromium salt in the dried mixture being about five percent of the whole.



4. Powdered talc having its particles covered with a film of soluble chromium sulphate.

1,482,907. SEWING-MACHINE ATTACHMENT FOR SPIRAL STITCHING. WINFIELD L. BROOKS and WILLIAM M. SMITH, Worcester, Mass., assignors to Royal Worcester Corset Company, a Corporation of Massachusetts. Filed Oct. 12, 1922. Serial No. 594,140. 10 Claims. (Cl. 112—139.)



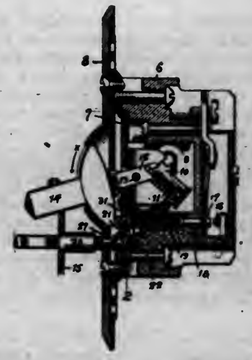
9. A sewing machine attachment for spiral stitching comprising a vertically movable and yieldingly mounted impaling pin on which the work may be turned, a guide adapted to direct a filling element between two plies of fabric and closely adjacent to the needle of the machine, a presser foot having in its bottom a plurality of curved grooves which are located mostly at one side of the feed dog of the machine, the said guide being carried by a pivoted arm which may be swung outward away from the needle when the guide is not in use, and means for lifting said impaling pin and holding same in raised position.

1,482,908. LAMINATED STRUCTURE. JOHN W. BUNKER and ASHTON M. BONEY, New York, N. Y., assignors to Service Bag Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 26, 1921. Serial No. 448,177. 1 Claim. (Cl. 154—46.)

A flexible, composite material composed of a plurality of laminations, including an intermediate lamination of thin sheet metal having holes therethrough and indentations made from one side thereof, the projecting ends of which are made to enter and fasten to the adjacent lamination and an agglutinant between the metal layer and the other adjacent fibrous layer which causes the two to adhere by covering the adjacent surfaces, entering the indentations and extending through the holes to the layer on the opposite side of the metal layer whereby a single product is formed of the several layers.

1,482,909. WINDING APPARATUS. JAMES BIRDSALL CALKINS, Auburn, N. Y., assignor to Marcus E. Calkins, Ithaca, N. Y. Filed Apr. 16, 1923. Serial No. 632,378. 15 Claims. (Cl. 118—51.)

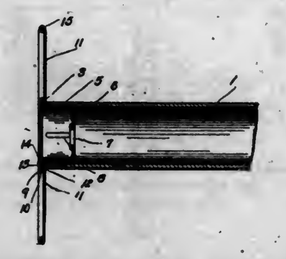
1. In an apparatus of the character described, a delivering element driven at a constant rate of speed, a receiving element, a rotary shaft connected to the receiving element and rotating therewith, a disk rotating with the rotary shaft, a gear journaled on an eccentric portion of said disk, a second gear meshing with the first-named gear, means for driving the second gear at a rate of speed corresponding to the speed of the delivering element, and means driven by the first-named gear for causing a traversing movement of the said shaft during its rotary movement.



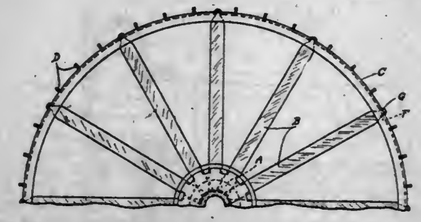
1,482,910. PERFORMANCE PEDESTAL. VIRGILIO CARONTI, Chicago, Ill. Filed Apr. 13, 1923. Serial No. 631,756. 5 Claims. (Cl. 46—70.)

1. In a performance pedestal for acrobatic and like exhibitions, the combination of a tubular post the lower end of which is adapted to rest upon the floor, guy ropes for holding the post in a vertical position, a platform

revolubly mounted at the upper end of the post by a plate on the underside of said platform, with said plate having a depending sleeve portion encircling the upper end of the post and a vertical spindle fitting and turning in the upper end of the bore of said post.



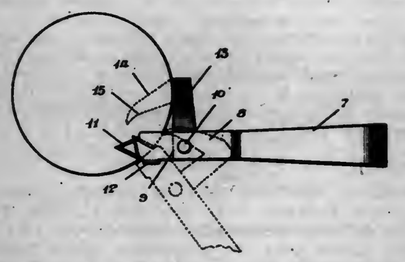
1,482,911. ELECTRIC SWITCH. HOYT CATLIN, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed July 7, 1922. Serial No. 573,423. 12 Claims. (Cl. 177—339.)



7. In a signal system having independent signal devices, control means therefor comprising a series of pairs of switch devices, each pair adapted to control said independent signal devices, and means for rendering impotent, in any pair, the switch controlling one of the signal devices without affecting the operation of the other switch of said pair, or the operation of any of the switches of the remaining pairs.

1,482,912. PAPER REEL. ARTHUR W. CAPS, Kansas City, Mo. Filed Dec. 22, 1922. Serial No. 608,433. 3 Claims. (Cl. 242—124.)

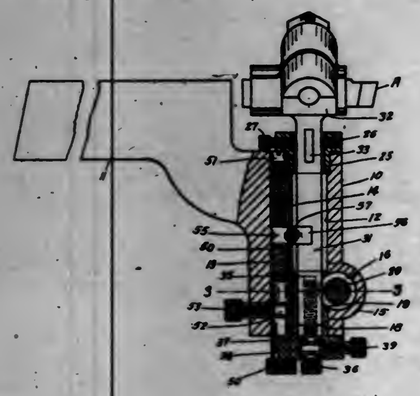
1. A removable head for reels comprising a cylindrical member having one end turned inwardly to provide an inwardly projecting flange surrounding an opening, and the other end having an outwardly projecting flange, and a separate, ring-shaped flange member having a central opening, the metal of the flange member surrounding the central opening being bent back upon itself to form a reinforcing fold and then again bent in to form a wall in spaced relation to the fold whereby a groove is provided to receive the outwardly projecting flange on the end of the cylindrical member, the cylindrical member being adapted to be received in one end of a tubular mandrel upon which the material to be wound is received.



1,482,913. TRACTOR WHEEL. JAMES HARRY CLARK and THOMAS C. WHITEHEAD, Detroit, Mich. Filed Apr. 20, 1921. Serial No. 463,026. 5 Claims. (Cl. 301—104.)

2. A vehicle wheel comprising a hub, a rim and spokes formed of bar metal, tubularly fashioned at their outer ends and engaged in openings in the rim and upset to form heads upon the exterior face of the rim.

1,482,914. CAN OPENER. JOSEPH J. DAIGLE, Robertville, New Brunswick, Canada. Filed Mar. 14, 1922. Serial No. 543,795. 2 Claims. (Cl. 30—3.)

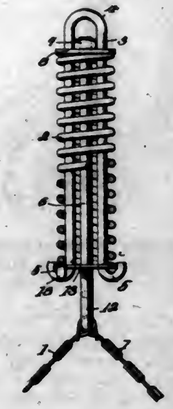


1. A can opener composed of a single piece of material and comprising a looped handle having one end portion secured on the other, the upper end portion projecting beyond the lower end portion to overlap the top of the can, said projecting portion having a downwardly bent lug to bear against the can, the lower end portion having a rigid arm extending laterally and provided with a cutting blade to enter the can.

1,482,915. WINDOW VENTILATOR. ROBERT F. DOLEZAL, Chicago, Ill., assignor of one-half to Frederick C. Whippey, Chicago, Ill. Filed Feb. 18, 1922. Serial No. 537,459. 8 Claims. (Cl. 98—31.)

2. A ventilator comprising a plurality of inclined slats, the top edge of each slat being connected to the next adjacent slat by a substantially horizontal strip which joins the said adjacent slat at a point between the upper and lower edges of the inclined portion thereof.

1,482,916. TOOL HOLDER. DELANO H. DUGAR, Cleveland, Ohio. Filed Aug. 6, 1921. Serial No. 490,286. 2 Claims. (Cl. 29—98.)

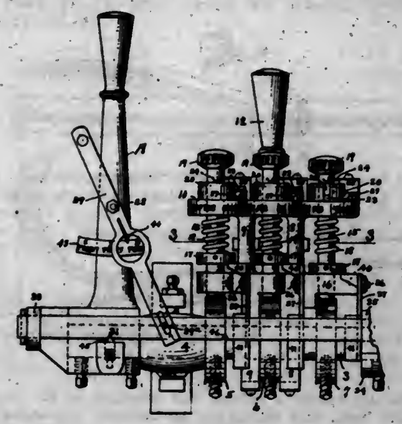


1. A tool holder comprising a body having a shank portion for mounting said body in a suitable support, a tool-post carried by said body, means for rigidly clamping the lower end of said tool-post in said body while leaving the upper end of said tool-post free to oscillate or vibrate laterally, means adjustable longitudinally of the tool-post for reenforcing the post at any point above its fixed support in the body and means for mounting a cutting tool in the upper end of the said post.

1,482,917. MOTION-CHECKING DEVICE. JOHN H. DURNO, Rochester, N. Y. Filed July 17, 1922. Serial No. 575,497. 6 Claims. (Cl. 16—51.)

1. The combination with a cylinder attachable to one of a pair of relatively movable elements and arranged in approximately horizontal position when in operation, of a piston movable in the cylinder and provided with a free opening near the bottom thereof, a piston-rod carrying said piston and attachable to the other of said pair of relatively movable elements, and a relatively small body of liquid in said cylinder, said opening in the piston permitting flow of said liquid in either direction through the piston whereby the liquid passes to opposite sides of the piston only through said opening.

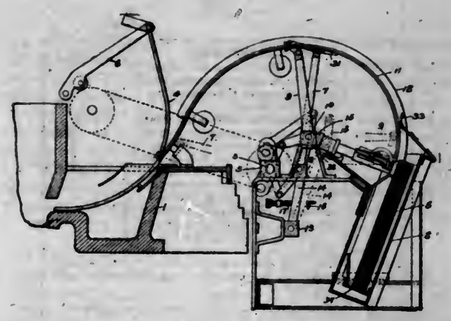
1,482,918. COMPRESSIBLE SPRING. FRANK DUTCHER, Versailles, Pa. Filed May 26, 1922. Serial No. 563,805. 3 Claims. (Cl. 267—72.)



1. A compressible spring comprising a coil spring, a U-shaped member having its free ends provided with out-turned hooks and passing longitudinally through the spring and of a length extending beyond the spring to form an eye, a washer having a slot and an opening for the free ends of the U-shaped member and located between that end of the spring and the hooks, the outer wall of the slot of the washer turned downward, a washer for the opposite end of the spring provided with oppositely extending slots to receive the legs of the U-shaped member, the washers having centralized openings, a rod passing through said openings with its screw-threaded end at the bend of the U-shaped member, a nut on the screw-threaded end locked by engagement with the legs thereof, the opposite end of the bolt provided with supporting means for the purpose described.

1,482,919. PROCESS OF MAKING RESINOUS MATERIALS. CARLETON ELLIS, Montclair, and HARRY M. WEBER, Bloomfield, N. J., assignors to Ellis-Foster Company, a Corporation of New Jersey. Filed May 9, 1921. Serial No. 468,140. 10 Claims. (Cl. 134—26.)

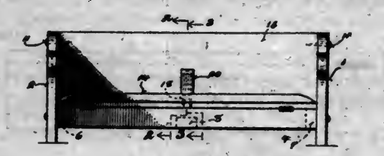
7. A process of making a resinous material which comprises heating an alkaline earth metal resinate with an alcohol to form a resinous complex of relatively low acid number, and treating such resinous complex with a liquid which is a solvent of the acid resins but which is not a good solvent for the non-acid resins present.



1,482,920. SWITCH-CONTROL DEVICE. HARRISON J. L. FRANK, Detroit, Mich., assignor to Mutual Electric and Machine Company, Detroit, Mich., a Corporation of West Virginia. Filed Dec. 29, 1922. Serial No. 609,561. 12 Claims. (Cl. 74—39.)

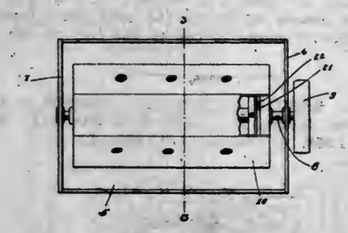
1. In a switch control device, a shaft and a handle thereon to turn the shaft back and forth, a switch-operating frame rotatably mounted on the shaft, a plurality of collars attached to the shaft, a stem slidable in said frame in alinement with each coller, a spring to move each stem into operative engagement with its collar so

that any desired movements of the shaft will be imparted to the switch-operating frame, and means to select the stem to be connected to its collar.



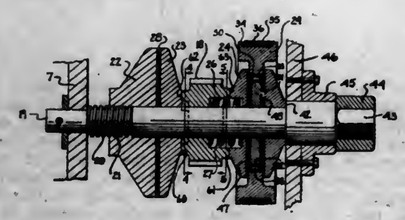
1,482,921. TRANSFER APPARATUS. JOHN W. FREE, Woodlawn, Pa. Filed Oct. 12, 1922. Serial No. 594,014. 10 Claims. (Cl. 271—27.)

1. The method herein described of separating sheets one by one from a pack, which consists in causing the pack to rest by gravity upon one edge while submerged in liquid, and imposing upon the outermost sheet two successive movements, first, a swinging movement upon its lower edge as an axis of turning, while still resting on its gravitational support, and in so doing opening an upwardly widening V-shaped space between it and the remainder of the pack, and, second, raising the so separated sheet upwardly through the liquid.



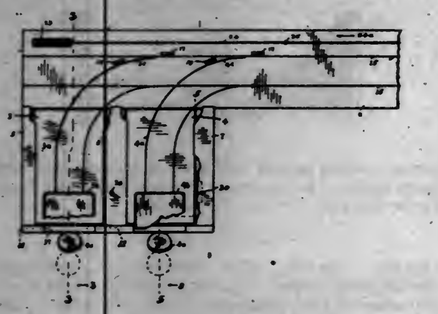
1,482,922. TOY DAVENPORT. HANNES GREEN, Racine, Wis. Filed Nov. 9, 1922. Serial No. 599,801. 1 Claim. (Cl. 5—29.)

A convertible toy davenport comprising a body portion having a lower frame, ends and a back; a flap extending the full length of the davenport between the end and having its front edge hingedly jointed to the front edge of the lower frame; and a substantially rigid tab extending upwardly from the rear edge of the flap and lying against the back when the davenport is closed, and acting as a leg to support the flap when the davenport is open, said tab comprising a substantially rigid wire



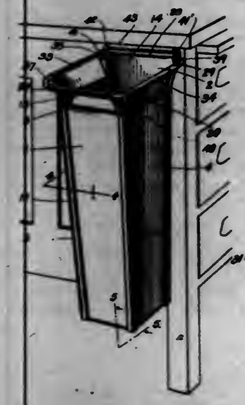
having a looped portion and terminal extensions at right angles thereto and projecting into said flap, and a covering for the looped portion of said wire.

1,482,923. DEVICE FOR BURNISHING METALLIC ARTICLES. PAUL J. GOKE and GILBERT L. KEMPER, Cincinnati, Ohio, assignors to The Cincinnati Coffin Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 3, 1922. Serial No. 549,221. 8 Claims. (Cl. 51—164.)



1. In a device of the class described the combination of a tank adapted to contain a cleansing fluid, a porous drum revolubly mounted in the tank adapted to extend into the fluid and to contain cleansing elements, and a holder revolubly contained within the drum adapted to support articles, and means to revolve the drum and holder.

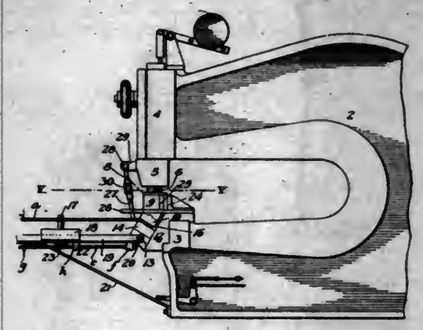
1,482,924. PORTABLE ELEVATOR. ETHAN N. HESCOCK, Westfield, N. J., assignor to New Jersey Foundry and Machine Company, a Corporation of New Jersey. Filed Mar. 3, 1923. Serial No. 622,584. 4 Claims. (Cl. 192—15.)



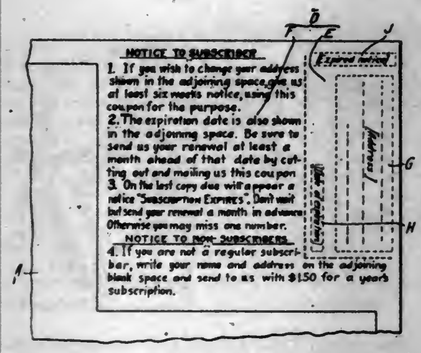
1. In a hoist mechanism the combination of an axle, a pinion loosely mounted on the axle, friction discs loosely mounted on the axle, a clutch member mounted on the axle, a brake wheel mounted on the clutch member, means to automatically connect the clutch member and brake wheel on one direction of rotation and release said members on the reverse direction of rotation, means to clamp said friction discs and clutch member together on rotation of the axle in one direction and to permit slipping of the parts when the loose members rotate, or tend to rotate, faster than the axle, and friction means bearing on the brake member.

1,482,925. SANITARY WAITER. MATTHEW A. HIGH, Anderson, Ind. Filed Mar. 10, 1923. Serial No. 624,264. 14 Claims. (Cl. 186—1.)

10. In a device of the kind described, a main deck, a lower deck, a tray deck operable to decline to the lower deck, a roller tray adapted to roll from the tray deck, means to convey the tray away from the tray deck, and means to convey the tray to the tray deck.



1,482,926. REFUSE RECEPTACLE. NEWTON S. HILLYARD, St. Joseph, Mo. Filed June 30, 1922. Serial No. 571,958. 4 Claims. (Cl. 220—4.)



1. A refuse receptacle comprising a front panel, a back panel and two side panels, the longitudinal edges of each panel being bent back to form reversibly extending tongues, channel-shaped locking members having inwardly bent edges to engage the tongues of the panels to secure them together to form a substantially rectangular tube, an end member for closing the bottom of the tube, the upper ends of the front member and two side members being bent outwardly to provide a flared open end for the receptacle and the back member being straight, and means on the back member for engagement with a support whereby the receptacle may be supported in a suspended position.

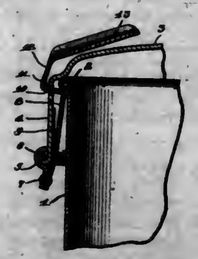
1,482,927. SHEET-METAL-BENDING DIES. JOHN HUBER, Bellwood, Pa. Filed Jan. 19, 1922. Serial No. 530,306. 14 Claims. (Cl. 153—25.)

1. In flanging mechanism, the combination with a supporting base and an upper reciprocable power driven head, of an anvil block mounted on the base having a bending edge and a continuous plane backwardly and downwardly sloping face extending therefrom, a co-acting die having a similar face mounted on the reciprocable head, and means for horizontally supporting a plate with its edge portion extending across the anvil block.

1,482,928. COVER FOR MAGAZINES AND THE LIKE. FRANS HUTTER, New York, N. Y., assignor to The McCall Company, a Corporation of New York. Filed June 23, 1920. Serial No. 390,990. 5 Claims. (Cl. 283—56.)

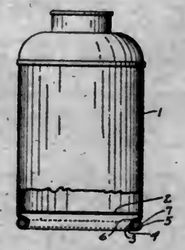
1. A magazine cover having a delineated portion adapted to be used as an order for subscription and showing on its outer face an indicated space distant from and entirely outside of the remainder of the cover, the said indicated space adapted to carry the address of the individual subscribers and an adjoining space carrying a notice common to all copies and directing the attention of the purchaser to the use to which said delineated portion may be put.

1,482,929. KETONIC RESIN AND PROCESS OF MAKING SAME. TREVOR S. HUXHAM, Bloomfield, N. J., assignor, by mesne assignments, to Carleton Ellis, Montclair, N. J. Filed Sept. 10, 1921. Serial No. 499,783. 5 Claims. (Cl. 260—31.)



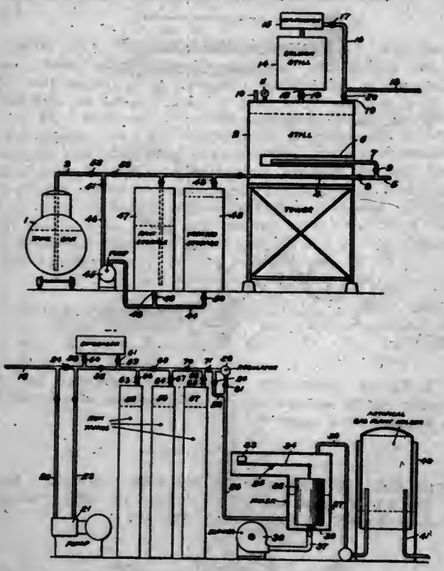
1. The process of making an insoluble and infusible resin which comprises reacting on a soluble and fusible ketone-aldehyde resin with formaldehyde and an alkaline activating agent.

1,482,930. PARALLEL RULER. CHARLES E. JOHNSON, Ridgefield Park, N. J., assignor to Johnsyedon Corporation, New York, N. Y., a Corporation of New York. Filed June 4, 1921. Serial No. 474,992. 1 Claim. (Cl. 33—32.)



A combination ruler comprising a housing and a flat ruling edge both integral with said housing, and a roller mounted in said housing, said ruler having incisions cut in the flat ruling edge adapted to control the drawing of lines perpendicular to said edge.

1,482,931. COVERED RECEPTACLE. CLARENCE C. KEEHN, Canandaigua, N. Y., assignor of one-half to The Lisk Manufacturing Company, Ltd., Canandaigua, N. Y., a Corporation of New York. Filed Dec. 28, 1922. Serial No. 609,479. 5 Claims. (Cl. 220—55.)



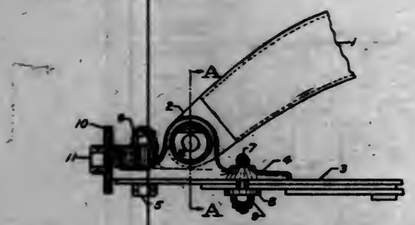
1. The combination with a receptacle having an annular projection and a cover having a depending flange receiving the upper end of the receptacle and said annular projection, and having an opening therein, of a locking member pivotally mounted at the lower end of the flange, extending upwardly from said pivot between the flange and the receptacle, having an abutment operating through the opening in the flange, and having also an operating portion rigid therewith extending upwardly from said abutment and inwardly over said cover.

1,482,932. SHEET-METAL CONTAINER. HENRY A. KEINER, Richmond Hill, N. Y., assignor to Keiner-Williams Stamping Company, a Corporation of New York. Filed Jan. 20, 1922. Serial No. 530,548. 4 Claims. (Cl. 220—66.)

1. A sheet metal container comprising a hollow cylindrical body member, a ring having an outer diameter not greater than that of said body member, the edge of one end of said body member being contracted and extending directly into and partially enclosing said ring, and a bottom member having a closure portion having its periphery contacting with the inner face of said body member above said contracted edge and having a marginal flange extending downwardly in close engagement with the inner face of said body member and curved around said edge thereof and said ring, into engagement with the outer face of said body member and having an outer diameter substantially equal to that of said body member.

1,482,933. METHOD OF TREATING NATURAL-GAS GASOLINE AND OF MAKING GAS THEREFROM. ARTHUR N. KERR, Bellevue, Pa. Filed May 9, 1921. Serial No. 467,926. 3 Claims. (Cl. 48—212.)

2. The method of converting the whole of natural gas gasoline into marketable products, which comprises distilling the lighter combustible constituents from said gasoline, and without intermediate condensation mixing the vapor distillate with air to form a transportable artificial gas.



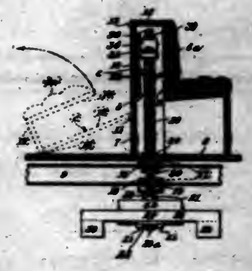
1,482,934. ILLUMINATED LICENSE TAG AND CASE. BENJAMIN W. LANCE and ARTHUR E. OLSON, Geneva, Ill. Filed Mar. 16, 1923. Serial No. 625,649. 1 Claim. (Cl. 40—132.)

The combination with a license tag display light box, said light box comprising a main casing having rearwardly extending chambers therein, license tag illumi-

nating lamps, a tail light illuminating lamp, of a reflecter disposed within the casing and provided with rearwardly extending extensions extending into the rearwardly extending chambers of the casing, said lamps supported in the extensions of the reflector, a hinged cover for the casing, said hinged cover having means for supporting a license number in front of the lights within the casing and an upwardly extending extension having a lens therein adapted to register with the tail light when the cover is closed.

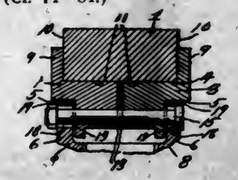
1,482,935. COMBINATION SPRING END AND BUMPER SUPPORT. VINCENT LINK, Detroit, Mich., assignor to Studebaker Corporation, a Corporation of New Jersey. Filed Sept. 7, 1922. Serial No. 586,684. 11 Claims. (Cl. 293—55.)

2. In an automobile, a spring end member and a spring rigidly secured thereto, said member also forming a support for a bumper.



1,482,936. SHADE-ROLLER HOLDER. MICHAEL MACIEJKO, Meriden, Conn. Filed July 11, 1921. Serial No. 483,753. 1 Claim. (Cl. 156—24.)

A shade roller holder comprising a bracket plate having opposite ends adapted for attachment to a window frame in a horizontal position, said bracket plate having a longitudinal slot therein, a shade roller supporting member comprising a flat perpendicular leg adapted to be secured to the bracket plate and flatly engage the front face of the same when securely clamped thereto and to tilt and frictionally engage the lower longitudinal edge of said plate and the upper portion of the securing means should the latter loosen, the said leg having a longitudinal slot therein, a longitudinally depending arm formed with the said leg and bent into a plane at right angles to the plane of the leg portion, and positioned forwardly of the last mentioned plane, the said depending arm having an aperture therein for engaging the shade roller pin, a screw passing through the slot of the shade roller supporting leg and the bracket plate, a nut for receiving the projecting end of the screw, a rectangular projection carried by said nut and extending into the bracket plate groove to prevent rotation of the nut when the screw is tightened, and a washer interposed between the head of the screw and the shade roller supporting arm, the screw head being countersunk within the outer face of said washer.



1,482,937. AUTOMOBILE TURNTABLE. IGNAZIO MARINO, Washington, D. C. Filed May 24, 1923. Serial No. 641,224. 10 Claims. (Cl. 254—87.)

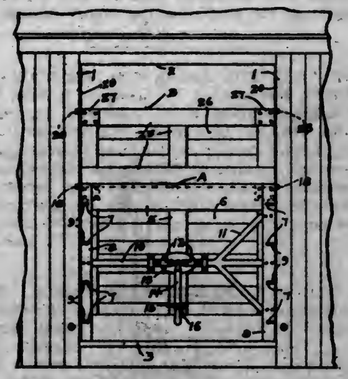
10. The combination with an automobile, of a pair of bars removably secured to the frame of said automobile, posts movably carried by said bars, a plate secured to said posts, a base having a series of annularly arranged recesses rotatably secured to said plate, means for causing relative vertical movement between said base and said automobile for raising or lowering the latter bodily in respect to the ground, and means for selectively

preventing relative rotary movement between said base and plate, said first mentioned means comprising a locking bar vertically, movably associated with the bars secured to said automobile adapted for selectively occupying one of said recesses formed in said base.

1,482,938. CROSSHEAD. JOHN O. MCARTHUR, Philadelphia, Pa. Filed Dec. 21, 1921. Serial No. 523,930. 6 Claims. (Cl. 74—84.)

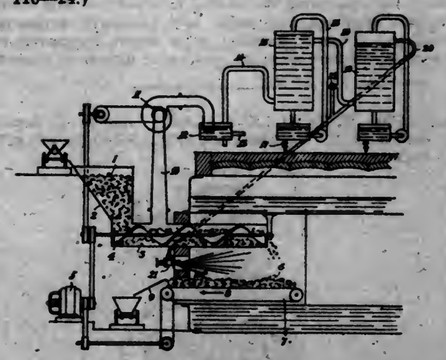
1. A crosshead comprising spaced crosshead plates, spaced crosshead shoes carried by said plates and having crosshead guide channels, said crosshead shoes having portions disposed between the crosshead plates and portions overlying the ends of the crosshead plates, bolts extending through the crosshead shoes and the crosshead plates, and removable angularly shaped liners disposed between the shoes and the plates and having portions overlying the ends of the plates.

1,482,939. PROCESS OF MAKING CARBON. JAMES MCINTOSH, Norristown, Pa., assignor to Diamond State Fibre Company, Elsmere, Del., a Corporation of Delaware. Filed June 24, 1921. Serial No. 480,207. 1 Claim. (Cl. 252—3.)



The process which consists in parchmentizing vegetable fibrous material; subjecting said material to heat and to a pressure above that of the atmosphere; washing the parchmentizing chemicals from the parchmentized material; and carbonizing the washed product.

1,482,940. SHOE-BUTTON CAP. HENRY MUNZER, New York, N. Y. Filed May 29, 1923. Serial No. 642,305. 1 Claim. (Cl. 24—113.)



As a new article of manufacture, a shoe-button cap comprising a body, and a clip carried by and spaced from the inner side of the body and arranged in parallelism to said side and joined by opposite angularly disposed arms to opposite points of said side and having a bifurcation with a contracted throat to receive the shank of a button, the opposed side walls of said throat being convex and the inner end wall of the bifurcation being at right angles to the length thereof and considerably longer than the throat is wide.

1,482,941. GRAIN DOOR FOR CARS. HERBERT S. NESBITT, Minneapolis, Minn., assignor of one-third to Oscar P. Gustavsen, Minneapolis, Minn., and one-third to Thomas D. McMahon, St. Paul, Minn. Filed July 10, 1922. Serial No. 573,865. 3 Claims. (Cl. 20—38.)

1. A car door structure comprising door posts having vertical grooves in the lower portions of their adjacent sides, said grooves having their forward walls outwardly inclined, metal plates covering said sides of the posts and extending along said inclined walls, a door section disposed between said posts having laterally movable metal plates extending along its vertical side edges, the outer edges of said plates being beveled at their front portions to be disposed in said grooves and co-operating with the plates therein.

1,482,942. POWER-PRODUCING SYSTEM. WILLIAM HERBERT NIELD, Stockport, England, assignor of one-half to William Melland, Manchester, England. Filed Dec. 8, 1919. Serial No. 343,272. 1 Claim. (Cl. 110—24.)

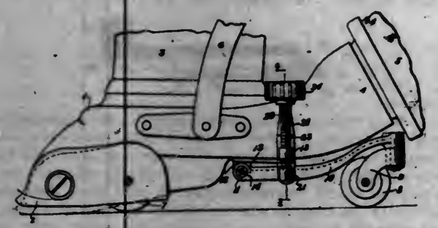
A fuel consuming device comprising a furnace for industrial use including a grate to consume the fuel, a tube in the combustion chamber of the furnace, means to pass fuel continuously into said tube and out of the inner end on to said grate, means to move the fuel passing out of said tube on to said grate along the grate in an opposite direction to the direction of its passage through the tube, means to discharge ash from the furnace, means to draw off gases from the tube evolved in the absence of air, means to remove condensation products from the gases, means to pass the stripped gases back to the furnace and a burner in the combustion chamber to burn said stripped gases below the tube to coke the fuel therein previous to its passing on to the grate.

1,482,943. SALES-CHECK HOLDER. THOMAS R. F. POTTER, Brooklyn, N. Y. Filed Feb. 9, 1923. Serial No. 617,977. 10 Claims. (Cl. 211—37.)

1. In a device of the class described, the combination of a support for a pad of checks; a plate secured to said support and adapted to have its outer end moved toward said support, said end having an opening therein; and a pivoted cutter interposed between said plate and support with its cutting edges normally above said opening but adapted to enter said opening and coact with the wall thereof when the end of said plate is moved toward said support.

1,482,944. RELEASABLE WIRE-ROPE SOCKET. JOHN D. RUSS, Spencer, W. Va., assignor of one-half to Wirt N. Russ, Spencer, W. Va. Filed Dec. 14, 1922. Serial No. 606,990. 5 Claims. (Cl. 103—226.)

1. A wire-rope socket device comprising two members, mortised to provide mating tongues, means for normally holding said members in assembled position with said tongues disposed face to face, said means comprising a roller carried transversely of one tongue and normally engaging the other tongue, and a spring-pressed latch carried by one member and normally engaging the other member.



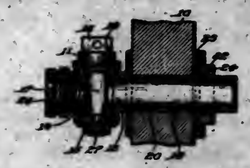
1,482,945. LOOSE-LEAF BINDER. ARTHUR R. SELDEN, Rochester, N. Y. Filed Oct. 31, 1921. Serial No. 511,864. 4 Claims. (Cl. 129—8.)

1. A loose leaf binder embodying an impaling post or projection comprising two sections one of which has a screw-thread engagement with the other to effect the ad-

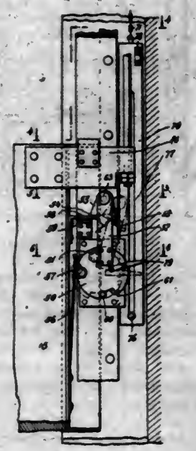
justment of such post or projection and is provided with a longitudinally extending notch, and a locking device cooperating with the walls of the notch to hold the section against turning.

1,482,946. CASTER. ADAM A. SERVA and WALTER S. SIMPSON, Canton, Ohio, assignors to The United Electric Company, Canton, Ohio, a Corporation of Ohio. Filed Feb. 1, 1923. Serial No. 616,294. 9 Claims. (Cl. 16—34.)

1. In combination with a vacuum cleaner, an arm pivoted thereto at one end and having a caster at the other end, bearings on the cleaner and arm, an adjusting screw on one of the bearings and swivelled to the other bearing, and spring means for preventing vibration of said parts.



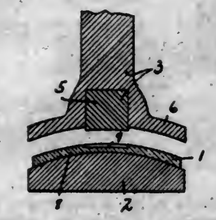
1,482,947. COMBINATION VALVE STEM AND PRESSURE GAUGE. NELSON TALMAGE SHORTS, Fern, Pa. Filed Jan. 6, 1923. Serial No. 611,069. 2 Claims. (Cl. 152—11.5.)



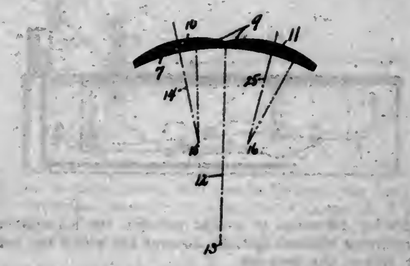
2. A combination valve stem and pressure gauge comprising a valve stem body, a barrel having one end screw-threaded on the body and having an inturned flange at its opposite end, a pressure indicating plunger slidable in the barrel and projectable from the last named end thereof, an air valve in the plunger, and a spring between the barrel and plunger confined between said flange and a portion of the plunger, said flange having a feather, the plunger having a longitudinal groove to engage said feather, said feather being removed from said groove by forcing the plunger into the barrel.

1,482,948. VALVE FITTING. JAMES J. SMITH, Philadelphia, Pa. Filed May 3, 1921. Serial No. 466,391. 2 Claims. (Cl. 251—91.)

1. A drain faucet for ice cream containers and the like, comprising a one piece body having a flange to cooperate with the outer wall of the container, a packing cooperating with the inner wall of the container, a passage alined with the faucet passage, and a rotary plug for regulating the flow from the faucet passage.



1,482,949. CONTROL MECHANISM FOR DOORS. EZRA B. SMITH, Ravenswood, Ill., assignor to John Edward Ogden, Mountainville, N. Y. Filed Dec. 11, 1922. Serial No. 606,276. 26 Claims. (Cl. 187—59.)

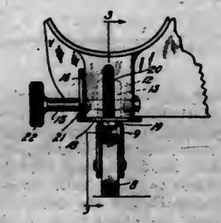


15. In combination, a plurality of movable hatchway door sections adapted to move toward each other to closed position and means including a pneumatic device mounted on a fixed support and engageable by one of the doors for cushioning the closing movement of said doors as they approach each other, said pneumatic device including a piston so weighted as to return by gravity to operative position after the cushioning movement thereof.

1,482,950. BIFOCAL-LENS BLANK. HAROLD J. STEAD, Geneva, N. Y. Filed Mar. 23, 1921. Serial No. 454,627. 9 Claims. (Cl. 88—54.)

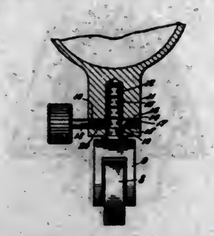
1. A lens blank having upon one face a relatively small depressed central portion molded to an accurate curvature suitable for visual purposes without grinding or polishing, and a relatively large surrounding surface molded to an approximate curvature, and the other face of the blank molded to an approximate curvature.

1,482,951. BIFOCAL-LENS BLANK. HAROLD J. STEAD, Geneva, N. Y. Filed Apr. 16, 1923. Serial No. 632,339. 4 Claims. (Cl. 88—54.)



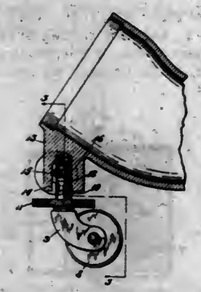
1. A bifocal lens blank having a concave inner surface of substantially uniform curvature throughout, and an outer surface formed with two separate curved surfaces having substantially the same radius of curvature, but differing in radius of curvature from the concave inner surface of the blank.

1,482,952. REENFORCED-RUBBER FLOORING AND PROCESS OF MAKING THE SAME. JAMES HERBERT STEDMAN, Braintree, Mass. Filed Oct. 4, 1922. Serial No. 592,423. 7 Claims. (Cl. 18—50.)



4. The method of making vulcanized rubber flooring, or the like, which comprises treating a compound of unvulcanized rubber, cotton fiber and pigment in a manner to mix the pigment and fiber throughout the compound, then repeatedly folding and passing the mixed batch through a refining mill the heavy pressure and differential action of which tears the fiber into minute shreds and distributes the fibre throughout the batch as it is shredded, a fine comminution of the fiber and its intimate association with the rubber being accomplished by continuing the refining of the batch until it is reduced to a sheet of substantially paper thickness, then mixing a plurality of such batches each of a distinctive color to form a variegated sheet in which the interspersed fiber, in the condition described, causes the colors to resist amalgamation under prolonged mixing with a final result of mingling without losing color identities, and then vulcanizing the sheet.

1,482,953. ADJUSTABLE CASTER. WILLIAM J. TIDEMAN, Canton, Ohio, assignor to The United Electric Company, Canton, Ohio, a Corporation. Filed Dec. 10, 1921. Serial No. 521,340. 3 Claims. (Cl. 16—19.)



1. A caster for a vacuum cleaner or the like having a vertical bore therein, a shank vertically adjustable within the bore, and provided with a vertical slot, said shank being provided with a disc, a caster upon the shank, spring means for normally urging the shank upward, a shaft extending transversely through the slot and an eccentric cam upon the shaft engaging said disc to move the shank downward.

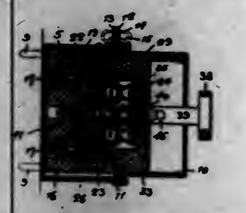
1,482,954. ADJUSTABLE CASTER. WILLIAM J. TIDEMAN, Canton, Ohio, assignor to The United Electric Company, Canton, Ohio, a Corporation. Filed Dec. 10, 1921. Serial No. 521,341. 4 Claims. (Cl. 16—19.)

1. A caster for vacuum cleaners or the like including, a vertically adjustable, annularly grooved shank, a caster carried thereby and a bearing screw for engagement with the shank for holding the same in adjusted positions and friction means cooperating therewith.

1,482,955. ADJUSTABLE CASTER. WILLIAM J. TIDEMAN, Canton, Ohio, assignor to The United Electric Company, Canton, Ohio, a Corporation. Filed Dec. 10, 1921. Serial No. 521,342. 3 Claims. (Cl. 16—19.)

1. A caster for vacuum cleaners or the like including an adjusting screw having an annular groove, a caster carried thereby, and a locking screw extending tangentially through the groove in the adjusting screw and vertically movable with the adjusting screw.

1,482,956. ADJUSTABLE CASTER. WILLIAM J. TIDEMAN, Canton, Ohio, assignor to The United Electric Company, Canton, Ohio, a Corporation. Filed Dec. 10, 1921. Serial No. 521,343. 3 Claims. (Cl. 16—19.)



1. A caster for vacuum cleaners, or the like including an inclined, notched guideway, a plunger slidably located therein and having ears for engagement with the notches, means for normally holding the plunger in adjusted position and a caster carried by the plunger.

1,482,957. SHADE HOLDER. ARTHUR J. TILLEY, Brooklyn, N. Y. Filed July 22, 1921. Serial No. 486,722. 5 Claims. (Cl. 240—148.)

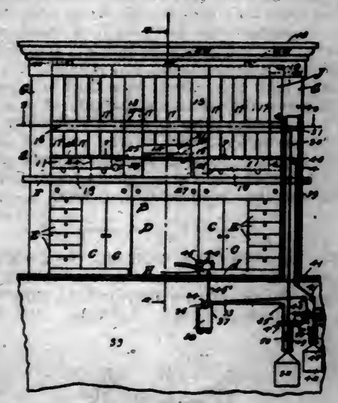
1. For use with a lamp shade having a skeleton frame element extending inwardly from the upper margin of the shade, a shade carrier comprising an attaching member for mounting the same upon a lamp base, supporting arm means rigid therewith, carrier arm means pivoted thereto a bridge extending between and integral with said carrier arm means, and means associated with the carrier arm means for detachably engaging said skeleton frame element of the lamp shade, said shade-frame engaging means being engageable with frames of different sizes.

1,482,958. ELECTRIC SWITCH. EMIL H. W. ULLRICH, New York, N. Y., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 12, 1921. Serial No. 468,909. 6 Claims. (Cl. 200—114.)

1. A switch of the character described, comprising a connection block, switch contacts and associated terminal connections thereon, a cover block of insulating material mounted on and secured to said connection block and covering the electrical conductors thereon, said block being apertured in register with the switch contacts, together with an independent switch block of insulating material, switch blades thereon, associated fuse terminals adapted to receive and electrically connect a fuse between said switch blades, a box encasing said parts, and a switch operating handle passing through the said box and connected to said switch block for shifting the latter rectilinearly to open or close the switch, said switch box having side walls affording a guide for the switch block during its switch opening and closing movements.

1,482,959. SCALE. CARLOS LUIS TOMÁS ABÁLSAMO, Buenos Aires, Argentina. Filed Aug. 18, 1922. Serial No. 582,720. 2 Claims. (Cl. 265—58.)

1. A scale, comprising in combination, a beam; a receiving element for the material to be weighed; a lever system connecting the beam and receiving element to operate the former in accordance with the movements of the latter; an indicator system for setting the scale to weigh different definite amounts and including at least one weight adjustable along the beam in accordance with the particular amount to be weighed, an indicator arm connected to the weight to be shifted thereby, and a graduated scale member with which the indicator arm coacts; and a separate indicating device embodying an indicator arm connected to be shifted by the beam during the movements thereof, and a graduated scale member with which the last-named indicator arm coacts to indicate

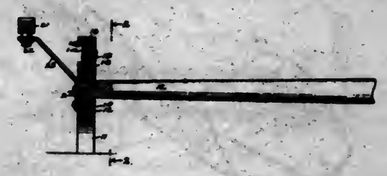


the precise difference in weight between the material on the receiving element and the amount for which the indicator system has been set.

1,482,960. PROCESS OF MANUFACTURING AND LAYING BITUMINOUS SHEET PAVEMENTS AND MATERIALS THEREFOR. FREDERICK C. ALSDORF, Columbus, Ohio. Filed Sept. 16, 1922. Serial No. 588,722. 6 Claims. (Cl. 94—23.)

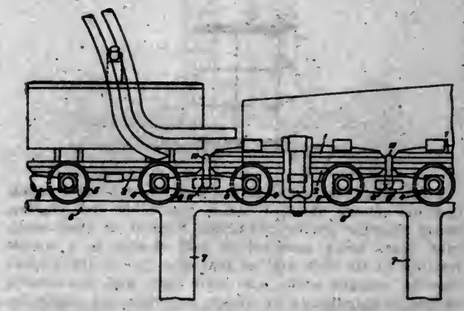
1. The process of manufacturing and laying a bituminous paving material, which consists in agitating a heated mixture of bitumen and a base, and while the mixture is still warm adding a hydrocarbon distillate thereto.

1,482,961. BANK-TELLER'S WINDOW GUARD. JOHN N. BANITT and JACOB THIEMANN, Goodhue, Minn. Filed May 23, 1922. Serial No. 563,079. 3 Claims. (Cl. 268—2.)



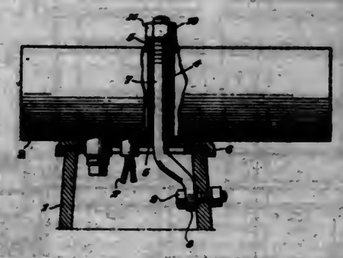
2. In a window of the class described, a closure, said closure having a window opening therethrough, a closure movable independently of the first closure to cover said opening, draw cables movable to different extents to operate the closures, means to urge drawing movement of both cables, a detent to which both cables are connected, catch means engageable by the detent, and means operable to disengage the detent from the catch means.

1,482,962. BRIDGE FOR BILLIARD AND POOL TABLES. WALTER WILGUS BANKS, Salem, N. J. Filed Aug. 9, 1922. Serial No. 580,736. 3 Claims. (Cl. 46—6.)



1. A bridge for billiard and pool tables, including a handled body formed with a transversal groove at the upper portion thereof, an extension element formed with

depressions adjacent each end thereof arranged to slide in said groove, said extension element being totally ar-



ranged in said groove, and means between the body and the extension element to hold said element in a given position.

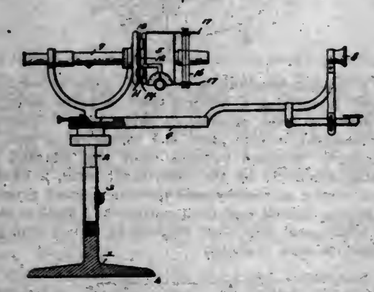
1,482,963. MACHINERY FOR MAKING WAFER BISCUITS, CUP WAFERS, AND SIMILAR ARTICLES FROM LIQUID. THOMAS O. BATES, Liverpool, England. Filed Aug. 24, 1921. Serial No. 494,778. 2 Claims. (Cl. 107—58.)

1. In a wafer biscuit making machine, a movable series of plates, and a baffle interposed between adjacent plates to prevent a fresh charge introduced in one set of plates from being interfered with by steam generated from the charge of the preceding plate, said baffle projecting above the material receiving plane of the plates and being wholly free of connection with any of the plates.

1,482,964. ANCHOR. HERSHEL A. BENEDICT, East Orange, and EDVARD M. MOLLER, Jersey City, N. J. Filed Nov. 26, 1921. Serial No. 518,078. 6 Claims. (Cl. 64—24.)

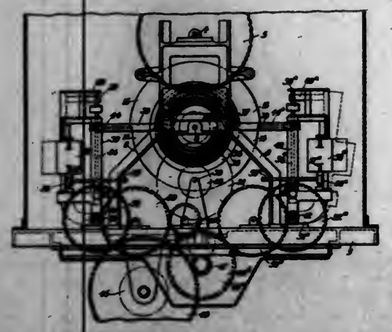
1. In a device of the character described, a tank having a tube closed with respect to the interior of the tank and open at its opposite ends to the exterior of the tank, an anchor bolt of greater length than said tube having means at one end for attaching the same to a bearing housing and arranged and adapted to project through said tube for securing the tank in place.

1,482,965. POOL-BALL CABINET. ELMER A. BLACK, Louisville, Ky. Filed May 1, 1923. Serial No. 635,952. 3 Claims. (Cl. 46—6.)



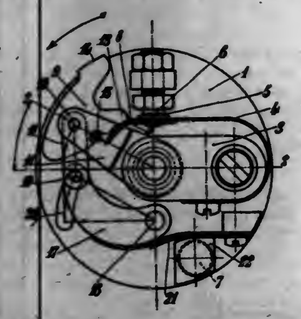
1. A pool ball cabinet comprising a back portion, an outwardly extending support attached at the lower end thereof, a rotatable rack pivotally mounted on said back portion and provided with a plurality of spaced, grooved ball receiving trays, an arcuate guard member carried by said back member and extending concentrically with said pivoted rack, and means for holding said rack in operative position.

1,482,966. BACTERIOLOGICAL TEST APPARATUS. LLEWELLYN E. W. BEVAN, Salisbury, Southern Rhodesia, South Africa. Filed June 24, 1922. Serial No. 570,749. 1 Claim. (Cl. 23—3.)



A device for use in bacteriological tests, comprising a vessel for the reception of a diluted emulsion containing bacteria in suspension, a closure for sealing the vessel, and a capillary filament carried by and depending from the closure, said closure also sealing said filament from the atmosphere.

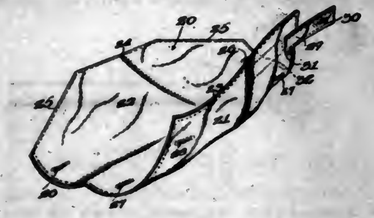
1,482,967. OPTOMETRICAL INSTRUMENT. BENJAMIN E. BRIERTON, Birmingham, Ala. Filed Oct. 26, 1922. Serial No. 597,020. 6 Claims. (Cl. 88—20.)



1. In an instrument of the class described, the combination of mire-boxes, an ophthalmostat located in front thereof, and means located between the respective mire-boxes and the ophthalmostat for deflecting the light rays passing from the mire-boxes to the corneal surface of the eye under examination.

1,482,968. TRANSMITTER FOR ELECTRIC RECORDING AND SIGNALING SYSTEMS. ARTHUR BURTON BUCKLEY, Cairo, Egypt. Filed June 14, 1921. Serial No. 477,549. 10 Claims. (Cl. 177—351.)

1. In a device for transmitting the movements of an object to a distant indicator, a pair of independently driven intermittent current impulse transmitters, a device having means co-operating with said transmitters whereby both of said transmitters are restrained from movement when said device is in normal position and whereby one or other of the transmitters is released for movement when the device is moved in one direction or the other, a connection between said device and said object whereby the object moves the device and means controlled by the impulses transmitted to the distant indicator and co-operating with said device for returning said device to normal restraining position.

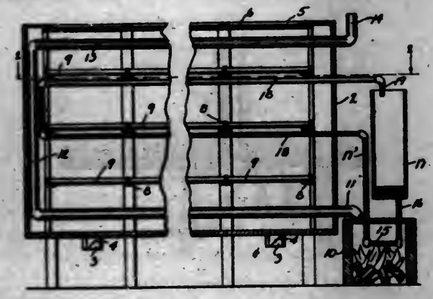


1,482,969. CONTACT BREAKER FOR INTERNAL-COMBUSTION ENGINES. PAUL AUGUSTE VICTOR CERESOLE, London, England. Filed Jan. 4, 1923. Serial No. 610,666. 5 Claims. (Cl. 200—31.)

2. A contact-breaking device for internal combustion engines, comprising a driving shaft, a plate mounted on said shaft, a lever pivoted on said shaft, a centrifugal mass mounted on said plate and connected to said lever, a trip-lever mounted on said lever and adapted to be adjusted angularly by the centrifugal mass, a fixed contact, a spring carried by said plate, a contact pressed by said spring against said fixed contact and fixed abutments with which said trip lever engages to deflect said spring to separate said contacts.

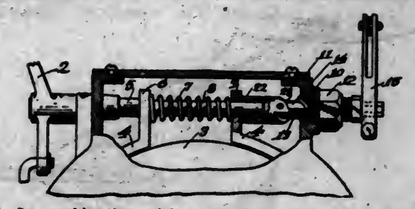
1,482,970. SHIRT AND CUFF THEREFOR. GEORGE P. CRAGIN, Spokane, Wash. Filed Feb. 9, 1920. Serial No. 357,460. 2 Claims. (Cl. 2—79.)

1. A soft reversible cuff adapted to form an inner and an outer fold, said inner fold having its corners cut away and provided with cuff-button-holes, said outer fold having complementary button holes and a sleeve-button hole at one end, and said outer fold having at its opposite



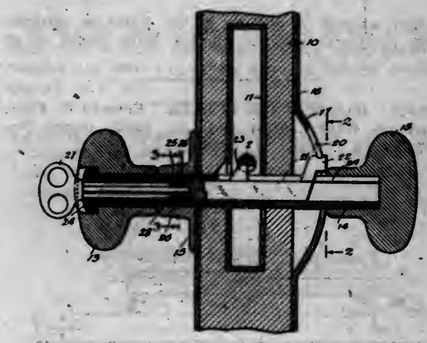
end a slot and a sleeve-button-hole tab adapted for use with said sleeve-button-hole at selective sides of the outer fold.

1,482,971. WIREBOUND BOX. CHARLES ALLEN CUMMINGS, Battle Creek, Mich., assignor to Battle Creek Box Co., Battle Creek, Mich. Filed Jan. 25, 1921. Serial No. 439,730. 3 Claims. (Cl. 217—12.)



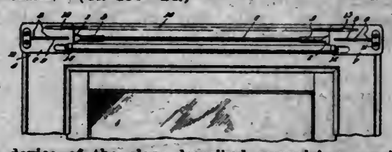
1. In a box, the combination with the side wall panels and end cleats therefor, of a removable end closure, cleats therefor having projecting tongues at their ends, said cleats being mounted on said closure in a spaced relation to its ends and so that one end of the closure may be engaged under one wall cleat and the closure shifted longitudinally to engage its other end under the opposite wall cleat, the other pair of wall cleats having rabbet-like recesses in their inner edges adapted to receive the projecting tongues of said closure cleats, and a locking block adapted to be disposed between one of the closure cleats and the adjacent wall cleat when the other closure cleat is in engagement with the opposite wall cleat thereby preventing longitudinal disengaging movement of the closure.

1,482,972. FRUIT DRIER. JOHN CHANDLER, Chino, Calif. Filed Oct. 26, 1922. Serial No. 597,066. 2 Claims. (Cl. 34—39.)



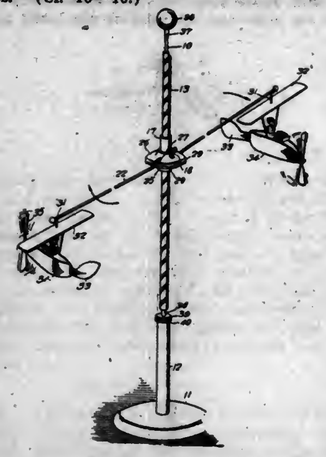
2. A dehydrating apparatus comprising a compartment having racks upon which trays containing substance to be treated are to be arranged, a fire box outside of chamber, smoke flues from the fire box in parallelism through and up in the compartment, a water tank having water pipes leading to the fire box and thence parallel to and just below trays on the racks and returning to the tank.

1,482,973. LOW-GEAR ATTACHMENT FOR FORDS. CARL B. CRAMER, Los Angeles, Calif. Filed Nov. 24, 1922. Serial No. 602,999. 7 Claims. (Cl. 74—39.)



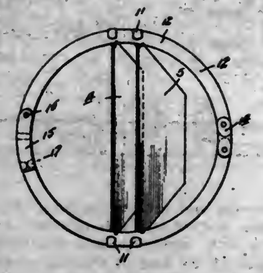
1. In combination with a low speed mechanism including the usual operating lever, and an independent auxiliary low speed mechanism setting device.

1,482,974. LOCK. ERNEST DAELE, New York, N. Y. Filed Apr. 12, 1923. Serial No. 631,705. 3 Claims. (Cl. 70—91.)



1. In a door lock including a hollow spindle, bearing plates in which said hollow spindle is mounted and a latch operated by said hollow spindle, means for locking the hollow spindle against rotation and the latch against movement, comprising a bar slidably mounted in said hollow spindle, projections formed on said bar and extending through a slot provided in the hollow spindle, one of said projections serving to engage in a slot provided in one of the bearing plates, the other projection being positioned to engage the latch to retain it against movement, and means for operating said bar.

1,482,975. SHADE BRACKET. BURWELL M. DAVIS, Raleigh, N. C. Filed Apr. 1, 1922. Serial No. 548,733. 1 Claim. (Cl. 156—24.)



A device of the class described comprising a pair of plates, each having one end bent and its other end cut and rolled to provide a screw threaded socket, and a rod having its ends screw threaded for engaging said sockets, a pair of flat members slotted longitudinally, screws passing through the slots and openings in the plates respectively for associating the members with the plates for horizontal adjustment thereon, a shade roller bracket formed on each member by cutting the member and bending the cut portion at right angles, a spring clamp connected with each member for supporting a curtain pole, a hook formed on each member by cutting the same and bending the cut portion at right angles and a spring engaging said hooks for supporting a curtain.

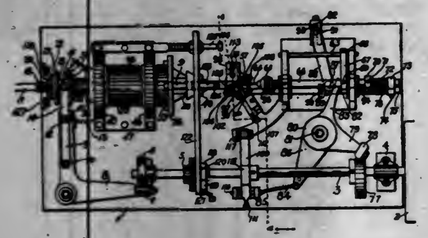
1,482,976. TOY. WILLIAM H. J. DOWNEY, Wilmington, Del. Filed Sept. 29, 1921. Serial No. 504,136. 4 Claims. (Cl. 46—40.)

1. A toy comprising a vertical mast, a helical guide extending approximately the length of the mast but stopping short at the upper and lower ends, a hub slidable upon the mast, manually-operable means carried by the hub for engaging the helical guide and so positioned as to escape the guide at the lower end where the helical guide is interrupted, an anti-friction member disposed to receive and support the hub after escaping the helical guide, radial arms carried by the hub, and devices carried adjacent the extremities of the radial arms.

1,482,977. ANTIGLARE HEADLIGHT FOR AUTOMOBILES. WILLIAM H. J. DOWNEY, Wilmington, Del. Filed Mar. 27, 1923. Serial No. 627,973. 2 Claims. (Cl. 240—48.4.)

1. An automobile headlight structure provided with a reflector, a lens for location in front of the reflector, a supporting ring for the lens with said ring having its continuity interrupted, and a pair of transverse shields associated for joint action and provided with terminal portions for embracing the ring and extensible to be adapted for attachment to reflectors of different sizes.

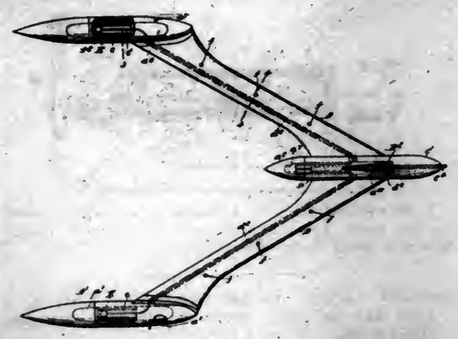
1,482,978. WINDOW SHADE. JOSIAH P. EDWARDS, Spiceland, Ind. Filed Aug. 31, 1922. Serial No. 585,454. 6 Claims. (Cl. 156—10.)



5. A shade of the character described comprising in combination, a flexible sheet; an upper transverse stretcher bar therefor; a lower transverse stretcher bar therefor, a series of intermediate transverse stretcher bars attached alternately to the front and back of said sheet at vertically spaced intervals between said upper and lower stretcher bars, said shade being provided just below each, with the exception of the lowermost, of said

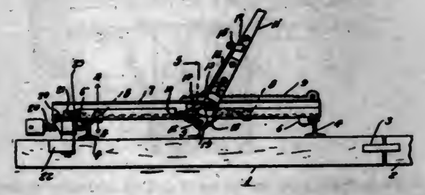
intermediate stretcher bars, with a centrally located opening; a lock pulley attached centrally of the inner face of said upper stretcher bar; and a draw cord secured at its inner end centrally of the lower portion of

the lowermost intermediate stretcher bar and extending upwardly through said openings alternately along the inner and outer faces of said shade across said intermediate stretcher bars, thence through said pulley and downwardly along the inner face of said sheet.



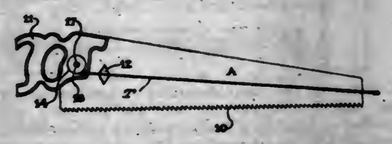
1,482,979. TURNING AND DRILLING MACHINE. GEORGE H. FAGAN, Bloomfield, N. J. Filed Oct. 17, 1919. Serial No. 331,420. 13 Claims. (Cl. 144—46.)

1. In a turning and drilling machine, the combination with a machine bed, of revoluble intermittent rod-feeding mechanism, a drill, spring tension drill-feeding devices, means for limiting the feed of the rod towards the drill, a tool carriage movable horizontally, a turning tool secured upon the carriage, a fixed pattern, the said carriage having a member arranged to contact with and to follow the pattern, means for pivotally supporting the tool carriage whereby it may be tilted bodily up and down, means for moving the tool carriage and the said drill-feeding devices at the same time back and forth lengthwise of the said bed, a parting tool, and means for operating the parting tool and for tilting the tool carriage in timed relation to the movements of the said tool carriage and drill.



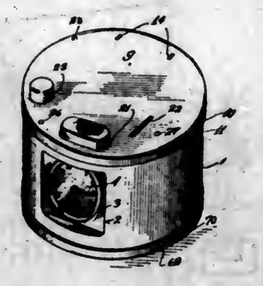
1,482,980. DIRECTION DETECTOR FOR SUBMARINE SOUNDS. RICHARD D. FAY, Nahant, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed June 27, 1919. Serial No. 307,231. 9 Claims. (Cl. 181—0.5.)

6. A device of the kind described comprising three receivers located substantially equidistant from each other, a towing member, and ribs connecting said receivers and said towing member, said device being



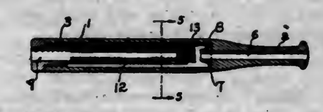
weighted whereby it will be in the water in approximately horizontal position whether being towed or at rest.

1,482,981. RAILWAY-TIE PULLER. EDWARD H. FISH, Spokane, Wash. Filed Oct. 27, 1922. Serial No. 597,355. 6 Claims. (Cl. 254—43.)



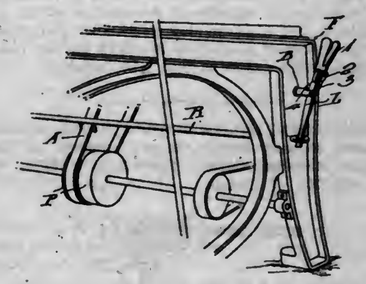
6. A railway tie remover comprising complemental members, one of said members being provided with means for connecting it to the rails and the other of said members being provided with means for connecting it to the tie to be removed, an operating lever fulcrumed to the movable member, two sets of pawls carried by the operating lever and disposed at different distances from the fulcrum thereof, ratchet bars carried by the movable member and adapted to cooperate with the respective set of pawls and means on said operating lever to hold either set of said pawls in inoperative position.

1,482,982. COMBINATION TOOL. OLIVER E. FOWLER, Baldwin, Ga. Filed May 27, 1922. Serial No. 564,216. 1 Claim. (Cl. 7—13.)



A lumber measuring device for saws having a handle and a sight opening in the blade thereof adjacent the handle, said measuring device comprising a graduated tape, a casing arranged in a recess in the handle, a spring-actuated spool mounted for rotation in the case and about which the tape is adapted to be wound and unwound, and said tape being arranged longitudinally of the saw when in use and traversing the sight opening whereby the tape can be read from the opposite side of the saw as specified.

1,482,983. SAVINGS BANK. GEORGE D. GALLAGHER, Washington, D. C., assignor to John Floyd Cissel, Washington, D. C. Filed Nov. 22, 1921. Serial No. 517,087. 10 Claims. (Cl. 194—78.)



3. A bank including a time piece having a winding stem, and a coin controlled winding stem guard embracing the stem to prevent gripping thereof except on deposit of a coin.

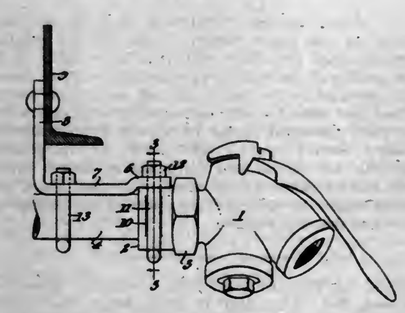
1,482,984. CIGARETTE HOLDER OR THE LIKE. JOSÉ DANIEL GARCÍA, Buenos Aires, Argentina. Filed Jan. 27, 1923. Serial No. 615,292. 2 Claims. (Cl. 131—10.)

1. A cigarette holder comprising an outer casing, a filtering tube therein, a plurality of slits in the filtering tube, the said slits presenting an unobstructed passage for the smoke to the outer surface of the filtering tube.

1,482,985. LEVER CHOCK. OMER C. GOULET, Fall River, Mass., assignor of one-half to Albert E. Perron, Fall River, Mass. Filed Apr. 30, 1923. Serial No. 635,738. 2 Claims. (Cl. 74—39.)

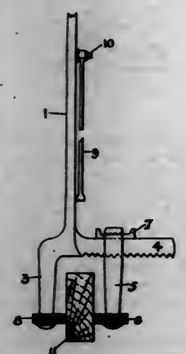
1. In combination, a lever mounting bracket having an ear thereon forming a shoulder, a shifting lever pivoted on the bracket at a point beyond said shoulder, said lever having a socket, a spring in the socket, and a chock lever pivoted to the first named lever, said spring exerting yielding pressure against the chock lever so that it will automatically engage with said shoulder when the shifting lever is moved outwardly a predetermined extent.

1,482,986. DRAIN GATE. EUGENE E. GRIMES, Tiffin, Ohio, assignor to Frederick A. Damschroeder, Tiffin, Ohio. Filed May 19, 1921. Serial No. 470,823. 2 Claims. (Cl. 251—125.)



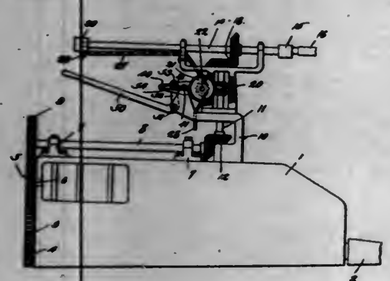
1. A drain gate including a spout having a discharge passage and having its mouth beveled downwardly and outwardly from its upper side, a pair of upstanding ears on the spout adjacent its mouth, a flap valve having a pair of rearwardly projecting ears near its upper end, a pintle inserted through the ears whereby to pivot the valve to the spout in position to lie upon and over the beveled mouth, and a spring coiled around the pintle and housed between the ears and having its ends bearing respectively upon the upper side of the spout and the rear side of the valve.

1,482,987. ANGLE-COCK HOLDER AND TRAIN-PIPE CLAMP. CLEON M. HANNAFORD, Richmond, Va. Filed Mar. 27, 1922. Serial No. 546,997. 4 Claims. (Cl. 248—31.)



1. An angle-cock holder, made in two longitudinally separable parts and having a pocket formation to receive and engage the hex of the angle-cock and a trough to receive and engage the train pipe and provided with laterally extended horizontal flanges, and a supporting bracket therefor, said bracket adapted to be carried by a car and having a horizontal portion to engage the top of a train pipe and the holder flanges and to serve as a direct support for holding the angle-cock and train pipe rigidly and thereby prevent the angle-cock from moving forward, backward, and laterally, and hold the same in proper position.

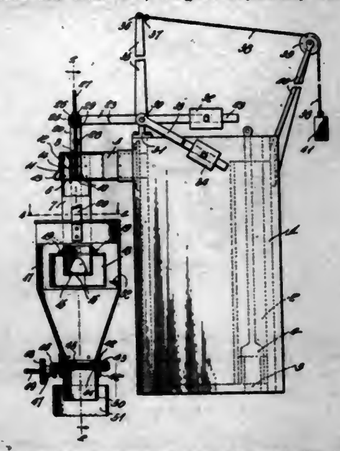
1,482,988. HOLDER FOR ANGLE COCKS. CLEON M. HANNAFORD, Richmond, Va. Filed Sept. 18, 1922. Serial No. 589,374. 5 Claims. (Cl. 248—31.)



5. An angle cock, having a shell or body provided with an extension rearward of its hex and made in one piece with its shell or body and adapted to be engaged with a train pipe and a supporting bracket, said extension provided with a terminal flange adapted to cooperate with a fastening medium for uniting the extension, train pipe and supporting bracket.

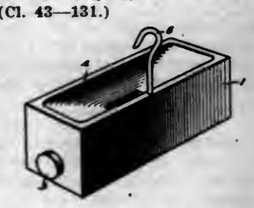
1,482,989. APPLIANCE FOR CLAMPS OR CRAMPS AND THE LIKE. LESLIE FREDERICK HEBING, Launceston, Tasmania. Filed Apr. 18, 1923. Serial No. 633,007. 6 Claims. (Cl. 254—15.)

1. A clamp of the character described, comprising a lever having two downwardly extending jaws provided with rotatable cams, and means for adjusting the jaws relatively one to the other.



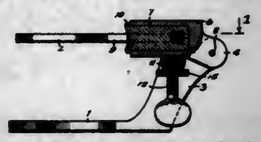
1,482,990. AUGER. LOUIS F. HESS, Ansted, W. Va., assignor, by direct and mesne assignments, to Daniel Boone Mining Machine Company, a Corporation of West Virginia. Filed Aug. 13, 1921. Serial No. 491,984. 3 Claims. (Cl. 262—9.)

1. A mining machine comprising a body, a frame mounted on the upper portion of the body, a substantially horizontal first shaft supported for rotation on the upper portion of the body, a substantially vertical second shaft journaled in the frame, beveled pinions connecting the first and second shafts, an approximately horizontal third shaft journaled in the frame and slidable therein, an auger carried by the third shaft, beveled pinions connecting the second and third shafts, means driven by the second shaft for advancing the third shaft, and a clutch under the control of an operator and interposed in the last specified means.



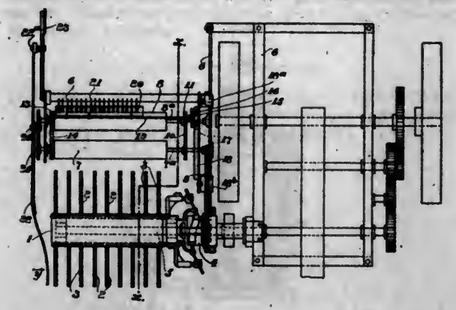
1,482,991. STOCK REGULATOR. ALBERT T. HILAMAN, Newark, Del. Filed May 15, 1922, Serial No. 561,104. Renewed Sept. 10, 1923. 9 Claims. (Cl. 92—46.)

3. In a structure of the character described, a stuff box, an outlet pipe for the stuff box having a depending spout, a gate in the pipe slidable upwardly to an open position, a pulp bucket positioned about the lower portion of the spout and having an outlet in its lower portion and a control for the outlet, hanger arms extending upwardly from the bucket, a rotatably mounted rocker shaft, lever arms carried by the rocker shaft, a cross bar extending between the lever arms and pivotally connecting the hanger arms with the same, a threaded stem pivotally connected with said gate and adjustably held in engagement with the cross bar, weights adjustably carried by



the lever arms, crane arms extending upwardly from said rocker shaft, a support carried by said stuff box and provided with a pulley wheel, a weight carrying cable connected with the crane arms and engaged with said pulley, a handle arm carried by said rocker shaft, and a weight adjustable upon said handle arm.

1,482,992. INSECT TRAP. AUGUST HOFFBAUER, Brooklyn, N. Y. Filed May 9, 1923. Serial No. 637,745. 1 Claim. (Cl. 43—131.)

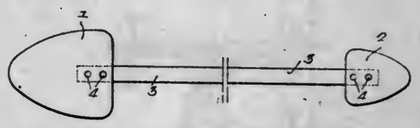


An insect trap which includes a block of wood impregnated with an oil waterproof material to act as a bait for insects, said block having a chamber containing insecticide, the upper surface of the block having a shallow depression therein opening into said chamber.

1,482,993. DENTAL ARTICULATOR OR RELATOR. JOSEPH HOMER, Boston, Mass., assignor to Corinne Homer, Brookline, Mass. Filed June 6, 1923. Serial No. 643,730. 3 Claims. (Cl. 32—1.)

1. A dental articulator comprising fixed and movable frame members, said movable frame member provided with a chamber, a jaw member having a portion adapted to extend into said chamber, and a plastic medium disposed in said chamber surrounding the end of said jaw member to connect it to said frame member while permitting a certain movement thereof relative to the frame member.

1,482,994. FLAX AND LIKE PULLING OR HARVESTING MACHINE. SAMUEL CRAWFORD IRVINE, Belfast, Ireland. Filed Jan. 5, 1923. Serial No. 610,864. 12 Claims. (Cl. 55—66.)



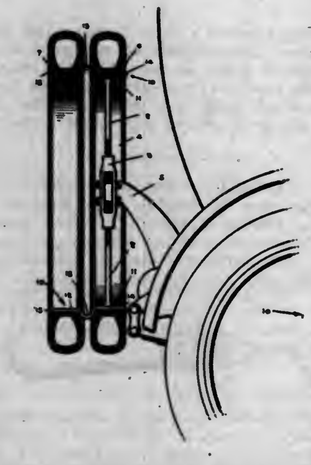
1. In a flax or like pulling and harvesting machine, the combination with means for pulling the material out of the ground and releasing it at a suitable point, of a comb for engaging the pulled material and means for moving said comb to deposit said material away from said pulling means.

2. In a flax or like pulling and harvesting machine, the combination with means for pulling the material out of the ground and releasing it at a suitable point, of a comb for engaging the pulled material and means for imparting a combined angular and translatory movement to said comb in order to deposit said material away from said pulling means.

7. In a flax or like pulling and harvesting machine, the combination with means for pulling the material out of the ground and releasing it at a suitable point, a side bar for engaging fallen material at the side of the machine for lifting same into engagement with the means for pulling the material out of the ground, and a comb for engaging the pulled material and means for moving said comb to deposit said material away from said pulling means.

1,482,995. SHOE TREE. ARTHUR C. JACKSON, Philadelphia, Pa., assignor to The Miller Lock Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 22, 1922. Serial No. 556,106. 2 Claims. (Cl. 12—128.1.)

1. A shoe tree consisting of a spring metal strip having a toe piece at each end, one toe piece being larger the the other, and each toe piece being formed to fit a shoe of a given shape.

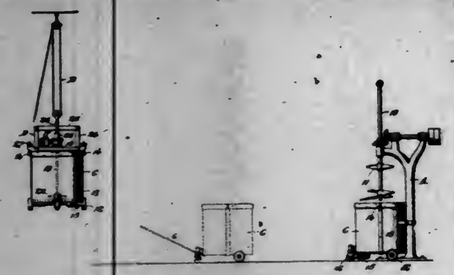


1,482,996. GLASS VENTILATOR. THOMAS A. JENKINS, Jersey City, N. J. Filed Mar. 17, 1922. Serial No. 544,541. 2 Claims. (Cl. 98—31.)

1. In a ventilator opposed spaced sets of fixed panel supports of each set arranged in spaced relation, each of said supports comprising an inclined rectangular supporting member, a flange integral with and of less length than one longitudinal edge of said member and further integral with one end edge and spaced from the other end edge of said member, a flange integral with the other longitudinal edge of and spaced from the flanged end of said member and further projecting beyond the other end edge of said member, said flanges disposed at right angles with respect to said member opposing each other and further one projecting beyond one end of the other, and means extending through the portion of that flange

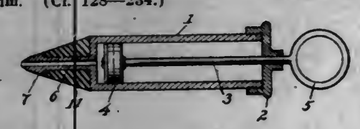
which projects beyond one end edge of said member for securing a panel supported by the opposed flanges against the flanged end of said member.

1,482,997. SPARE-RIM CARRIER. NELS JENSEN, Berlin, Wis. Filed Oct. 5, 1922. Serial No. 592,519. 1 Claim. (Cl. 224—29.)



A spare rim carrier comprising aligning rods, a turnbuckle threaded on the adjacent terminals thereof, and heads secured to the opposite ends of said rods, each head having a portion to fit in and bear against a rim carrier, another portion to fit in and bear against an extra rim, an arched bend between said portions, and bent portions at the opposite ends of said portions to engage the last named carrier and rim, the second-named portion of each head being offset relatively to the first named portion of the head away from the turn-buckle.

1,482,998. AGITATING APPARATUS. JAMES W. KENT, Brooklyn, N. Y., assignor to Kent Machine Works, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 30, 1923. Serial No. 677,766. 3 Claims. (Cl. 259—1.)



1. In apparatus of the class described, a suspended stirring mechanism, means for elevating and lowering

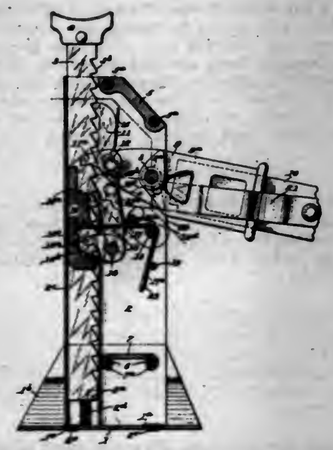
said mechanism in suspension, and means for detachably and operatively connecting the mechanism to a dispensing

tank whereby the tank and mechanism may be elevated in operative union to facilitate dispensing and effect stirring of the tank's contents during dispensing.

1,482,999. SYRINGE. EDWARD H. KOHNEN, Cincinnati, Ohio. Filed Nov. 3, 1919. Serial No. 335,826. 1 Claim. (Cl. 128—234.)

In a syringe, a barrel, a piston in said barrel, an outlet from the barrel, an extension from the barrel of reduced width, a tapered nozzle on the end of the extension of greater width than the extension but integral therewith, and a tapered soft rubber body mounted on the extension and filling the space between the tapered nozzle and the barrel wall.

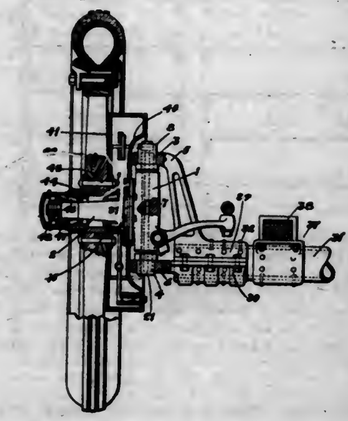
1,483,000. ELECTRIC COOKING UTENSIL. HENRY KRUESHELD, New Washington, Ohio, assignor to The Perfection Electric Products Co., New Washington, Ohio, a Corporation of Ohio. Original application filed Apr. 18, 1922, Serial No. 554,703. Divided and this application filed Apr. 9, 1923. Serial No. 630,982. 1 Claim. (Cl. 53—10.)



A handle connection for cooking utensils comprising a socket member the walls of which are flattened together for attachment to the utensil, a block having a threaded bore fitting in the socket, the walls of the socket having depressed nibs engaging the block to hold it in place, and a handle fitting in the end of the socket and having a screw at its inner end engaging the bore of the block.

1,483,001. CURB COCK. AUGUST KUEBE, Brooklyn, N. Y. Filed Nov. 6, 1922. Serial No. 599,309. 1 Claim. (Cl. 251—113.)

In a cock having a rotatable valve member, an all-metal casing for the valve member having a valve seat for said member and also having fluid passage openings leading to said valve seat, a stem projecting beyond the casing and carried by the valve member for manually turning the latter, and all metal means associated with the casing and the valve member for limiting endwise movement of the latter in the casing, the combination of means carried by the cock to retard chemical and electrolytic corrosion of the all-metal parts when the cock is used as an underground shut-off; said means including a supplementary all-metal casing partially permanently carried by the main casing and partially comprising an all-metal annular structure detachably carried by the cock, said supplementary casing having the parts thereof so shaped that when said annular structure is attached a chamber is provided between the two casings completely non-communicant with said valve seat, and a collection of oleaginous material packed tight in said chamber, said chamber extending along the main casing except where the latter is interrupted by said openings.



1,483,002. LIFTING JACK. GEORGE LANE, Poughkeepsie, N. Y., assignor to Lane Brothers Company, Poughkeepsie, N. Y., a Joint Stock Association of New York. Filed Mar. 19, 1923. Serial No. 626,205. 15 Claims. (Cl. 254—111.)

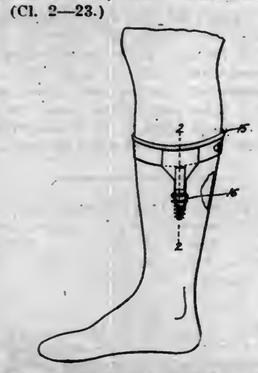
1. A lifting jack comprising a standard, a lifting bar slidably guided therein, lifting and holding pawls cooperating with said lifting bar, spring means normally pressing said pawls into operative relation to said lifting bar, angularly disposed contact arms rigidly connected with said pawls and extending at right angles to the pivotal axes of the pawls, a floating member having spaced abutments for contact with the lower sides of said arms, yielding means tending normally to force said floating member into position to contact with said arms, and means for positioning said floating member so that its abutments will be inactive with respect to said arms.

15. In a lifting jack, a standard of pressed sheet metal of channel shape having outwardly pressed portions in its sides forming lengthwise disposed internal grooves and external ribs, a relatively broad base to the intermediate portion of which the lower end of the standard is secured, said base having upwardly and inwardly converging wing portions, the upper edges of which are bent into parallelism with the side walls of the standard and secured thereto, the parallel portions having outwardly pressed portions forming grooves to receive the ribs of the standard.

1,483,003. STEERING-KNUCKLE CONSTRUCTION FOR VEHICLES. RALPH M. LOVEJOY, Meredith, N. H. Filed Feb. 6, 1922. Serial No. 534,451. 11 Claims. (Cl. 280—96.1.)

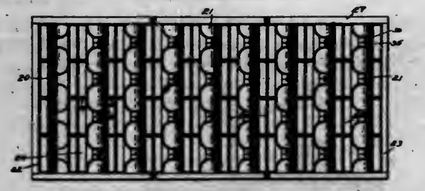
1. A steering knuckle construction for vehicles comprising a steering knuckle having oppositely extending trunnions and a yoke formed in separable sections having sockets for the respective trunnions and complementary base portions surrounding the vehicle axle, means for detachably securing one of said base sections to the axle and means for securing said base sections together.

1,483,004. CONSTRUCTION JACK. JOHN W. MACDOW, Newark, N. J. Filed May 15, 1922. Serial No. 561,070. 2 Claims. (Cl. 254—100.)



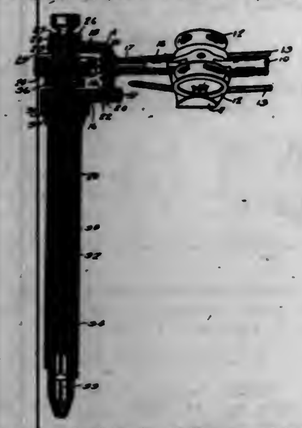
2. A jack of the class described comprising a supporting base, an object engaging head mounted thereon and composed of laterally spaced parallel angle bars, the upright flanges of which are equipped with a plurality of registering apertures, clamping jaws mounted to slide between said bars and recessed in their opposed faces to receive the upright members of the bars, the recessed portion of said jaws being apertured to register with the apertures in said bars, and pins to extend through the apertures in the bars and jaws for holding said jaws in adjusted position.

1,483,005. ELECTRIC FENCE. ALBERT DUY MCNAIR, Fayetteville, Ark. Filed July 23, 1921. Serial No. 486,979. 5 Claims. (Cl. 175—265.)



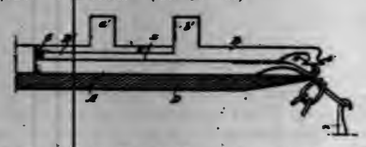
3. An electric fence comprising a normally open circuit, and means operated to close said circuit upon application of pressure to the fence.

1,483,006. HOSE. GROVER B. MELLUS, Los Angeles, Calif. Filed Oct. 31, 1921. Serial No. 511,587. 5 Claims. (Cl. 2—23.)



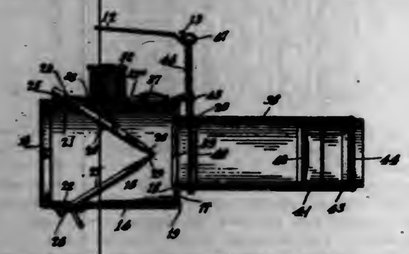
1. A hose having an annular bead formed at its open end, and a slit at its intermediate portion adapted to receive the head portion of a garter clasp for the purpose set forth.

1,483,007. BLOCK MOLD. FRED H. MORRISON, Marion, Ohio. Filed Jan. 11, 1923. Serial No. 612,086. 10 Claims. (Cl. 25—121.)



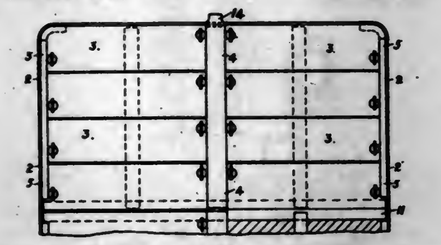
1. A molding apparatus comprising a plurality of parallel sets of molds, and each of the molds of each set consisting of a pair of vertically extending and oppositely disposed concave-convex front and rear cores, each provided with a pair of oppositely extending rightangularly disposed end portions, an upper core common to the molds of and mounted on the vertical cores of the molds of each set, a bottom core common to and having the vertical cores of each set mounted thereon, and partitions each common to the molds of the set and having the end portions at one side of the vertical cores of the molds of the set abutting there against.

1,483,008. DENTAL HANDPIECE FOR DRILLS. HAROLD H. OZANNE, Emmetsburg, Iowa, assignor of one-third to Leonard Vaughan and one-third to Laurens D. Potter, both of Emmetsburg, Iowa. Filed Sept. 17, 1923. Serial No. 663,093. 5 Claims. (Cl. 32—15.)



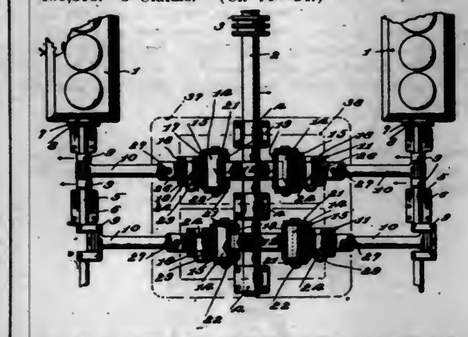
1. A dental hand piece for drills comprising a hand piece casing, a frame, means for detachably connecting the casing to the frame, a pulley wheel mounted in said frame, said frame comprising an upper and lower part demountably connected together, said pulley wheel being journalled in the upper part of the frame for permitting the parts of the hand piece to be disassembled without disconnecting the pulley wheel from its belt.

1,483,009. KNITTING-MACHINE NEEDLE. ALBERT E. PAGE, Flatbush, Brooklyn, N. Y., assignor to Scott and Williams, Inc., New York, N. Y., a Corporation of Massachusetts. Filed May 23, 1921. Serial No. 471,715. 5 Claims. (Cl. 66—5.)



1. A knitting machine needle in two parts, comprising a needle body and a latch in sliding relation to each other, one of the parts having an open groove in its side to receive and guide a part on the other.

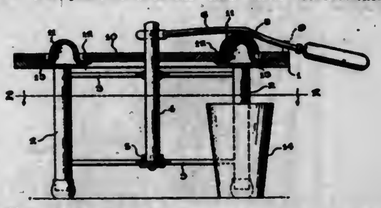
1,483,010. ELECTRICAL THERAPEUTIC DEVICE. SAMUEL E. FEDEN, St. Louis, Mo. Filed Dec. 5, 1922. Serial No. 605,141. 4 Claims. (Cl. 174—177.)



1. A therapeutic device comprising a light casing provided with a light directing tube, inclined carbon holders projecting into said casing, circuit connections leading to said holders, carbons carried by said holders to provide an arc, a magnetic device for shifting one of said holders, a pair of concavo-convex lenses mounted in said tube and spaced from each other, one of said lenses arranged in proximity to the arc, the other of said lenses being colored, and a bi-convex lens mounted in said tube forwardly of said colored lens.

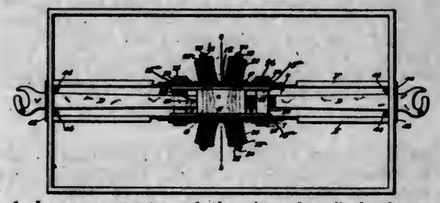
1,483,011. HATCH COVERING FOR NAVIGABLE VESSELS, APPLICABLE TO OTHER SIMILAR PURPOSES. WILLIAM GEORGE READ, Prescot, England. Filed Aug. 2, 1922. Serial No. 579,259. 4 Claims. (Cl. 114—208.)

1. In combination, a hatch cover, a locking means therefor, comprising a locking bar having an extension to overlie the hatch cover, means for removably holding one end of said bar, a socket to receive the other end of said bar, and a locking member seating flush in a recess in said socket and having a projection to pass through openings formed in said bar and the walls of said socket.



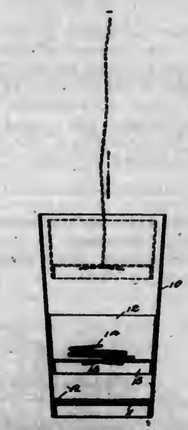
1,483,012. REDUCTION AND MULTISTROKE POWER-TRANSMITTING MECHANISM. CHARLES REINEKE, New York, N. Y. Filed Mar. 7, 1921. Serial No. 450,308. 5 Claims. (Cl. 74—14.)

1. The combination with a plurality of parallel high speed driving shafts and a relatively slow speed driven shaft arranged between the same, of a cam fixed to the driven shaft, a cross head adapted to reciprocate in a plane perpendicular to the axis of the driven shaft and provided with oppositely arranged abutment members constructed and positioned to engage said cam at substantially diametrically opposite points, and means connecting said cross-head to said driving shafts in such manner that one of the driving shafts will pull the cross-head in one direction while the other driving shaft is pushing the cross-head in the same direction.



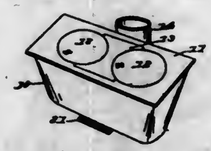
1,483,013. EXTRACTOR. SPURGEON ROBERTS, Corsicana, Tex. Filed Jan. 24, 1923. Serial No. 614,625. 3 Claims. (Cl. 100—41.)

1. A device of the class described comprising a frame, a disc rotatably mounted thereon, means for holding portions of fruit on the disc, a handle, a compression cup thereon and means for permitting the handle to be moved vertically in order to place the compression cup in contact with a portion of fruit on the disc to squeeze the juice therefrom and then horizontally to



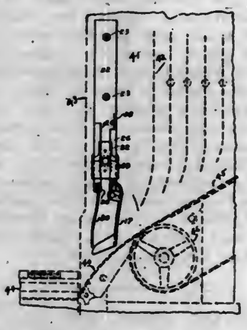
partially rotate the disc to bring another portion of fruit into compression position so that it can be engaged by the cup when the handle is brought back to a compression position.

1,483,014. PRESSURE DRAFT GEAR. HENRY J. SCHAEFER, Ashtabula, Ohio. Filed Dec. 1, 1920. Serial No. 427,529. 7 Claims. (Cl. 213—44.)



1. In an apparatus of the class described, the combination with a draw bar; of pull distributing means, and a connection between said means and bar whereby a pull on the bar will be distributed throughout the car.

1,483,015. OUTFIT FOR PRODUCING DRINKS. HENRY SCHNACKENBERG, Stroudsburg, Pa. Filed July 15, 1922. Serial No. 575,402. 3 Claims. (Cl. 206—56.)

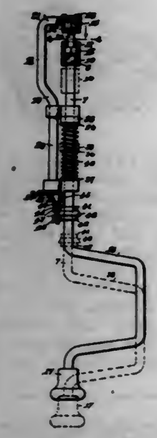


1. As a new article of manufacture, an outfit for producing drinks, said outfit comprising an outer cup having a closed bottom, a cuplike closure within the outer cup and having a bottom forming with the bottom of the outer cup a chamber, and commodity in said chamber, said chamber being air and moisture-tight by reason of the fit of said inner cuplike device within the outer cup; together with an extensible strip attached to said inner cuplike device and serving for use in pulling said device from the outer cup, said strip when extended having a length to constitute a stirrer for the commodity in the outer cup.

1,483,016. HEATING ATTACHMENT FOR COOK-STOVES. JOHN F. SECKINGER, Humboldt, Saskatchewan, Canada. Filed May 27, 1920. Serial No. 384,615. 1 Claim. (Cl. 126—301.)

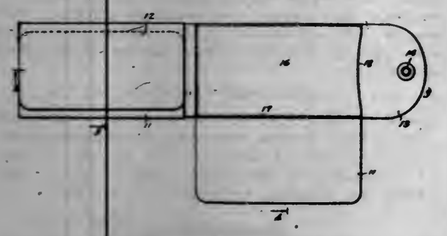
The combination with a cook stove having a stove pipe for connection with a chimney, of a downwardly tapered shell comprising side and end walls and provided with a top plate constructed to receive the stove lids I-bar of the stove, said shell being open at the bottom for interior communication with the stove through the space provided by the removal of the lids and I-bar, said shell on its front wall being provided with a tongue at the lower edge for engagement under the edge of the top plate of the stove, and an auxiliary draft connection between the shell and the stove pipe and communicating with the former adjacent the top.

1,483,017. ADJUSTABLE CHUTE SPRING FOR TYPE-SETTING MACHINES. ROBERT SHIELDS, Brooklyn, N. Y. Filed Mar. 4, 1922. Serial No. 541,074. 4 Claims. (Cl. 199—28.)



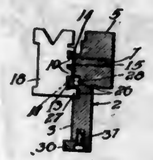
1. In a typesetting machine, the combination with a master chute spring mounted for vertical adjustments and means for effecting vertical adjustments thereof, of an auxiliary chute spring, and means for effecting simultaneous relative movement of the auxiliary chute spring in an opposite direction upon movement of the master chute spring.

1,483,018. METHOD OF PRODUCING COMPOSITE BEARINGS. GEORGE A. SHOEMAKER, Philadelphia, Pa., assignor to Bound Brook Oil-Less Bearing Company, a Corporation of New Jersey. Filed Sept. 27, 1921. Serial No. 503,475. 4 Claims. (Cl. 22—194.)



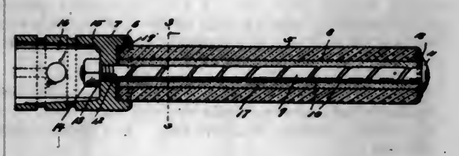
1. A core for casting hollow cylindrical or semicylindrical bodies having radial openings therein to provide radial studs or protuberances on the inner face of the casting, said radial openings of the core being formed by displacing the material of the core through openings in a liner arranged within the core box while filling and ramming the core.

1,483,019. WRENCH. EDWIN R. SMITH and JOHN A. CROSBY, Wilacoochee, Ga. Filed Nov. 2, 1922. Serial No. 598,545. 5 Claims. (Cl. 81—55.)



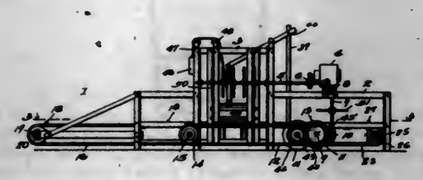
1. A wrench comprising a nut holding element provided with a nut receiving socket open at each end, a lengthwise shiftable and rotatable bolt removing element provided with a bolt head receiving socket opposing the nut receiving socket, means for locking said nut receiving element with the bolt removing element whereby movement of the former is arrested during the operation of the bolt removing element, an inner and an outer coupling member for connecting said elements together, said inner member carrying said locking means for said element, a resilient element surrounding said bolt removing element and confined by said member, and a shiftable and a stationary annular member mounted on said bolt removing element and interposed between said coupling members and provided with conical extensions projecting into said resilient elements.

1,483,020. CHANGE PURSE AND BILL FOLD. EDWARD SPERLING, New York, N. Y. Filed Jan. 26, 1923. Serial No. 615,018. 1 Claim. (Cl. 150—38.)



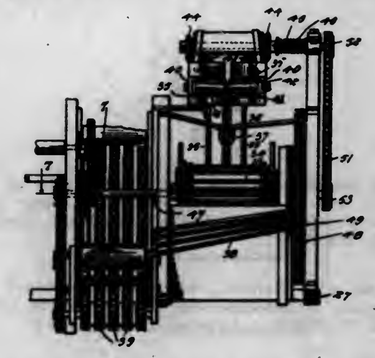
The combination with a bill fold consisting of a strip of material, a pair of inwardly foldable flaps at the opposite side edges of one end, an inwardly foldable flap at one side of the other end, an inwardly foldable end flap at the latter end, said strip being medially foldable to dispose the side flaps in confronting relation, and interengageable means provided respectively on the end flap and the outer side of the opposite end of the bill fold for retaining the same in folded condition, of a change pocket arranged to lie parallel and under the single inwardly foldable side flap, said change pocket having its mouth disposed adjacent the end flap whereby said end flap also constitutes a closure for the pocket.

1,483,021. CASTING MACHINE. ASHTON G. STEVENSON, Chicago, Ill. Filed Jan. 29, 1921. Serial No. 441,077. 4 Claims. (Cl. 199—55.)



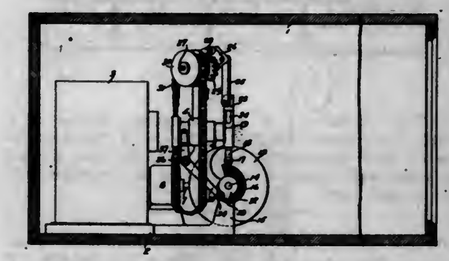
1. In a machine of the character described, a slug mold lower than the standard mold, closure means for forming the upper face of the slug, positioned in front of the mold, and spaced therefrom equal to the reduction in the height of the mold, a mask positioned between the face of the mold and said closing means for carrying the mold slot forward from the face of the mold to said closing means and causing the production of a full height slug, the mold having a guide groove in its face, other slot closing means associated with said closing means and formed for engagement with the mask and for entering said guide groove to cause the proper registration of the three parts of the slug forming cavity.

1,483,022. PUMP PLUNGER AND CROSSHEAD. JOHN W. STEWART, Martinsburg, W. Va. Filed July 20, 1923. Serial No. 652,824. 7 Claims. (Cl. 74—108.)



4. The combination with a cross head, of a pump plunger consisting of an outer vitreous cylinder, a metallic securing bolt of a non-corrosive nature extending the full length of and secured in the cylinder and having an outer headed end and a inner screw-threaded and nutted end connected to the cross head, and a wood fiber washer interposed between the inner end of the vitreous cylinder and the cross head around the bolt.

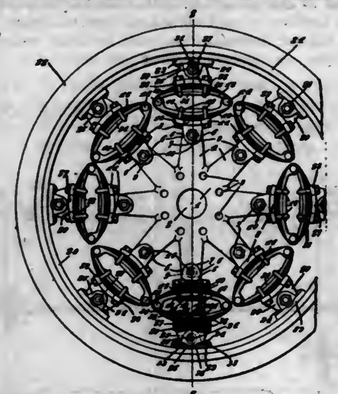
1,483,023. AUTOMATIC ICE-SCORING MACHINE. GEORGE R. THEIS, Winchester, Va., assignor to Snapp Foundry, Inc., Winchester, Va. Filed Mar. 6, 1923. Serial No. 623,154. 5 Claims. (Cl. 125—13.)



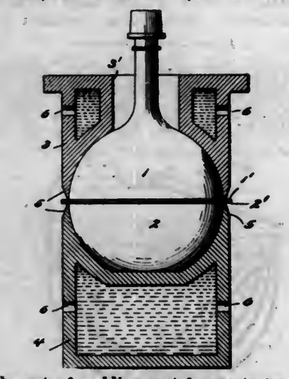
1. The combination in an ice scoring machine with a horizontally disposed conveyer for an ice plate, of an elevator and means thereon for lifting said plate, means for raising and lowering said elevator, means in the path of movement of said plate as it is being elevated for transversely scoring said plate, and means located between said elevator and the delivery end of the conveyer for longitudinally scoring said ice plate.

1,483,024. POTATO HARVESTER. WILLIAM T. TRAVIS and PAUL J. TRAVIS, Oyster, Va. Filed Aug. 26, 1920. Serial No. 406,227. 4 Claims. (Cl. 55—51.)

1. A potato harvester having a digger and a vine and earth separator consisting of a potato supporting conveyor and a superjacent vine engaging and advancing carrier, and a transverse stripper having a potato engaging loop for detaching potatoes from the vines.



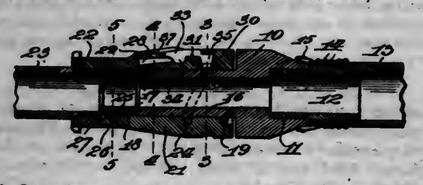
1,483,025. PROJECTING MACHINE. GILBERT M. TUCKER, Jr., Glenmont, N. Y. Filed Sept. 27, 1921. Serial No. 503,556. 8 Claims. (Cl. 88—28).



1. A projecting apparatus which comprises a plurality of spaced picture sections, a projecting frame through which said picture sections are successively passed, means for moving said series of pictures through said projecting frame, and means operated by said picture-moving means to clamp each picture successively in position in said projecting frame and to interpose a shield between the clamped section and the adjacent section to prevent the spread of fire.

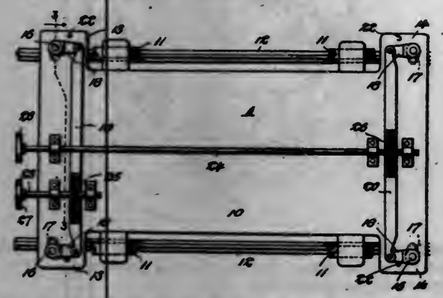
1,483,026. RESILIENT SPRING WHEEL. ARTHUR DARBY WACK, St. Louis, Mo., assignor to Giant Resilient Wheel Company, St. Louis, Mo., a Corporation. Filed Dec. 9, 1920, Serial No. 429,400. Renewed Nov. 26, 1923. 1 Claim. (Cl. 152—32.)

A device for use in the making of a spring wheel, comprising symmetrical elliptical leaf springs each including inner and outer members; securing devices connecting the leaves of the inner and outer members; clips cooperating with the inner surfaces of the inner and outer members, brackets cooperating with the outer surfaces of the inner members, and brackets cooperating with the outer surfaces of the outer members, the brackets and the clips having recesses receiving the ends of the securing elements, the first specified brackets having wings, and the last specified brackets having webs, each web including an intermediate bearing projection, and being supplied with inclined stop edges located on opposite sides of the bearing projection; pivot elements mounted in the brackets; and U shaped connectors detachably assembled with the brackets and extended about the inner and outer members of the springs and about the clips, the clips having grooves for the reception of the connectors.



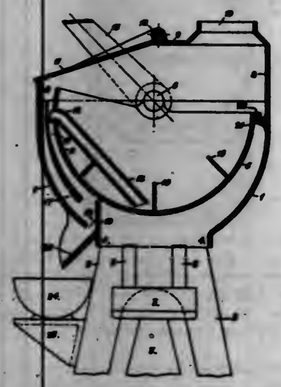
1,483,027. ART OF WELDING METAL RECEPTACLES. WALTER WAGNER, Chicago, Ill. Filed Oct. 5, 1922. Serial No. 592,665. 3 Claims. (Cl. 113—99.)

1. In the art of welding metal receptacles of the type including an upper and lower half section having meeting marginal flanges, means positioned upon the receptacle for preventing the heating of the same while the marginal flanges undergo the welding operation, said means being so formed as to allow the said marginal flanges to project therefrom.



1,483,028. COUPLING FOR HOSE, PIPE, AND THE LIKE. HARRY R. WALSH, San Pedro, Calif., assignor to Walsh Automatic Coupling Company, Los Angeles, Calif., a Corporation of California. Filed Mar. 9, 1922. Serial No. 542,275. 9 Claims. (Cl. 285—75.)

1. In a hose coupling, a pair of tubular members, a tubular extension on one of said members, which extension has threaded engagement with the other member,

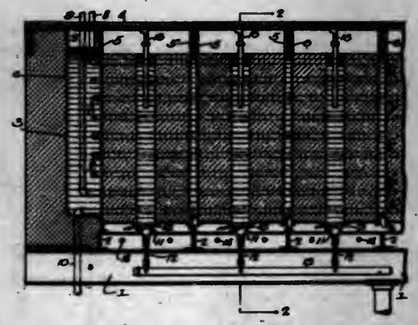


the thread between said members being notched, and a latching member arranged in an aperture extending lengthwise of one of said tubular members adapted to engage the notches in said thread to lock the parts of the coupling against disconnection, said latching means being pivoted upon an imperforate lug and secured by a ring.

1,483,029. SANDING DEVICE FOR MINE MOTORS. IRA F. WHITE, Oakwood, Ill. Filed Oct. 15, 1923. Serial No. 668,753. 3 Claims. (Cl. 291—28.)

2. A sanding device for mine motors including a sand box having a delivery opening, a rotatable shaft within said box, a plate carried by said shaft to control delivery of sand through said opening, means for rotating said shaft, and means carried by said shaft to agitate and break up sand within the box when the shaft is rotated.

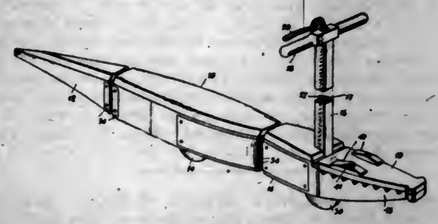
1,483,030. FURNACE FOR MELTING STEREO AND SIMILAR METALS, AND OTHER MATERIALS. HERBERT W. V. WILSON, Meols, England. Filed Oct. 24, 1922. Serial No. 596,642. 6 Claims. (Cl. 266—13.)



2. A furnace for melting stereo and other metals or materials, comprising an outer casing, comprising upper and lower separate parts, the upper part including a hinged lid or door and formed to provide a gas discharge flue, the lower part having a discharge channel, and a pot supported in the outer casing on a horizontal axis for oscillation, and blades in the pot for mixing the material during the oscillation of the pot.

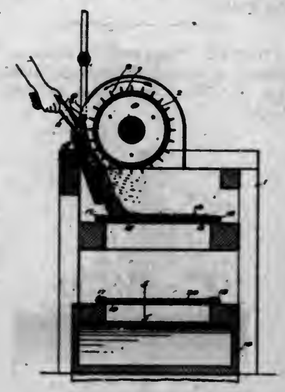
1,483,031. ROPE-GUIDE DEVICE. DANIEL M. WINANS, Binghamton, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a Corporation of New York. Filed July 21, 1923. Serial No. 653,003. 18 Claims. (Cl. 156—15.)

8. In combination with an awning or shade, having a flexible fabric, a guide device comprising a loop strap of circular contour with ends thereof formed into abutments to close said loop, an integral foot flange for each of the respective abutments disposed upon one side of the fabric, a clinch prong for each said foot flanges extending through said fabric, and a keeper plate on the opposite side of said fabric adapted to engage said prongs for fastening said flanges to the fabric, substantially as described.



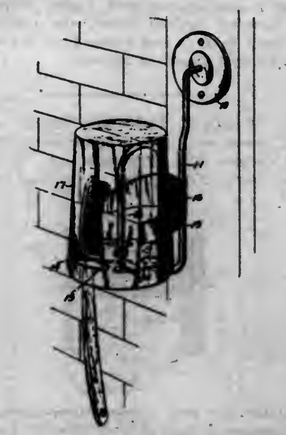
1,483,032. ICE-MAKING APPARATUS. JOSEPH F. WINKLER, Philadelphia, Pa. Filed Feb. 23, 1922. Serial No. 538,677. 4 Claims. (Cl. 62—157.)

1. The combination in a refrigerating system of a tank; cans therein adapted to receive a liquid to be frozen; heat transferring medium in the tank around the cans; and means for establishing an electrical current in said liquid.



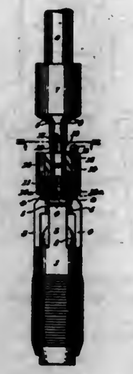
1,483,033. SCOOTER. PHILIP H. WISMAN, Washington, D. C. Filed Aug. 12, 1922. Serial No. 581,498. 7 Claims. (Cl. 280—87.5.)

4. In an amusement vehicle a plurality of hinged sections simulating in contour the body of an animal, certain of said sections being supported by rollers positioned midway of their length, a steering post rigid with and a member hingedly secured to the forward section, and means controlled at will by the operator for moving said hinged member.



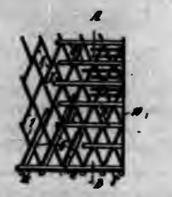
1,483,034. HACKLING MACHINE. LUCIUS B. WOOTTON, Jacksonville, Fla. Filed Nov. 11, 1922. Serial No. 600,361. 5 Claims. (Cl. 19—7.)

2. A hackling machine, comprising a hackling drum provided with comparatively thin teeth, a chute for directing matter to be hackled to a point adjacent said drum whereby it is entered and shredded by said teeth,



and means for directing water under high pressure against the matter to be hackled during the hackling operation.

1,483,035. TOILET DEVICE. WILLIAM EDWARD WYATT, Toronto, Ontario, Canada. Filed Oct. 6, 1922. Serial No. 592,789. 1 Claim. (Cl. 248—63.)

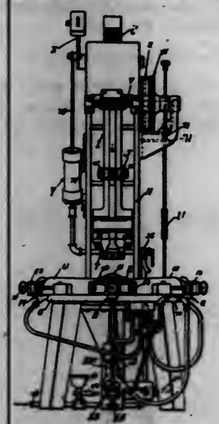


In a tooth brush holder, a bracket having one end adapted to be secured to a wall and having a portion extending downwardly therefrom and bent outwardly and upwardly to form a U-shaped portion, the upwardly extending leg of the U-portion of said bracket being bent outwardly and downwardly to form an inverted U-shaped portion, the free leg of said last-mentioned downwardly extending portion having a circular plate secured thereto adapted to support a drinking glass in an inverted position over said inverted U-shaped portion with the intermediate leg of the U-portions in supporting contact with the inner side of the glass, said circular plate having a slightly less diameter than the internal diameter of the glass, whereby the periphery of said plate contacts with the inner surface of the glass adjacent the upper peripheral edge thereof, said plate having a series of recesses spaced around the periphery for receiving brushes, and a clamping member carried by the bracket having portions curved to conform with the glass and extending in opposite directions about the glass to embrace the same at substantially diametral points, substantially as set forth.

1,483,036. VALVE EXTRACTOR FOR WELLS. ROBERT L. WYCKOFF, Independence, Kans. Filed Jan. 18, 1923. Serial No. 613,546. 3 Claims. (Cl. 294—86.)

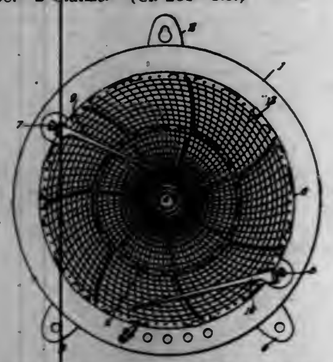
1. In a valve extractor for wells, a socket member carrying a depending screw, a block threaded on said screw, and cooperating means carried by the block and screw permitting rotation of the block on the screw in one direction, said cooperating means including a pawl carried by the upper edge of the block, and a longitudinal groove formed in the screw into which the pawl ratchets.

1,483,037. MEANS OF MANUFACTURING SPACE-COVERING STRUCTURES SUCH AS ROOFS, FRAME WALLS, AND THE LIKE. FRIEDRICH ZOLLINGER, Merseburg, Germany. Filed Jan. 11, 1922. Serial No. 528,460. 8 Claims. (Cl. 108—1.)



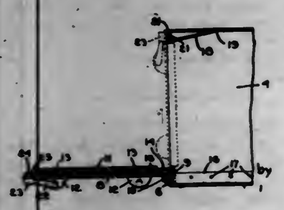
1. Space enclosing structural elements such as walls, roofs, lattice work and the like, comprising angularly related elements, each of which, extending in one general direction, engages at its ends with approximately central points of elements which extend in another general direction.

1,483,038. SWAGING MACHINE. MICHEL CARL ZEDERBAUM, JOB FISH, Jr., and LOUIS JOHN KIRCHENBAUER, Yonkers, N. Y., assignors to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 25, 1920. Serial No. 412,801. 25 Claims. (Cl. 78—13.)



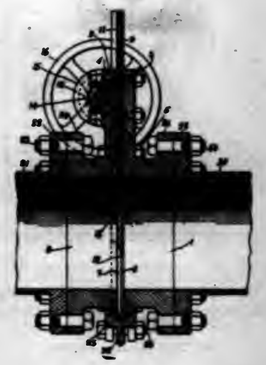
1. In a forging machine, a table having a central recess, dies therein, radial recesses in said table, hammers in said recesses, said radial recesses having an opening

in line with said central recess, a vertical opening in the bottom of said central recess, a hammer in said opening, the dies being adapted to receive an article to



be forged and the hammers to be operated to deliver blows or pressure upon the dies, and article to be forged therein.

1,483,039. METER. JOSEPH W. BICKEL, Chicago Heights, Ill., assignor of one-half to George S. Bartlett, Evanston, Ill. Filed Jan. 27, 1921. Serial No. 440,258. 2 Claims. (Cl. 234—5.5.)



1. In combination, a one-piece chart having two concentric portions, each portion carrying graduations and complete indicia for reading the same, whereby the two portions may be separated for independent use.

1,483,040. COMBINED RECEPTACLE AND CUTTING BOARD. LOUIS P. BONIER, Woonsocket, R. I. Filed Apr. 8, 1922. Serial No. 550,706. 6 Claims. (Cl. 45—71.)

1. A sheet metal receptacle comprising a body, a door hinged to said body adjacent to the bottom thereof having a plate of fibrous material secured to the inner face thereof to provide a cutting board and a plurality of standards secured to said door for supporting said door upon the base upon which the receptacle rests, to prevent strain upon the hinge when cutting is done upon said cutting board.

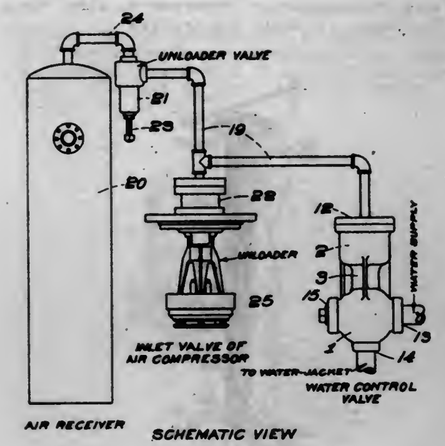
1,483,041. VALVE. WILLIAM J. BROOKS, Middletown, Ohio, assignor to George H. Harvey, Middletown, Ohio. Filed Feb. 25, 1921. Serial No. 447,782. 4 Claims. (Cl. 251—54.)

1. In a valve of the character described, the combination, with two members comprising a casing, a valve slide mounted to slide back and forth across the casing and having a cutting edge, and a gate having a bed of yieldable material against which the cutting edge of the blade may contact and secured to the casing in a manner to be held closed or opened.

1,483,042. BUILDING CONSTRUCTION. ARTHUR H. COOMBS, Atascadero, Calif., assignor of one-fourth to Wendell Coombs Hill, Washington, D. C. Filed Sept. 19, 1922. Serial No. 589,209. 9 Claims. (Cl. 72—30.)

5. A tie rod for wall constructions having an intermediate corrugated portion and spaced vertical extensions at each end thereof.

1,483,043. FIRE EXTINGUISHER. CHARLES M. FAHNESTOCK, Cincinnati, Ohio, assignor to The "Save-M" Fire Extinguisher Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 23, 1922. Serial No. 602,827. 1 Claim. (Cl. 169—35.)



A fire extinguisher including a hollow body portion adapted to contain fire extinguishing material and provided at one end with an annular shoulder from which a smooth frustro-conical wall extends outwardly, a perforated plate arranged at the outer end of said wall and forming with said shoulder and wall a head for said body portion, a hollow cap for said having a socket provided with a smooth frustro-conical resilient wall adapted to engage the frustro-conical wall of the body portion and prevent accidental detachment of said cap, and a finger

projecting from the edge of said cap toward the body portion to permit the extinguisher to be hung on a hook, said frustro-conical walls exerting sufficient friction on

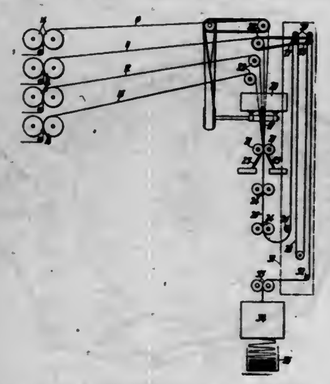
one another to support the body portion from the cap until sufficient force is exerted on the body portion to pull the same from the cap.

1,483,044. WATER-REGULATING SYSTEM FOR AIR COMPRESSORS. LEON F. HOFFMAN and HARRY C. WASSON, Franklin, Pa. Filed Nov. 8, 1921. Serial No. 513,714. 4 Claims. (Cl. 230—24.)

SCHEMATIC VIEW

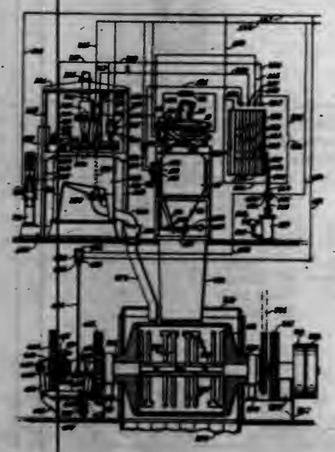
1. In a water-regulating system for the cooling water of air compressors, in combination, an air compressor having a water-jacketed cylinder, a conduit through which water is supplied to said water-jacket, a valve in said conduit, means normally and yieldably retaining said valve in the open position, means adapting said valve to be actuated to its closed position by the use of compressed air, a compressed air actuated unloading device for said air compressor, and means whereby compressed air is simultaneously applied to both said valve and to said unloading device, and simultaneously released therefrom.

1,483,045. TUBULAR STUD. WILLIAM A. REINHARDT, Ashland, Wis. Filed Aug. 28, 1922. Serial No. 584,739. 3 Claims. (Cl. 240—85.)



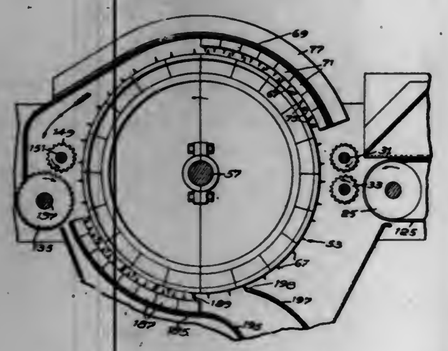
1. A stud of the character described having a tapered body portion, an annular projection about the base of the tapered portion, and opposed clinching tongues formed within the tapered portion for engaging a support between the annular projection and the tongues.

1,483,046. ROOF COVERING. GEORGE RITTER, Perth Amboy, N. J., assignor to The Barber Asphalt Paving Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Mar. 8, 1922. Serial No. 541,892. 10 Claims. (Cl. 108—7.)



2. A roof covering comprising an aggregate of unit shingles laid in staggered overlapping courses, a strip of material laid between adjacent courses, and means on the strips and shingles coacting to lock each shingle between an overlying and underlying pair of strips.

1,483,047. PROCESS AND APPARATUS FOR PRODUCING MULTIPLE-PLY WEBS. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 9, 1923. Serial No. 611,620. 14 Claims. (Cl. 270—4.)



1. The method of manufacturing a composite web for use in a typewriting machine, consisting in printing successions of forms upon a plurality of plies, assembling the plies with the forms in register, applying adhesive material to one set of edges of the assembled plies to form a padded web, and reducing the composite web to a compact multiple-layer form or coil.

1,483,048. APPARATUS FOR MEASURING AND MIXING MATERIALS. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 18, 1921. Serial No. 508,491. 20 Claims. (Cl. 83—73.)

1. An apparatus of the character described, comprising, in combination, a mixer, scales having containers, inlet valves for admitting materials to said containers, outlet valves for delivering the materials from said containers to said mixer, that they may be mixed by the latter, and electrical means operable in response to operation of the scales for closing the inlet valves on delivery of charges of predetermined weight to said containers.

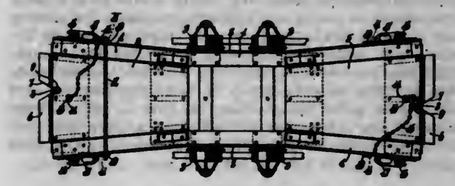
1,483,049. MACHINE FOR FLUFFING FIBERS. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 19, 1923. Serial No. 633,317. 6 Claims. (Cl. 19—83.)

1. A machine for fluffing fibers comprising, in combination, a cylinder having pins on the peripbery thereof, means to feed a mass of fibers to the cylinder, members having pins projecting toward the cylinder, said members being spaced circumferentially of the cylinder, a pair of rolls adjacent the cylinder and intermediate said members for feeding fibers to the cylinder, and means to rotate said cylinder, thereby to cause its pins to sweep past said feeding means, members and rolls, thereby to pick the fibers from the feeding means and rolls and fluff up the fibers.

1,483,050. HOSE CLAMP. ERNEST D. WELLS, Atlanta, Ga., assignor of one-half to Stiles Hopkins, Atlanta, Ga. Filed Feb. 13, 1923. Serial No. 618,804. 1 Claim. (Cl. 24—19.)

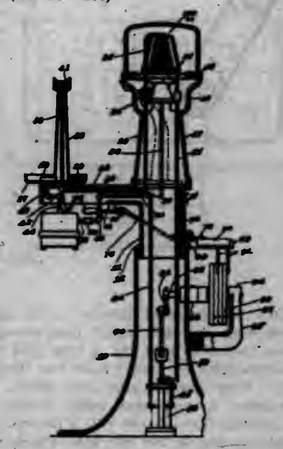
A hose clamp comprising arcuate members formed from resilient wire and having crimped side portions said members being pivotally connected together, a longitudinally curved locking plate provided at its side edges and at a point between its ends which are disposed within the concaved side of the plate, one of the arcuate members having the ends of its side portions pivotally engaged in the gears, the plate being provided at one end with a concaved lip adapted to engage in the end of the other arcuate member, the parts being so arranged that when the device is applied to a hose section and the locking member is closed, the said part will lie in close proximity to the exterior surface of the hose.

1,483,051. ADJUSTABLE SUPPORT. JOHN L. SAUNDERS, Washington, D. C. Filed July 31, 1920. Serial No. 400,411. 1 Claim. (Cl. 45—111.)



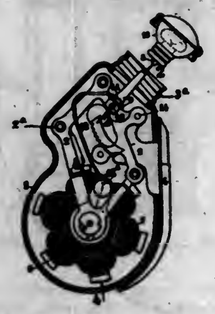
An adjustable support having a base with an upwardly extending standard having internal screw threads, a platform, and a screw threaded rod extending within said standard and cooperating with the screw threads thereof, said rod being secured at its upper end to the platform, in combination with a hollow sheath secured to said platform surrounding the screw threaded rod and of sufficient diameter to encircle and engage frictionally the exterior surface of the standard throughout the range of the adjustment of the screw threaded rod, whereby the sheath acts to prevent premature turning of the screw threaded rod and the inadvertent lowering of the platform.

1,483,052. PROCESS OF MAKING A NONMETALLIC LACE TIP. CARL A. MATSON, Lynnfield, Mass., assignor to Matson Lace Tipping Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 5, 1923. Serial No. 630,134. 1 Claim. (Cl. 24—143.)



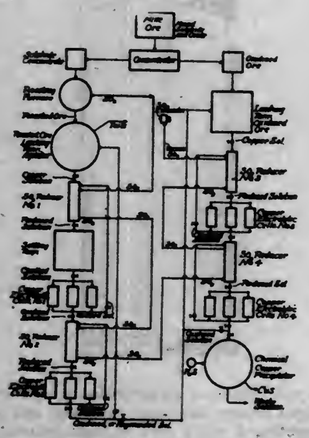
The process of making a non-metallic tipped lacing, having a corrugated contour, which consists in applying to a predetermined portion of the lacing, moldable material in plastic form, and thereafter molding said treated portion into corrugated form.

1,483,053. MINING-MACHINE TRUCK. ROY NORMAN, St. Louis, Mo., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 19, 1922, Serial No. 562,231. Renewed June 18, 1923. 24 Claims. (Cl. 105—161.)



1. A mining machine truck comprising a body having provision for receiving a mining machine at either end thereof.

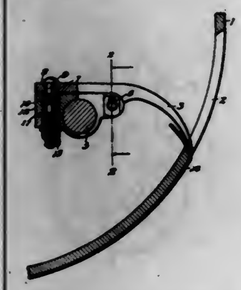
1,483,054. INSIDE LIP-TURNING MACHINE. SIDNEY C. WILSON, Rochester, N. Y., assignor to Wilson Process, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 24, 1922. Serial No. 583,993. 3 Claims. (Cl. 12—29.)



2. In a machine of the class described, the combination of a hollow base, a platform secured to the top thereof, a hollow standard mounted on the top of the platform, a fluid heating element located in the top of said hollow column, a horn mounted on the platform, a wetting element located in the top open end of the horn, a conduit extending from the heating element to the steaming element, controlling means located in said conduit for regulating the supply of steam to the steaming element, moisture collecting means mounted on the platform at the base of the wetting horn, a sediment pot provided with a plurality of chambers located beneath the platform, a conduit connecting the moisture collecting means with the lower chamber of the sediment pot, a conduit connecting the upper chamber of said sediment pot with the pump in the base, and means for controlling the operations of the pump at will.

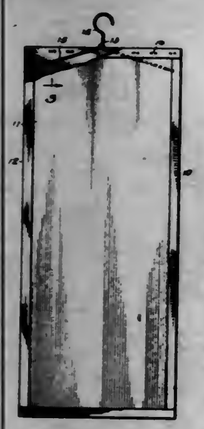
1,483,055. ELECTROMECHANICAL LAMP. PAUL BLOT, Paris, France, assignor to Societe Blot-Garnier & Chevalier, Paris, France. Filed Mar. 14, 1922. Serial No. 543,759. 5 Claims. (Cl. 240—8.5.)

1. An electro-mechanical pocket lamp comprising a casing,—a cage secured in the said casing,—an electric generator of the magneto type and its driving members carried by the said cage,—a metal socket on an inclined face of the casing,—an electric bulb secured on the said socket,—a resilient metal strip secured on the cage and in contact with the metal cap of the electric bulb,—an insulated contact-piece on the said strip and in contact with the insulated contact-piece of the said bulb,—means for conveying the current from the electric generator to the insulated contact piece of the resilient metal strip,—means for ensuring the actuation of the rotary magnet.



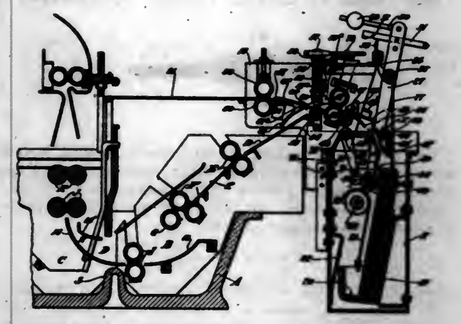
1,483,056. METALLURGICAL PROCESS. WILLIAM E. GREENAWALT, Denver, Colo. Filed Dec. 6, 1921. Serial No. 520,241. 32 Claims. (Cl. 204—15.)

1. A process of treating sulphide and oxide ores of copper comprising, treating the sulphide ore to get a sulphide concentrate, roasting the concentrate, leaching the



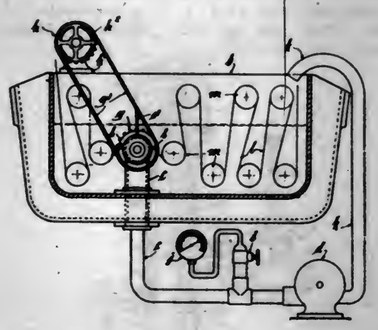
roasted concentrate with a dilute acid solution, treating the resulting copper solution with sulphur dioxide obtained from roasting the sulphide concentrate, electrolyzing the solution to deposit the copper and regenerate acid, returning a portion of the regenerated solution to the roasted concentrate to extract the remaining copper, applying the excess regenerated acid solution to the unroasted oxidized ore to extract the copper therefrom, precipitating the copper from the resulting solution obtained from leaching the unroasted oxidized ore, and then wasting the solution.

1,483,057. GRIPPER FOR PRINTING PRESSES. AUGUST W. WARSEN, Brooklyn, N. Y. Filed Mar. 11, 1922. Serial No. 542,837. 3 Claims. (Cl. 101—412.)



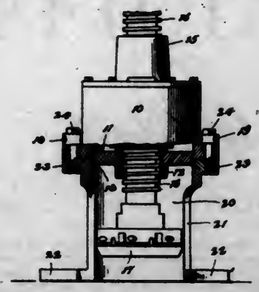
1. In a gripper mechanism for printing presses, a gripper finger, a rockable block pivotally mounting said gripper finger and formed with a threaded opening, a tubular member threaded in said opening, and a bolt passing through the bore of said tubular member and through an opening in said finger for limiting the pivotal movement of said finger.

1,483,058. DRESS SEPARATOR. PAUL M. FRANK, New York, N. Y. Filed Jan. 30, 1923. Serial No. 615,974. 4 Claims. (Cl. 45—37.)



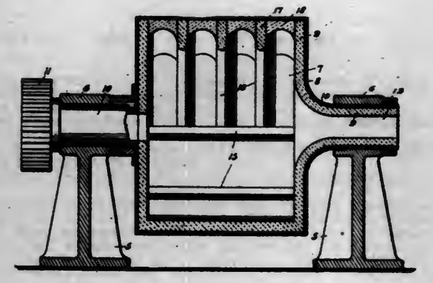
2. As a new article of manufacture, a separator board for suspended dresses and other garments, said separator board presenting a broad area of stiff material adapted to be disposed between adjacent suspending garments to completely separate the same, and hanger means on said separator at the top.

1,483,059. DEFLECTOR FOR PLATE-FEEDING MECHANISMS. ELMER C. POOL, New Castle, Pa. Filed Dec. 15, 1922. Serial No. 607,122. 3 Claims. (Cl. 271—56.)



1. In an automatic plate feeding mechanism, a pair of calipering members, means for feeding plates from a pack, guide means on one of said calipering members for guiding said plates downwardly when only single plates pass between said calipering members, a second plate guide adapted to receive the plates from said first named guide when said first named guide is in its normal position, said first named guide being raised to form a gap between said first and second named guides when more than one plate passes between said calipering members, so that said plurality of plates will be fed over said second guide.

1,483,060. APPARATUS FOR IMPREGNATING FABRICS WITH A MERCERIZING OR OTHER LIQUID. ERNEST FARRELL, Salford, Manchester, England. Filed Mar. 13, 1923. Serial No. 624,837. 4 Claims. (Cl. 8—20.)



1. Apparatus for enabling fabrics to be impregnated with a mercerizing or other liquor comprising a vat, a series of guide rollers in said vat, a long pipe in said vat extending horizontally to points near two opposite sides and having a long narrow slot, the fabric to be impregnated passing around said guide rollers and over said slot in passing through the vat, a branch outlet pipe and an outlet opening in the vat with which the branch pipe communicates, guides in the long pipe, guide plates carried by said guides and extending upwards through the slot and well above the pipe, a spindle with right and left hand screw threads for adjusting the guides and guide plates, relatively to each other, and a pump for continuously extracting liquor from the long pipe through the branch pipe, and returning it to the vat, substantially as herein set forth.

1,483,061. CYLINDER-REBORING MACHNIE. FREDERICK T. FLINCHBAUGH, York, Pa. Filed Dec. 14, 1920. Serial No. 430,640. 1 Claim. (Cl. 77—2.)

In a cylinder reboring machine, the combination with a gear case carrying a boring head and having an annular shoulder concentric with said head; of a base having a bore coincident with said annular shoulder and adapted to be attached to an engine cylinder, ears on said gear case and bolts engaging with said ears and threaded in said base for securing the gear case and base together; and a second base having a bore of larger diameter than said first base, an adapter intended to be inserted between said second base and said gear case and having a bore of the same diameter as said first base and a seat of the same diameter as the second base adapted to fit the bore thereof; means for rigidly securing said adapter to said second base, and tapped apertures provided in said adapter for said bolts, whereby the gear case may be shifted from said first base to said second base and attached to said adapter.

1,483,062. METAL-WORKING FURNACE. OSWALD S. PULLIAM, New York, N. Y., assignor to Hibbard Process Corporation, New York, N. Y., a Corporation of New Jersey. Filed Feb. 3, 1922. Serial No. 533,893. 6 Claims. (Cl. 263—33.)

1. In a metal balling furnace, means for forming a plurality of individual balls, and means for selectively discharging said balls from the furnace.

Patents Nos. 1,483,063 to 1,483,861.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 319—No. 2. TUESDAY, FEBRUARY 12, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Amendment to Rules of the Court of Appeals of the District of Columbia.

The following communication received from the clerk of the Court of Appeals of the District of Columbia relative to an amendment to the rules of the court as revised December 4, 1920, is published for the information of those concerned:

Amend Rule VIII as follows:

Paragraph 3: Strike out "September 10" and insert in lieu thereof "September 1." Strike out "October 10" and insert in lieu thereof "October 1."

Paragraph 4: Strike out the words "until the first day of the October Term," and insert in lieu thereof the words "20 days after the first of September." Strike out the words "until the first Monday in November," and insert in lieu thereof the words "20 days after the first of October."

PER CURIAM.

Test:

HENRY W. HODGES,
Clerk.

Promulgated January 26, 1924.

Interference Notice.

U. S. PATENT OFFICE, *Washington, Jan. 19, 1924.*

Philip A. Luckett, his assigns or legal representatives, take notice:

An interference having been declared by this Office between Friedman & Friedman, 1368 De Kalb Avenue, Brooklyn, N. Y., for registration of a trade-mark and trade-mark registered January 9, 1917, No. 114,897, to Philip A. Luckett, Salisbury, Md., and a notice of such declaration sent by registered mail to said Philip A. Luckett at the said address having been returned by the post office authorities as undeliverable, notice is hereby given that unless said Philip A. Luckett, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Jan. 22, 1924.*

Lady Jane Hat Shops, Inc., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The Samuel Stores, Inc., 456 Fourth Avenue, New York, N. Y., to effect the cancellation of the trade-mark registration of Lady Jane Hat Shops, Inc., of 2826 Broadway, New York, N. Y. No. 136,063, dated October 26, 1920, and the notice of such proceeding sent by registered mail to said Lady Jane Hat Shops, Inc., at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Lady Jane Hat Shops, Inc., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Jan. 14, 1924.*

John R. Edmiston, his assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of James Brothers, of 1519 Boardwalk, Atlantic City, N. J., to effect the cancellation of the trade-mark registration of John R. Edmiston, of 1231 Pennsylvania Avenue, Washington, D. C., No. 172,016, dated August 21, 1923, and the notice of such proceeding sent by registered mail to the said John R. Edmiston at the said address and also to No. 7 North Howard Street, Baltimore, Md., having been returned by the post office authorities as undeliverable, notice is hereby given that unless said John R. Edmiston, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

Notice Regarding Payment of Fees.

All fees must be paid in advance. Payment of money required for Office fees *must* be made in specie, Treasury notes, national-bank notes, post-office money orders, or certified checks. Money orders and checks must be made payable to the "Commissioner of Patents." Money sent by mail to the Patent Office will be at the risk of the sender. (See Rule 194.)

Certified checks, bank drafts, express and foreign money orders must be immediately negotiable in this country and for the full amount of the fee required by the Patent Office. No allowance can be made by this Office for any charge for their collection or exchange. Postage stamps will not be accepted. Failure to comply with the above instructions will cause delay.

Condition of Applications Under Examination at Close of Business February 1, 1924.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 64,223; Trade-Mark Division, 1,744. Oldest new case, May 2, 1923; oldest amended, May 5, 1923. The dates given are 1923 except where * indicates 1924.) Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

REPORT OF THE COMMISSIONER OF PATENTS TO CONGRESS

FOR THE YEAR ENDED DECEMBER 31, 1923.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., January 22, 1924.

To the Senate and House of Representatives:

In compliance with section 494 of the Revised Statutes I have the honor to submit the following report of the business of the Patent Office for the year ended December 31, 1923:

In the years 1921 and 1922 this office received over 9,000 applications each month. With a capacity to act upon only 7,500 cases per month it followed that the office went behind about 30,000 cases in the two years. These arrears, added to the 42,000 cases already awaiting attention at the beginning of the Harding administration made an accumulation of cases equaling in volume the entire amount of work received by the office in any one year before this country entered the Great War. To reduce the accumulations of years, this office was provided, on July 1 last, with 45 additional examiners and 40 additional clerks. Although it took over 4 months to enroll this force, and it is still untrained, rapid progress is being made as evidenced by the reduction, since the increase in force, of 6,567 patent cases, 1,697 design cases, and 1,542 trade-mark cases, a total reduction of 9,806 cases.

Progress is further shown by the fact that one year ago an applicant in some branches of the work had to wait 15 months before his patent case could be taken up for the first reading (7 months in design cases, and 5½ months in trade-mark cases), while to-day no applicant has to wait more than 9 months in patent cases, or 7 weeks in either design or trade-mark cases.

The office is now gaining at the rate of more than 1,000 cases per month and, in the absence of unexpected circumstances, it is confidently believed that this gain will increase rather than decrease as the force becomes better trained. Nevertheless, there are now on hand 67,000 patent cases, 900 design cases, and 2,100 trade-mark cases awaiting action. Even with a gain of 1,000 cases per month, it will be 5 years before the technical work can be current. To accomplish this within a reasonable time the force would have to be augmented by at least 100 more examiners.

In view of the fact that during the first two years of this administration the office received over 9,000 applications a month (216,170 cases in two years or a gain of 50 per cent in patent work and 100 per cent in trade-mark work, during which period there was an increase of only 7 per cent in personnel); radical changes were introduced in a determined effort to prevent the office from being completely submerged with new work. It therefore seems appropriate at this time to report to the Congress some of the improvements in methods which have been made during the past 3 years.

CLERICAL DIVISIONS.

The methods of the 10 clerical divisions were so revised that they are practically up to date. For the first time in years, particularly in the summer months, the manuscript division has been able to furnish almost immediately copies of records demanded by the public and the courts.

APPLICATION ROOM.

In the application room an entirely new system of keeping the records resulted in permitting the handling of the clerical work of 108,000 incoming applications per year with 17 clerks, whereas in 1920, 20 clerks were required to handle 104,000 cases.

A new form of file wrapper has just been adopted which will make a further saving by eliminating the recording of upwards of 400,000 dates every year.

ISSUE DIVISION.

This division is responsible for the publication, weekly, of the OFFICIAL GAZETTE, containing 250 pages and 1,100 cuts, and also for printing the *weekly* issue of about 1,000 *original* patents and trade-marks. It is a stupendous job, the printing alone costing over $750,000 annually. Radical changes have made it possible to issue these patents and trade-marks and the OFFICIAL GAZETTE on time each week rather than to publish the GAZETTE many days late, as sometimes previously occurred.

Heretofore the proof reading of patents, trade-marks, and the OFFICIAL GAZETTE has been done at the Government Printing Office and then has been done a second time in the Patent Office. A year ago I notified the Public Printer that we would rely upon his office to make its proof reading accurate. Thus the services of those who read proof in the Patent Office was saved, although some supervision will always be necessary in questionable cases.

The forms of grants of patents and certificates of registration of trade-marks have been simplified, so as to eliminate approximately one-half the typewriting necessary on the 50,000 individual grants per year.

A new procedure reduces by two weeks the time necessary to issue a certificate of correction and eliminates entirely the services of the engrosser.

SAVING IN PRINTING.

One index of the OFFICIAL GAZETTE has been omitted saving $10,000 annually; printing the trade-

marks has been simplified, the Public Printer estimating a saving of $5,400 annually; the headings of the drawings are multigraphed instead of printed, saving clerical time and about $2,000 cash annually; and the matter common to the weekly issue of 1,000 patents and trade-marks is printed, instead of typewritten, saving $1,000 annually, besides making for accuracy.

As the result of careful investigation and considerable labor, the free mailing list of the OFFICIAL GAZETTE has been reduced by 300 copies, saving $2,500 per year.

A new manual of classification in loose-leaf form has been published and at an expense of $2,000 less than the manual published in 1920. Heretofore this has been printed in book form in a very expensive manner every three or four years, and these manuals have become out of date before they were one year old. The loose-leaf form will avoid the necessity for reprinting the entire book every few years and make it possible to keep the manuals up to date by merely reprinting pages to be substituted for the old sheets, arrangements having been made with the Public Printer to hold the type set up for this purpose. Not only is the first cost greatly reduced but classification manuals for the 500 technical examiners will always be up to date, thus increasing their usefulness and adding to the efficiency of the examiners. Moreover, this new form will benefit hundreds of inventors and attorneys in all parts of the country who purchase these manuals and constantly use them.

DRAFTING DIVISION.

Simplified methods have enabled this division to dispense with one employee and still handle a large increase in work.

FINANCIAL DIVISION.

The financial clerk, who handles $3,000,000 in Government fees each year, has been enabled, through the introduction of a bookkeeping machine, to dispense with two employees.

The method of handling and acknowledging 40,000 final fees per year has been changed so as to simplify and expedite the application of the fees to the various cases and the preparation of the patents for publication.

CIRCULARS OF INFORMATION.

Instead of mailing expensive complete Rules of Practice, condensed circulars giving all needed information in the language of the layman have been prepared, saving at least $500 per annum in printing as well as saving clerks, who formerly wrote about 20,000 information letters annually.

10-CENT STACKS.

Printed copies of patents cost about 6 or 7 cents and sell for 10 cents. There are about 50,000,000 copies in stock; 200,000 are sold monthly, bringing in $20,000 *each month*. As patents are usually ordered singly, storing, selecting, and delivering is a serious problem. New methods of handling have given greater efficiency. Recent issues have been placed upon newly designed stacks, enabling copies to be selected and delivered in about one-half the former time and very materially lessening the wastage of copies.

REPRODUCTION OF COPIES.

When copies are out of print, they are reproduced by photolithography at less than 60 cents per page for 50 copies, where the original cost is over $4 per page for 100 copies. In 1921 this work was 160 days in arrears; now it is under 30 days. Since the office delivers almost 5,000,000 copies annually, prompt delivery to the various industries of the country is of national importance.

Trade-marks and designs were printed on two sheets, the text being printed at the Government Printing Office and the drawings reproduced by private photolithographers. In reproducing these papers the text and drawings are now put on opposite sides of a single sheet, thereby saving one-half of the storage space, facilitating the pulling of complete copies from the storage bulk, and preventing wastage.

REPRODUCING FOREIGN PATENTS.

A change in the method of reproducing foreign patent drawings for the use of about 500 technical examiners, has resulted in a saving of $15,641.25, and permitting work to be completed in 6 months instead of 3 years.

ASSIGNMENT DIVISION.

Changed methods of recording and indexing 40,000 assignments annually has saved two clerks, and will save more in the future.

A card index is gradually being prepared in spare time which it is hoped will be completed and ready for use by July, 1925, at which time the office will begin to receive from 3,000 to 6,000 trade-mark renewals per year, each of which will entail a title search covering 20 years. These title searches would swamp the office without this index. The index will not only be a great convenience to the attorneys and the public, but will effect a marked economy in making thousands of official searches. Incidentally these renewals will add revenue of from $30,000 to $60,000 per year.

TRADE-MARKS DIVISION.

Three years ago the office received 8,000 trade-mark applications annually; the last two years 17,000 per year. The trade-mark search room has been reorganized, most of the force voluntarily working nights for 4 weeks to attain this end. The reorganization has effected an enormous saving in time in the making of 400 official searches each week, whereby the trade-mark division was brought 4 months nearer to date than before reorganization. The increased force provided on July 1st has permitted the work to be brought within 7 weeks instead of 8 months, and in a few weeks the work will be within 30 days. This reorganization has been of such benefit to the attorneys and the public in making their private searches that the American Patent Law Association passed special resolutions commending the work.

There has been installed in the trade-mark search room a classified file of trade-marks published, but not yet registered. This was done at small expense, in spare time, answering a long felt want of the public and expediting the work of the official examiners.

LIBRARY.

The increased salary provided by Congress made it possible to obtain a trained librarian, who has been placed in charge of the Scientific Library, with the result that it is being reorganized with conspicuously beneficial results, including increased aid to both the public and the officials. Much more improvement could be made if sufficient funds were available. Better library facilities should be provided, particularly since there is no counterpart of this library in the country, if in the world. It is frequented by searchers from all parts of the country, and it is doubtful if there is a single industry in the country that does not make use of it.

OTHER CHANGES.

The changed method of handling 2,400 petitions annually saves one clerk.

Returning about 45,000 letters of inquiry and requests per year with replies thereto instead of filing and indexing them has amounted to a considerable saving of clerical time and storage space.

The decisions of the Commissioner and the Assistant Commissioners are recorded in volumes. A card index of these decisions is now being made, so that any particular case may be found without going through the indexes heretofore kept in each separate book.

The spare time of some of the employees is being used now to make a card index of the 1,600,000 patents issued, indicating the class and subclass to which each patent has been assigned. This will be placed in the search room and open to the public, thereby not only adding greatly to the public convenience, but saving much time of the employees of the office, who must now furnish this information.

MORE SPACE.

The addition of 85 employees in July, 1923, greatly aggravated an already deplorable condition. The 1,146 employees now in this office, including 520 technical examiners, can not perform their work efficiently when crowded as they are, many of them working in halls and with artificial light. A single necessary conference with an inventor or his attorney may disturb a half dozen examiners in the present crowded quarters. I feel compelled to quote from my last annual report:

> More room is an absolute necessity to permit the office to perform the duties imposed by statute. Every nook and corner of the building is used, including the ends of all the halls not used as exits, and also including the main entrance on Ninth Street. The technical work of the examiners can not be efficiently done in such makeshift quarters, and it is a tremendous waste to pay $2,085,000 annually in salaries and fail to provide room where such technical work can be properly performed. At least 50 more rooms are of vital necessity and would be a real economy.

In order to perform its work economically and expeditiously the Patent Office must be provided with more room either by giving it ample room in the old Land Office Building across the street from the Patent Office, already connected to it by a tunnel, or by reconstructing the present building. The Patent Office could be remodeled with good results. The upper floor was never adapted for office purposes. The basement floor on the Ninth Street side should be remodeled, so that the public-service features of the office could be located on the ground floor. Thus the public search room could be moved from the top floor to the basement floor, and the financial clerk's room, which receives over $3,000,000 in fees, ranging from 10 cents to $20, could also be located on the ground floor at the entrance to the building, so that attorneys and the public generally who pay their fees can pay them at the entrance rather than be compelled to take the elevator to one of the upper floors. If these and other public-service features were removed from the upper floor to the basement, the upper floor could be remodeled to provide well-lighted rooms for the technical examining force. Further quarters could be provided by building a fourth story on the court side of the building, as was done in the Treasury Building and the House Office Building. The courtyard could also be excavated to provide a storage space for the millions of copies of patents which now bring in a revenue of $20,000 monthly. These changes would enable the present building to be more efficiently used and would be a great aid in bringing the work to date. To show its practicability, the Secretary of the Interior has had preliminary plans prepared providing for such changes. These plans prove the feasibility of remodeling the building, and I can not urge too strongly that an appropriation for such changes be provided at the earliest possible moment and that in the meantime adequate space in the Land Office Building be placed at the disposal of this Bureau in order that its work may be so efficiently performed that the Patent Office will stimulate rather than be a drag upon the industries of the country. In this connection attention is called to an editorial in "Chemical and Metallurgical Engineering" of December 17, 1923, as follows:

> The relation of the Patent Office to industrial prosperity in the United States is so intimate that progress may almost be measured by the speed with which applications for patents are disposed of. New construction, employment, and production frequently depend on the patentability of a process or product. Business and industry stand ready to risk investment if patents are granted, but are likely to become weary of waiting a year or 16 months for an undermanned Government institution to function.

In order to take care of the burden of work on this office we have adopted every method of economy and efficiency possible within the means at our disposal but even these and further improvements and economies can not carry the burden satisfactorily. While it is evident that much has been done, if the office is to continue the progress which has been made, relief in the nature of additional space and other employees must be provided.

Respectfully submitted.

THOMAS E. ROBERTSON,
Commissioner of Patents.

STATISTICS OF THE BUSINESS OF THE PATENT OFFICE.

[1] Including patents, designs, and reissues.

[2] Caveat law repealed June 25, 1910.

Statement showing the number of the first patent, design patent, and reissued patent, and the number of the first certificate of registration of a trade-mark, label, and print issued in each calendar year since July 28, 1836, when the present series of numbers of Letters Patent commenced.

[The number of patents granted prior to the commencement of this series of numbering (July 28, 1836), was 9,957.]

[1] No change made in numbers of last year's report. No definite information received.
[2] 1921 figures estimated on account of lack of information.

OTHER DETAILS OF BUSINESS.

During the year a total of 80,522 applications for patents, reissues of patents, and designs and 174,141 amendments in pending applications were filed. This represents a decrease of 8,408 in the number of applications, and an increase of 209 in the number of amendments. There were filed without fees, under the act of March 3, 1883, 130 applications for patent, and under rule 170 of the Rules of Practice, 1 application for reissue, making a total of 131 applications without fees.

The fees received by mail and express amounted to $1,911,286.87, and the fees paid by hand amounted to $1,061,095.24. The number of letters indexed and filed, constituting the general correspondence of the office, was 309,121, a decrease of 9,393 over last year. In addition 50,386 letters of inquiry were returned with indorsements or circulars of information answering the questions propounded, a decrease of 3,518 over last year. The number of parcels received by registered mail was 20,276, and the number of parcels by express was 1,306.

During the year 6,122 applications were forfeited by reason of failure to pay the final fee within the time prescribed by section 4885, Revised Statutes. Since March 3, 1861, about 248,788 forfeited cases have become abandoned.

In the drafting division 995 drawings were made for inventors, who paid $4,741.80 therefor, and 6,952 drawings previously filed were corrected upon request by the inventors, for which the office received $7,006.75. There were also 2 tracings made for $1.00. The total fees received for work by the drafting division amounted to $11,749.55. In addition to this 5,032 corrections in drawings were made without cost to the inventors; 141,547 sheets of drawings were inspected, and 16,721 letters were answered.

In the assignment division 36,935 deeds, transferring the titles to patents, etc., and containing 16,256,200 words, averaging 440 words per deed, were recorded. For this work the office received $66,112.96. In addition to this the assignment division prepared 2,924 abstracts of title and 4,224 briefs, for which fees amounting to $6,331.05 were paid. The total earnings of the assignment division were $72,444.01.

Typewritten copies of 18,540,700 words of records were furnished at 10¢ per hundred words, for which the office received $18,540.70; for 3,532,600 words, received to be compared, the office made a charge of $3,532.60; for photostatic copies of manuscript pages at 15¢ per page the office received $17,596.05, and for certifying to these copies $2,020.50, with $16.50 additional for certificates attached to photoprints of drawings, making a total of $41,706.35. For 8,137 certified printed copies, etc., the office received $6,810.70. For 546 certificates of standing of attorneys furnished from August 22d to end of year the office received $546.00. For 172,709 photostatic copies of foreign patents, etc., the office received $34,374.65, and for 70,748 photographic copies $11,156.60. For all of this class of work the office received a total of $94,594.30. The office furnished to other departments, without charge, 1,404 photostatic copies, and made for its own use 12,082 copies; 17,280 photographic copies were made for its own use.

Printed copies of specifications and drawings of patents to the number of 2,464,261 were sold at 10¢ each, bringing to this office on this account $246,426.10. For 599,425 copies sold to libraries the office received $775.00. The total received from the sale of copies of patents was $247,201.10, an increase of $4,622.70 over the receipts of last year. Copies to the number of 1,089,338 were shipped to foreign Governments in exchange for copies of foreign patents, which would otherwise have cost the office about $75,000. 471,849 copies were drawn for office use. The total number of printed copies of patents distributed during the year was 4,624,873.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

INTERNATIONAL BEDDING CO. *v.* OSTERMOOR & CO.

Decided February 13, 1923.

1. TRADE-MARKS—CANCELLATION—PICTURE OF GOODS.

Where the statement accompanying the certificate of registration shows that it was the intention of the registrants to indicate that their mark was a picture of their goods, *Held* that the mark is merely descriptive of their goods.

2. SAME — SAME — SAME — ILLUSTRATION OF GOODS IN PARTLY-FINISHED STATE.

Where the mark consists of the representation of a mattress in parts, of which one part appears finished and the other part appears opened up, disclosing superimposed layers, *Held* that the mark illustrates the goods, notwithstanding the fact that one part is not shown made up as ordinarily sold.

3. SAME—SAME—WHO MAY APPLY FOR CANCELLATION.

Where the applicant for cancellation has been threatened with suit by the registrant for alleged infringement of the trade-mark in issue by publishing advertisements illustrating goods made by the applicant, *Held* that this shows sufficient interest in the threatened party to warrant it in bringing proceedings for cancellation of the registered mark.

4. SAME—MERELY DESCRIPTIVE MARK—SECONDARY SIGNIFICANCE.

Even if it is true that long use of a mark has given it a secondary significance and that its merely descriptive character has disappeared, *Held* that the mark is not entitled to registration where it is of the same character as that passed upon in *Hercules Powder Co.* v. *Newton*, 266 Fed. 169.

5. SAME—CANCELLATION—INSTIGATED BY A MANUFACTURER'S ASSOCIATION—NOT FOR SOLE BENEFIT OF APPLICANT FOR CANCELLATION.

Where registrant requests permission to show that the proceeding is instituted by the National Association of Bedding Manufacturers and is not brought by the applicant for cancellation for its sole benefit, *Held* that if all that is alleged were proved the fact would still remain that the applicant is damaged by the registration of the mark and an order for cancellation would still be proper.

APPEAL from Examiner of Interferences.

TRADE-MARK FOR MATTRESSES, PILLOWS, CUSHIONS, AND HASSOCKS.

Mr. Frank F. Reed, Mr. Edward S. Rogers, Mr. Allen M. Reed, Mr. Frank L. Browne, Mr. Dudley Browne, and *Mr. J. T. Dowling* for International Bedding Company.

Messrs. Munn & Co. and *Mr. C. C. Cousins* for Ostermoor & Co. (*Mr. John K. Brachvogel* of counsel).

FENNING, *Assistant Commissioner:*

In 1905 Ostermoor & Co. registered their Trade-Mark No. 47,833, for mattresses, pillows, cushions, and hassocks, consisting—

of the representation of a tufted mattress in parts, of which one part appears finished or complete and the other part appears opened up, disclosing expanded, superimposed layers of a fabric-material.

[1, 2, 3] This quotation from the statement accompanying the certificate of registration seems to clearly show that it was the intention of Ostermoor & Co. to indicate that their mark was a picture of their goods. It is urged that since mattresses are ordinarily sold entirely made up and not with one end open to disclose the filling, the mark does not illustrate the goods. I am unable to so find and must hold that the mark is merely descriptive of the goods. The International Bedding Company makes mattresses and urges that purchasers from it have been threatened with litigation by Ostermoor & Co. for alleged infringement of the trade-mark here in issue by publishing advertisements illustrating mattresses made by the International Bedding Company. This shows sufficient interest in the International Bedding Company to warrent them in bringing the present proceedings for cancellation of the registered mark.

[4] Ostermoor & Co. claim that long use of the mark has given it a secondary significance and that its merely descriptive character has so disappeared.

Even if this is so the mark is not entitled to registration under the present law, as pointed out in *Hercules Powder Co.* v. *Newton*, 266 Fed. 169.

[5] Registrant requests permission to reopen the case and take additional testimony to show that the present proceeding is instigated by the National Association of Bedding Manufacturers and is not brought by the International Bedding Company for its sole benefit. The circumstances do not justify reopening the case. If all that is alleged in the moving papers were proved, the fact would still remain that the International Company is damaged by the registration of the descriptive mark and an order for cancellation would still be proper.

Affirmed and the mark will be canceled.

PATENT SUITS.

[Notices under section 4921, Revised Statutes, as amended February 18, 1922.]

842,154, H. G. Martin, Telegraphic transmitters, final consent decree in favor of plaintiff, sustaining patent, adjudging infringement, and granting injunction, filed Dec. 31, 1923, D. C., S. D. N. Y., *The Vibroplex Co., Inc.*, v. *J. H. Bunnell & Co.*

Re. 15,654. (See 1,383,906.)

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,383,275, S. E. Adair, Amplifier, decided January 2, 1924, claim 1.

Pat. 1,403,161, C. L. Harralson, Roller-bearing swivel wrench plate, decided December 24, 1923, claim 1.

Pat. 1,429,031, P. Harder, Puncture-healing tube, decided December 26, 1923, claim 1.

Pat. 1,441,661, C. S. Church, Brick-handling mechanism, decided January 3, 1924, claims 5 and 6.

TRADE-MARKS

OFFICIAL GAZETTE, FEBRUARY 12, 1924.

[VOL. 319. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 136,096. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) STANDARD METAL MANUFACTURING COMPANY, Newark, N. J. Filed Aug. 13, 1920.

STANDARD

No claim is made for the word "Standard" apart from the mark shown on the drawing.

Particular description of goods.—Horns for Automobiles and Motor Cycles, Both Hand Operated and Bulb Operated.

Claims use since early in 1905.

Ser. No. 139,068. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EMILY F. DAVIS, Dover, N. H. Filed Nov. 1, 1920.

Septalon

Trade-mark "Septalon."

Particular description of goods.—Tablets for the Prevention of Colds, Grippe, Pneumonia, Coughs, and All Catarrhal Conditions.

Claims use since Jan. 1, 1918.

Ser. No. 149,147. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) THE PETERS & HERRON CO., Columbus, Ohio. Filed June 14, 1921.

The Mastertone

Particular description of goods.—Phonographs.

Claims use since 1917.

Ser. No. 153,495. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MARIA L. BELDEN, doing business as A. G. Belden & Co., Brooklyn, N. Y. Filed Sept. 29, 1921.

HUILE D'OLIVE VIERGE

Grand Monarque

LOUIS XIV

No claim is made to the words "Huile d'Olive Vierge" apart from the mark shown.

Particular description of goods.—Olive Oil.

Claims use since Jan. 1, 1891.

Ser. No. 154,481. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) BOEING AIRPLANE COMPANY, Seattle, Wash. Filed Oct. 24, 1921.

BOEING

The representation of the goods is disclaimed except in connection with the mark shown.

Particular description of goods.—Airplanes and Parts and Accessories Thereto—Namely, Propellers, Struts, Landing Gear, Metal Fittings, and Wooden Parts.

Claims use since May 23, 1921.

Ser. No. 154,553. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GEBHARDT CHILI POWDER CO., San Antonio, Tex. Filed Oct. 25, 1921.

EAGLE BRAND

No claim is made for the word "Brand" apart from the mark shown in the drawing.

Particular description of goods.—Canned Chili Meat.

Claims use since 1898.

Ser. No. 157,634. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) GLATZ BROS., Manchester, Mich. Filed Jan. 9, 1922.

M.M.

Particular description of goods.—Concrete-Marker Molds.

Claims use since Sept. 6, 1921.

Ser. No. 157,868. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) WIGHTMAN AND HOUGH COMPANY, Providence, R. I. Filed Jan. 12, 1922.

YANKEE

The lining on the drawing indicates shading.

Particular description of goods.—Cigarette Cases, Cigar Cases, Matchcases, Cigarette Holders, Humidors, Cigarette Boxes, Ash Trays, and Match Stands, All of Which are Made of Base Metals, Leather, or of Molded Material Other Than Precious Metal.

Claims use since Jan. 23, 1918.

Ser. No. 158,308. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) ANGELO GRILLI, Milwaukee, Wis. Filed Jan. 23, 1922.

Angelo Al Grilli

Particular description of goods.—Propellers.

Claims use since Jan. 10, 1922.

Ser. No. 158,548. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) CLARENCE WHITMAN & SON, INC., Katonah and New York, N. Y. Filed Jan. 27, 1922.

YOLA

Particular description of goods.—White and Colored Silk and Cotton Piece Goods.

Claims use since Dec. 28, 1921.

Ser. No. 159,052. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOHN G. PATTON, Philadelphia, Pa. Filed Feb. 8, 1922.

L'Aiglon

Particular description of goods.—Candy—Namely, Fudge.

Claims use since about September, 1918.

Ser. No. 159,230. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WARD BAKING COMPANY, New York, N. Y. Filed Feb. 11, 1922.

SOFT BUN

Particular description of goods.—Loaf Bread.

Claims use since Jan. 27, 1922.

Ser. No. 159,485. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) AMERICAN BISCUIT COMPANY, San Francisco, Calif. Filed Feb. 18, 1922.

JUMBO FIESTA

Particular description of goods.—Cakes, Biscuits, and Crackers.

Claims use since Oct. 1, 1921.

Ser. No. 160,024. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PIONEER COFFEE COMPANY, Moorhead, Minn. Filed Mar. 1, 1922.

PIONEER

Particular description of goods.—Coffee.

Claims use since 1916.

Ser. No. 162,264. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) PITTSBURGH STEEL PRODCTS CO., Pittsburgh, Monessen, and Allenport, Pa. Filed Apr. 13, 1922.

SUPER

Particular description of goods.—Rotary Drill Pipe, Bull Plugs, Swage Nipples, and Casings.

Claims use since about Apr. 1, 1922.

Ser. No. 164,440. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) KAUFMANN DEPARTMENT STORES, INC., Pittsburgh, Pa. Filed May 24, 1922.

KELSWORTH

NEW YORK

No claim made to the words "New York" apart from the mark shown.

Particular description of goods.—Pianos, Organs, Phonographs, and Parts Thereof.

Claims use since about Mar. 15, 1922.

Ser. No. 166,688. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) H. G. HILL COMPANY, Nashville, Tenn. Filed July 10, 1922.

CIRCLE H

Particular description of goods.—Tea and Corn Meal.

Claims use since 1905.

Ser. No. 167,204. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) STEPHENS ENGINEERING COMPANY, Pittsburgh, Pa. Filed July 21, 1922.

VORTICAL Combustion

No exclusive right is claimed in the words "Vortical" or "Combustion" except in the relation shown.

Particular description of goods.—Furnaces, Parts of Furnaces for Burning Solid Fuel, and Furnace Appliances.

Claims use since Feb. 5, 1921.

Ser. No. 167,308. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) OTTO MARTENS, San Francisco, Calif. Filed July 24, 1922.

HIDNKIX

Particular description of goods.—Confections Consisting of a Candy Body Having a Flavored Sirup Center Contained Within a Shell of Crystallized Sugar Embedded Within the Candy.

Claims use since May 25, 1922.

Ser. No. 168,209. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FRANCISCO COTERA, doing business as The Cotera Brothers, El Paso, Tex. Filed Aug. 14, 1922.

Particular description of goods.—Coffee.

Claims use since July, 1919.

Ser. No. 168,272. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MOORITE PRODUCTS COMPANY, Seattle, Wash. Filed Aug. 15, 1922.

MOORITE

Particular description of goods.—Mineral Powders, Mineral Body Massage and Poultice Cream, Mineral Emulsion, Mineral Pyorrhea Powder, Mineral Disappearing Toilet Cream, Mineral Disappearing Toilet Lotion, Mineral Dental Cream, Mineral Pile Suppositories, and Mineral Beauty Pack and Facial Massage Cream.
Claims use since Feb. 25, 1921.

Ser. No. 168,644. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HOWARD H. HUBBARD, doing business as H. H. Hubbard Butter & Egg Company, Rochester, N. Y. Filed Aug. 24, 1922.

The picture appearing in the drawing is fanciful. No claim is made to the exclusive use of the words "Fancy Creamery" and "Butter" apart from the mark shown.
Particular description of goods.—Butter.
Claims use since Jan. 5, 1922.

Ser. No. 169,648. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) B. A. RAILTON COMPANY, Chicago, Ill. Filed Sept. 18, 1922.

Particular description of goods.—Vinegar; Canned Vegetables—viz, Asparagus, Tomatoes, Sweet Potatoes, Pork and Beans, Baked Beans, Red Kidney Beans, Lima Beans, String Beans, Stringless Beans, Sifted Peas, Early June Peas, Sweet Corn, Small Beets, Hominy, Rhubarb, Sauerkraut, Spinach, Pumpkin, Tomato Puree, Mushrooms, Wax Beans, Succotash, Apple Sauce, Cepes, Pimientoes; Preserved Vegetables; Canned Fruits—viz, Sliced Peaches, Yellow Cling Peaches, Hawaiian Pineapple, Grated Pineapple, Egg Plums, Green-Gage Plums, Bartlett Pears, Royal Anne Cherries, Red Pitted Cherries, Apricots, Blueberries, Loganberries, Gooseberries, Red Raspberries, Black Raspberries, Strawberries, Apples, and Olives; Preserved Fruits, Dried Fruits, Crushed Fruits, Fruit Jams, Fruit Butters, Fruit Marmalades, Fruit Jellies; Canned Fish—viz, Clams, Salmon, Crab Meat; Salt Fish, Clam Juice; Canned Meats—Namely, Chile Con Carne, Dried Chipped Beef, Cooked Corned Beef, Corned-Beef Hash, Deviled Ham, Potted Ham, Mexican Tamales, Veal Loaf, Sausage and Cereal, Deviled Tongue, Potted Tongue, Chicken, Chop Suey; Cereals—viz, Tapioca, Bran, Oatmeal, Rolled Oats, Rice, Corn Flakes, Farina; Graham Flour, Wheat Flour, Rye Flour, Buckwheat Flour, Waffle Flour, Pancake Flour, Prepared Cake Flour; Corn Meal; Vermicelli, Macaroni, Spaghetti, Noodles; Cornstarch, Food-Flavoring Extracts, Honey, Molasses, Sirups for Food Purposes, Minced Meat, Gelatine, Ice-Cream Powders, Jelly Powders, Tea, Cocoa, Coffee, Chicory, Chocolate, Pickles, Catchup, Spices, Allspice, Prepared Mustard, Mayonnaise Dressing, Salad Dressing, Salad Oil, Cooking Oil, Olive Oil, Cottonseed Salad Oil, Lard, Lard Compound, Oleomargarine, Cheese, Evaporated Milk, Compound Milk, Powdered Sugar, Bouillon Cubes, Soups, Peanut Butter, Essences for Food Purposes, Chop-Suey Sauce, Chile Con Carne, Horse-Radish, Chili Sauce, Chow-chow, Oyster-Cocktail Sauce, Worcestershire Sauce, Clam Chowder, Biscuits, Cookies, and Crackers.

Particular description of goods.—Canned Fruits, Canned Vegetables, Canned Grain, Canned Berries, Canned Pork and Beans, Canned Fish, Canned Shell Fish; Canned Sirup, Including Sorghum, Corn Sirup, Table Sirup, and Molasses; Canned Meat, Pickles, Olives, Dressings, Such as Salad Dressing, Olive Oil, Cottonseed Oil, Vinegar, Horse-Radish, Catchup, Pepper Sauce, Mustard, Chili Sauce; Food Flavoring Extracts, Such as Lemon and Vanilla; Dry Fruits, Such as Prunes, Peaches, Apricots; Fruit and Vegetable Preserves, Such as Apple, Raspberry; Jelly, Such as Apple, Currant, Strawberry; Peanut Butter, Apple Butter, Evaporated Milk, Mincemeat, Pepper, Cheese, Sugar, Cocoa, Tea, and Coffee.
Claims use since May 16, 1912.

Ser. No. 170,060. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) "400" PRODUCTS COMPANY, Chicago, Ill. Filed Sept. 29, 1922.

"400"

Particular description of goods.—Food Beverage Composed of Flavoring, Milk, and Skimmed Milk, and Sirup for Making Same.
Claims use since June 22, 1922.

Ser. No. 170,075. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE W. R. MONTAGUE COMPANY, La Crosse, Wis. Filed Sept. 29, 1922.

ADAIR

No claim is made to the representation of the cooky as illustrated apart from the mark shown. The lines appearing on the drawing indicate shading.
Particular description of goods.—Cracker Products and Dutch-Style Cookies.
Claims use since June 3, 1922.

Ser. No. 170,528. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE IDEAL CONCRETE MACHINERY COMPANY, Cincinnati, Ohio. Filed Oct. 10, 1922.

Ideal
ALL THAT THE NAME IMPLIES

No claim is made to the words "All That the Name Implies" except in the form and association shown in the drawing.
Particular description of goods.—Concrete Machinery—Namely, Concrete Mixers, Gravel Screeners, Sand Driers; Concrete Block, Brick, Sill, and Lintel; Pillar, Capital, and Base Tile; Ball, Pier-Coping, and the Like Molds and the Product of Such Molds, Also Interchangeable Faceplates, Pallets, Cores, Liners, and Dividing Plates for Such Molds; Tools and Implements for Making Artificial Stone and Cement Pavements, Comprising Tampers, Jointers, Edgers, Trowels, Markers, Rollers, Pounders, and Levelers.
Claims use since December, 1918.

Ser. No. 170,576. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) GENERAL BOILERS COMPANY, Waukegan, Ill. Filed Oct. 11, 1922.

PACIFIC

Particular description of goods.—Steel Boilers in the Nature of a Heating Unit Adapted to Burn Coal, Oil, Gas, or Wood.
Claims use since 1914.

Ser. No. 170,993. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SEATTLE FLOUR MILLS, Seattle, Wash. Filed Oct. 20, 1922.

The lines in the drawing are for shading purposes only; those on the words "Good Luck," brown.
Particular description of goods.—Wheat Flour.
Claims use since 1910.

Ser. No. 171,525. (CLASS 39. CLOTHING.) DAVID W. BRILL, Cleveland, Ohio. Filed Nov. 3, 1922.

Particular description of goods.—Leather Shoes.
Claims use since Oct. 10, 1922.

Ser. No. 171,993. (CLASS 39. CLOTHING.) E. H. HORWOOD & CO., Hoboken, N. J., and New York, N. Y. Filed Nov. 14, 1922.

LITTLE BEAUTY

Particular description of goods.—Union Suits of Knitted and Textile Fabrics.
Claims use since June 5, 1922.

Ser. No. 171,995. (CLASS 39. CLOTHING.) E. H. HORWOOD & CO., Hoboken, N. J., and New York, N. Y. Filed Nov. 14, 1922.

LITTLE BEAUTY

Particular description of goods.—Bloomers.
Claims use since Aug. 1, 1922.

Ser. No. 172,354. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE REMILLER CO., New York, N. Y. Filed Nov. 21, 1922.

BILLET DOUX

Particular description of goods.—Perfumes, Toilet Waters, Face Powders, and Talcum Powders.
Claims use since Nov. 1, 1922.

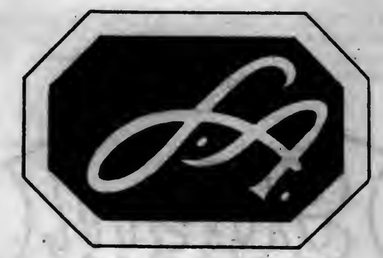
Ser. No. 172,355. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE REMILLER CO., New York, N. Y. Filed Nov. 21, 1922.

MON TRÉSOR

Particular description of goods.—Perfumes, Toilet Waters, Face Powders, and Talcum Powders.
Claims use since Nov. 1, 1922.

Ser. No. 172,542. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) F. G. LASHER COLOR CO., INC., New York, N. Y. Filed Nov. 25, 1922.

MADE IN U.S.A. LASHER'S LAKES



No claim is made to the words "Lakes" and "Made in U. S. A." apart from the mark shown, no common-law rights, however, being waived.
Particular description of goods.—Pigments and More Particularly Dry Colors and Lakes.
Claims use since April, 1915.

Ser. No. 172,846. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NEWLING & SON, La Mesa, San Diego, Calif. Filed Dec. 2, 1922.

KE-PEG

Particular description of goods.—Egg-Preserving Compounds.
Claims use since May 1, 1922.

Ser. No. 172,854. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE LOUIS ALLIS COMPANY, Milwaukee, Wis. Filed Dec. 4, 1922.

Particular description of goods.—Electric Motors, Generators, Rotary Converters, Inverted Converters, Rotaries, Frequency Changers, Controllers, and Compensators.
Claims use since about Sept. 1, 1922.

Ser. No. 172,875. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) GENERAL ELECTRIC COMPANY, Schenectady, N. Y. Filed Dec. 4, 1922.

COLORBESTON

The mark consists of the word "Colorbeston."
Particular description of goods.—Insulated Electrical Conductors and Especially Asbestos-Covered Conductors.
Claims use since July, 1921.

Ser. No. 172,908. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) SOUTH BEND BAIT CO., South Bend, Ind. Filed Dec. 4, 1922.

ORENO

Particular description of goods.—Fishing Reels, Fishing Rods, Artificial Fishing Baits and Lures, Fish Hooks, Fishing Lines, Leaders for Fish Hooks.
Claims use since Aug. 1, 1922.

Ser. No. 173,020. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ANN M. WEBER, Gary, Ind. Filed Dec. 6, 1922.

ANN M. WEBER'S Hair Pomade

No claim is made to the words "Hair Pomade" apar from the mark shown in the accompanying drawing.
Particular description of goods.—Hair Pomade.
Claims use since December, 1921.

Ser. No. 173,089. (CLASS 37. PAPER AND STATIONERY.) OTTO KECLIK, doing business as O. K. Press, Chicago, Ill. Filed Dec. 8, 1922.

O·K· Press

Particular description of goods.—Building and Loan Association Forms, Blank Books, and Job and Commercial Printing and Loose-Leaf Systems.
Claims use since Jan. 2, 1915.

Ser. No. 173,097. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE J. C. LYSLE MILLING COMPANY, Leavenworth, Kans. Filed Dec. 8, 1922.

GOLDEN AGE

Particular description of goods.—Wheat Flour.
Claims use since 1882.

Ser. No. 173,216. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) SIBYL A. SCOTT, doing business as Scott-Block Co., New York, N. Y. Filed Dec. 11, 1922.

The applicant disclaims the two representations of the blocks apart from her mark.
Particular description of goods.—Wooden Wedge Blocks.
Claims use since Jan. 1, 1921.

Ser. No. 173,408. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DANVILLE WHOLESALE GROCERY CO., Danville, Ill. Filed Dec. 16, 1922.

VANITY MAID

Particular description of goods.—Canned Fruit.
Claims use since June, 1922.

Ser. No. 173,420. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) C. C. HALL, INC., Rochester, N. Y. Filed Dec. 16, 1922.

BLUE DIAMOND

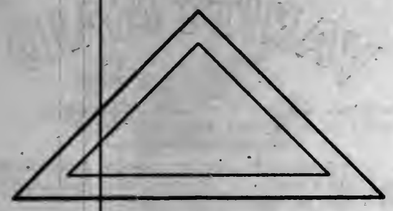
Particular description of goods.—Dried Fruits.
Claims use since Nov. 15, 1922.

Ser. No. 173,573. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) MCCREA MFG. CO., Minneapolis, Minn. Filed Dec. 19, 1922.

STORM KING

Particular description of goods.—Commercial Cab Bodies.
Claims use since August, 1919.

Ser. No. 173,684. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) STENTORPHONE COMPANY, Los Angeles, Calif. Filed Dec. 21, 1922.



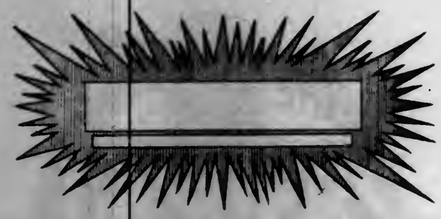
Particular description of goods.—Radio Loud Speakers.
Claims use since Aug. 1, 1921.

Ser. No. 173,829. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE HOLALCO COMPANY, New York, N. Y. Filed Dec. 26, 1922.

HOLALCO

Particular description of goods.—Rubbing Lotion.
Claims use since about Oct. 25, 1922.

Ser. No. 173,865. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) TRIANGLE WATER HEATER CO., Monrovia, Calif. Filed Dec. 26, 1922.



Particular description of goods.—Automatic Gas Heaters.
Claims use since January, 1919.

Ser. No. 173,893. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) LANSBURGH & BRO., INC., Washington, D. C. Filed Dec. 27, 1922. Under ten-year proviso.

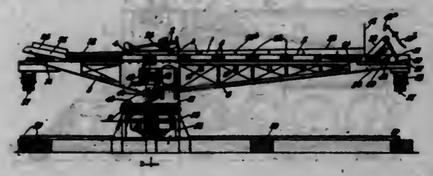
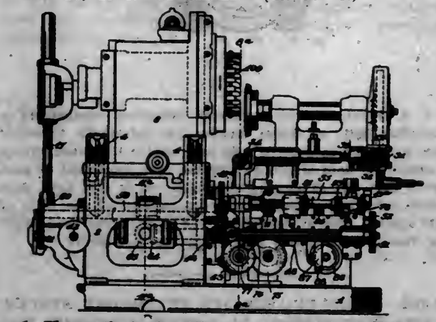
REISSUES



FEBRUARY 12, 1924.

15,757. GARMENT. DAVID L. FINE, Newton, Mass. Filed Nov. 9, 1922. Serial No. 599,948. Original No. 1,426,973, dated Aug. 22, 1922, Serial No. 204,446, filed Nov. 28, 1917. 3 Claims. (Cl. 2—143.)

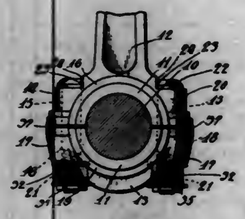


1. In a waist supported garment, a body covering having the top portion thereof divided at the hip sections of the same to form a forepart and a drop flap, said forepart being provided at the waistline thereof with an elastic band having the ends thereof permanently secured at the ends of said forepart with the intermediate parts of said forepart slidably supported on said elastic band to effect a gathering feature to said forepart, and a restraining means extending rearwardly beyond said forepart for engaging the same in supported relation about the waist of the wearer, and said drop-flap being also provided at the waistline thereof with an elastic band having the ends thereof permanently secured to the sides of said drop-flap with the intermediate portions of said drop-flap slidably supported on said last mentioned elastic band for effecting a gathering and self-contracting feature for the waistline of said drop-flap; and coacting fastening means provided at the sides of said forepart and said drop-flap at the waistline sections thereof, adapted to temporarily support said drop-flap in wearing relation with said forepart of said garment.

15,758. AIRPLANE-RECEIVING APPARATUS. RICHARD GIBBONS, Brooklyn, N. Y., assignor to Mary A. Kenney, Brooklyn, N. Y. Filed Dec. 14, 1923. Serial No. 680,771. Original No. 1,437,236, dated Nov. 28, 1922, Serial No. 317,672, filed Aug. 15, 1919. 29 Claims. (Cl. 244—2.)

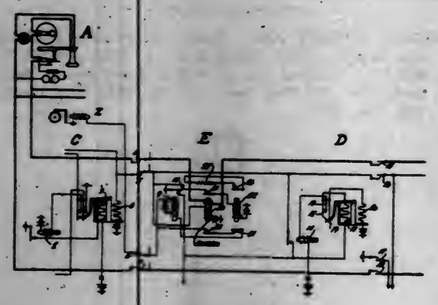
1. An airplane receiving apparatus comprising a runway adapted to receive an airplane, and means for moving the airplane supporting surface of said runway in a plane substantially parallel to the direction of movement of an airplane along said runway, said means being operative to move the portions of said runway adjacent one end thereof at speeds progressively greater than the speeds at which the portions of the runway at the other end are moved.

15,759. METHOD OF AND MACHINE FOR CUTTING GEARS OR WHEELS. JAMES E. GLEASON and ARTHUR L. STEWART, Rochester, N. Y., assignors to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed June 25, 1923. Serial No. 647,746. Original No. 1,349,951, dated Aug. 17, 1920, Serial No. 879,026, filed Dec. 26, 1914. 51 Claims. (Cl. 90—4.)



1. The method of cutting a gear or wheel which consists in moving a tool in a curved path with its point in a plane tangent to the root surface of the gear to be produced to shape the tooth, imparting a continuous indexing movement to the blank, and simultaneously producing a relative rolling motion between the blank and tool to generate the tooth.

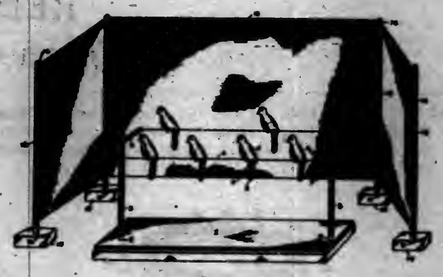
15,760. ROTARY JAR. JAMES ALLEN KAMMERDINER, Los Angeles, Calif. Filed Dec. 17, 1923. Serial No. 681,306. Original No. 1,469,305, dated Oct. 2, 1923, Serial No. 597,726, filed Oct. 30, 1922. 10 Claims. (Cl. 255—27.)



1. A rotary jar comprising two sections slackly linked together and rotatable with respect to one another, shoulders on said sections arranged so that they may engage one another and hold said sections in a contracted position, said shoulders being arranged so that by rotating said sections they may disengage thereby tripping and permitting the sections to be arrested by impact of the linked parts.

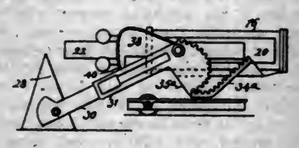
15,761. AUTOMATIC BEARING ADJUSTER. JOHN F. ROSE, Davenport, Iowa, assignor to Kil-Nock Company, a Corporation of Illinois. Filed Aug. 15, 1923. Serial No. 657,645. Original No. 1,453,184, dated Apr. 24, 1923, Serial No. 453,932, filed Mar. 21, 1921. 4 Claims. (Cl. 85—32.)

3. A device of the character described comprising a threaded bolt, a sleeve having an interiorly threaded bore arranged to receive said bolt, and a torsional spring mounted on said sleeve having one end connected to said sleeve and the other end connected with said bolt, said sleeve extending substantially throughout all the coils of said spring, thereby supporting the coils thereof and limiting the space occupied by said spring and sleeve.



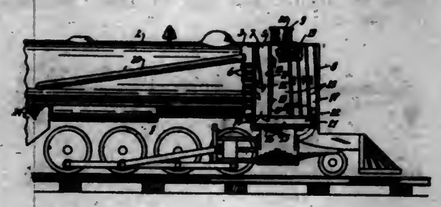
15,762. MEASURED-SERVICE TELEPHONE SYSTEM. JOHN WICKS, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1923. Serial No. 610,340. Original No 1,379,068, dated May 24, 1921, Serial No. 276,463, filed Feb. 12, 1919. 20 Claims. (Cl. 179—9).

1. In a telephone system, a meter, a circuit therefor, a meter controlling relay, means for operating said meter controlling relay to close one point of said circuit, and auxiliary controlling means for delaying the operation of said meter by holding said circuit open at another point for a predetermined interval beginning when said circuit is closed at the first point.



15,763. GAME. ISAAC W. DOREMUS, West Englewood, N. J., assignor, by mesne assignments, to Doremus, Schoen & Co., Inc., New York, N. Y., a Corporation of New York. Filed July 3, 1923. Serial No. 649,222. Original No. 1,383,610, dated July 5, 1921, Serial No. 468,682, filed May 11, 1921. 8 Claims. (Cl. 124—15.)

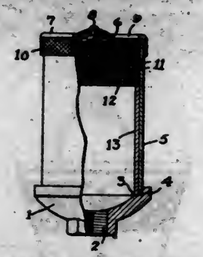
1. In a game the combination of a base member supporting upright rigid members, around the upper ends of which is strung a flexible member on which is supported a group of objects resting in balanced position, together with a number of secondary base members each



supporting perpendicular uprights on which a net is secured, thereby serving as a backstop for missiles projected at said balanced objects.

15,764. LOADING MACHINE. FRANK BILLINGS and ROBERT P. GREENLEAF, Cleveland, Ohio; said Greenleaf assignor to said Billings. Filed July 16, 1920. Serial No. 396,836. Original No. 1,322,476, dated Nov. 18, 1919, Serial No. 179,300, filed July 9, 1917. 17 Claims. (Cl. 214—134.)

16. In a loading machine, a shovel and power operated mechanism for giving the shovel a filling movement and a lifting movement for dumping purposes, the lifting means including an element through which force is transmitted through a leverage which is at a maximum at substantially the time of greatest resistance to lifting, and which gradually decreases as dumping position is approached.

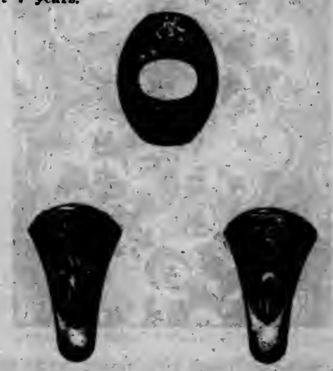


15,765. SPARK ARRESTER FOR LOCOMOTIVES. COTTER S. CHALFANT, Chicago, Ill. Filed Mar. 9, 1923. Serial No. 624,025. Original No. 1,408,075, dated Feb. 28, 1922, Serial No. 426,643, filed Nov. 26, 1920. 8 Claims. (Cl. 110—50.)

1. The combination with a flue outlet chamber and a smoke outlet chamber at the front end of a locomotive engine, said smoke outlet chamber being provided with a stack, and said flue outlet chamber having an inlet for a pressure fluid, of a spiral conduit arranged in said chambers with one open end thereof positioned directly above the inlet for the pressure fluid and with the other end thereof positioned directly beneath and adjacent to the stack orifice, means for conducting the gases of combustion from the fire tubes with the entrained unconsumed solid substances into position to enter the conduit at its first named end, and a declined conduit communicating with the spiral conduit at its last named end and leading to the fire box of the engine for conducting the unconsumed solid substances to the latter.

15,766. AIR HUMIDIFIER. ROBERT W. HARDIE, Fanwood, N. J. Filed Nov. 20, 1923. Serial No. 675,962. Original No. 1,404,700, dated Jan. 24, 1922, Serial No. 491,088, filed Aug 10, 1921. 6 Claims. (Cl. 183—44.)

1. An air humidifying device comprising a casing having an inlet aperture and a plurality of discharge apertures, a vapor conditioning member having a plurality of superimposed layers of foraminous, non-absorbent material within said casing, with its discharge face adjacent to the interior surface of the apertured part of the discharge end of said casing, with apertures of said member communicating directly with the discharge apertures



of said casing, and a discharge control plate mounted upon said casing and adapted to expose or cover said discharge apertures.

DESIGNS

FEBRUARY 12, 1924.

63,925. RING. CHARLES W. BAILEY, Philadelphia, Pa., assignor to The Bailey, Banks & Biddle Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 31, 1922. Serial No. 3,600. Term of patent 7 years.

The ornamental design for a ring, as shown.

The ornamental design for a ring substantially as shown.

63,932. TEXTILE FABRIC. JAMES H. BUNTING, Clifton, N. J., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Oct. 17, 1923. Serial No. 7,519. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

63,933. SHOE VAMP. ROCCO CENTRONE, Brooklyn, N. Y., assignor of one-half to Frank Napoli, Brooklyn, N. Y. Filed Dec. 16, 1922. Serial No. 4,622. Term of patent 3½ years.

The ornamental design for a shoe vamp, as shown.

63,934. ARM FOR LIGHTING FIXTURES. ABRAHAM COOPER, Brooklyn, N. Y. Filed Mar. 16, 1923. Serial No. 5,490. Term of patent 3½ years.

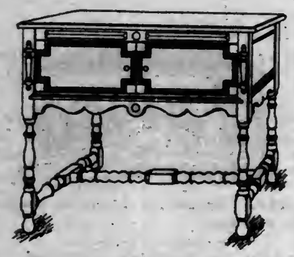
The ornamental design for an arm for lighting fixtures, as shown.

63,935. TUBE CAP. THOMAS J. DOBBINS, Brooklyn, N. Y., assignor to Chesebrough Manufacturing Company (Consolidated), New York, N. Y., a Corporation of New York. Filed Dec. 9, 1922. Serial No. 4,533. Term of patent 14 years.

The ornamental design for a tube cap as shown.

63,936. RUG. JOHN A. FARRELL, Amsterdam, N. Y., assignor to Stephen Sanford & Sons, Inc., Amsterdam, N. Y., a Corporation of New York. Filed Oct. 5, 1923. Serial No. 7,405. Term of patent 7 years.

The ornamental design for a rug, substantially as shown.



63,937. FINGER RING OR ARTICLE OF SIMILAR NATURE. LOUIS FIEDLER, New York, N. Y., assignor to Benjamin Gross Company, Inc., New York, N. Y., a Corporation of New York. Filed July 28, 1923. Serial No. 6,886. Term of patent 3½ years.

The ornamental design for a finger ring or article of similar nature as shown.

63,938. RADIO CABINET. WILLIAM A. FRENCH, Minneapolis, Minn., assignor to Wm. A. French Furniture Company, Minneapolis, Minn. Filed Aug. 4, 1923. Serial No. 6,940. Term of patent 7 years.

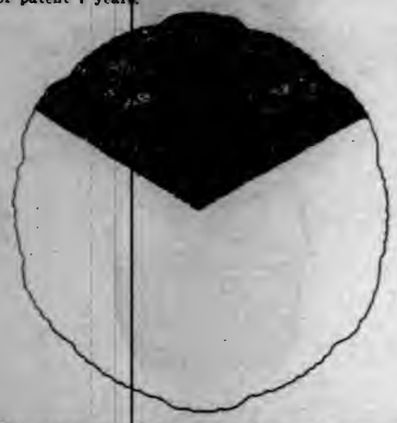
The ornamental design for a radio cabinet, as shown.

63,939. KETTLE OR SIMILAR ARTICLE. JOSEPH FRIEDMAN, Brooklyn, N. Y. Filed June 8, 1922. Serial No. 2,588. Term of patent 7 years.

The ornamental design for a kettle or similar article, as shown.

63,940. KETTLE OR SIMILAR ARTICLE. JOSEPH FRIEDMAN, Brooklyn, N. Y. Filed June 8, 1922. Serial No. 2,590. Term of patent 7 years.

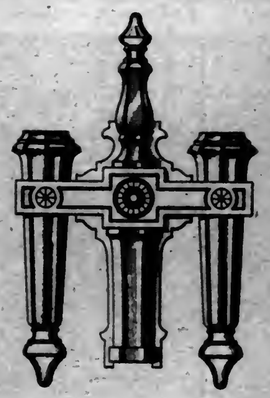
The ornamental design for a kettle or similar article as shown.



63,941. BOX OR SIMILAR ARTICLE. WILLIAM GEIB, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Aug. 13, 1923. Serial No. 7,000. Term of patent 7 years.

The ornamental design for a box or similar article substantially as shown.

63,942. PLATE OR SIMILAR ARTICLE. WILLIAM GEIB, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Aug. 31, 1923. Serial No. 7,131. Term of patent 7 years.



The ornamental design for a plate or similar article substantially as shown.

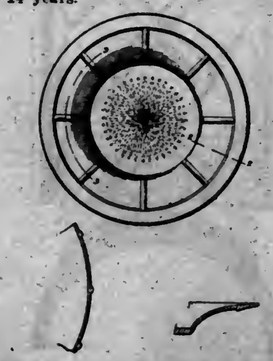
63,943. LIGHTING FIXTURE. WILFRED B. GODDARD, San Francisco, Calif. Filed Dec. 6, 1923. Serial No. 7,966. Term of patent 3½ years.

The ornamental design for a lighting fixture substantially as shown.

63,944. LIGHT FIXTURE. JOSEPH W. GOSLING, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 11, 1923. Serial No. 6,139. Term of patent 14 years.

The ornamental design for a light fixture as shown.

63,945. GLASS GOBLET OR SIMILAR ARTICLE. FRANK D. GREENAN, Moundsville, W. Va., assignor to Fostoria Glass Company, Moundsville, W. Va., a Corporation of West Virginia. Filed Jan. 10, 1923. Serial No. 4,856. Term of patent 14 years.

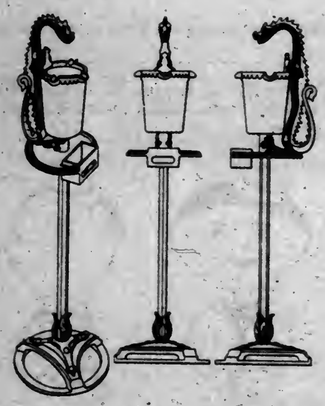


The ornamental design for a glass goblet or similar article, as shown.

63,946. DOLL. AGNES P. HANDLEY, Oakland, Calif. Filed Aug. 29, 1923. Serial No. 7,117. Term of patent 14 years.

The ornamental design for a doll, as shown.

63,947. PLATE. T. CLARENCE HEISEY, Newark, Ohio assignor to A. H. Heisey & Company, Newark, Ohio. Filed Mar. 14, 1923. Serial No. 5,467. Term of patent 14 years.

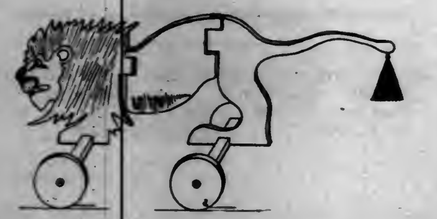


The ornamental design for a plate, as shown.

63,948. STATUETTE. ALMA V. HENDLEY, Kansas City, Mo. Filed Feb. 2, 1923. Serial No. 5,057. Term of patent 3½ years.

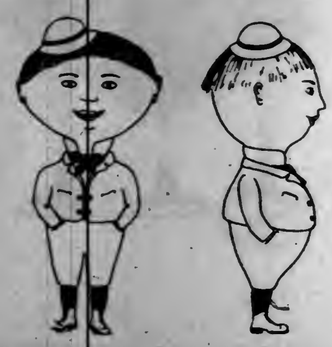
The ornamental design for a statuette as shown.

63,949. COMBINED ASH TRAY, RECEIVER, AND STAND. SYLVANUS D. LOCKE, Bridgeport, Conn. Filed Aug. 29, 1923. Serial No. 7,118. Term of patent 8½ years.



The ornamental design for a combined ash tray, receiver and stand, as shown.

63,950. TIRE TREAD. CARL G. LUNDSTROM, Cleveland, Ohio. Filed Dec. 6, 1922. Serial No. 4,514. Term of patent 3½ years.

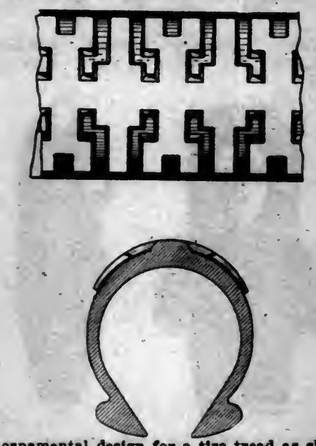


The ornamental design for a tire tread, substantially as shown.

63,951. TOY ANIMAL. RODNEY H. MARCHANT, Oakland, Calif. Filed Feb. 8, 1922. Serial No. 597. Term of patent 3½ years.

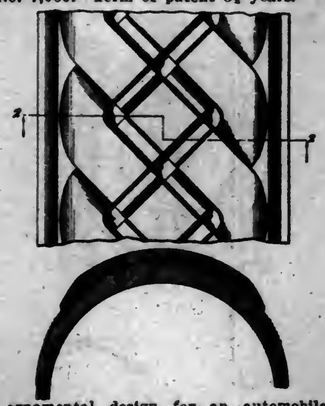
The ornamental design for a toy animal, as shown.

63,952. STATUETTE. GABRIEL MAROTTA, Seattle, Wash. Filed Sept. 29, 1923. Serial No. 7,367. Term of patent 3½ years.



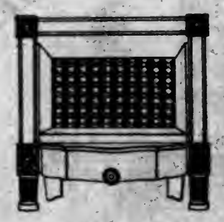
The ornamental design for a statuette, as shown.

63,953. DESK. JOSEPH R. MCCABGAR, Grand Rapids, Mich., assignor to Stow & Davis Furniture Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Nov. 1, 1923. Serial No. 7,644. Term of patent 3½ years.



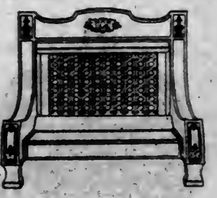
The ornamental design for a desk, substantially as shown.

63,954. TIRE TREAD. GEORGE C. MCCONNELL, Massillon, Ohio, assignor to Fidelity Tire & Rubber Co., a Corporation of Illinois. Filed Feb. 13, 1922. Serial No. 675. Term of patent 3½ years.



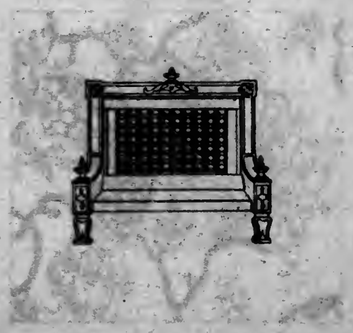
The ornamental design for a tire tread as shown.

63,955. AUTOMOBILE TIRE. JULES HAUVETTE MICHELIN, New Brunswick, N. J. Filed Aug. 22, 1923. Serial No. 7,060. Term of patent 3½ years.



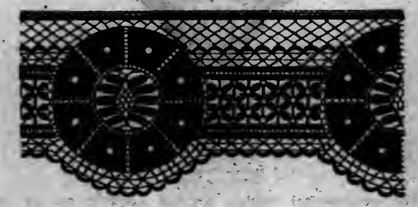
The ornamental design for an automobile tire as shown.

63,956. HEATER. FRANK A. NIEBERDING, Cleveland, Ohio, assignor to The Guardian Gas Appliance Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 24, 1923. Serial No. 7,297. Term of patent 3½ years.



The ornamental design for a heater, as shown.

63,957. HEATER. FRANK A. NIEBERDING, Cleveland, Ohio, assignor to The Guardian Gas Appliance Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 24, 1923. Serial No. 7,298. Term of patent 3½ years.



The ornamental design for a heater, as shown.

63,958. HEATER. FRANK A. NIEBERDING, Cleveland, Ohio, assignor to The Guardian Gas Appliance Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 24, 1923. Serial No. 7,299. Term of patent 3½ years.

The ornamental design for a heater, as shown.

63,959. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Nov. 20, 1923. Serial No. 7,826. Term of patent 14 years.

The ornamental design for lace substantially as shown.

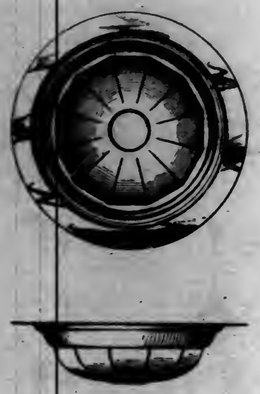
63,960. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Nov. 21, 1923. Serial No. 7,838. Term of patent 14 years.

The ornamental design for lace substantially as shown.

63,961. EARRING. HENRY L. PEACOCK, Dallas, Tex. Filed Apr. 30, 1923. Serial No. 6,008. Term of patent 3½ years.

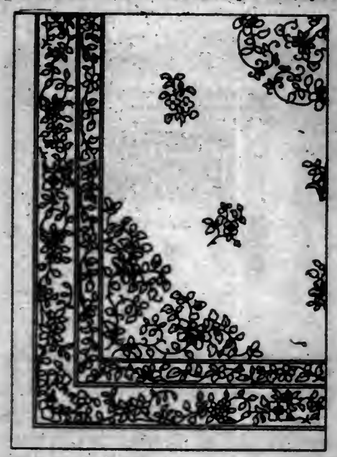
The ornamental design for an earring, as shown.

63,962. ELECTRIC CANOPY. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 12, 1923. Serial No. 7,475. Term of patent 3½ years.



The ornamental design for an electric canopy, as shown.

63,963. ELECTRIC-SOCKET COVER. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 12, 1923. Serial No. 7,477. Term of patent 3½ years.



The ornamental design for an electric socket cover, as shown.

63,964. FRUIT BOWL OR SIMILAR ARTICLE. PHILIP PUTTERMAN, New York, N. Y. Filed Nov. 5, 1923. Serial No. 7,684. Term of patent 3½ years.

The design for a fruit bowl or similar article as shown.

63,965. RUG. FRANCIS F. RAINSFORD, Amsterdam, N. Y., assignor to Stephen Sanford & Sons, Inc., Amsterdam, N. Y., a Corporation of New York. Filed Oct. 13, 1923. Serial No. 7,494. Term of patent 7 years.

The ornamental design for a rug, substantially as shown.

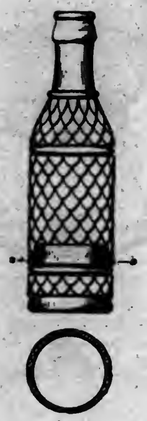
63,966. WAFFLE-BAKING IRON. EDDIE ROBINSON and ALBERT F. ABREO, Kansas City, Mo. Filed Sept. 10, 1923. Serial No. 7,176. Term of patent 7 years.

The ornamental design for a waffle baking iron, as shown.

63,967. TEXTILE FABRIC. MAX ROTHSCHILD, New York, N. Y., assignor to Susquehanna Silk Mills, a Corporation of New York. Filed Nov. 19, 1923. Serial No. 7,814. Term of patent 3½ years.

The ornamental design for a textile fabric as shown.

63,968. BOTTLE. CLAUD A. SEARS, Columbus, Ga., assignor to Chero-Cola Company, Columbus, Ga., a Corporation of Georgia. Filed Sept. 15, 1923. Serial No. 7,217. Term of patent 14 years.

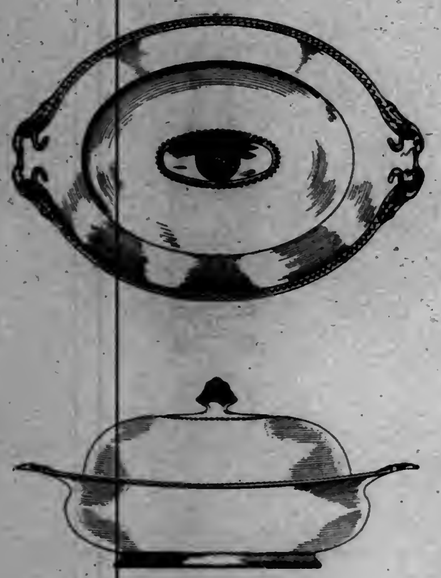


The ornamental design for a bottle, as shown.

63,969. BOTTLE. CLAUD A. SEARS, Columbus, Ga., assignor to Chero-Cola Company, Columbus, Ga., a Corporation of Georgia. Filed Sept. 19, 1923. Serial No. 7,265. Term of patent 14 years.

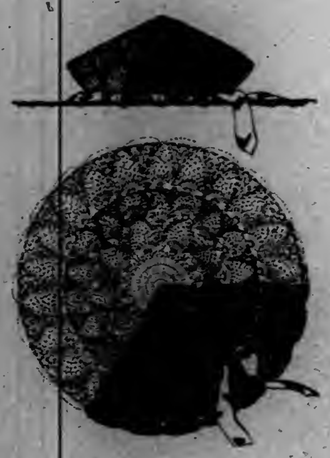
The ornamental design for a bottle, as shown.

63,970. BOTTLE. CLAUD A. SEARS, Columbus, Ga., assignor to Chero-Cola Company, Columbus, Ga., a Corporation of Georgia. Filed Sept. 19, 1923. Serial No. 7,266. Term of patent 14 years.



The ornamental design for a bottle, as shown.

63,971. BOTTLE. CLAUD A. SEARS, Columbus, Ga., assignor to Chero-Cola Company, Columbus, Ga., a Corporation of Georgia. Filed Sept. 19, 1923. Serial No. 7,267. Term of patent 14 years.

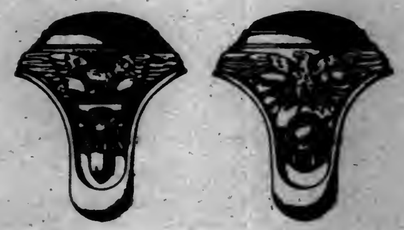


The ornamental design for a bottle, as shown.

63,972. COVERED DISH. CHARLES L. SEBRING and EDWARD BROOKS, Sebring, Ohio, assignors to The Sebring Pottery Company, Sebring, Ohio, a Corporation of Ohio. Filed Nov. 17. 1923. Serial No. 7,801. Term of patent 7 years.

The ornamental design for a covered dish, substantially as shown.

62,973. HAT. BERTHA SCHARPEN, Fessenden, N. Dak. Filed Oct. 29. 1923. Serial No. 7,618. Term of patent 7 years.



The ornamental design for a hat, as shown.

63,974. BELT-BUCKLE FRAME. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Oct. 23, 1923. Serial No. 7,575. Term of patent 7 years.

The ornamental design for a belt buckle frame, as shown.

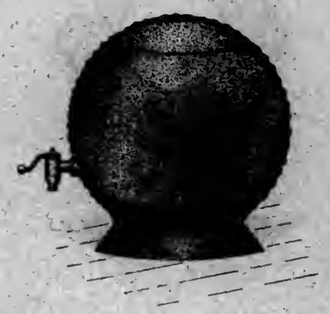
63,975. RING. FREDERICK A. SHIMP, Philadelphia, Pa., assignor to Skillkrafters Incorporated, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 13, 1923. Serial No. 4,876. Term of patent 3½ years.

The ornamental design for a ring, as shown.

63,976. DOLL. MAY R. SMITH, Brooklyn, N. Y. Filed July 12, 1922. Serial No. 3,042. Term of patent 3½ years.

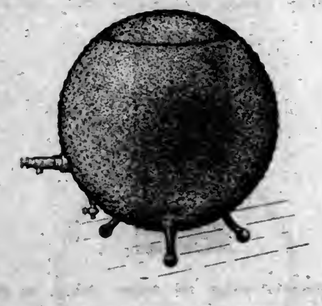
The ornamental design for a doll substantially as shown.

63,977. LAMP SHADE. ELMER L. SNYDER, Sioux City, Iowa. Filed Mar. 26, 1923. Serial No. 5,594. Term of patent 3½ years.



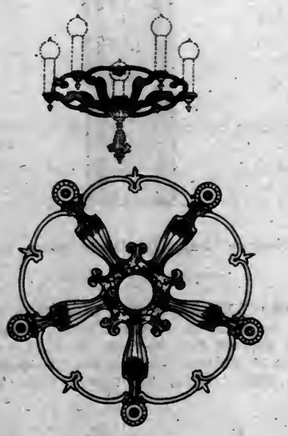
The ornamental design for a lamp shade, as shown.

63,978. MONUMENT. WILLIAM V. TIPPING, Marshall, Mo. Filed Oct. 15, 1923. Serial No. 7,505. Term of patent 14 years.



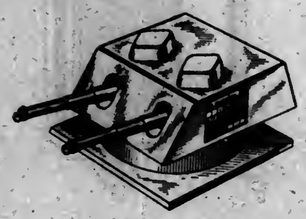
The ornamental design for a monument as shown.

63,979. BEVERAGE-DISPENSING APPARATUS. JOHN M. TRAVIS, St. Louis, Mo. Filed July 27, 1921. Serial No. 488,013. Term of patent 14 years.



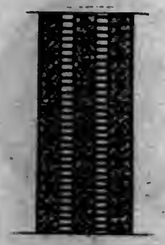
The ornamental design for a beverage dispensing apparatus, as shown.

63,980. BEVERAGE-DISPENSING APPARATUS. JOHN M. TRAVIS, St. Louis, Mo. Filed July 27, 1921. Serial No. 488,014. Term of patent 14 years.



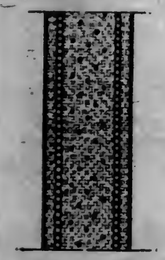
The ornamental design for a beverage dispensing apparatus, as shown.

63,981. LIGHTING-FIXTURE UNIT. ALBERT ULLMAN, Cleveland, Ohio, assignor to The Scott-Ullman Company, Cleveland, Ohio., a Corporation of Ohio. Filed Mar. 5, 1923. Serial No. 5,366. Term of patent 3½ years.



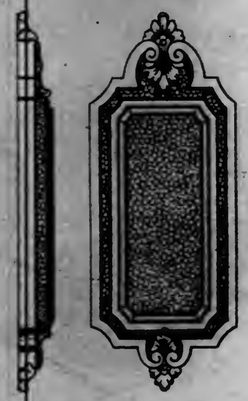
The ornamental design for a lighting fixture unit, as shown.

63,982. COMBINATION INKSTAND AND DESK-SUPPLIES HOLDER. FRANK L. WAASER, Glenbrook, Conn. Filed Nov. 22, 1921. Serial No. 517,118. Term of patent 7 years.



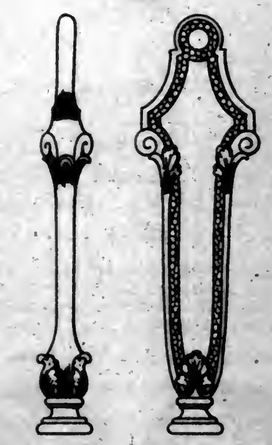
The ornamental design for a combination inkstand and desk supplies holder substantially as shown.

63,983. FABRIC RIBBON. ERNEST WALBRECKER, Wyomissing, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a Corporation of Pennsylvania. Filed Sept. 19, 1923. Serial No. 7,272. Term of patent 7 years.



The ornamental design for fabric ribbon, as shown.

63,984. FABRIC RIBBON. ERNEST WALBRECKER, Wyomissing, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a Corporation of Pennsylvania. Filed Sept. 19, 1923. Serial No. 7,273. Term of patent 7 years.



The ornamental design for fabric ribbon, as shown.

63,985. BRACKET BACK FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to The G. & G. Fixture Co., Newark, N. J., a Copartnership composed of William Goldberg and Abe Goldberg. Filed Nov. 6, 1923. Serial No. 7,691. Term of patent years.

The ornamental design for a bracket-back for lighting fixtures, as shown.

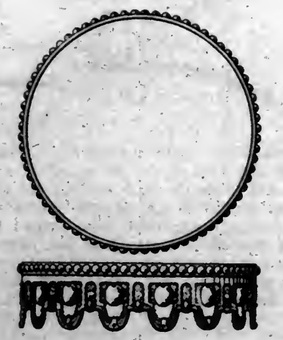
63,986. LOOP FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to The G. & G. Fixture Co., Newark, N. J., a Copartnership composed of William Goldberg and Abe Goldberg. Filed Nov. 6, 1923. Serial No. 7,692. Term of patent 7 years.

The ornamental design for a loop for lighting fixtures, as shown.

63,987. CANOPY RING FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to The G. & G. Fixture Co., Newark, N. J., a Copartnership composed of William Goldberg and Abe Goldberg. Filed Nov. 6, 1923. Serial No. 7,693. Term of patent 7 years.

The ornamental design for a canopy ring for lighting fixtures, as shown.

63,988. TIRE. CHARLES H. WHEELER, East Palestine, Ohio, assignor to The National Tire & Rubber Company, East Palestine, Ohio. Filed Dec. 8, 1923. Serial No. 7,976. Term of patent 14 years.



The ornamental design for a tire as shown.

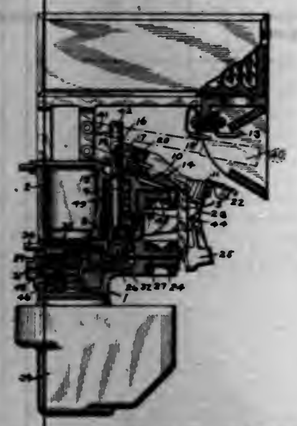
63,989. GARTER OR ARMLET. ALMA WOODWARD, New York, N. Y. Filed Sept. 15, 1923. Serial No. 7,207. Term of patent 7 years.

The ornamental design for a garter or armlet as shown.

63,990. BAND FOR CHANDELIER FIXTURES. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 25, 1923. Serial No. 7,319. Term of patent 7 years.

The ornamental design for a band for chandelier fixtures, as shown.

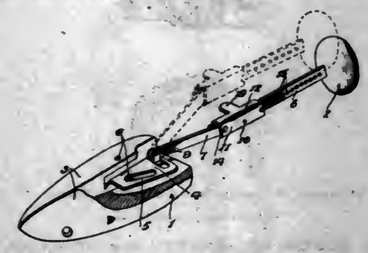
PATENTS



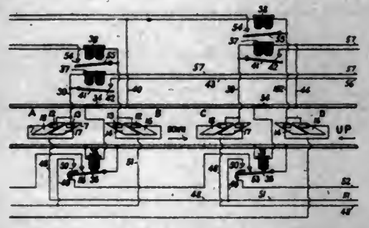
GRANTED FEBRUARY 12, 1924.

1,483,063. PARING KNIFE. WILLIAM E. ANDERSON, Jamestown, N. Y. Filed Nov. 20, 1922. Serial No. 602,027. 14 Claims. (Cl. 30—20.)

1. A paring-knife guard comprising a frame or body constructed and arranged to be mounted on the knife-blade and said frame having a curved part for engaging and bending the inserted knife-blade laterally on itself, the lower part of said frame being spaced apart from the cutting-edge of the knife-blade and forming a gage for the cutting-edge and being curved on a greater radius or arc than said cutting-edge, the two said curves forming a crescent shaped space between them.



1,483,064. MOTOR-CONTROLLING DEVICE. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 14, 1919. Serial No. 330,601. 9 Claims. (Cl. 172—288.)



1. In a motor controlling device, the combination with a resistance, of a switch mechanism movable to an initial position for connecting said resistance into the motor circuit and adapted upon a further movement to a final position to short-circuit said resistance, means for moving said switch mechanism to its initial position, and a spring for moving said switch mechanism to its final position upon the reverse movement of said means.

1,483,065. SHOE TREE. ANDREW R. ANDERSON, North Arlington, N. J.; Arthur R. Anderson executor of said Andrew R. Anderson, deceased. Filed Jan. 27, 1922. Serial No. 532,185. 7 Claims. (Cl. 12—128.2.)

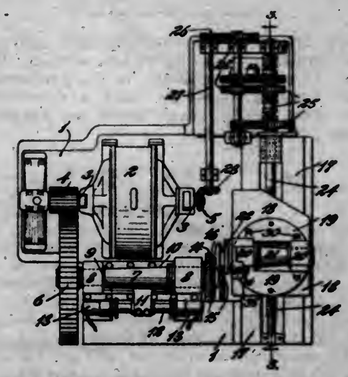
1. In a shoe last, toe and heel parts, shank members connected with said parts, means connecting the shank members for relative longitudinal adjustment comprising a locking member pivotally connected to one of said shank members and slidably engaging the other shank member, the locking member and its supporting shank member, as one unit, and the second mentioned shank member, as another unit, being relatively laterally displaceable, means yieldably holding the units against such displacement, and coacting locking means upon the locking and second mentioned shank members arranged to be rendered inactive upon displacement of said members.

1,483,066. RAILWAY SAFE-RUNNING DEVICE. ARTHUR REGINALD ANGUS, Minehead, England. Filed Oct. 1, 1913. Serial No. 792,706. 7 Claims. (Cl. 246—71.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A train protecting device comprising a bonded track having one of the rails divided into insulated sections, a normally deenergized testing relay connected across the rails at one end of each section and adapted to control current paths, track contacts pertaining to the other end of each of said sections and located appropriately for controlling admission thereto and connected to said current paths respectively, other track contacts pertaining to each of said sections respectively, electrically controlled train means including warning and stopping means, a vertically displaceable train contact coacting with the first mentioned track contacts, and a laterally displaceable train contact co-acting with the second mentioned track contacts, said train means being designed to energize the testing relays and pass a current of predetermined value through the train means to restrain the warning and stopping means when the track is clear.

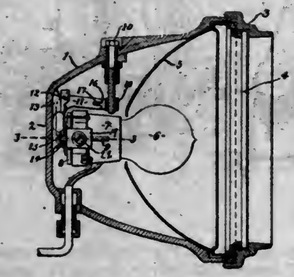
1,483,067. INTERCHANGEABLE AND ADJUSTABLE SIGN. CULLYE T. BERRY, Montgomery County, near Dayton, Ohio. Filed Jan. 19, 1923. Serial No. 613,790. 3 Claims. (Cl. 85—32.)

3. The combination with a sign, of a lamp for illuminating the same, a wire-containing conduit mounted on the sign for supporting said lamp in front of the latter, a conical reflector rotatably mounted on said conduit around the lamp, different colored lenses secured within the periphery of said reflector, means for rotating said reflector, a conical shield having a hub portion secured to said conduit within the reflector, and a conical



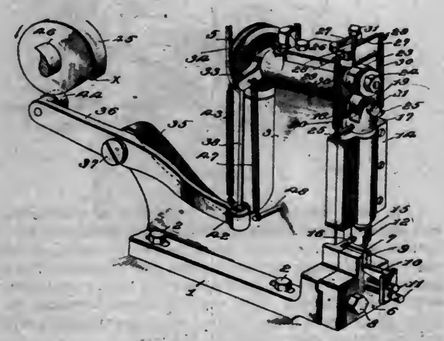
shutter free to turn on said hub portion within the shield for the purpose of providing between it and the shutter an adjustable opening to project the rays of the lamp through each lens upon the sign when said lens is carried past the opening by the rotatable reflector.

1,483,068. SAFETY DEVICE FOR BOMB FUSES. WILLIAM A. BORDEN, U. S. Army. Filed June 27, 1922. Serial No. 571,222. 4 Claims. (Cl. 102—39.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



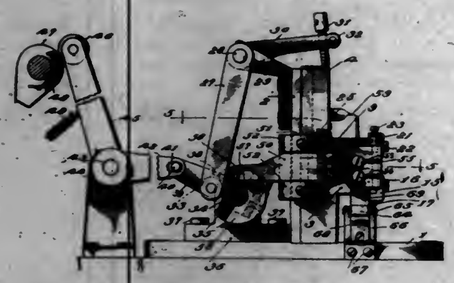
1. The combination with a fuse, including a wind wheel formed with a radially extending portion provided with an aperture, a portion stationary with respect to the wind wheel and adjacent thereto, said portion formed with a radial extension provided with an aperture with which the aperture in the wind wheel may be brought into alinement, of a wire passing through the apertures and formed with a loop whereby the wire may be withdrawn from the apertures when a bomb carrying the fuse is launched.

1,483,069. RING-ROLLING MACHINE. GOUVERNEUR G. BROWNE, Winchester, N. H. Filed June 22, 1921. Serial No. 479,472. 4 Claims. (Cl. 80—5.)



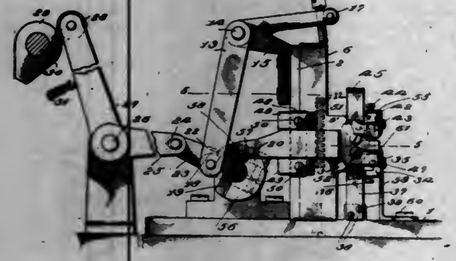
4. A ring rolling machine, comprising a rotatably mounted forming roll, a swivel head adjacent to said forming roll, a second forming roll rotatably mounted in said swivel head to cooperate with said first forming roll, means for moving said swivel head bodily so as to feed said second forming roll transversely of said first forming roll, and means for rotating said first forming roll, said feed means and said rotating means having a common source of power.

1,483,070. HEADLIGHT. FRANK BUCHANAN, Syracuse, N. Y. Filed Aug. 27, 1919. Serial No. 320,082. 2 Claims. (Cl. 240—44.)



1. A headlight comprising a casing, a concave reflector in the casing, a guide carried by the rear wall of the casing in the rear of the reflector, a lamp socket support mounted on the guide and movable thereon axially of the reflector, means for shifting the support along the guide comprising an angle lever carried by the casing and having one arm thereof connected to the support substantially centrally thereof in the axial line of the lamp socket, and an operating member connected to the other arm of the lever and arranged at an angle to the axis of the support and extending through a peripheral wall of the casing, substantially as and for the purpose specified.

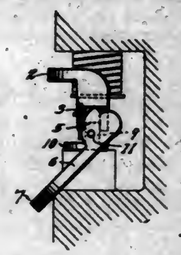
1,483,071. RIVETING MACHINE. JOHN A. CALDER, Torrington, Conn., assignor to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed June 15, 1921. Serial No. 477,708. 8 Claims. (Cl. 78—38.)



1. A riveting machine including in combination, a riveting hammer, a rotating shaft, a reciprocating member carrying said hammer, an actuating member carried by the shaft for moving said reciprocating member, means for yieldingly holding said reciprocating member in contact with the actuating member on the shaft, and means for shifting the actuating shaft toward and from the article being riveted for varying the reciprocating position of the riveting hammer.

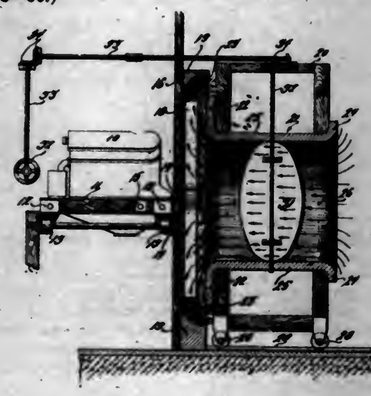
1,483,072. RIVET-CUTTING DEVICE. JOHN A. CALDER, Torrington, Conn., assignor to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed July 13, 1921. Serial No. 484,406. 14 Claims. (Cl. 164—44.)

1. A rivet cutting machine including in combination, two pairs of cooperating cutters, means for operating the cutters in the respective pairs for cutting the rivet at each end thereof, and means for moving one pair of cutters bodily toward and from the other for clamping the article carrying the rivet to be cut and thus holding the rivet relative to the cutters for the cutting action thereon.



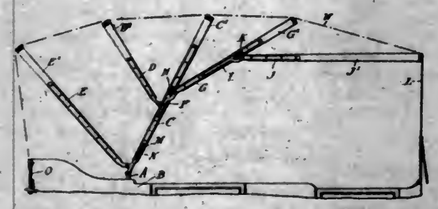
1,483,073. RIVET-CUTTING MACHINE. JOHN A. CALDER, Torrington, Conn., assignor to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed July 13, 1921. Serial No. 484,407. 8 Claims. (Cl. 164—44.)

1. A rivet cutting machine including in combination, two pairs of cooperating cutters, means for operating the cutters of the respective pairs to cut the rivet at each end thereof, means for moving one pair of cutters toward and from the other for determining the length of the rivet, said cutters having their cutting edges arranged in a plane at an acute angle to the line of reciprocation of the cutters during the cutting of the rivet.



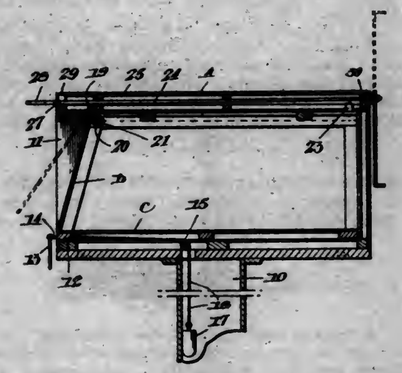
1,483,074. VALVE TOOL. WALTER D. CARROW, Chicopee Falls, Mass. Filed July 3, 1922. Serial No. 572,611. 2 Claims. (Cl. 29—86.3.)

1. A device of the class described comprising a chair for insertion under the greater portion of the valve spring of an engine, a semi-circular handle attached to the chair and arranged to encompass the valve spring, a plurality of cams having a peaked end portion, said cams being arranged to engage with the chair for raising and lowering the same, and means for operating the cams



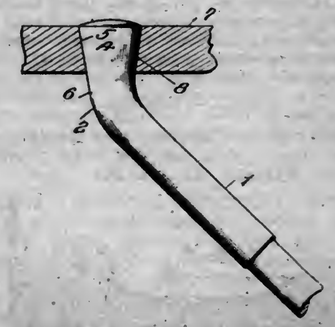
whereby the cams will actuate under the chair for raising and lowering the same and for locking in a set position on the peaked portion.

1,483,075. MOTOR-TESTING APPARATUS. ROLAND CHILTON, Keyport, N. J., assignor to Aeromarine Plane & Motor Company, a Corporation of New York. Filed Jan. 17, 1923. Serial No. 613,261. 22 Claims. (Cl. 188—90.)



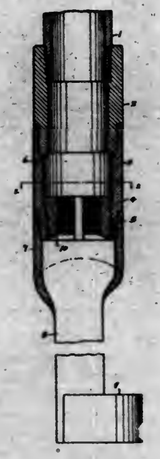
1. In the art of testing an engine, a test club adapted for rotation in a fluid and drivably secured to the engine to be tested, in combination with means for controllably leading said fluid to the center of said club.

1,483,076. FOLDING TOP FOR VEHICLES AND OTHER STRUCTURES. JAMES H. CLOYES, Chicago, Ill., assignor, by mesne assignments, to The Ashtabula Bow Socket Company, Ashtabula, Ohio, a Corporation of Ohio. Filed Oct. 8, 1913. Serial No. 794,032. 26 Claims. (Cl. 296—116.)



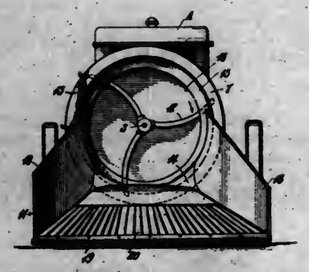
1. In a vehicle top, the combination with a main bow pivotally attached to the vehicle body, of an articulated outrigger bow supported from said main bow intermediate the base and top thereof so as to be foldable into substantially parallel relation therewith, and means independent of the joints of said outrigger bow adapted to limit the amount of bending at such joints past the center, when the top is extended, to a point where an upstanding arched structure is formed.

1,483,077. RURAL MAIL BOX. JOSEPH ELWELL COLE, Dacre, Ontario, Canada. Filed Mar. 12, 1923. Serial No. 624,640. 5 Claims. (Cl. 232—45.)



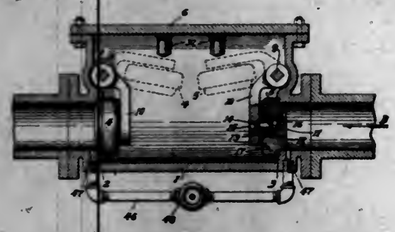
1. A mail box of the character described comprising a casing closed at one end and open at the other end, a reciprocal carriage in the casing, a door adapted to automatically open and close as the carriage is moved forwardly and rearwardly, said door being hingedly mounted on the casing and a roller on the carriage adapted to engage the door.

1,483,078. SPOKE CONNECTION. HARMON J. COOK, Torrington, Conn., assignor to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed Oct. 20, 1921. Serial No. 508,973. 2 Claims. (Cl. 301—59.)



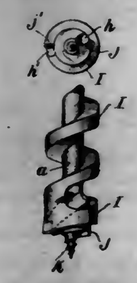
2. A spoke connection comprising a hub formed with a conical shaped spoke hole, the walls of which in longitudinal section are straight lines substantially symmetrically disposed about the center line of the hole, and a spoke formed with a conical enlargement shaped to conform to the spoke hole, the end of the spoke being slightly rounded and substantially flush with the inner face of the hub, and the body portion of the spoke being bent at an acute angle to the longitudinal center of the spoke hole said conical enlargement continuing its taper beyond the point of its connection with the hub and extended toward the main or central portion of the spoke.

1,483,079. FISHING TOOL. THOMAS B. COUCH, Wichita Falls, Tex. Filed Apr. 10, 1922. Serial No. 551,022. 3 Claims. (Cl. 294—102.)



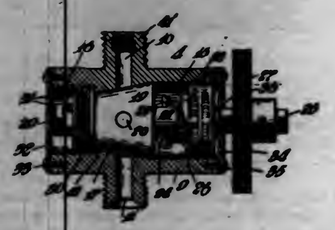
1. A fishing tool, including a tubular body formed with a downwardly tapering seat, a pipe engaging jaw resting on said tapering seat, a shank depending from said body at one side, a pipe engaging hook carried by the lower end of the shank, said fishing tool being provided with a water course extending therethrough from the upper to the lower end.

1,483,080. SNOWPLOW. FRANK SHIELDS CURRIE, Webster City, Iowa. Filed Sept. 26, 1921. Serial No. 503,263. 1 Claim. (Cl. 37—43.)



In a snow-shovelling attachment for an automobile, the combination of a fan attachable to the automobile's crank-shaft, a channel in which the fan is rotatable by means of a crank-shaft, a pair of brackets attachable to opposite sides of the automobile's chassis and having said channel secured thereto, a scoop secured on said brackets and having an air inlet in its lower rear portion and a snow outlet through which the snow can pass over the air inlets in the said channel, said channel having a snow outlet, said fan being adapted to suck air through the air inlet and thereby raise snow from said scoop to prevent clogging of the snow in the scoop's rear end.

1,483,081. VALVE. PETER P. DEAN, Sound Beach, Conn. Filed Mar. 17, 1921. Serial No. 451,868. 12 Claims. (Cl. 137—139.)



7. A valve having in combination two gates to control the flow of fluid therethrough, and means to close the gates at a predetermined rate of speed when fluid is not flowing and to close one of the gates at a higher rate when fluid is flowing.

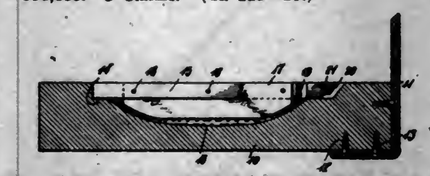
1,483,082. DRILL BIT OR AUGER. HENRI DOSIMONT, Arville, Belgium, assignor to Etablissements Dosimont, Societe Anonyme, Brussels, Belgium, a Corporation. Filed Apr. 13, 1921. Serial No. 461,050. 6 Claims. (Cl. 145—117.)

1. In a bit or auger, a body formed of a cylindrical rod provided with a helical groove, a head at the end of said rod, the said head having an unbroken periphery and passages forming cutting orifices in said head, the said passages being formed as extensions of the helical groove, and ending in the face of the head perpendicularly to the longitudinal axis of the rod.

1,483,083. VALVE MECHANISM FOR LIQUID-VENDING MACHINES. JOHN FRITSCHE, Merion, Pa. Original application filed Sept. 16, 1919, Serial No. 324,154. Divided and this application filed May 24, 1922. Serial No. 563,201. 5 Claims. (Cl. 251—113.)

1. In a liquid vending machine, a valve casing having a plurality of ports and provided with a bore having a tapered valve seat therebetween and through which said ports open, said bore having a cylindrical portion forming with said seat a shoulder a conical valve to engage said seat, a ball bearing, and means to secure said ball bearing to said valve whereby said ball bearing engages said shoulder and serves to secure said valve in proper relation with respect to said ports and also as an anti-friction bearing.

1,483,084. MANUFACTURE OF N-SULPHATO-ALKYL COMPOUNDS. ARTHUR GEORGE GREEN and KENNETH HERBERT SAUNDERS, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Filed Nov. 29, 1921. Serial No. 518,569. 11 Claims. (Cl. 260—27.)

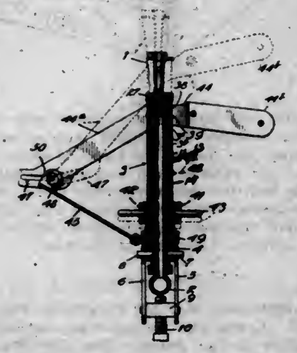


11. As new compounds green acid mordant dyeing triphenylmethane colouring matters which contain a carboxy group and are N-sulphato-ethyl compounds containing at least one ethyl sulphuric acid group attached to nitrogen and which upon treatment with caustic alkalies split off the SO_4H groups as alkaline sulphate.

1,483,085. SURGICAL BONE-CUTTING DEVICE. JAY A. HEIDBRINK, Minneapolis, Minn. Filed Apr. 21, 1921. Serial No. 463,421. 3 Claims. (Cl. 128—305.)

1. A surgical bone-cutting device comprising a holder for a cutting tool, a tubular member which receives an enlarged portion of said holder, a head secured to the forward end of said tubular member and having a bore through which a reduced portion of said holder extends slidably, a stop on the forward end of said holder which by engagement with said head limits rearward movement of said holder, a shaft-supporting member secured to the rear end of said tubular member, means for attaching said shaft-supporting member to the handle member of a dental engine, a shaft in said shaft-supporting member adapted for operation by the dental engine, a cam on the forward end of said shaft, a collar fixed in intermediate position in said tubular member, a shank extending slidably through said collar and having an enlargement on its rear end, a hammer head in the forward end of said shank, a coiled spring surrounding said shank between said hammer head and said collar, a roller carried by the rear of said shank and adapted to be forced rearwardly by the rotation of said cam, a fixed pin extending through a slot in said hammer head, and resilient means interposed between said pin and the rear of said tool holder.

1,483,086. CHICKEN ROOST. FRED HEINRICH, Whittemore, Iowa. Filed Apr. 18, 1922. Serial No. 554,488. 3 Claims. (Cl. 119—25.)

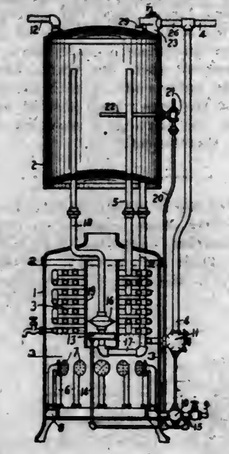


1. A chicken roost of the character described, comprising a body portion provided with a cut out portion open to its upper face and a reservoir open to said cut out portion and terminating short of the ends thereof, spaced inserts arranged in said cut out portion, a wick arranged in said inserts and extending into said reservoir, said inserts provided with an opening communicating with said reservoir, and said body portion being provided with an opening spaced from said cut out portion having communication with said reservoir, substantially as described.

1,483,087. AMMONIUM-NITRATE EXPLOSIVE. ROY LINDEN HILL, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 21, 1923. Serial No. 626,580. 9 Claims. (Cl. 52—11.)

1. An ammonium nitrate explosive containing 17 to 32% nitroaromatics of which at least 50% is trinitro toluene, a non-explosive inorganic nitrate and a liquid organic nitrate.

1,483,088. OIL STOVE. RUDOLPH HOFFMAN, Kankakee, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Original application filed July 19, 1919, Serial No. 311,953. Divided and this application filed Jan. 3, 1921. Serial No. 434,497. 25 Claims. (Cl. 158—42.)

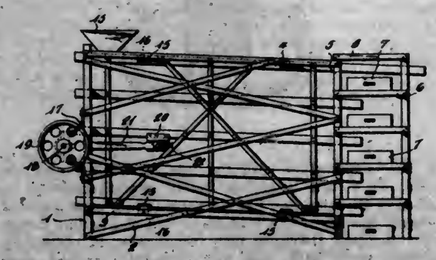


1. In an oil stove, the combination with an oil supply pipe and a burner, of a fitting mounted on said supply pipe, an extensible pipe connection between said fitting and said burner comprising an inner pipe section rising from the fitting, an outer section depending from the burner and telescoping over the inner pipe section, a tubular stem providing an annular channel around said inner pipe section for the reception of a quantity of mercury or the like into which the lower end of the outer pipe section is immersed, a pair of valve members upon said outer pipe section adapted to be seated upon the upper ends of said inner pipe section, a stem to form a closure for said annular channel, a locking sleeve rigid with said outer pipe section and surrounding said stem, said sleeve having at its lower end a shoulder, a lock-nut engaging said shoulder and said fitting to draw said sleeve downwardly and clamp said valve members upon their seats, and raising and lowering means for the burner comprising a bracket carried by said fitting, and a lever fulcrumed on said bracket and pivotally connected to said locking sleeve.

1,483,089. MOTION-TRANSMITTING MECHANISM. EARL B. HOUGH, Chicago, Ill., assignor to Guy M Peters, trustee, Chicago, Ill. Filed Sept. 11, 1920. Serial No. 409,560. 11 Claims. (Cl. 298—21.)

1. In combination, a load, a source of power, a pair of lever arms and a flexible element secured to one of said lever arms for applying power from said source to said load through said arms, first substantially directly through one of said arms and thereafter through a leverage including said arms.

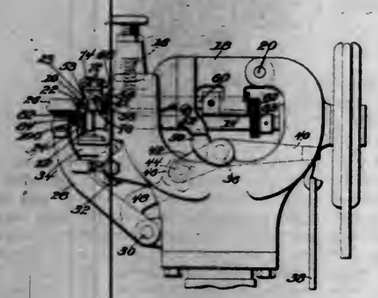
1,483,090. WATER HEATER. RUFUS J. HUTCHINS, Middletown, Ohio. Filed July 18, 1921. Serial No. 485,602. 6 Claims. (Cl. 236—23.)



1. In a water heater, a tank, a heating element connected with said tank and comprising a plurality of superimposed coils, a burner arranged beneath said heating element, means to automatically control said burner, a casing arranged within the coils of the first mentioned heating element, a second heating element arranged wholly within said casing and having circulating connection with said tank, and a burner for said second heating element.

1,483,091. STORGAE-BATTERY CASING. LEO IMBLUM, Pueblo, Colo. Filed Dec. 23, 1921. Serial No. 524,430. 8 Claims. (Cl. 204—29.)

1. A unitary battery casing comprising a box having a plurality of transverse partitions, each of which is provided with a notch near the side of the box, and a channel in the top of each partition for the reception of a sealing compound.

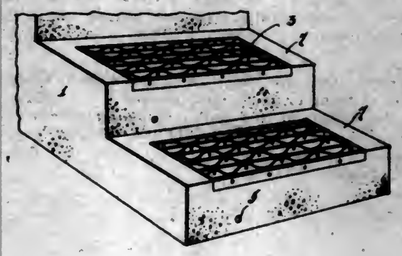


1,483,092. PEA SEPARATOR AND GRADER. PAUL CARL KRASKA, Amery, Wis. Filed Apr. 19, 1923. Serial No. 633,297. 8 Claims. (Cl. 130—32.)

1. A pea grader comprising a supporting frame, a plurality of interconnected collectively movable trays disposed longitudinally of and slidably supported upon

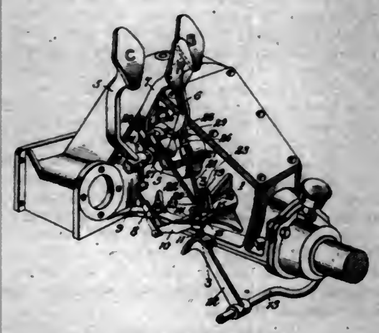
said frame, the bottom portions of each of said trays being perforated and the outer end of the uppermost tray being extended beyond the corresponding ends of the lower trays and having said extended end formed with perforations larger than the perforations in the remaining portion of the bottom thereof, means for imparting vibratory movement to said trays, and receiving receptacle supported upon the frame beneath and in proximity to the outer ends of each of said trays, the extended end of the upper tray passing over and being disposed beyond the particular receiving receptacle arranged directly therebeneath.

1,843,093. STOCK-FITTING MACHINE. ALBERT E. JOHNSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 2, 1919. Serial No. 287,009. 18 Claims. (Cl. 12—30.)



9. A machine for operating on lipped soles having, in combination, a frame, a shaft journaled therein, a roll carried by one end of the shaft to bear on one side of the lip, an arm pivoted on the frame, a parallel countershaft journaled therein, means for rotating said shafts one from the other, a stud-shaft mounted on said pivoted arm, a roll of relatively small diameter carried by the stud-shaft to bear on the other side of the lip, a driving mechanism between the stud-shaft and the countershaft for rotating the small roll at the same surface speed as the other roll.

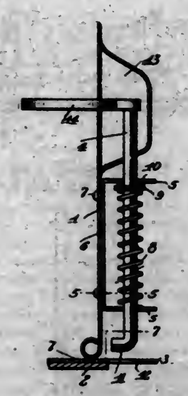
1,483,094. SPONGE MOUNTING FOR FINGER MOISTENERS. GRIFFIN WILLIAMS JONES, Toronto, Ontario, Canada. Filed Jan. 20, 1923. Serial No. 613,909. 4 Claims. (Cl. 9—51.)



4. The combination with the liquid container and the sponge, of a rod extending freely therethrough in a transverse direction and having hook shaped ends adapted to engage the lip of the container, said rod having downwardly directed U shaped lugs terminating in outwardly extending ends, said lugs and outwardly turned ends adapted to engage respectively the inside face of the lip and its upper edge, said rod being constructed of resilient material.

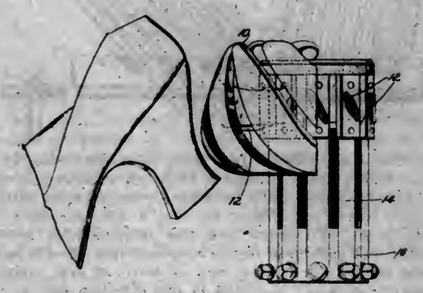
1,483,095. MEANS FOR COLLECTING MUD, FOOT SCRAPINGS, WATER, AND THE LIKE DEPOSITED ON STEPS. CHARLES E. KAIN, Dallas, Tex. Filed Aug. 18, 1922. Serial No. 582,742. 4 Claims. (Cl. 72—96.)

1. In a step construction, a concrete body having a mud-receiving chamber and formed with a cut-out extending through the riser of the step and along the sides and ends of the chamber and through the top of the tread of the step to form a shoulder, and a removable grating conformably fitted in the top of the chamber and seated on said shoulder and having its front side disposed flush with the front face of the riser.



1,483,096. REVERSE BRAKE CONTROL FOR AUTOMOBILES. LAWRENCE CHARLES KARCHER, Henderson, Ky., assignor to The Karcher Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 21, 1920. Serial No. 411,743. 4 Claims. (Cl. 74—81.)

1. An attachment for automobiles for preventing the application of either the brake or the reverse mechanism while the forward or high speed clutch is in action, comprising a bracket for attachment to the clutch lever, and a pair of connecting rods leading from the bracket to the brake and reverse levers of the automobile, whereby on the application of either the brake or the reverse mechanism the clutch is moved into the neutral or out-of-action position.

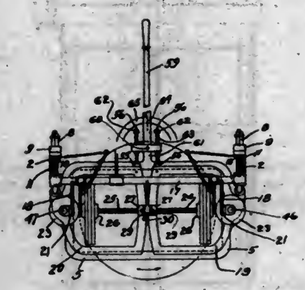


1,483,097. LOCKING MECHANISM FOR AUTOMOBILE HOODS. EDWARD S. KLINE, Rochester, N. Y. Filed Feb. 28, 1922. Serial No. 539,985. 4 Claims. (Cl. 292—62.)

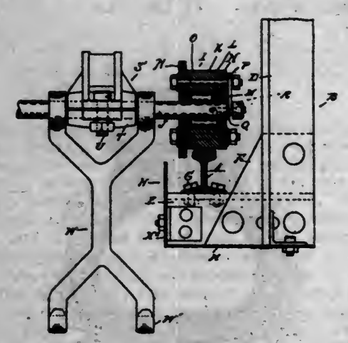
1. The combination with a hood of an automobile having a pocket in an exterior wall and a keeper arranged on a fixed part on the inner side of the hood, of a rotatable latch for cooperating with the keeper, said latch having an arm rigid therewith lying within the pocket when the latch is engaged with the keeper and movable to

project from the pocket when the latch is rotated to disengage the latch from the keeper, to act as a handle through which the hood may be raised and lowered.

1,483,098. BURNISHING TOOL. ARTHUR D. MANSON, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 19, 1920. Serial No. 374,968. 8 Claims. (Cl. 12—105.)



1. A rotary heel finishing tool made up of a series of relatively movable finishing elements each having its front and rear portions of substantially the same diameter and its median portion of a greater diameter than its front and rear portions, said tool being constructed and arranged thereby to generate a work engaging surface adapted to treat one part of a heel at one side of the greater diameter and a surface adapted to treat another part of a heel at the other side of said diameter.

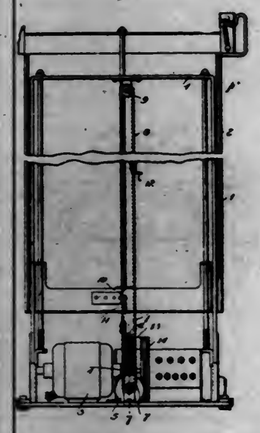


8. A rotary heel finishing tool having a working face comprising two differently formed work engaging surfaces, one surface constructed and arranged to finish a certain portion of a heel and the other surface constructed and arranged to finish a different portion of the heel, said surfaces meeting near the maximum diameter of the tool as a whole thereby leaving clearance for that part of the heel not being treated.

1,483,099. TRANSMISSION FOR MOTOR VEHICLES. ROY V. MARTIN, Oakland, Calif. Filed June 17, 1919. Serial No. 304,807. 9 Claims. (Cl. 74—26.)

7. In a transmission for motor vehicles, a fiber-faced driving-disk, independent horizontal shafts normally positioned on the same plane across the center of the face of said driving-disk, means for automatically changing the planes of said shafts with respect to each other, right and left hand groups of friction-disks slidably mounted on said horizontal shafts and adapted to contact with the face of said driving-disk and to receive motion therefrom, means for compensating the respective speeds of the rear wheels when the vehicle is running off a straight course, and means for imparting motion to the rear wheels of the vehicle.

1,483,100. CONVEYER. JESSE E. MCBRIDE, Highland Park, Mich., assignor to Palmer-Bee Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 10, 1919. Serial No. 270,536. 6 Claims. (Cl. 198—177.)



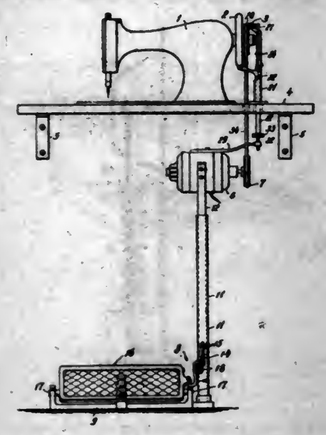
2. The combination with parallel tracks, of members engageable with said tracks and movable therealong, a rod between said members, a conveyer chain having a link fixedly secured intermediate said members to said rod, and a work supporting hanger secured to said rod and depending therefrom and between said tracks.

1,483,101. COPYHOLDER. ANDREW S. MACDOWELL, Rochester, N. Y. Filed May 11, 1922. Serial No. 560,047. 11 Claims. (Cl. 120—29.)

6. The combination with a frame, of a copy support movable upwardly or downwardly thereon, a driven shaft, a reversible electric motor operating the shaft, a pinion on the shaft, a second pinion journalled on the frame, a chain engaging the pinions and having one end connected directly to the copy support, a spring connecting the other end of the chain with the copy support, a pair of switches controlling the motor and operating to auto-

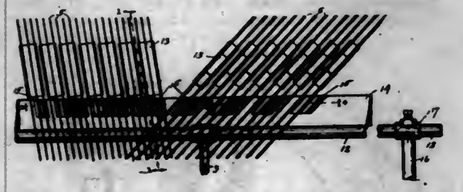
matically open the motor circuit as the copy support reaches the limit of its upward or downward travel, and

lugs carried by the chain arranged to engage and move said switches as the copy support reaches the limit of its respective movements.



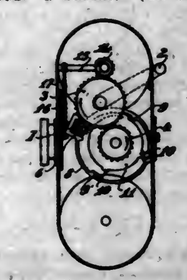
1,483,102. NONSKID DEVICE. HARRY M. MCCUNE, Kenmore, Ohio. Filed Feb. 13, 1922. Serial No. 536,395. 9 Claims. (Cl. 152—14.)

1. A skid preventing device comprising, the combination with circumferential chains and spaced transverse chains connected to the circumferential chains and adapted to be received over a tire, a removable plate positioned over one of said transverse chains, a lug interval with the plate forming a side-skid preventing projection, and means passing through the plate and the chain and adapted to attach the plate in position on the chain.



1,483,103. MOTOR-DRIVING UNIT FOR SEWING MACHINES. HYMAN MAIMIN, New York, N. Y. Filed Jan. 16, 1923. Serial No. 612,938. 17 Claims. (Cl. 192—11.)

1. A driving unit for sewing machines comprising the combination of a standard adapted to be positioned adjacent the driving wheel of the machine, a motor mounted on the standard for vertical movement toward and away

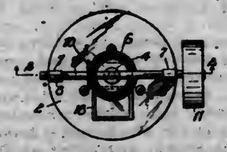


from the machine, and means for effecting such movement.

1,483,104. DAMPER ATTACHMENT FOR PIANOS. DAVID MCILWRATH, Newcastle, Ind. Filed Apr. 21, 1922. Serial No. 555,901. 3 Claims. (Cl. 84—219.)

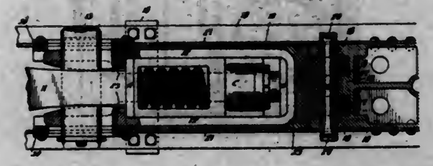
1. The combination with a group of treble strings of a piano and a group of bass strings, all substantially in a common plane, of a rock-bar crossing both string groups, means for rocking the bar, a mute-bar fixed to move with the rock-bar and also crossing both string groups, and pads fixed to the mute-bar, each of said pads being adapted to contact one or more of said strings when the rock-bar is rocked in one direction and to be disengaged therefrom when the rock-bar is oppositely rocked.

1,483,105. CINEMATOGRAPHIC APPARATUS. GIORGIO MICHETTI, Rome, Italy. Filed Oct. 3, 1921. Serial No. 504,983. 2 Claims. (Cl. 88—18.)



1. In a cinematographic apparatus, a feed drum, actuating mechanism for the drum, a boss fixed to the drum, and a ring shaped balance member, cooperating with the boss, for regulating motion of the drum.

1,483,106. CHART. FRANK E. MIELKE, Shawano, Wis. Filed Sept. 3, 1921. Serial No. 498,269. 3 Claims. (Cl. 84—485.)

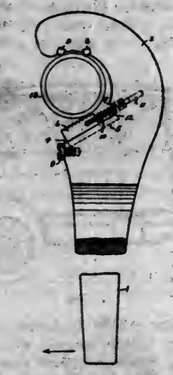


2. A device of the class described comprising a base, note carrying devices disposed upon the base and arranged in rows corresponding to string and fret positions on the instrument to be played, certain of said note carrying devices comprising a pair of superposed leaves, means pivotally connecting said leaves to one another and to the base, means carried by the uppermost of said leaves and engaging the connecting member to limit the movement of the leaf to the elevated position, and means carried by the lower leaf and coacting with the upper leaf to limit the movement of the lower leaf to the raised position, the notes of said note supporting members being exposed to view when the note supporting members are elevated, and concealed by the note supporting members when the note supporting members are in the lowered position.

1,483,107. AGITATOR FOR USE IN BLEACHING FLOUR. BURTON NEAL, St. Louis, and GEORGE H. HERBRAND, Kinloch, Mo. Filed Jan. 18, 1923. Serial No. 613,881. 9 Claims. (Cl. 83—42.)

1. A device for use in subjecting flour to the action of a gas, comprising an extended casing providing a gas-tight chamber, means located, respectively, at opposite ends of said chamber for continuously compressing and feeding flour into, and continuously compressing and discharging it from the chamber, thereby maintaining the seal of the chamber by means of said compressed bodies of flour, and means for supplying a gas to said chamber.

1,483,108. RAILWAY DRAFT RIGGING. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed May 6, 1920. Serial No. 379,328. 2 Claims. (Cl. 213—50.)

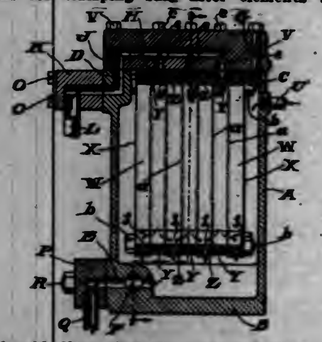


1. In a railway draft rigging, the combination with draft sills and a rear abutment block; of a pair of laterally spaced stop castings integrally united at their rear ends and adapted to sustain a shock absorbing means and a draw bar, said castings being spaced apart laterally to permit removal of the shock absorbing mechanism bodily in a vertical direction, means for pivotally anchoring said integrally formed stop castings to said abutment block to swing about a horizontal axis; and a single detachable means for normally separately supporting the forward ends of the stop castings and the draw bar.

1,483,109. MOTION-PICTURE FILM. OLE ANDREW OWEN, Detroit, Mich. Filed Feb. 20, 1923. Serial No. 620,201. 8 Claims. (Cl. 88—19.5.)

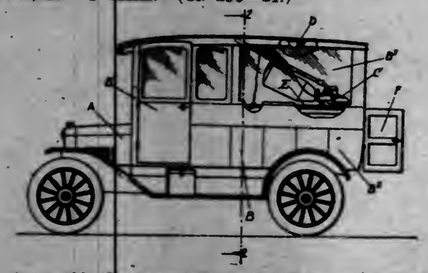
1. A motion picture film having a section provided with a series of different scenes, a second section provided with immobilized scenes, and characters superposed upon said immobilized scenes.

1,483,110. PIPE WRENCH. OSCAR PEARCE and IVAN BALES, Houston, Tex. Filed Mar. 14, 1922. Serial No. 543,564. 1 Claim. (Cl. 81—179.)



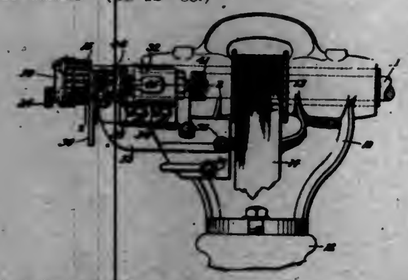
A pipe wrench including a handle having a curved jaw formed integrally with one end thereof and adapted to fit around one side of the pipe to be turned, pipe engaging teeth carried by said curved end, a flat face formed on said handle opposite said jaw, said face diverging outwardly with respect to a plane passing through said teeth, said face being formed with a dove tailed groove, a slidable jaw having a bearing on said face and formed with a dove-tailed tenon which slides in said groove, the operative face of said last mentioned jaw being toothed, a set screw threaded into the handle and against the head of which said tenon is adapted to abut, a shoulder formed on said handle opposite the inner end of the jaw, and against which said inner end of said jaw is adapted to abut said handle having a deep socket in alignment with said slidable jaw, a rod attached to the inner end of the jaw and working in said bearing, the outer end of said bearing being enlarged, and a coil spring surrounding said rod, one end of which is seated in the enlarged outer end of the socket and the other end of which rests against the inner end of said jaw.

1,483,111. FILTER. WILLIAM T. PRICE, deceased, late of Easton, Pa.; by Helen C. Price, executrix, Easton, Pa., assignor to Price Engine Corporation, New York, N. Y., a Corporation of New York. Filed May 14, 1921. Serial No. 469,436. 4 Claims. (Cl. 210—178.)



1. A filter comprising a casing having an inlet and outlet for the circulation of liquid, a cover for said casing, a removable filter member suspended at right angles from said cover and comprising filter elements in the form of frames having filter fabric stretched thereon, the outer

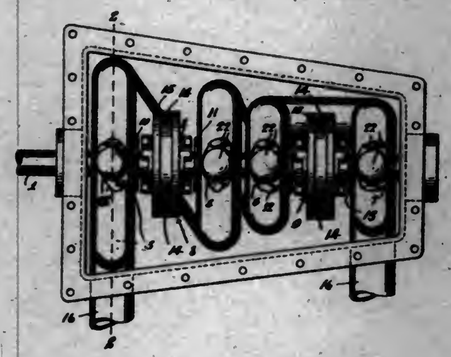
frames of the filter elements having open outer sides, and means for clamping said filter elements together,



certain of said filter elements communicating with the inlet of the casing and elements alternate thereto communicating with the outlet of the casing.

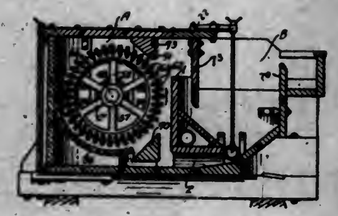
1,483,112. DELIVERY WAGON. FLOYD M. RHED, Kansas City, Mo. Filed Oct. 17, 1919. Serial No. 331,413. 1 Claim. (Cl. 296—21.)

A movable display exhibit including in combination a display and delivery vehicle formed with a forward driving compartment, a rearward lower closed delivery compartment, and superimposed thereupon a closed glazed display compartment, the floor of said compartment being substantially on a level with the lower edge of the glazing and being carpeted, and in combination with said vehicle a floor cleaning machine mounted within said display compartment upon said carpet in its normal operative position, and means within said vehicle for furnishing operating current to said device so that it may be displayed in operation.



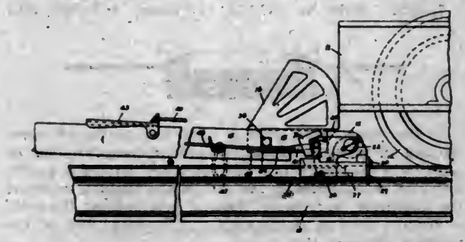
1,483,113. HEEL-TRIMMING MACHINE. LE ROY W. ROLLINS, Medford, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 1, 1921. Serial No. 519,138. 13 Claims. (Cl. 12—88.)

1. A heel-trimming machine comprising a rotary trimming cutter, an adjustable tread-rest arranged to execute its adjusting movement along lines substantially perpendicular to its tread face, and a one-way clutch arranged normally to hold said tread-rest against movement in one direction along said lines.



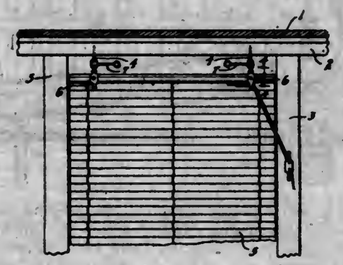
13. A heel-trimming machine comprising trimming means, an adjustable work-gage arranged in cooperative relation thereto, a spring arranged normally to adjust said work-gage in one direction, and means arranged to act automatically so as to hold said work-gage against adjusting movement but operable manually to release the work-gage.

1,483,114. CHANGE-SPEED POWER-TRANSMITTING MECHANISM. FRANCIS H. ROOT, Watertown, N. Y. Filed Feb. 4, 1921. Serial No. 442,411. 3 Claims. (Cl. 74—32.)



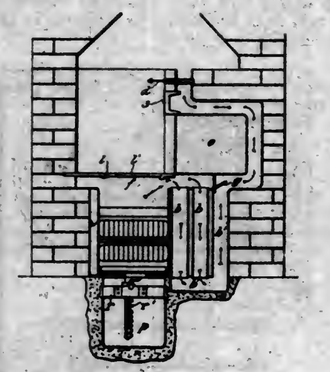
1. A change speed power transmitting mechanism comprising driving and driven shafts, and power transmitting mechanism between the shafts comprising wheels mounted on the shafts, a continuous conduit looped around the wheels, the conduit being formed with slots for receiving the peripheries of the wheels, power transmitting means movable in the conduit and acting on the wheels, and mechanism for connecting and disconnecting the wheels on one of said shafts to and from said shaft, substantially as and for the purpose described.

1,483,115. IMPELLER FOR FLOTATION MACHINES. CHARLES E. ROSE, Douglas, Ariz., and AUGUST SANDBERG, New York, N. Y., assignors to William A. Butchart, Denver, Colo. Original application filed June 13, 1917, Serial No. 174,583. Divided and this application filed Dec. 29, 1920. Serial No. 433,867. 1 Claim. (Cl. 259—136.)



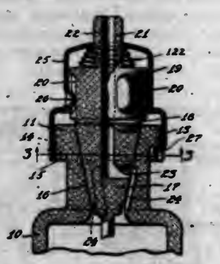
A combined aerating device and pulp agitator for flotation machines, comprising a horizontally-disposed, rotatable shaft, rigid spiders on said shaft arranged in spaced relation and each provided with a circular rim portion, a plurality of blades arranged parallel to said shaft and set edgewise in the rim portions of said spiders with their outer edge portions pointing forwardly and projecting beyond the rim portions of the spiders, and removable keys for detachably connecting said blades to said spiders arranged longitudinally of said blades in co-operating key-ways formed in the blades and in the circular rim portions of the spiders.

1,483,116. CAR MOVER. FREDERICK W. RUBIN, Indianapolis, Ind. Filed Aug. 25, 1922. Serial No. 584,227. 5 Claims. (Cl. 254—35.)



5. A hand operated railway rail mover including a hand lever, a fulcrum shoe adapted to rest on a railway rail to which one end of the lever is fulcrumed and which is slotted longitudinally and has a downward extension at each side of the railway rail and a longitudinal slot in one side thereof, a wedge shaped block, a bolt extending from said block through the slot in the side of the fulcrum shoe so as to adjust the shoe to loosely fit on a railway rail, a clamping plate pivoted at the fulcrum of said lever with a wedge shaped portion extending down through the slot in the edge of the shoe and against the other side of the shoe in position to wedge between said side of the shoe and the rail for clamping the shoe on the rail, a plate on the side of the lever carrying a lug in position to engage the top of the clamping plate when the lever is moved downward for forcing said clamping plate to the clamping position, a rod mounted on the lever and adapted to have longitudinal movement, a catch on one end of said rod for engaging a notch in said clamping plate for releasing the clamping plate when the lever is elevated, a spring on said rod forcing the catch into engagement with the clamping plate, a small bell shaped lever on said main lever for withholding said rod and catch from engaging with the clamping plate, and a pushing block on said lever near its fulcrum adapted to engage the object to be moved.

1,483,117. VENTILATING SHADE HANGER. ZACHARY E. RUSSELL, Sauk Rapids, Minn., assignor to Clyde W. Warren, Sauk Rapids, Minn. Filed Apr. 28, 1923. Serial No. 635,267. 3 Claims. (Cl. 156—16.)



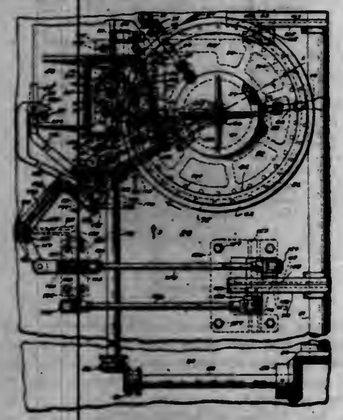
2. A hanger for a shade comprising a piece of rod or wire having an eyelet at one end adapted to engage a supporting hook at the top of said shade and having a loop at its other end adapted to be carried in an eyelet in the supporting member for said shade, said loop having a laterally extending portion with converging sides whereby the loop may simultaneously engage the supporting means at the top of the shade and the eyelet in the supporting member with said lateral portion engaging the eyelet in the supporting member so that when the curtain is supported said hanger will assume a lateral position.

1,483,118. RANGE OR STOVE. JOHN MIDDLETON RUTTER, Guildford, England. Filed Aug. 31, 1921. Serial No. 497,410. 2 Claims. (Cl. 126—1.)

1. A stove comprising, in combination, a boiler forming the back and two sides of a fire place, a plurality of flue tubes passing through the boiler, a hot plate over the fire place for deflecting the flames and hot gases from the fire place down the flue tubes of the boiler, another flue at the outer side of the boiler, communicating with the said flue tubes of the boiler, an oven above the boiler, a flue around the oven in connection with the side flue communicating with the flue tubes of the boiler and means for supporting the boiler, the hot plate and the oven in their relative positions.

1,483,119. BOTTLE STOPPER. SAMUEL M. SCHENKEIN, Lyndhurst, N. J. Filed Sept. 8, 1922. Serial No. 586,015. 11 Claims. (Cl. 215—83.)

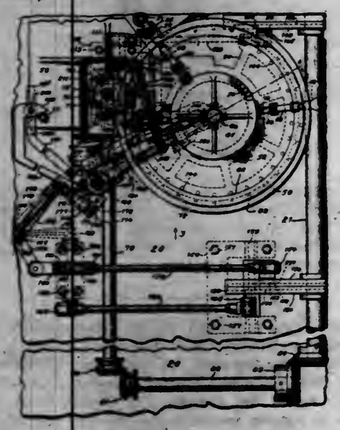
1. A bottle stopper, a cap connected thereto and movable longitudinally thereof, and a spring between the stopper and cap: in combination with a bottle having a lip said cap having lugs engaging below said lip and permitting the cap to rotate.



1,483,120. COATING MACHINE. REINHOLD D. SCHOENWETTER, Baltimore, Md., assignor, by mesne assignments, to The National Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Filed Jan. 8, 1920. Serial No. 350,186. 18 Claims. (Cl. 91—39.)

1. In a coating machine, the combination of a clamp for holding an article, means for wetting said article and a non-corrosive support for said article.

2. In a coating machine, the combination of a clamp for holding an article, means for wetting said article, means for removing said article from said clamp, and means for varying the period of time between said wetting and said removal.

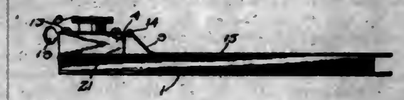


11. In a coating machine, the combination with a conveyor for articles to be wetted, means for rotating said conveyor in a plurality of angular movements alternating

with dwells, a plurality of clamps on said conveyer angularly spaced apart on a parity with the extent of each angular movement, means for delivering an article to a clamp during each dwell, means for wetting an article during each dwell and means for removing an article from a clamp during each dwell.

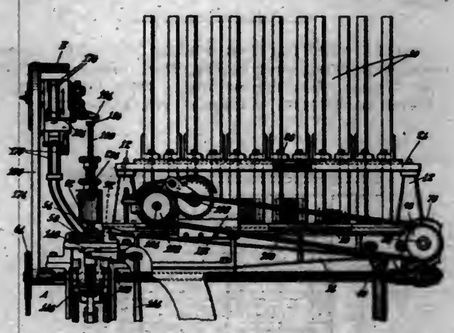
18. In a coating machine, the combination with means for holding an article to be coated, means for coating said article, means for removing said article from said holding means and means for varying the time interval between the coating of said article and the removal of said article from said holding means.

1,483,121. CONVEYER MECHANISM. REINHOLD D. SCHOENWETTER, Baltimore, Md., assignor to National Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Original application filed Jan. 8, 1920, Serial No. 350,186. Divided and this application filed Feb. 7, 1922. Serial No. 534,655. 7 Claims. (Cl. 198—210.)



1. In a coating machine, the combination with a conveyer, of a plurality of clamps thereon, means for opening each of said clamps to receive an article, means for closing said clamps, a depositor for moving an article from each clamp and means for opening each clamp to deliver an article to said depositor, said means also acting to open a plurality of adjacent clamps in order to provide clearance for said article during its movement by said depositor.

1,483,122. BUNG FOR METAL CONTAINERS. ANTHONY SCHROEDER, Cleveland, Ohio, assignor of one-half to James Merle Finney, Cleveland, Ohio. Filed May 7, 1921. Serial No. 467,718. 4 Claims. (Cl. 220—39.)

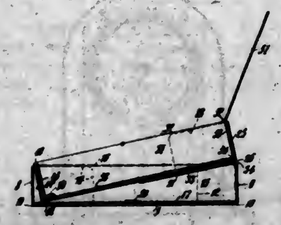


1. The combination with a container having an opening and an inwardly extending annular flange around the same, of a bushing within the container, having a groove in which the flange fits, the end of the bushing adjacent the container wall being reduced and swaged inwardly to form a bead in said flange overlying the end of the bushing adjacent the groove.

1,483,123. LOOSE-LEAF BINDER. ALEXANDER G. SIEGER, Chicago, Ill. Filed Aug. 1, 1921. Serial No. 489,026. 4 Claims. (Cl. 129—4.)

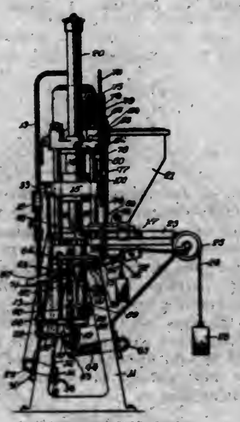
2. A loose leaf binder comprising a back plate, posts secured to said back plate and being adapted to carry sheets of paper, a casing slidably mounted on said posts, means associated with said posts for preventing upward movement of said casing with respect to said posts, and for moving said casing downwardly into clamping engagement with the paper.

1,483,124. HEEL-BUILDING MACHINE. RALPH C. SIMMONS, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 4, 1918. Serial No. 260,996. 19 Claims. (Cl. 12—50.)



1. In a heel building machine, the combination of a movable lift assembling carrier, means for producing a series of lifts and depositing them in a dispersed row upon the carrier, and means for actuating the carrier in a single movement to assemble the lifts in the form of a heel pile.

1,483,125. FOLDING DISPLAY BOX. JOSEPH B. SINGER and ARTHUR B. LEVY, New York, N. Y. Filed Mar. 23, 1921. Serial No. 454,607. 11 Claims. (Cl. 206—44.)



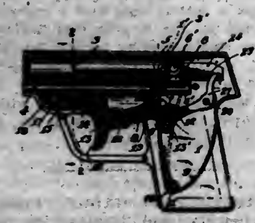
1. A folding display box comprising a body and a cover adapted to telescope together in the closed position of the box, said body having a section cut therefrom, said section having hinged connection both with the cover and with the body and adapted to connect such cover and body for relative swinging movement of the cover about

the lower forward end of said body with reference to the display position of the body, said section and cover acting to support the body in an inclined position with the front

end of the body resting in the cover, and a supplementary bottom fitted in said body and covering the void made by said hinged section.

1,483,126. PRESS. HARVEY SLATER, Chicago, Ill., assignor to Charles F. Elmes Engineering Works, Chicago, Ill., a Corporation of Illinois. Filed Jan. 27, 1919. Serial No. 273,350. 23 Claims. (Cl. 100—57.)

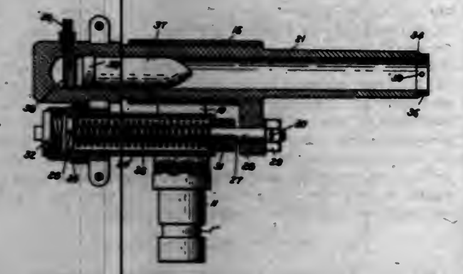
1. The combination with a continuous pressure fluid operated press, and a control valve therefor, of a connection between the press and valve whereby to synchronize the operation of the press and valve under all variations in speed of press operation.



12. The combination with a pressure fluid operated press, and a control valve therefor comprising inlet, press and exhaust ports and a valve plug to connect the press port alternatively with the supply and exhaust, of a connection between the press and valve whereby to synchronize the operation of the press and valve under all variations in press operation and to reverse the press when the pressure exerted thereby reaches a predetermined degree, said connecting mechanism comprising a pop-valve subject to the pressure within the press, a restraining lever fulcrumed on the pop-valve to hold it seated, a shiftable weight on the lever to vary the action on the pop-valve, a toggle arranged when straightened to hold the valve plug in position to maintain the press in communication with the inlet port and not with the exhaust port and when broken to shift the valve plug to close the inlet port and connect the press with the exhaust port, a weighted lever tending by gravity to break the toggle, a releasable connection between the toggle lever and restraining lever whereby when the pop-valve is unseated the toggle will be broken and the control valve shifted to effect communication between the press and the exhaust port and to reverse the press when the pressure exerted thereby reaches a degree predetermined by the adjustment of the weight on the restraining lever, a valve-actuating rod connected with the restraining lever and tending by the gravital action thereof to move to a position of reversal, a spring bearing on the rod in a direction opposed to gravity, an abutment for the spring disposed in the path of a moving part of the press whereby to compress the spring as the press reverses, a detent to hold the rod in reverse position, a tappet actuated by the movement of the press near its reverse limit to disengage the detent whereby the stressed spring thereupon effects movement of the actuating rod against gravity to shift the valve plug and start the press on its work stroke and as the spring abutment is relieved from the action of the press the unstressed spring permits gravity to move the actuating rod in the opposite direction to shift the valve plug and again reverse the press, the action of the stressed spring being to again connect the released connection between the toggle operating lever and the weighted restraining lever.

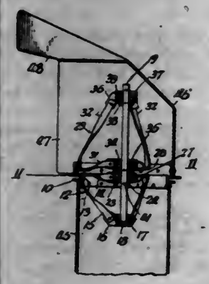
1,483,127. DANCING FIGURE. ERNEST STARBUCK, Peoria, Ill. Filed May 20, 1921. Serial No. 471,266. 14 Claims. (Cl. 46—40.)

1. In a dancing figure including a body and legs pivoted thereto, in combination, a source of power mounted in the body, a drive wheel operated thereby, separate operating means connected with each leg including a slidable clutch-portion, a driving clutch-member disposed between the clutch-portions continuously rotated by the power source, and means operated by the said power source adapted to shift the clutch-member alternately into and out of engagement with said clutch-portions.



1,483,128. TOY PISTOL. ERNEST STARBUCK, Peoria, Ill. Filed Feb. 20, 1922. Serial No. 537,840. 6 Claims. (Cl. 124—12.)

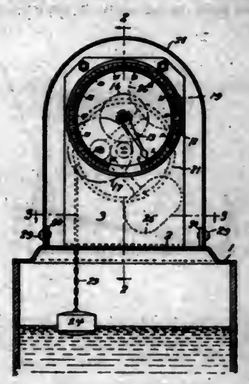
1. A toy pistol including with its barrel a spring extending at one end thereinto adapted to eject a projectile, a trigger to engage the spring to place it under stress, a movable magazine for holding the projectiles adapted to feed one projectile into the barrel in each movement thereof, and a member engaging both the magazine and



the trigger adapted to simultaneously move the trigger to release it from the spring and to impart movement to said magazine during the movement of said trigger to initiate the feeding of projectiles into said barrel.

1,483,129. LINE-THROWING GUN. JOHN W. STOCKETT, Washington, D. C. Filed Oct. 16, 1923. Serial No. 668,874. 4 Claims. (Cl. 89—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

4. A line throwing gun, including a gun barrel counterbored at its muzzle end to provide a seat in the muzzle opening for line carrying means.

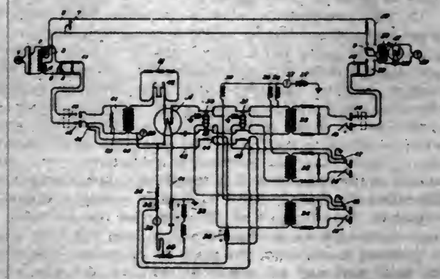


1,483,130. BEARING SUPPORT FOR ROTARY VENTILATORS, CHIMNEY TOPS, AND THE LIKE. JOSEPH SYLVAN, Chicago, Ill. Filed Jan. 3, 1921. Serial No. 434,449. 4 Claims. (Cl. 98—3.)

1. A bearing support for rotary ventilators and the like, comprising a bottom ring and a top ring, a central standard carried by the bottom ring, adjustable means on said bottom ring providing for the lateral support of said standard, vertically spaced collars secured to said standard, and bearing sleeves carried by the top ring for engaging said standard and coacting with the collars thereon to provide a rotative bearing for the top ring with respect to the bottom ring.

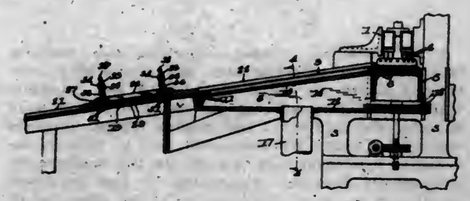
1,483,131. LIQUID-LEVEL GAUGE. FERDINAND TAUSZ, Cleveland Heights, and CHARLES D. BENSON, Jr., Cleveland, Ohio. Filed Feb. 5, 1921. Serial No. 442,813. 1 Claim. (Cl. 73—82.)

A gauge of the class described comprising a float member adapted to rise and fall with the fluid level of a container, a winding drum, a flexible member engaged about the surface of said drum and connected with said float, an indicating mechanism geared to said winding drum, and a counterweight interposed in said connection, said counterweight comprising a weighted arm rigidly connected to one of the gears and being adapted to rise



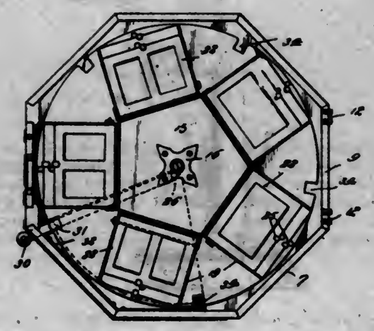
and fall respectively with the fall and rise of said float member thereby to keep said flexible member taut at all positions of said float.

1,483,132. BRACELET. KARL L. TOELCKE, AATE MIKKOLA, and LEON SHAPIRO, Chicago, Ill. Filed Oct. 9, 1922. Serial No. 593,455. 1 Claim. (Cl. 59—80.)



A bracelet of the character described comprising a plurality of links substantially U-shaped in cross section, the side walls of said links being formed with an outwardly extending lug portion at one end thereof, each of said lug portions having an opening therethrough, and integral shaft portions in the side walls adjacent the opposite end thereof arranged to be received in the opening in the lugs of the adjacent links when said links are engaged one with another, the ends of each of the side walls of said links being tapered slightly so that said bracelet may conform to the curvature of the arm to which it is applied.

1,483,133. ELECTRICAL TESTING SYSTEM. JOHN F. TOOMEY, New York, N. Y., and GEORGE CRISSON, Hackensack, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed June 10, 1921. Serial No. 476,588. 14 Claims. (Cl. 179—175.)

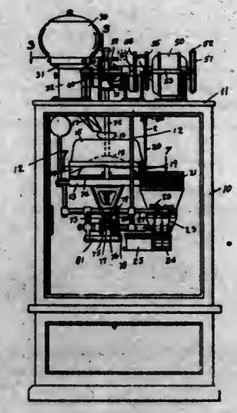


2. In an electrical testing sytem, the combination of a source of varying potential, an indicating instrument, a plurality of circuits for applying said potential to said instrument, one of said circuits having means associated therewith for connecting an amplifier and its proper output network to the said circuit, and means for measuring the gain attainable by the said amplifier.

1,483,134. NEEDLING MACHINE. WILLIAM H. WAGNER, Burlington, Wis., assignor to Burlington Blanket Company, Burlington, Wis., a Corporation of Wisconsin. Filed Sept. 12, 1921. Serial No. 500,203. 9 Claims. (Cl. 24—4.)

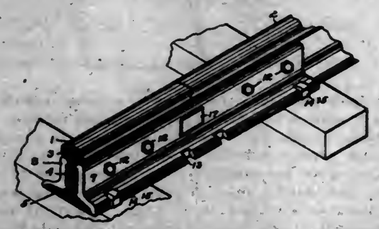
1. In a needling machine the combination of a reciprocating needle beam provided with needles, and a hollow bed having openings with which the needles register, and an air exhausting connection with the bed.

1,483,135. COMBINATION TABLE AND PICTURE ALBUM. SAMUEL J. WALASCHEK, New York, N. Y. Filed June 25, 1923. Serial No. 647,472. 2 Claims. (Cl. 40—72.)



2. An article of the class described including a table top portion having a housing provided with a bottom wall, side walls, and a table top hingedly connected to said side walls, said top having a section thereof hingedly connected to the remaining portion and foldable thereon to provide access to the interior of the housing, a plate rotatable in said housing, a plurality of U-shaped frame members arranged in spaced relation on said plate and having the free ends extending outwardly and terminating adjacent the edge of the plate, a plurality of picture holders hingedly mounted in said U-shaped frame members, each picture holder including a pair of relatively movable members adapted for interfitting relation and providing with picture viewing openings, and means for holding said members in interfitting relation whereby pictures may be secured therebetween to be viewed through said openings therein, and means for rotating said plate so that the U-shaped frame member may be successively positioned under the hinge section of the table top so that the pictures carried in the picture holders hinged in said member may be viewed.

1,483,136. COMPOSITION FOR PAINT. JOHN WALSH, Prides Crossing, Mass. Filed Dec. 14, 1922. Serial No. 606,962. 3 Claims. (Cl. 134—46.)

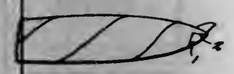


3. A composition for coating glass comprising the ingredients and in substantially the proportions as follows:—4 ounces of ground gelatin, 6 ounces of powdered starch, 6 ounces of whiting, mixed together and dissolved in approximately one gallon of water.

1,483,137. POP-CORN MACHINE. HOMER A. WALTMAN and GEORGE H. ROSSEBO, Indianapolis, Ind., assignors to Holcomb & Hoke Mfg. Co., Indianapolis, Ind., a Corporation. Filed Jan. 30, 1923. Serial No. 615,962. 11 Claims. (Cl. 33—4.)

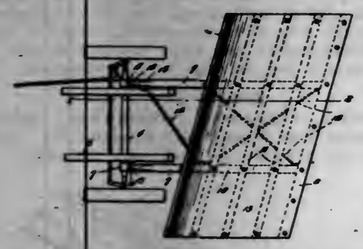
1. A pop corn machine comprising a supporting frame, a popping element mounted in said frame, means for discharging unpopped corn therein, means for causing the discharge of the popped corn therefrom, a hopper supported adjacent said popping element for receiving said discharged corn, means for applying butter to the corn discharged therein, and means mounted in said hopper for engaging and removing the corn therefrom.

1,483,138. RAIL-JOINT CONNECTION. MILTON N. WEBBER, Fort Wayne, Ind. Filed July 10, 1922. Serial No. 573,884. 1 Claim. (Cl. 238—182.)



A rail-joint connection comprising two fish-plates secured to opposite sides of two meeting rails, each plate engaging the webs of the rails adjacent the treads and also at the junction point between the said webs and the bases of the rails, said plate also contacting with the surface of the bases of the rails, each plate having a rectangular opening therein adapted to register with rectangular openings in the meeting ends of the rails, a rectangular bolt forcibly engaged in the registered openings and having a threaded cylindrical portion at one end for the reception of a nut and a washer having a rectangular opening adapted to receive the rectangular body of the bolt and the washer being adapted to be clamped against the adjacent fish-plate by the nut, each fish plate also having spike receiving notches.

1,483,139. BADGE. EDWARD L. WEED, Providence, R. I., assignor to Potter & Buffinton Company, Providence, R. I., a Corporation of Rhode Island. Filed Apr. 14, 1923. Serial No. 632,051. 3 Claims. (Cl. 40—1.5.)

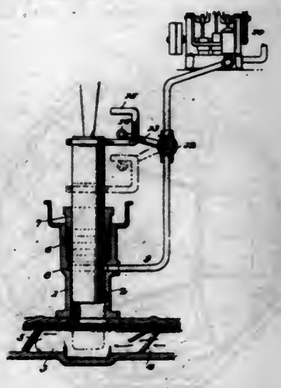


1. A badge comprising a back plate of triangular shape with a side as a base, a front plate formed in halves which combined are of the shape and size of the back plate and which halves are hinged to opposite side edges of the back plate to be swung outwardly therefrom to expose the symbols on their inner faces also that on the inner face of the back plate and adapted to be swung to partly closed position to cooperate with the back plate to form a base to support the device in upright position.

1,483,140. FALSE HEAD FOR CIGARS. MILTON WERTHEIMER, Baltimore, Md. Filed Nov. 13, 1922. Serial No. 600,596. 2 Claims. (Cl. 131—52.)

1. A false head for cigars comprising a disk having an incision extending from its margin to its center.

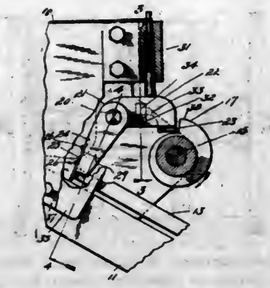
1,483,141. SNOWPLOW. CHARLES E. WHITE, Newport, Wash. Filed Mar. 20, 1923. Serial No. 626,280. 2 Claims. (Cl. 37—42.)



1. A snow plow for attachment to a motor vehicle including a pair of bars arranged in parallel relation and of unequal length, the rear end of said bars having a detachable pivotal connection with the front axle of a vehicle, a cross bar connecting the forward end of said parallel bars having the end portions extending beyond the connection with said bars, a pair of vertical standards mounted on said bars intermediate the ends thereof and arranged in a plane parallel with the cross bar, inclined bars connecting each vertical standard to the forward end of the respective bar adjacent the cross bar, a bar member connecting the upper ends of said uprights, a plurality of transverse bars mounted on the inclined bars in parallel spaced relation with each other and the cross bar, and a seat member extending from the cross bar to the bar member connecting said upright and supported by said transverse bar for forming a scoop, and means for supporting the forward ends of said bar in spaced relation with the ground surface, whereby the cross bar at the forward end of said parallel bar will receive and transmit the stresses applied to the scoop in the use thereof directly in the line of said parallel bars to the axle of the vehicle.

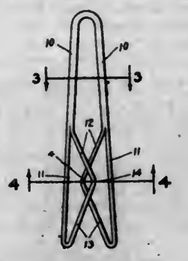
1,483,142. AUTOMOBILE BUMPER. FREDERIK G. WHITTINGTON, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Illinois. Filed Oct. 2, 1920. Serial No. 414,300. 4 Claims. (Cl. 293—55.)

1. An automobile bumper comprising two similarly formed flat bar members, each having a portion commencing nearer one end than the other and extending toward the middle, deflected edgewise a relatively short distance, and said other end portion reflexed rearward and inward behind the undeflected part to form an inwardly-open resilient loop or hook, the two members being reversely positioned for lapping the first mentioned end of each on the forward portion of the other end of the other bar member; whereby the deflected portions of the two bar members constitute respectively an upper and a lower impact bar spaced apart a relatively short distance.



1,483,143. DREDGING PUMP. JAMES GILBERT WHITLOCK, Richmond, Va. Filed Dec. 23, 1920. Serial No. 432,796. 1 Claim. (Cl. 103—204.)

In a pump, the combination with a plunger, of a cylinder having an internal annular channel formed therein, a water supply pipe leading to said channel, means for supplying water under pressure to said pipe, a valve in said pipe, and means operated by said plunger in its reciprocation for opening and closing said valve.



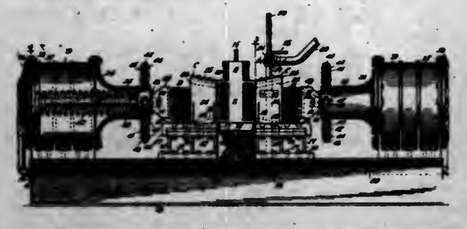
1,483,144. CLEARING MECHANISM. RICHARD LESTER WILCOX, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 6, 1922. Serial No. 534,542. 11 Claims. (Cl. 10—162.)

4. In combination with a feed chute, of means for stripping therefrom all blanks which are not in regular processional line therein, comprising a rock member pivotally mounted upon a fixed part, means for actuating the same whereby the movement of the end thereof that is adjacent to the blanks is unrestrained when traveling against the path of movement of the blanks and controlled while moving in the opposite direction, an element connected and movable with said rock member that projects over the head of the blanks and during its movement swings over the top of said chute, positive means for actuating said rock member when the said element connected therewith is moving over said chute in a path

substantially parallel to the direction of movement of the blank therein, and yielding means for moving the same in the opposite direction.

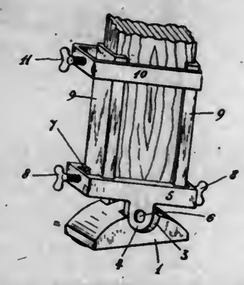
1,483,145. HAIRPIN. FRANK A. WILDASON, Indianapolis, Ind. Filed Aug. 25, 1922. Serial No. 584,229. 6 Claims. (Cl. 132—52.)

1. A hair pin having a pair of shank members and projections formed near the free ends thereof, said projections being returned portions of the shanks and providing closed ends for the latter, said projections being so arranged as to overlap and adapted to bear against each other under spring tension, when said shank members are in normal position.



1,483,146. FIREARM. SAMUEL WILEY, Metuchen, N. J. Filed Nov. 8, 1923. Serial No. 673,444. 3 Claims. (Cl. 42—77.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

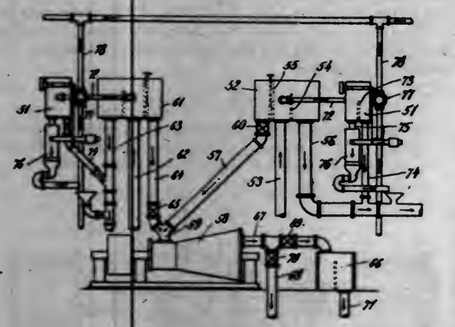
1. In a fire arm, a bore chamber formed in one piece, a dividing wall integral with the bore chamber and serving to separate the bore chamber into a pair of barrels, said dividing wall formed with an opening whereby the barrels may communicate with one another, one of the barrels adapted to contain a service projectile and serve as a passageway therefor, the other of said barrels adapted to contain a second projectile and serve as a passageway therefor, whereby the service projectile while traversing its barrel upon the firing of the piece, acts as an obturator and checks the gases generated by firing, the gases collecting in the second barrel to propel the projectile therefrom, and means adapted to be removably positioned in the opening in the dividing wall whereby the fire arm may be converted into an ordinary service piece.



2. In a fire arm, a stock, firing means secured to the stock, a cartridge chamber secured to the stock, a bore chamber formed in one piece and secured to the cartridge chamber and adapted to butt against the forward end of the stock, a dividing wall integral with the bore chamber and serving to separate the bore chamber into a pair of barrels, said dividing wall formed with an opening whereby the barrels may communicate with one another, one of the barrels adapted to contain a service projectile and serve as a passageway therefor, the other of said barrels adapted to contain a second projectile and serve as a passageway therefor, whereby the service projectile while traversing its barrel upon the firing of the piece acts as an obturator and checks the gases generated by firing, the gases collecting in the second barrel to propel the projectile therefrom.

1,483,147. ASSEMBLING MACHINE. KEITH WILLIAMS, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed June 13, 1921. Serial No. 476,991. 8 Claims. (Cl. 29—87.1.)

1. In an assembling machine of the character described, the combination with a spring guiding and contracting means through which a spring is adapted to be forced; of a support adjacent the delivery end of said guide means on which an article is adapted to rest while having the spring inserted therein; a support at the admission end of said guide means on which a spring is adapted to rest prior to being forced through the guide; and power actuated means, including a reciprocating plunger, in alinement with the guide means arranged to force the spring through the guide means into the said article.

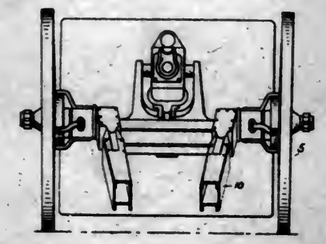


1,483,148. SAFETY DEVICE FOR LADDERS. AUGUST WINKLER, Zurich, Switzerland. Filed Nov. 6, 1922. Serial No. 599,417. 1 Claim. (Cl. 228—62.)

In the herein-described safety device for ladders, the combination, with a shoe having recesses in its flat bottom, and rubber discs in said recesses, of a supporting member pivoted to and mounted centrally of the shoe and having the form of a rectangular frame provided with a longitudinally disposed slot, two U-shaped clamp-

ing plates engaging the slot and made slidable therein and adapted to partially embrace the bottom end of the upright of the ladder, and means to adjust the clamping plates within the said slot and cause them to tightly grip variously sized ladder uprights.

1,483,149. STOCK-BLENDING MECHANISM. GEORGE STANFORD WITHAM, Jr., Hudson Falls, N. Y., assignor to Union Bag and Paper Corporation, a Corporation of New Jersey. Filed Feb. 17, 1921. Serial No. 445,589. 6 Claims. (Cl. 92—20.)

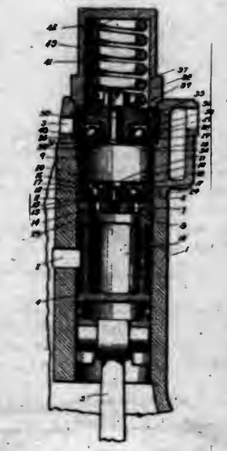


1. Apparatus for treating hard or soft stock, comprising a Jordan engine, a density regulator for each character of stock to be treated, each regulator delivering to the Jordan engine, and means for disconnecting any regulator from the Jordan engine.

1,483,150. TOY BALLOON. ARTHUR P. WITTEN, Akron, Ohio. Filed May 6, 1920. Serial No. 379,264. 2 Claims. (Cl. 46—37.)

1. In a toy balloon, the combination of an elastic inflatable body portion, having an opening in each end thereof, an elastic inflatable head portion and a cylindrical ring, one end of said body portion being secured to said ring and turned backwardly thereupon; the mouth of said head portion being secured over said ring so that a fluid tight connection is maintained between said body portion and head portion.

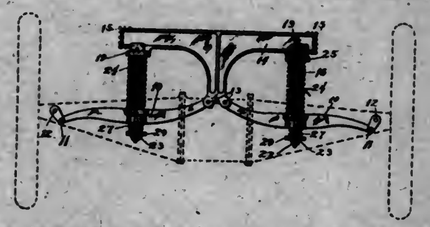
1,483,151. GUN TRAIL. HARRY C. ZIMMERMAN, Washington, D. C. Filed Sept. 20, 1923. Serial No. 663,907. 7 Claims. (Cl. 89—40.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



7. In a gun carriage, a hollow trail arm embodying spaced end plates of identical structure, each formed with a pair of legs, and means connecting the end plates together.

1,483,152. PROCESS FOR THE PRODUCTION OF SOLUTIONS OF VOLATILE OILS. JEAN ALTWEGG, Lyon, France, assignor to Societe Chimique des Usines du Rhone, Paris, France. Filed Apr. 11, 1922. Serial No. 551,651. 3 Claims. (Cl. 167—9.)

2. The process of producing a solution of a volatile oil, which consists in dissolving oil of thyme in an alkali salt solution of bile acid.

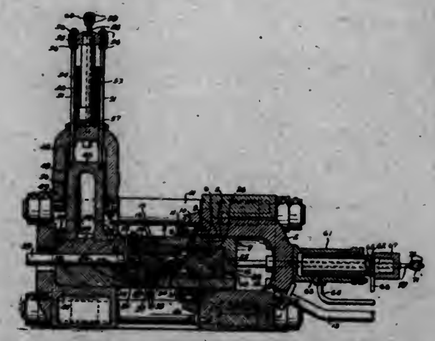


1,483,153. VALVE MECHANISM. CHESTER A. BAKER, Omaha, Nebr. Filed Aug. 12, 1922. Serial No. 581,531. 4 Claims. (Cl. 251—121.)

1. A valve mechanism for compressors comprising two disks, at least one of which is provided with a circular series of recesses about its center, valve cages in the recesses, each valve cage comprising a ring having longitudinal fingers projecting therefrom, means for clamping the valve cages between the disks, and ball valves in the valve cages.

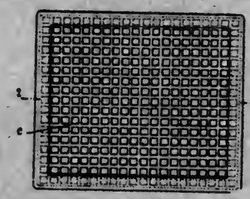
1,483,154. SPRING SUSPENSION FOR VEHICLES. RANSOM Y. BOVEE, Maywood, Ill. Filed Jan. 17, 1921. Serial No. 437,891. Renewed Dec. 31, 1923. 7 Claims. (Cl. 267—20.)

1. A spring suspension embodying cooperation supporting members, means pivotally anchoring one end of each of the members, a hanger connected with the vehicle and to which hanger the other ends of the said suspension members are pivotally connected, bolt members pivotally connected by one end to the said hanger and passing through and beyond the said supporting members intermediate the outward suspension limits of the latter, and elastic members encompassing the said bolt members on opposite sides of the said supporting members and operating upon the latter and also upon the said hanger.



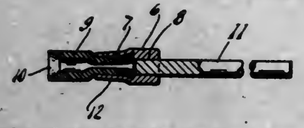
1,483,155. FOOD PRODUCT AND MANUFACTURE THEREOF. JAMES BOYCE, Holland, Mich., assignor to The American Cotton Oil Company, New York, N. Y., a Corporation of New Jersey. Filed June 1, 1914, Serial No. 842,281. Renewed June 22, 1923. 3 Claims. (Cl. 99—13.)

1. The method of obtaining from vegetable oil, a liquid product of improved quality, which consists in subjecting the oil to hydrogenization, stopping the conversion at a point where the oil treated hardens at ordinary room temperatures (70°–80° Fahr.), and then separating the hydrogenized liquid constituent from the hydrogenized solid constituent.



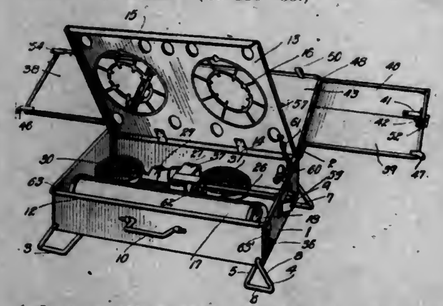
3. A liquid food product, consisting of the liquid constituent obtained by chilling and pressing an edible vegetable oil hydrogenized up to the point where it hardens at ordinary room temperature (70°–80° Fahr.) said liquid food product having an iodin number not substantially greater than 90 and having the quality of remaining clear for at least 5 hours at a temperature of 0°C.

1,483,156. PRESS. GOUVERNEUR GRAHAM BROWNE, Oakmont, Pa. Filed Apr. 20, 1921. Serial No. 462,956. 15 Claims. (Cl. 10—72.)



1. A press comprising a cylinder communicating with a source of fluid pressure, a hollow plunger in said cylinder constituting a cylinder for a second plunger and having an opening in its back portion communicating with a source of fluid pressure, a second plunger in said hollow plunger, means for holding a bar or the like in position to be operated on by said plungers, and means for controlling the supply of fluid pressure to said cylinders to cause said plungers acting together to upset the end of said bar and then to cause said second plunger to punch out a ring from said upset portion.

1,483,157. COUCH OR BED PAN. PAUL ELIE JULES CHARBERT, Castres, France. Filed Jan. 17, 1923. Serial No. 613,278. 3 Claims. (Cl. 4—112.)

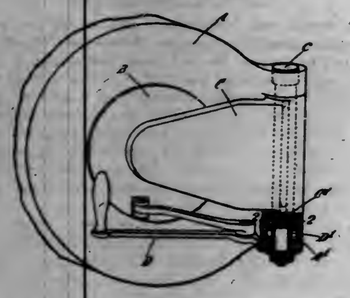


1. A flexible and removable couch or bed-pan adapted to insulate recumbent persons from their liquid dejections and to protect the bed linen, comprising a pan, of flexible and waterproof material, forming a collector, an apertured cover member, composed of a grid of moulded rubber, with bars intercrossing in the same plane upon their upper face and projections upon the lower face of said grid-bars, and means for separating the said cover member from the bottom of the pan and for allowing dejections to drain through the apertured cover member into the bottom of the pan.

1,483,158. TEETH-CLEANING INSTRUMENT. EDWARD L. CHOTT, Chicago, Ill. Filed Oct. 13, 1923. Serial No. 668,263. 3 Claims. (Cl. 32—13.)

1. A device of the class described comprising a head having a socket at one end and a bore extending through the other end thereof and into the bottom of said socket; a contact piece inserted in said socket, the walls of said socket being compressed inwardly to compress the inserted portion of said contact piece; and a stem inserted in the bore in said head, substantially as described.

1,483,159. PORTABLE STOVE. WILLIAM C. COLEMAN, Wichita, Kans. Filed Mar. 30, 1923. Serial No. 628,764. 4 Claims. (Cl. 126—38.)



4. In a portable stove, a case having a hinged cover, a burner mechanism, means for shifting the burner mechanism to one side of the case, and a fuel tank for the burner mechanism mounted to swing into the case when the burner mechanism is shifted to one side thereof and to swing out of the case to permit the burner mechanism to be shifted toward the center of the case.

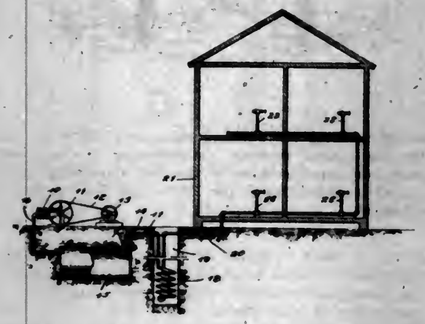
1,483,160. RECOVERING SODA AND ACTIVE CARBON. MAYNARD J. CREIGHTON, Wilmington, Del., assignor to Darco Corporation, Wilmington, Del., a Corporation of Delaware. Filed Mar. 28, 1922. Serial No. 547,540. 3 Claims. (Cl. 252—3.)

1. In the treatment of black liquors for the recovery of soda therefrom and for the production of activated

carbon, the process which comprises incinerating evaporated residues of such a liquor, reheating the incinerated material at a temperature around 600° C. or above in the presence of steam and separating soda from carbon by washing.

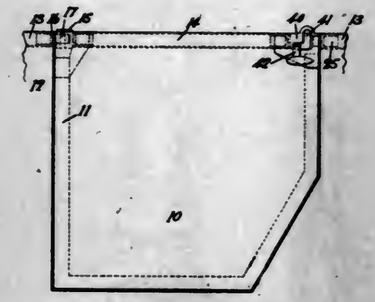
1,483,161. ORDNANCE BREECH MECHANISM. ARTHUR TREVOR DAWSON, GEORGE THOMAS BUCKHAM, and WILLIAM ROBERTSON PURVIS, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Filed Nov. 13, 1923. Serial No. 674,455. 7 Claims. (Cl. 89—20.)

1. In ordnance breech mechanism, the combination of a movable carrier, means which are not of a self-locking character for operating said carrier, an operating member for said means, a self-locking device which operates to retain the carrier in any position in which it is placed and means operated by said member for releasing said device on movement of said member in either direction.



1,483,162. MECHANICAL MOVEMENT. VICTOR R. DESPARD, Hinsdale, Ill., assignor to McGill Manufacturing Company, Valparaiso, Ind., a Corporation of Indiana. Filed Sept. 19, 1919. Serial No. 324,773. 7 Claims. (Cl. 173—354.)

1. Operating mechanism for switches comprising a tubular operating lever having an inturned flange at one end provided with an opening through the side of the lever connecting with an opening through the flanged end, a ball chain passed through the side opening of the tube and a ball link of which engages the lever flange to support the chain, and means for holding the chain in its supported position.



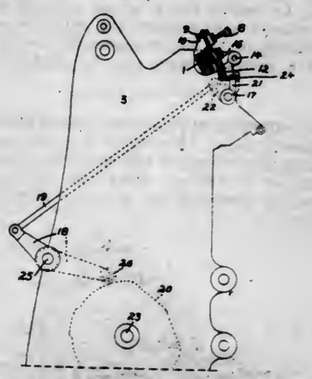
1,483,163. TEMPERATURE-REGULATING SYSTEM FOR HOUSES. EDWARD L. DOUGLASS, Jacksboro, Tex. Filed Sept. 30, 1922. Serial No. 591,533. 1 Claim. (Cl. 98—27.)

A system for stabilizing the atmospheric temperature of a building structure comprising a well tapping a subterranean volume of water, a tank buried in the earth at a location spaced from the side of the well, pumping means for forcing atmospheric air, a pipe for conducting the air from the pump to the tank, the transverse sectional area of the pipe being less than the transverse sectional area of the tank, a second pipe leading from the tank at a point which is spaced from the point of entrance of the first mentioned pipe with the tank, the second mentioned pipe being substantially of the same diameter as that of the first mentioned pipe and being less in transverse sectional area than the transverse sectional area of the tank, the second mentioned pipe

having a coil section disposed in the well and extending below the level of the bottom of the tank, said coil being above the surface level of the water in the well and lying within the radiating zone affected by the temperature of the water, the second mentioned pipe having a section leading from the coil and entering the building and provided with an air opening which is located within the building.

1,483,164. DOOR FOR AIRCRAFT BODIES. IVAN H. DRIGGS, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 12, 1921. Serial No. 507,238. 4 Claims. (Cl. 244—30.)

1. An aircraft body having a stress member therein, a door in the body, said stress member having a section cut away at the door, a brace carried by the door to lie in alignment with the ends of said stress member and complete the cut away section when the door is closed, and hinge means and bolt means for securing the brace to the stress member, whereby the stress member is rendered continuous in effect, said hinge means and bolt means lying in direct alignment with said stress member.

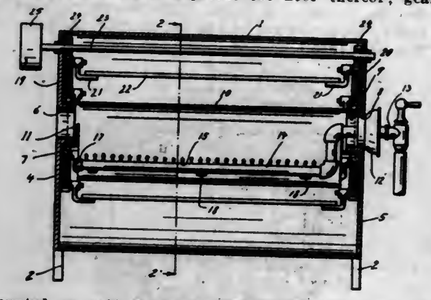


1,483,165. PRACTICE GOLF BALL. WASHINGTON LIBBEY EATON, Holyoke, Mass. Filed May 4, 1922. Serial No. 558,413. 2 Claims. (Cl. 46—4.)

1. A golf practice ball, said ball being hollow in construction, of substantially the same size as the balls employed in the usual golf game, and being provided with numerous apertures communicating with the interior of

the ball, said apertures being of a size such as not to materially detract from the rotundity of the ball.

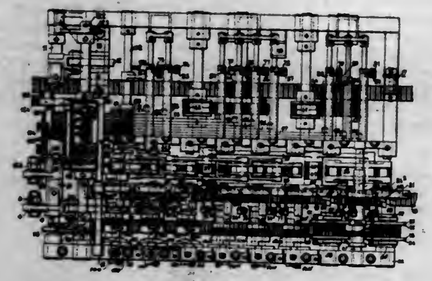
1,483,166. THREAD-CLAMPING DEVICE. LOUIS EGGER, Summiswald-Grunen, Switzerland. Original application filed Dec. 21, 1921, Serial No. 523,989. Patent No. 1,450,914, dated Apr. 10, 1923. Divided and this application filed Dec. 4, 1922. Serial No. 604,920. 4 Claims. (Cl. 112—59.)



4. In a thread clamping device of the character set forth, in combination with suitable supporting means, a cross-bar rigidly mounted on said supporting means, a plurality of laterally slit housings presenting downwardly tapering bores on said cross-bar, a bridge member rigidly secured to said cross-bar, thread tensioners on said bridge member, plugs adapted for reciprocal cooperation with said housing bores and means for normally retaining said plugs in their relative clamping position, means for periodically lifting said plugs, comprising a swing bar in operative contact with the lower faces of said plugs, a bell crank pivoted on said supporting means, one arm of which coacts with said swing bar, an adjusting member on this bell crank arm, a main drive shaft, a cam fixed thereto, a second bell crank pivoted on said supporting means and operable by said cam, and a connecting link between said cam operated bell crank and said swing bar operating bell crank.

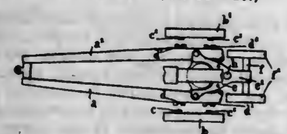
1,483,167. BURNER CHAMBER FOR ROTARY BAKING OVENS. HENRY EICHNER, Chicago, Ill. Filed Sept. 24, 1921. Serial No. 502,960. 6 Claims. (Cl. 107—59.)

1. In combination with a rotary oven having a carrier axially mounted therein; a plurality of shelves pivotally mounted adjacent the periphery of said carrier; and a heating chamber mounted co-axially with said carrier and having a portion offset with respect to the axis thereof.



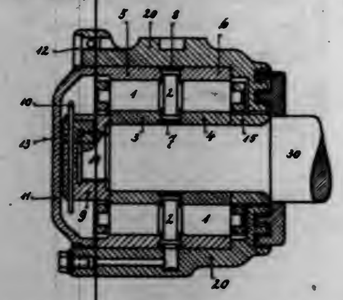
6. The combination with a rotary baking oven, a burner chamber adapted to be mounted within the revolving carrier of said oven; apertures in the end walls of said oven and inwardly turned flanges surrounding said apertures; sockets in said burner chamber engaging said flanges; a

mixer mounted in one of said apertures; a curved perforated burner pipe attached to said mixer and extending through said chamber adjacent the floor thereof; gears



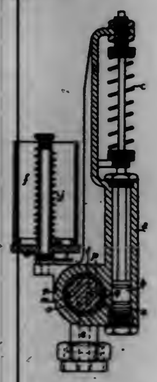
mounted on said flanges and held in position by said sockets; shelves mounted on said gears and revolving therewith; and means for synchronously driving said gears, substantially as described.

1,483,168. AUTOMATIC OPERATING DEVICE FOR EMBROIDERY MACHINES. OTTO FAHRNI, Blumlimatt, near Thun, Switzerland, assignor to Gottlieb Rieser and Leopold Wyler, both of Berne, Switzerland. Filed Apr. 15, 1918. Serial No. 228,572. 11 Claims. (Cl. 112—86.)



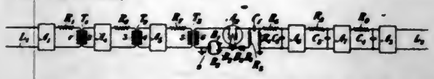
1. An automatic operating mechanism for embroidery machines, of the type in which the simultaneous vertical and horizontal displacements of the frame which jointly determine the shifting thereof are, for each stitch, controlled by means of holes formed in a pattern-strip, said mechanism including a frame-actuating rack; a lever attached thereto; a series of cranks having different arm-lengths and adjustable, independently of one another in two positions opposite one to the other, each crank being capable of producing a displacement of the rack corresponding to the throw of the crank; and a series of two-armed levers which connect the cranks with the first-named lever and transmit thereto the throws of the cranks.

1,483,169. GUN CARRIAGE. LOUIS JEAN FRANÇOIS FILLOUX, Le Havre, France. Filed Jan. 12, 1922. Serial No. 528,815. 11 Claims. (Cl. 89—40.)



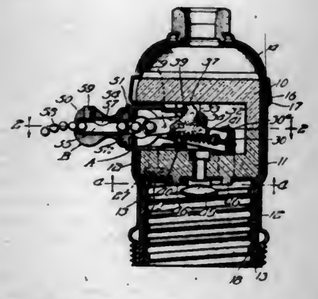
1. A gun carriage of the split trail type comprising, in combination, a frame, two trail members pivoted thereon, and a chain track directly mounted, independently of the trail pivot, on each of said trail members, for the purpose described.

1,483,170. BEARING. LEO FLESCH, Elberfeld, Germany, assignor to the Firm G. & J. Jaeger Kommanditgesellschaft, Elberfeld, Germany. Filed June 1, 1921. Serial No. 474,212. 6 Claims. (Cl. 64—39.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



6. A bearing comprising an outer casing, a plurality of rollers axially disposed with respect to said casing for transmitting radial thrust, a collar on each of said rollers disposed intermediate the ends thereof, a pair of inner bushings disposed on each side of said collars, and adapted to transmit radial and axial loads to said collers, the axial loads being transmitted to said collars by the ends of said bushings adjacent said collars, spacing means between said bushings, means for clamping said bushings in position, a pair of outer bushings disposed on each side of said collars and adapted to take up radial and axial loads, spacing means between said outer bushings and means associated with said casing for clamping said outer bushings and spacing means, said collars extending between said bushings but not into contact with said spacing means.

1,483,171. INDICATOR FOR RECIPROCATING ENGINES. CHARLES HENRY GALE, St. Johns, Bishopstoke, England. Filed Dec. 1, 1922. Serial No. 604,436. 4 Claims. (Cl. 234—21.)



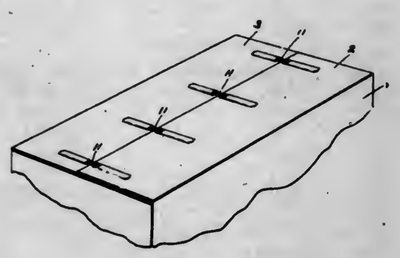
1. A fluid pressure engine indicator comprising a bracket a pressure recorder mounted on said bracket, a valve chamber mounted on said bracket, two co-axial ported sleeves relatively rotatable and in close contact forming a valve mounted on said chamber, means for rotating one sleeve in harmony with the engine, means for adjustably rotating the second sleeve independently of the engine to enable the ports in said sleeves to register at any desired point in the engine cycle, means for connecting said valve with the pressure recorder and simultaneously the engine cylinder at a predetermined point in each cycle, a recording drum mounted on said bracket, a cam connected with said independently adjustable sleeve and adapted to impart to the said recording drum a movement representing the movement of the engine piston and a dashpot device connected with the pressure recorder.

1,483,172. SIGNALING SYSTEM. DANFORTH K. GANNETT, Arverne, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 19, 1920. Serial No. 375,077. 7 Claims. (Cl. 178—44.)

1. In a signaling system the combination with a signal transmission line exposed to interference from extraneous sources of a network comprising bridged inductance across which the waves transmitted over the said line are impressed and adapted to produce the first derivative of the said waves, a translating device whose characteristic curve has a saturation point upon which the said derivative wave may be impressed whereby the amplitude of the wave may be limited and a second network comprising bridged capacity across which the output wave of the said translating device may be impressed whereby the integral of the impressed wave may be obtained.

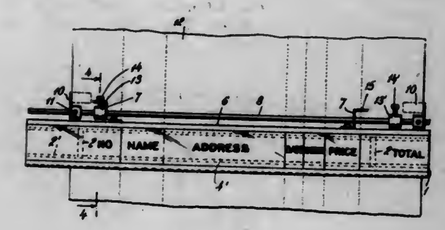
1,483,173. SWITCH-OPERATING APPARATUS. DAVID D. GORDON, Chicago, Ill., assignor, by mesne assignments, to McGill Manufacturing Company, Valparaiso, Ind., a Corporation of Indiana. Filed Apr. 20, 1918, Serial No. 229,743. Renewed Oct. 8, 1923. 13 Claims. (Cl. 173—354.)

1. Switching mechanism for lamp sockets comprising a shell a switch movement having a frame carrying a fixed seat protruding from the shell, and a externally secured readily removable universal lever tiltably resting on the seat and connected with the switch movement.



1,483,174. BOX. JASON H. GREENSTREET, Indianapolis, Ind.; Charles J. Greenstreet executor of the estate of said Jason H. Greenstreet, deceased. Filed Oct. 13, 1922. Serial No. 594,255. 7 Claims. (Cl. 217—12.)

1. In a package the combination with a series of side forming sections each section having secured at the opposite ends thereof cleats, of end members associated with said sections each comprising a pair of veneer panels the grain of one panel extending transversely to the grain of the other panel, diagonally disposed braces arranged between said panels spacing the same apart to receive said

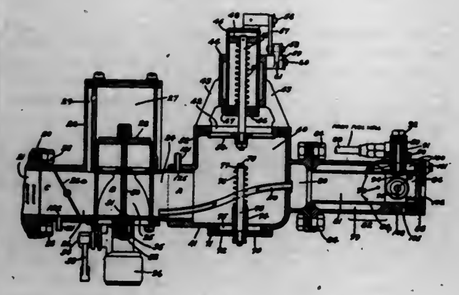


cleats and having their ends abutting against said cleats and means extending through the veneers and through the cleats for securing the end members in position with respect to the side sections.

1,483,175. SEALING DEVICE. ARTHUR G. G. GUENTHER, Chicago, Ill., assignor to Signode System, Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 25, 1918. Serial No. 218,976. 4 Claims. (Cl. 229—47.)

3. A fibre carton having oppositely disposed flaps, a plurality of tongues secured to each of said flaps extending in opposite directions in overlapping relation and aligned in pairs, a sleeve formed integral with one of the tongues of each pair and adapted to receive the other tongue of the pair, the sleeve and tongue of each pair being crimped together to provide a sealed tension resisting joint connecting said tongues.

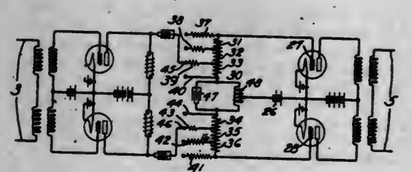
1,483,176. COLUMN GUIDE. HERBERT ANDREW HENRIKSON, Providence, R. I. Filed June 17, 1922. Serial No. 568,938. 8 Claims. (Cl. 281—42.)



7. A column guide for use with ruled or unruled paper, comprising a substantially wedge shaped base, means for holding a strip of material bearing column headings, means for supporting said strip holding means out of contact with the paper, and a pair of alignment guides adjustably mounted on one edge of said base.

1,483,177. SUCTION BURNER. JOHN H. HUNT and JOHN T. FITZSIMMONS, Dayton, Ohio, assignors to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed May 19, 1921. Serial No. 470,981. 25 Claims. (Cl. 123—122.)

1. In a fuel charge heater for internal combustion engines, the combination with a burner head and a heating chamber member adapted for heating the engine fuel and communicating with the engine intake; of a nozzle for admitting fuel spray; ignition means for said spray; means for admitting combustion air to said burner head; and means for distributing combustion air including provisions for directing air toward said nozzle.

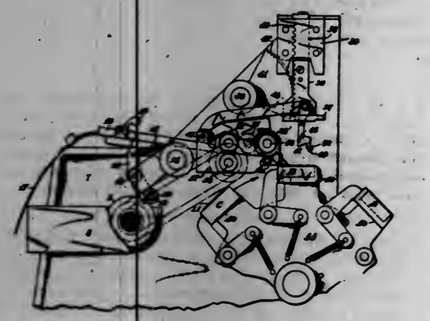


1,483,178. SUCTION BURNER. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 20, 1922. Serial No. 555,670. 14 Claims. (Cl. 123—122.)

1. In a fuel vaporizing device, the combination with an engine having an intake; of a carburetor connected therewith; a suction operated liquid fuel burner discharging into the carburetor for heating the same; and means for automatically restricting the variation of burner suction to a range less than the range of engine suction.

1,483,179. MEANS FOR CONTROLLING ELECTRICAL TRANSMISSION. JACOB S. JAMMER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 17, 1922. Serial No. 568,940. 5 Claims. (Cl. 178—44.)

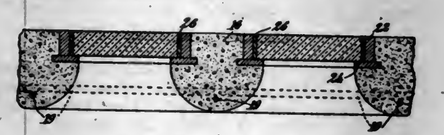
1. An attenuating device and an input and an output lead therefor, said device comprising a resonant circuit, a resistance, means for connecting an adjustable amount of said resistance between said circuit and said input lead, and means for so connecting said output lead to



said resistance that during normal operation of said device said output lead is at a potential between the potentials of the points of connection of said input lead and said circuit to said resistance.

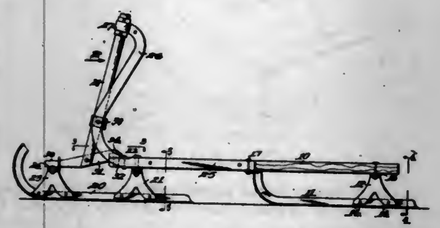
1,483,180. PRESSURE-FLUID-ACTUATED TOOL. WILLIAM H. KELLER, Grand Haven, Mich., assignor to William H. Keller, Inc., Grand Haven, Mich., a Corporation of Michigan. Filed Mar. 15, 1920. Serial No. 365,787. 5 Claims. (Cl. 121—36.)

1. A pressure-fluid actuated tool comprising, in combination, a cylinder, a handle screw-threaded on the rear end of the cylinder, and means for locking the handle upon the cylinder comprising a locking pin, said cylinder and handle having openings adapted to receive said pin, and an annular member surrounding the handle and cylinder and arranged to retain said pin in operative position, said member forming with the handle and cylinder an annular chamber and having openings therein leading from the chamber to the atmosphere, and said cylinder having one or more exhaust passages discharging into said chamber.



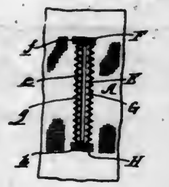
1,483,181. LABELING MACHINE. JAMES A. KNYBS, New York, N. Y. Filed Nov. 20, 1922. Serial No. 601,988. 10 Claims. (Cl. 216—33.)

1. The method of detaching a label from a label strip which consists of maintaining a portion of the label strip on both sides of the line of detachment in a substantially even plane, holding one marginal edge only of the label strip on one side of the line of detachment of the label from the label strip, holding the label to be detached on the other side of the line of detachment, and straining the label strip between the holding points until the label is parted from the strip.



1,483,182. VAULT LIGHT. FRANK ADOLPH LEERS, Bogota, N. J. Filed May 31, 1923. Serial No. 642,526. 5 Claims. (Cl. 88—59.)

1. A vault light comprising a grating structure, lights or lenses adapted to set in the openings in said grating structure, and rings or frames in said openings between said grating structure and said lenses, having a less coefficient of expansion with temperature than that of

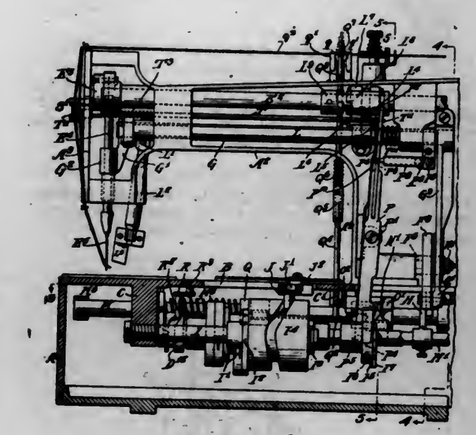


said lenses, adapted to relieve said lenses from contraction stresses exerted by said grating structure due to temperature changes.

1,483,183. SLIDING SCOOTER. ALFRED E. LINDBERG, Worcester, Mass. Filed Feb. 6, 1923. Serial No. 617,214. 4 Claims. (Cl. 280—16.)

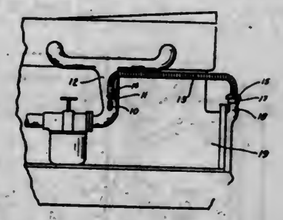
1. In a scooter of the character described, the combination with a top having front side runners supporting it, a stationary member extending upwardly above the top and having two bearings one above the other, a steering rod adapted to turn in said bearings and extending upwardly, a lever connected with the bottom of the steering rod, and means for transmitting the turning motion of the lever to said runners to steer the device.

1,483,184. BUTTONHOLE AND METHOD OF MAKING THE SAME. MICHAEL MCCANN, Glenmorris, N. Y., assignor to Frederick Osann Company, New York, N. Y., a Corporation of New York. Filed May 9, 1922. Serial No. 559,572. 4 Claims. (Cl. 112—264.)



1. As a new article of manufacture a button hole having two parallel lines of straight stitches extending from end to end of the button hole one on each side thereof and two lines of zig zag stitches formed over the straight stitches.

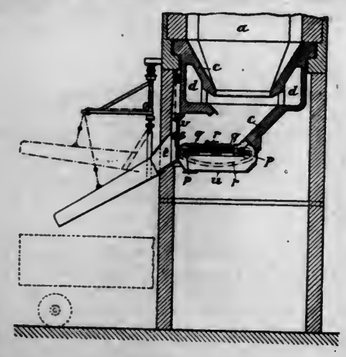
1,483,185. PULL-OFF MECHANISM FOR BUTTONHOLE-SEWING MACHINES. MICHAEL MCCANN, Glenmorris, N. Y., assignor to Frederick Osann Company, New York, N. Y., a Corporation of New York. Filed Aug. 5, 1922. Serial No. 579,794. 7 Claims. (Cl. 112—242.)



1. In a button hole sewing machine having means for stopping the machine as the button hole is finished, comprising and actuated by a longitudinally movable shaft

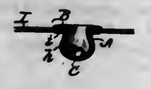
and a spring acting to move the shaft in a direction to actuate the stop mechanism, the combination with said shaft of a latch normally holding it in inoperative position, means acting to release said latch as the button hole nears completion, a bar pivoted on the stop shaft

and moving with it, said bar having a pull off actuating extension, a rotating cam actuated by the driving shaft and located to register with and actuate the pivoted bar when the stop motion shaft is released from its latch, and a pull off device arranged to be actuated by the bar extension aforesaid.



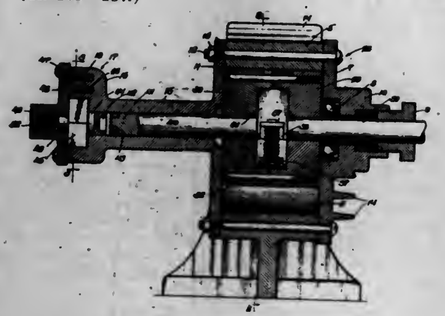
1,483,186. COMBINATION INLET VALVE AND PRIMING CUP. EINAR MINOR, Chicago, Ill. Filed Feb. 16, 1921. Serial No. 445,305. 1 Claim. (Cl. 123—119.)

The combination with the inlet manifold and the breather pipe of an automobile engine, of a cup mounted in a wall of said manifold, a valve in said cup, spring means to normally hold said valve closed, said valve opening automatically during intake of fluid through said manifold, a sleeve fitting the top of said breathe pipe, in place of the usual breather pipe cap and a fluid conduit between said cup and said sleeve.



1,483,187. CONTAINER FOR THE DRY COOLING OF COKE. ARNOLD MOETTELI, Oberwinterthur, Switzerland. Filed Feb. 1, 1923. Serial No. 616,298. 1 Claim. (Cl. 202—11.)

A device for dry cooling coke comprising a container with a conical bottom, an enclosed space below said container, means for introducing cooling gases through said enclosed space into the container; a conveyor belt



below the conical bottom and within the enclosed space for discharging the coke, whereby the coke is discharged without interrupting the flow of cooling gases.

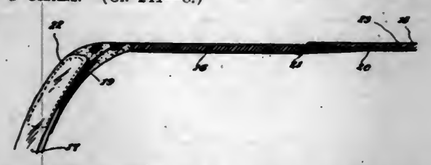
1,483,188. SEPARABLE FASTENER. WILLIAM B. MURPHY, Weehawken, N. J., assignor to Defiance Button Machine Co., New York, N. Y., a Corporation of New York. Filed Feb. 11, 1922. Serial No. 535,771. 3 Claims. (Cl. 24—213.)

1. In a separable fastener, the combination with a shell, of a seamless tubular post the metal at one end of which is deformed, said post being expanded within said shell for the metal at the deformed end thereof to conform under pressure to the contour of said shell.

1,483,189. PUMP. CARL F. PEARSON, Chicago, Ill. Filed Apr. 5, 1922. Serial No. 549,815. 5 Claims. (Cl. 103—137.)

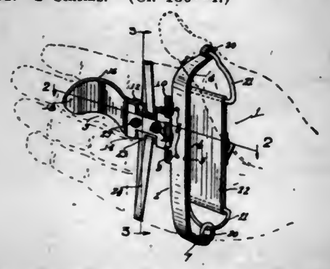
1. A pump structure comprising a cylinder housing; a hollow rotary sleeve therein eccentric to the axis of the cylinder, said sleeve transversely divided into two members and having a peripheral wall of substantially uniform thickness said sleeve having parallel slots extending therethrough, one on each side of its axis of rotation; means to hold the members together a blade in each slot; an arm attached to each blade and extending toward the other blade beyond the axis of rotation and wholly within the wall of the sleeve and a spring between the arms to yieldingly hold the blades in outward positions.

1,483,190. CENTERING DEVICE FOR WORK OR TOOL HOLDERS. ADOLF KAEGI-TREULIN, Pfaeffikon, Switzerland. Filed July 25, 1922. Serial No. 577,332. 3 Claims. (Cl. 279—1.)



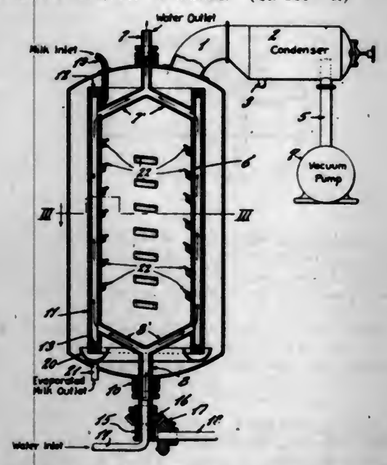
1. In a work or tool holder of the character set forth, in combination, a body member, clamping means for rough-adjustment on the one face of said body member; a flange member mounted on the other face of said body member and presenting two diametrically opposed guide slots and adapted to be mounted on the machine spindle; and means for allowing of displacement of said body member relative to said flange member, comprising an adjusting nut operable in one of said flange member slots and an eccentric operable in the other flange member slot, and means supporting, and operating through said adjusting nut and said eccentric respectively for clampingly retaining the relatively displaced parts in the adjusted position.

1,483,191. RESILIENT WHEEL. RUPERT H. LANGDALE, Cincinnati, Ohio. Filed Nov. 4, 1921. Serial No. 512,801. 7 Claims. (Cl. 152—28.)



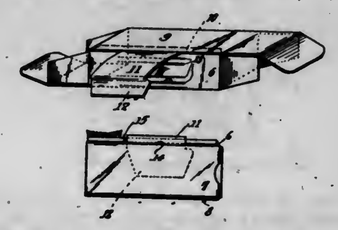
1. A resilient supporting element in wheels, comprising inner and outer concentric rubber portions, one of said portions being formed with a plurality of ridges therein, the other of said portions formed with individual ridges adapted to be seated within the plural ridges, and a hanger device on the plural ridges to support the individual ridges in position inset within them, for the purpose described.

1,483,192. ELASTIC BELT. GEORGE LANGGONS, Brooklyn, N. Y. Filed Mar. 30, 1922. Serial No. 548,075. 3 Claims. (Cl. 241—8.)



1. A belt comprising end sections of leather and an intermediate section of rubber, a strip of canvas vulcanized to each end of said rubber section and secured by means of stitching to the leather sections.

1,483,193. CORN-HUSKING TOOL. FREDERIC MARTIN, Columbus, Ohio. Filed May 22, 1922. Serial No. 562,761. 2 Claims. (Cl. 130—4.)



1. In a corn husking tool, a sheet metal base strip formed to include inner and outer integral layers, eyes formed with said layers, a claw holder of sheet metal bent to provide integral inner and outer layers, the latter being integrally joined by an eye portion arranged to register with the eyes of said base strip, a pin passing through said eyes to flexibly unite said strip and holder, and a claw member secured between the inner and outer layers of said holder.

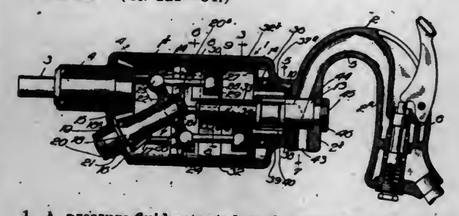
1,483,194. EVAPORATING APPARATUS. HENRY C. PETERSEN, Ste. Genevieve, Mo. Filed Oct. 4, 1920. Serial No. 414,686. 4 Claims. (Cl. 159—6.)

1. In an evaporator of the character described, a vacuum chamber having a vapor outlet, means for maintaining a vacuum in said chamber, a centrifugal device including a heating element in the form of a cylinder having an inner face adapted to receive the liquid to be evaporated and a jacket surrounding said cylinder, means for delivering the liquid to said inner face of the cylinder, bearings in which said cylinder is rotatably mounted said cylinder being provided with hollow trunnions arranged in said bearings, means for rotating said cylinder to forcibly spread the liquid in the form of a film on said inner face of the cylinder, and means for transmitting a heating fluid through said hollow trunnions and through said jacket so as to heat the film of liquid on said inner face of the cylinder, the interior of said cylinder being in free communication with said vacuum chamber to provide for vaporization of the liquid at a relatively low temperature.

1,483,195. DISPLAY BOX. EDWARD E. PINKERTON, Chicago, Ill., assignor of one-half to Joshua R. H. Potts, Chicago, Ill. Filed Mar. 16, 1922. Serial No. 544,122. 2 Claims. (Cl. 211—40.)

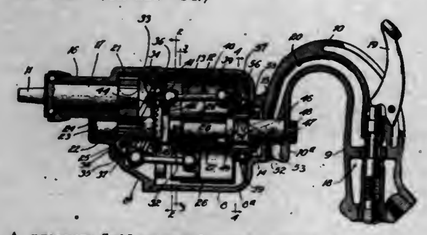
1. A display box comprising a foldable box body; and a flexible strip secured at one end of said body, there being slits formed in said body through which the free end of said strip is laced to form a retainer for holding an article to be displayed.

1,483,196. SANITARY WRAPPER FOR ICE-CREAM CONTAINERS. WILLIAM H. PRINCE, Minneapolis, Minn. Filed June 26, 1922. Serial No. 570,911. 7 Claims. (Cl. 229—87.)



1. A wrapping for an edible container comprising an inner wrapper normally entirely housing the container and formed for permitting one end thereof to be turned outwardly to freely expose the mouth of the container, and an outer wrapper open at both ends and in which the container when housed by the inner wrapper is freely slidable.

1,483,197. PROCESS OF PRODUCING NITROGEN CONTAINING COMPOUNDS. JAMES H. REID, Pittsburgh, Pa., assignor to International Nitrogen Co. Cleveland, Ohio, a Corporation of Delaware. Filed Nov. 14, 1919. Serial No. 338,109. 10 Claims (Cl. 23—13.)

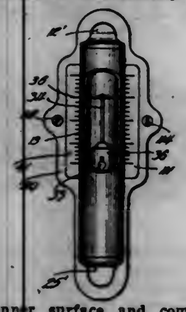


1. The process of producing a nitrified product which consists in conducting the material to be nitrified through a progressively heated zone and subjecting the carbide in such zone to an atmosphere of nitrogen having an activating agent mingled therewith.

1,483,198. ROTARY PISTON DRILL. ALBERT SCHINKEZ, Grand Haven, Mich., assignor to William H. Keller, Inc., Grand Haven, Mich., a Corporation of Michigan. Filed Mar. 27, 1920. Serial No. 369,160. 2 Claims. (Cl. 121—34.)

1. A pressure-fluid-actuated tool comprising, in combination, a casing having a forward section and a rear section, the rear section having a handle rigid therewith and the forward section having a forwardly projecting journal bearing, said handle having a valve controlled air passage therein, valve means mounted in the rear section and adapted to control the flow of pressure fluid from said passage, said valve means including a stationary member having rigid therewith a journal extending forwardly into the rear section of the casing substantially coaxially thereof, a plurality of cylinders rotatable as a unit upon said journal, said valve means being adapted to control the flow of pressure fluid to and from said cylinders, pistons in said cylinders, an inclined disk mounted in the forward casing section to rotate on an axis intersecting the axis of the cylinder unit, means operatively connecting said pistons with said inclined member whereby in the reciprocation of the pistons to cause the said member to rotate, and a shaft journaled in the bearing in the forward casing section and having a gearing connection with said inclined member.

1,483,199. ROTARY PISTON DRILL. ALBERT SCHINKEZ, Grand Haven, Mich., assignor to William H. Keller, Inc., Grand Haven, Mich., a Corporation of Michigan. Filed Dec. 16, 1920. Serial No. 431,129. 1 Claim. (Cl. 121—34.)

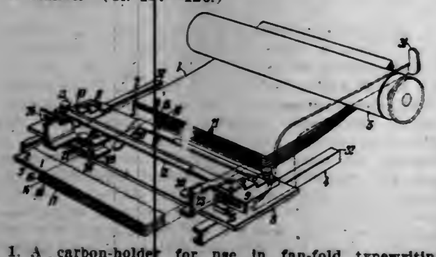


A pressure-fluid-actuated tool comprising, in combination, a casing, a rotary element providing a plurality of circumferentially arranged cylinders rotatably mounted as a unit in said casing and each having a piston therein, a tool spindle journalled in the casing, a rotary inclined member operatively connected with said pistons and with said spindle, said connection being adapted to maintain the member and cylinders in rotative alinement and comprising a gear element journalled at its forward end in the casing and fixed at its rear end in said rotary element, said gear element having a spur pinion and a bevel pinion, said tool spindle having a spur gear adapted to mesh with said spur pinion, and said annular member having bevel gear teeth meshing with said bevel pinion.

1,483,200. FLOW METER. JOHN F. SKOLD, Chicago, Ill. Filed May 6, 1921. Serial No. 467,510. 3 Claims. (Cl. 73—167.)

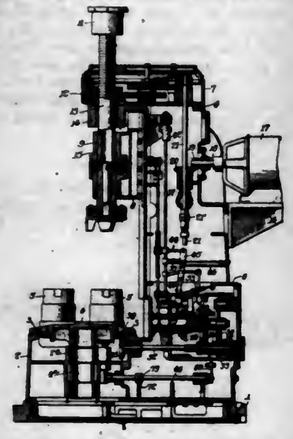
3. A flow meter comprising a tubular support having a sight opening formed therein, a gauge glass in said tubular support, a tubular member projecting from said

tubular support and into said gauge glass and provided at its inner end with a discharge opening, the said tubular member having a longitudinally extending groove



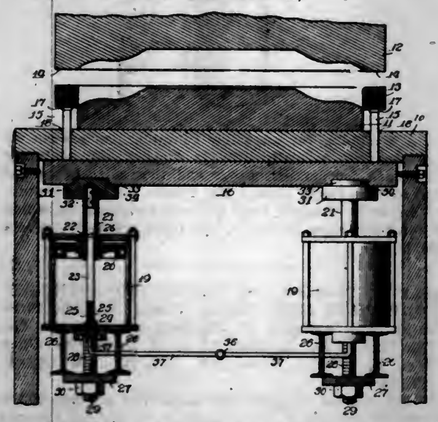
formed in its inner surface and communicating with said discharge opening, the depth of said groove increasing toward the inner end of said tubular member, and a disc mounted to reciprocate in said tubular member.

1,483,201. TYPEWRITING MACHINE. CHARLES E. SMITH, Brooklyn, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Original application filed Apr. 6, 1922, Serial No. 550,045. Divided and this application filed Jan. 11, 1923. Serial No. 611,922. 29 Claims. (Cl. 197—186.)



1. In a typewriting or like machine, the combination of a carriage, a platen carried thereby, feed mechanism for said carriage, a finger piece for turning said platen said finger piece being shiftable to and from compact position and adapted to remain indefinitely in either o said positions, and means controlled by said finger piece for releasing the carriage from the restraint of its feed mechanism.

1,483,202. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 28, 1920. Serial No. 377,189. 9 Claims. (Cl. 197—126.)



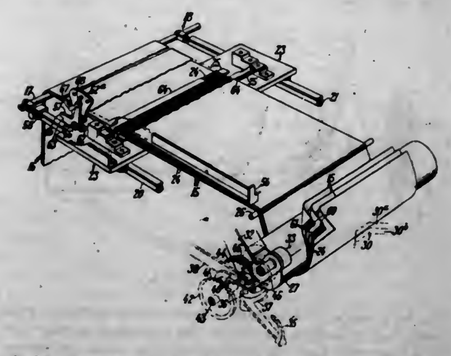
1. A carbon-holder for use in fan-fold typewriting machines, comprising a piece of sheet-metal formed to provide a thin carbon-holding body-portion to which a sheet of carbon may be secured and a thin work-web-cutting blade-portion of the same thickness as the body-portion, extending obliquely from the body-portion at the end thereof, and integral therewith, the construction being such that the combined carbon-holding body and work-web-cutting blade may be made by a single stamping operation.

1,483,203. AUTOMATIC TABLE INDEXING AND LOCKING MECHANISM. WILLIAM N. STEVENS, Madison, Wis., assignor to Gisholt Machine Company, Madison, Wis., a Corporation of Wisconsin. Original application filed Aug. 26, 1921, Serial No. 495,707. Divided and this application filed Oct. 9, 1922. Serial No. 593,165. 6 Claims. (Cl. 29—50.)

1. In an automatic table indexing mechanism, the combination with an upright frame structure, and a bed, of a slide mounted to reciprocate vertically on said frame structure, a spindle carried by said slide, a table rotatably mounted on said bed and carrying work holders movable in succession to a position beneath said spindle, means, including a pair of normally separated clutch members, for turning said table, spring actuated means for coupling said clutch members, detent mechanism normally holding said coupling means inactive, means actuated by said slide on its return travel for retracting said detent mechanism, and means for automatically uncoupling said clutch members at the end of the indexing movement of said table.

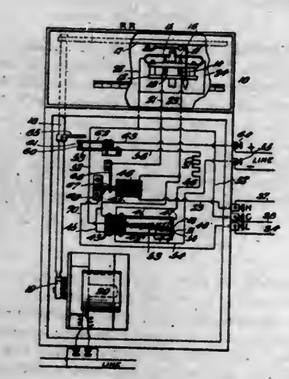
1,483,204. DIE CUSHION. DAVID STRAND, Chicago, Ill., assignor, by mesne assignments, to Marquette Tool & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 11, 1918. Serial No. 227,940. 3 Claims. (Cl. 113—46.)

1. Means for converting an ordinary power punch press into a sheet metal drawing press while maintaining the press intact for its original designed purposes, said



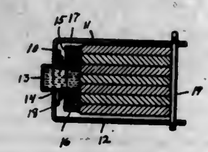
means embodying a cushion, the said cushion embodying a plurality of pressure cushions, and gripping means for the material carrying projecting operating and guiding means, a plate engaged by such projecting means, and with which plate the cushions are operatively connected, whereby a substantially unvarying pressure will be exerted by the cushions upon the gripping means, said cushions and the mechanism responsive to the operation thereof being adapted to be rendered inactive at will, while the remaining parts of the press remain active.

1,483,205. LOCKER LOCK. WALTER N. VANCE, Chicago Heights, Ill., assignor to Durand Steel Locker Company, Chicago, Ill., a Corporation of Illinois Filed Mar. 24, 1921. Serial No. 455,030. 11 Claims. (Cl. 70—14.)



2. A front for lockers and the like, comprising a door a door casing, a slidable latching bar in said door, a handle fixedly secured to said bar, keeper members on said casing adapted to cooperate with said bar to latch th door closed, and a plurality of locks, for locking the door said latching bar and keeper member being disengageabl by removal of one of said locks.

1,483,206. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Type writer Company, New York, N. Y., a Corporation o Delaware. Filed Apr. 9, 1920. Serial No. 372,445 18 Claims. (Cl. 197—126.)



1. In a typewriter machine, the combination with platen, a releasable feeding device, to receive and line feed work-sheets, of an interleaved copying elemen having a plurality of fields of different colors, and means settable to a plurality of operative positions to shift the copying element relatively to said work-sheets to selectively render any one of the fields effective.

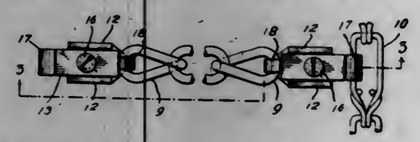
1,483,207. SAFETY DEVICE FOR CONTROL INSTRUMENTS. CHRISTIAN WILHJELM, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 9, 1922. Serial No. 587,252. 18 Claims. (Cl. 236—1.)

1. A safety system for a control instrument, comprising a safety circuit arranged to control a mechanism to prevent abnormal or danger conditions in a system controlled by said instrument, a control circuit, means controlled by said instrument for opening and closing said control circuit, and means actuated by said control circuit for controlling said safety circuit, said last means being arranged to affect said safety circuit in one manner when said control circuit is periodically closed, and to affect said safety circuit in another manner when said control circuit is continuously closed.

1,483,208. SPRING OILER. SAMUEL BARUCH, New York, N. Y. Filed Apr. 12, 1923. Serial No. 631,512. 11 Claims. (Cl. 184—1.)

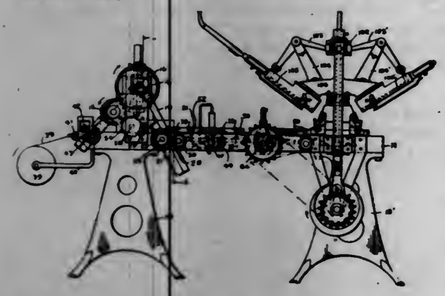
1. A lubricating device for laminated springs, including a lubricant container having an open end and a peripheral flange, an annular gasket engaging with the face of said flange, and a frame having an opening receiving said container but smaller than said flange.

1,483,209. APPARATUS FOR BLASTING BY THE USE OF ELECTRICITY. JOHN H. BILLS, deceased, late of Denver, Colo.; by Mollie R. Bills, administratrix, Denver, Colo. Filed June 12, 1922. Serial No. 567,777. 2 Claims. (Cl. 102—6.)



2. A toroidal-shaped cartridge whose length exceeds its diameter, said cartridge being formed of two concentric tubular members of different diameters whose ends are

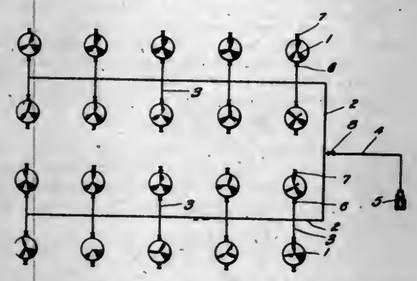
autogenously welded, whereby a closed cylindrical chamber is formed, said chamber being provided with an open-



ing for introducing a liquid thereinto, a plug in said opening, and an electric heater element within the innermost tubular member.

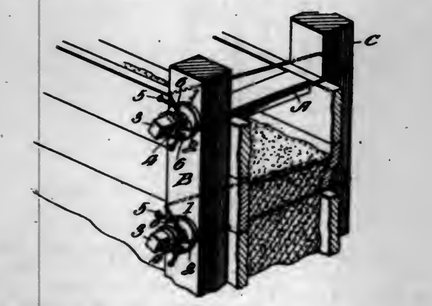
1,483,210. CONNECTER FOR CHAIN LINKS. JOSEPH BLAEKER, New York, N. Y., assignor of one-half to Maxwell Eisenstein, New York, N. Y. Filed Mar. 6, 1923. Serial No. 623,239. 5 Claims. (Cl. 24—238.)

1. A connecter for chain links comprising an elongated body portion having upturned hook extensions at the opposite ends thereof and side guide plates upturned at the sides thereof, and a closure member operatively disposed between said guide plates for closing the entrances to said hook-like extensions; and means for moving the said closure member to and from between the ends of said extensions.



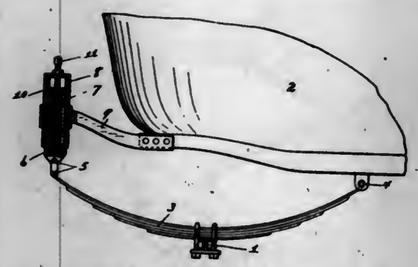
1,483,211. TRAY-MAKING MACHINE. HENRY BRADY Bloomfield, N. J., assignor to Henry Brady, Inc., a Corporation of New Jersey. Continuation of application Serial No. 71,931, filed Jan. 13, 1916. This application filed Nov. 11, 1919. Serial No. 337,302. 4 Claims. (Cl. 93—42.)

3. The combination of blank forming devices, a die and plunger for folding the blanks to the required shape, a gripping rod normally retracted from the die and guided through the centre of one part of the same to force portions of the blanks toward the plunger before the blank is in the die, means to reciprocate said rod, means external of the die for folding the corners and stapling devices adjacent to the end of the die.



1,483,212. VAPOR-CONSERVATION SYSTEM. STEPHEN H. BROOKS, Muskogee, Okla., assignor to Oil Conservation Engineering Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 17, 1921. Serial No. 453,086. 7 Claims. (Cl. 220—85.)

1. A system for conserving the lighter hydrocarbons generated from hydrocarbon oils comprising a tank, a pipe leading from the tank, an exhauster at one end of the pipe, a pressure-actuated valve in the pipe movable to open position only upon accumulation of pressure in the tank to allow communication with the exhauster, and a

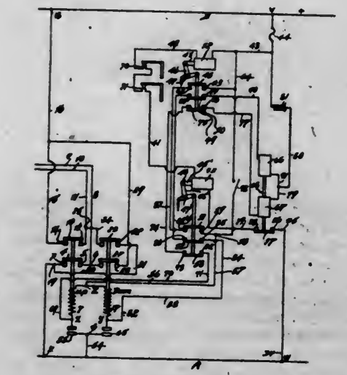


suction-actuated valve in the pipe between the pressure-actuated valve and the exhauster and normally open to atmosphere.

1,483,213. CLAMP FOR TIE WIRES. JOHN R. BULLIS, Winston-Salem, N. C. Filed Mar. 23, 1923. Serial No. 627,206. 5 Claims. (Cl. 25—131.)

1. A clamp for tie wires including a flat base for floating contact with a support, a part projecting from said base and formed to receive the ends of a tie wire, and means for turning said clamp.

1,483,214. VEHICLE SPRING. CHARLES H. CROCKETT, Troy, N. Y. Filed Dec. 1, 1916, Serial No. 134,255. Renewed June 16, 1922. Serial No. 568,820. 9 Claims. (Cl. 267—29.)

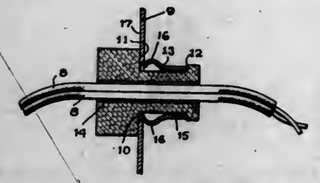


1. In a suspension system, a main-spring having a relatively low deflection-load-ratio; an auxiliary-spring having a relatively high deflection-load-ratio; and means constructed and arranged to so support them that the spring force of the auxiliary spring is never substantially greater than that due to the normal load.

1,483,215. VISIBLE INDEX. WILLIAM P. DE SAUSSURE, Jr., Englewood, N. J. Filed Aug. 31, 1921. Serial No. 497,154. 8 Claims. (Cl. 129—16.)

1. A visible index comprising in combination a rack having a back and a series of card holders slidably mounted in the rack, each card holder having a rearward projection adapted to support the lower edge of the holder next above and to engage said back, causing each holder to assume a forwardly inclined position in the rack.

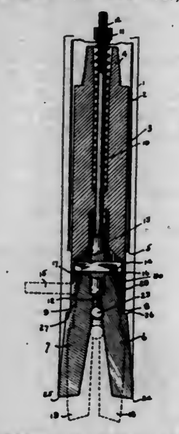
1,483,216. ELEVATOR SEQUENCE SAFETY DEVICE. NEVILLE S. DICKINSON, Glen Ridge, N. J., assignor to Elevator Supplies Company, Inc., a Corporation of New York. Filed June 18, 1920. Serial No. 390,048. 15 Claims. (Cl. 187—31.)



5. In an elevator safety appliance, the combination with an elevator operating circuit, a line switch magnet and a starting switch for controlling said circuit, of a gate circuit, means actuated on closing said gate circuit followed by actuation of said starting switch for closing a circuit through said line switch magnet, and means for breaking said gate circuit if said starting switch is first closed.

1,483,217. ANALGESIC COMPOUND AND PROCESS OF PRODUCING THE SAME. WILLIAM H. ENGELS, Rahway, N. J., assignor to Merck & Co., New York, N. Y., a Corporation of New York. Filed Sept. 22, 1922. Serial No. 589,932. 10 Claims. (Cl. 260—104.)

1. As an analgesic, a therapeutically pure alkali salt of salicylo-salicylic acid.

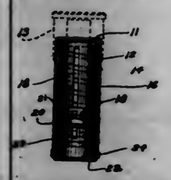


3. The process of making a water-soluble salt of salicylo-salicylic acid, which consists in treating salicylo-salicylic acid dissolved in an inert organic solvent with an alkaline compound, and isolating the salt of salicylo-salicylic acid so formed.

1,483,218. INSULATING BUSHING. ARCHIE P. FAHNESTOCK, Long Island City, N. Y., assignor to Fahnestock Electric Company, a Corporation of West Virginia. Filed Sept. 27, 1919. Serial No. 326,815. 13 Claims. (Cl. 16—2.)

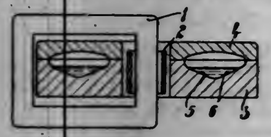
1. In a device of the class described, a bushing composed of insulating material and adapted to be inserted into an aperture, a shoulder for limiting the depth of insertion of said bushing within said aperture and adapted to abut on the end face thereof, a second shoulder on said bushing, and resilient locking means cooperating with said second shoulder for maintaining said first shoulder in abutting contact with the end face of said aperture.

1,483,219. UNDERREAMER. PROSPER J. FORREST, Alameda, Calif., assignor of one-half to Nettie Forrest, San Francisco, Calif. Filed Jan. 24, 1922. Serial No. 531,401. 4 Claims. (Cl. 255—75.)



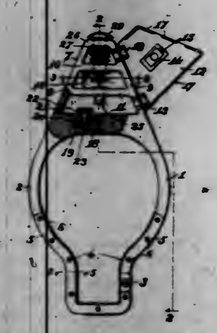
1. In an underreamer, a reamer head and a plurality of cutting blades joined in pivotal relation intermediate their ends, each blade having a lower cutting end and an upper end adapted to sheath in a recess in the head to hold the cutting ends expanded in their cutting position, a rod passing through the head and having a ball shaped end over which the said blades are adapted to pivot, a spring associated with said rod whereby the blades are normally retracted with their upper ends within said recess, shoulders on the blades adapted to contact with a well casing when the head is drawn upward thereby actuating the rod and spring to release the upper ends of the blades from the recess when the said cutting ends collapse inwards as the blades pivot over the said rod end, and a key which is passed through the blades and the rod, and engaging within the head.

1,483,220. CONTAINER FOR TOILET PREPARATIONS. THEODORE W. FOSTER, Providence, R. I., assignor to Theodore W. Foster & Bro. Co., Providence, R. I., a Corporation of Maine. Filed May 24, 1922. Serial No. 563,417. 2 Claims. (Cl. 206—56.)



1. A holder for toilet preparations comprising a tubular outer shell and a closure member therefor, an in-

termediate threaded tube non-rotatably mounted within said shell, a tube rotatably mounted with said threaded tube and provided with a longitudinal slot, a preparation carrying socket adjustably mounted in said slotted



tube and having an integral projection extending through said slot and engaging the threads in said intermediate tube, and means for rotating said slotted tube relative to said threaded tube whereby said socket is moved axially of said shell.

1,483,221. ELECTRIC INDUCTION FURNACE. OTTO FRICK, Herserud, Sweden. Filed Jan. 16, 1922. Serial No. 529,734. 4 Claims. (Cl. 204—64.)

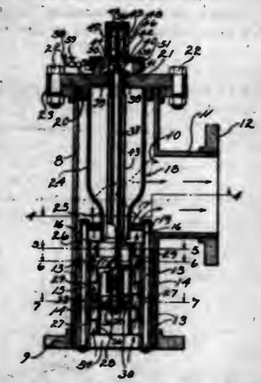
1. Electric induction furnace, comprising a ring-shaped hearth having a melting channel the inner side wall of which has a less inclination to the horisontal plane than the angle of repose of the repairing material so that such repairing material can be applied and sintered on corroded parts of said wall during operation of the furnace.

1,483,222. AUTOMOBILE ANTITHEFT DEVICE. JOSEPH WALTER GALLOWAY, Wilmington, Del. Filed Aug. 20, 1920. Serial No. 404,835. 5 Claims. (Cl. 116—33.)

4. A device as set forth in claim 1 in which the said housing comprises a pyramidal member open upon one side, a closure for said open side, means within said housing for supporting a detonating charge and a plunger extending inwardly from the end of said housing and adapted when driven inwardly to detonate said charge, substantially as described.

1,483,223. MANUFACTURE OF BUTTONS, BADGES, OR THE LIKE. CHARLES F. GAUNT, Birmingham, England. Filed Sept. 25, 1922. Serial No. 590,549. 3 Claims. (Cl. 76—5.)

1. The method of manufacturing buttons consisting in forming a sheet metal disc with a plurality of spaced radial projections on its periphery mounting the disc upon a stiffening member of dome form and making it conform thereto mounting a piece of fabric upon the



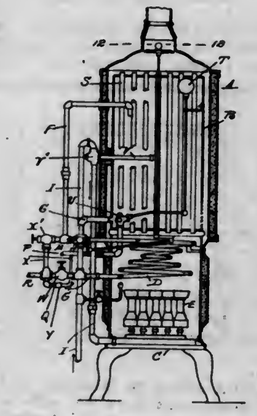
disc, turning the projections up and back upon the fabric and folding the edge thus formed and which protrudes beyond the stiffener beneath the latter.

1,483,224. PUTTY POWDER. CHARLES A. HAMEL, Swanton, Vt. Filed Apr. 16, 1923. Serial No. 632,588. 2 Claims. (Cl. 51—280.)

2. A putty powder for marble polishing comprising a mixture of French chalk, oxalic acid, tin oxide, pulverised stone, and chrome oxide, in about the proportions of French chalk 4½ lbs., oxalic acid 1 lb., tin oxide 1 lb., pulverized stone 4 lbs., and chrome oxide 1½ lbs.

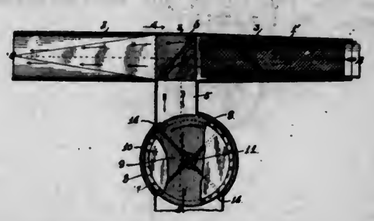
1,483,225. LIQUID METER. HARRY RICE HAMMETT, Bakersfield, Calif. Filed Apr. 29, 1922. Serial No. 557,277. 7 Claims. (Cl. 73—37.)

3. In a meter, the combination of a casing having an inlet and an outlet, upper and lower bearings connected with the casing, a shaft mounted in said bearings, propeller means in the casing associated with the shaft, means to form a gas pocket around the lower bearing, means enclosing the upper bearing and including a case having an opening, a glass closing the opening, registering mechanism in the case operated by the shaft, and means affording communication between the gas pocket and the upper bearing whereby any gas leaking through the upper bearing will be retained by the case.



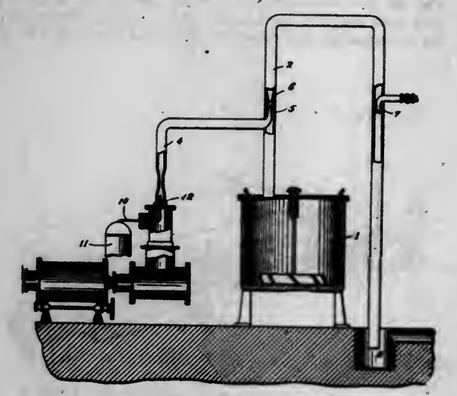
1,483,226. BATHING CAP WITH GOGGLES. ALPHONZO GLENDON JOHNSON, Cardenas, N. C. Filed Nov. 19, 1923. Serial No. 675,763. 4 Claims. (Cl. 2—106.)

1. A waterproof bathing cap, comprising nose and ear covering and transparent eye covering portions, said cap terminating at its lower edge in a face encircling water



seal portion for preventing entrance of water into said nose, ear and eye covering portions, said lower edge terminating above the mouth of the wearer when the cap is in a worn position.

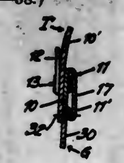
1,483,227. COMBINED WATER HEATER AND STEAM GENERATOR. AUGUST H. KOHLMEYER, Detroit, Mich. Filed Sept. 7, 1917, Serial No. 190,256. Renewed June 25, 1923. 22 Claims. (Cl. 122—4.)



4. The combination with a coil alternatively used to heat water and generate steam, of pipes for respectively drawing off steam and water from said coil, means for supplying water to said coil, and a common means for varying the supply of water to the coil and for varying its outlet connection according as the coil is used as a water heater or a steam generator.

1,483,228. DUST SEPARATOR. JAMES A. MCCULLOUGH, Fresno, Calif. Filed Jan. 16, 1923. Serial No. 612,901. 2 Claims. (Cl. 130—17.)

1. A dust-separator comprising a conduit having an inlet section to which the material is supplied, a discharge section for the separated dust, and an enlarged section between said inlet and discharge sections; means for establishing an air-current through said conduit to carry the material forward; a screen traversing the conduit in its enlarged section to intercept and divert the material while permitting the air and dust to pass; a screen-walled nozzle fitted to the end of the inlet section and lying within and spaced from the enlarged section with its delivery end spaced from and registering with the middle area of the intercepting screen; and a trap communicating with the enlarged section of the conduit below the screen to receive and discharge the cleaned material.

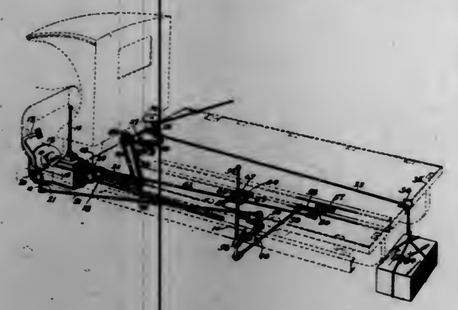


1,483,229. DEODORIZING APPARATUS. ANGUS MACLACHLAN, Perth Amboy, N. J., assignor to Maclachlan Reduction Process Co., Inc., New York, N. Y., a Corporation of Delaware. Filed July 28, 1920. Serial No. 399,589. 6 Claims. (Cl. 167—3.)

2. The method of deodorizing gases resulting from the treatment of waste organic substances, which consists in introducing SO_2 and steam into the conduit along which said gases pass and subsequently cooling the mixture.

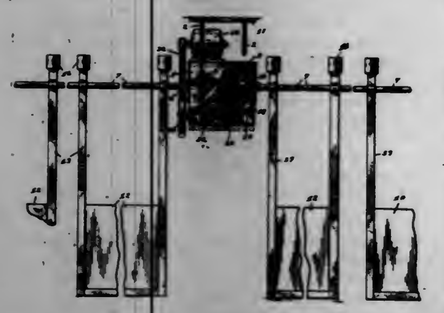
6. In an apparatus of the character described, the combination with a tank in which waste organic substances are treated, a stack leading from said tank through which the gases resulting from the treatment of the substances pass, said stack having a restricted portion therein, means for introducing SO_2 into said stack adjacent said restricted portion, and means for spraying the gases in the stack subsequent to the treatment thereof with SO_2.

1,483,230. FASTENER TAPE. DAVIS MARINSKY, New York, N. Y. Filed Mar. 29, 1923. Serial No. 628,544. 7 Claims. (Cl. 2—58.)



6. Fastener tape comprising a supporting tape a series of fasteners carried by said supporting tape on one side thereof, means for attaching said fasteners to said supporting tape, and an auxiliary tape attached by said attaching means along a portion of the width thereof to the remaining side of said supporting tape and having a portion at least of the remaining width thereof folded over so as to cover said attaching means to thus form a garment-fabric-receiving pocket open in a direction from said attaching means opposite to the direction in which said fasteners extend.

1,483,231. POWER TAKE-OFF-CONTROLLING MECHANISM FOR AUTOMOBILES. ALBERT A. MAYNARD, Buffalo, N. Y., assignor to Stewart Motor Corporation, Buffalo, N. Y., a Corporation of New York. Filed May 18, 1922. Serial No. 560,690. 3 Claims. (Cl. 74—7.)

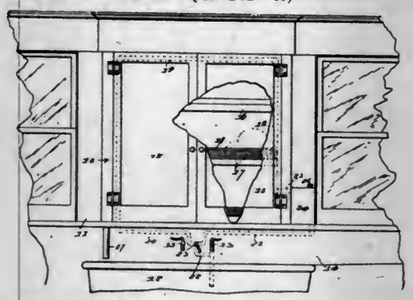


1. An automobile comprising a clutch adapted to connect and disconnect the motor with the propelling gearing and having a clutch operating rock shaft, and a foot lever mounted on said rock shaft, a power take-off having a driven shaft and a coupling mechanism for connecting

and disconnecting said driven shaft and propelling gearing, a controlling rock shaft operatively connected with said clutch operating shaft, a hand lever mounted on said controlling rock shaft so as to be compelled to turn therewith and also capable of swinging in a plane lengthwise of the controlling shaft and operatively connected with said coupling mechanism, and a locking device having a releasing slot in which the hand lever is free to

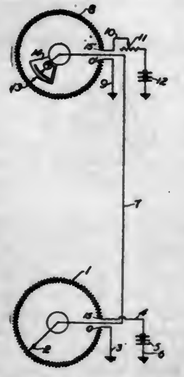
move in a plane parallel with the axis of the controlling shaft for shifting said coupling from one position to another and a plurality of locking slots which extend at right angles from said releasing slot and into one or another of which said hand lever is adapted to be moved in a plane at right angles to the axis of said controlling shaft and to be held therein against movement parallel with the axis of said controlling shaft.

1,483,232. VENTILATING DEVICE. WALTER MILLER-PEACOCK, San Francisco, Calif. Filed July 24, 1922. Serial No. 577,222. 8 Claims. (Cl. 230—1.)



6. A ventilating device comprising a shaft; a pair of gears mounted in spaced relation upon said shaft; a pair of racks slidably mounted in meshing relation with the gears; a rotatable member mounted adjacent the racks; a power driven worm mounted adjacent the rotatable member and operatively connected therto for rotating the same; a pair of parallel connecting members secured between the racks; a roller mounted adjacent the periphery of the rotatable member in engagement with the parallel connecting members for reciprocating the racks with a harmonic movement to impart an oscillating movement to the gears and shaft; punkas connected to the shaft to be oscillated thereby; a housing mounted over the shaft to enclose the shaft actuating members; bearing plates secured upon the ends of the housing to receive the shaft; and means for adjustably supporting the housing.

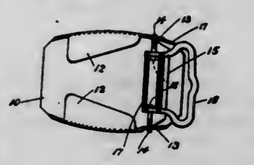
1,483,233. PROCESS OF PREPARING TRIPHENYLMETHANE DYES. JOSEPH R. MINEVITCH, New York, N. Y., assignor to Dicks, David & Heller Co., New York, N. Y., a Corporation of Delaware. Filed June 30, 1920. Serial No. 392,992. 8 Claims. (Cl. 134—68.)



2. The method of preparing organic dyestuffs of the triphenylmethane series which comprises dissolving the leuco base of the dyestuff in acetic acid of more than about 75 per cent strength and oxidizing said base with lead peroxide in the absence of mineral acid.

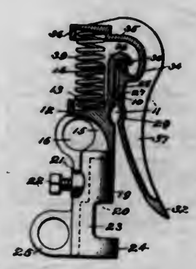
1,483,234. DISHWASHING CABINET. WILSON M. MOORE, Ontario, Calif. Filed June 21, 1922. Serial No. 569,792. 1 Claim. (Cl. 141—9.)

A dish washing apparatus consisting of a cabinet of water tight construction provided with a drain and containing dish trays, a spray pipe located within the cabinet and extending over said trays for discharging water upon the contents of the latter, a valved supply pipe having arms respectively in communication with opposite ends of the spray pipe and adapted for alternate use in supplying water thereto, and a soap box arranged in intercepting relation with one of the said supply arms whereby the water in passing from said arm to the spray pipe passes through the soap box.



1,483,235. SYSTEM FOR TRANSMITTING SETTINGS. ROBERT V. MORSE, Ithaca, N. Y., assignor to Morse Instrument Company, Inc., Ithaca, N. Y., a Corporation of New York. Filed July 26, 1919. Serial No. 313,506. 3 Claims. (Cl. 177—351.)

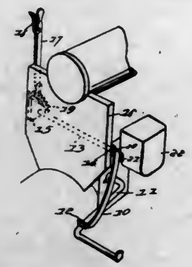
2. In an indicating system, the combination of a pivot, a carriage mounted to rotate about the pivot, a support, means for locking the support to the pivot in various positions, a contact, a resistance arranged on the support so that the contact may make electrical connection with it at various points as the carriage is rotated, a transmission



line, a conducting member connected to the line and extending thru the pivot but insulated from the pivot, an indicating instrument susceptible to differences in potential, an electrical connection between the conducting member and the indicating instrument, an electrical connection between the indicating instrument and the contact, means for applying a potential difference to the terminals of the resistance, a variable resistance in series with the first mentioned resistance whereby the applied potential may be precisely regulated, and a sending instrument connected to the transmission line.

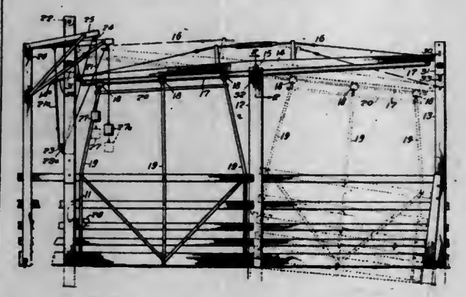
1,483,236. BELT BUCKLE. WILLIAM J. MORSE, Attleboro, Mass. Filed Aug. 24, 1923. Serial No. 659,090. 5 Claims. (Cl. 24—191.)

1. A buckle comprising a body portion, a clamping member pivotally mounted in said body to engage and bind a belt therein, a bail member pivotally connected to said clamping member, and means between the pivoted ends of said bail member for preventing said pivoted ends from being inadvertently disconnected from its pivots.



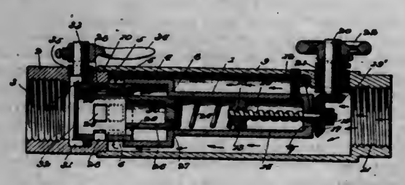
1,483,237. LINE TAPPER. ALBION MOULTON, Philadelphia, Pa., assignor to The Allen Iron & Steel Company, Philadelphia, Pa. Filed Feb. 12, 1921. Serial No. 444,372. 6 Claims. (Cl. 173—273.)

1. In a spring clamp for electrical conductors, a fixed jaw having a rearwardly extending downwardly opening hook at its upper end, a spring seat extending forwardly from the fixed jaw, a movable jaw having its upper end engaged in said hook and provided with an upward and forward extension carrying a spring seat alined above the fixed jaw spring seat, and a compression spring having its ends engaging said spring seats.



1,483,238. TRACTOR ATTACHMENT. MAGNUS E. NESS, Stevinson, Calif. Filed Feb. 18, 1922. Serial No. 537,455. 1 Claim. (Cl. 74—81.)

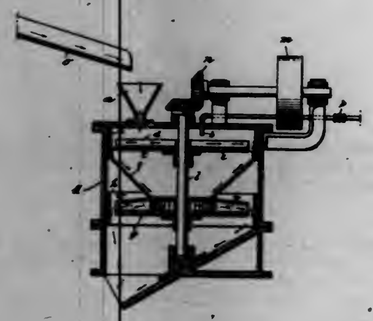
The combination with a tractor having a clutch pedal and a dash, of a transverse shaft, bearing brackets mounted on the forward wall of the dash and supporting said shaft for rocking movement, a holding arm carried by the shaft at one extremity and provided with a terminal shoe for engagement with the clutch pedal arm to hold the same depressed, a lever mounted at the opposite extremity



of the shaft and provided with a latch, and a segment carried by one of the bearing brackets and adapted for engagement by said latch.

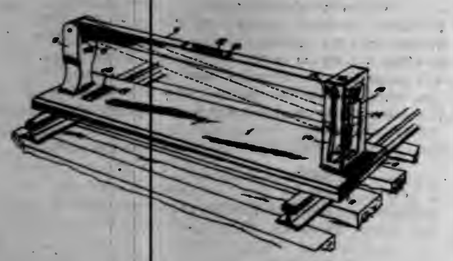
1,483,239. GATE AND THE LIKE. WILLIAM W. NORMAN, Hiram, Ark. Filed Jan. 12, 1923. Serial No. 612,217. 2 Claims. (Cl. 39—67.)

1. The combination of a gate, a vertically tilting support for the gate upon which the gate is movable by gravity between positions across the roadway and to one side thereof, means to tilt said support to an angle which will cause the gate to move from one of said positions to the other wholly by gravity, and a vertical pivot at the side of the roadway for said support about which it may turn to clear the roadway, said support in the normal operation extending completely across the roadway.



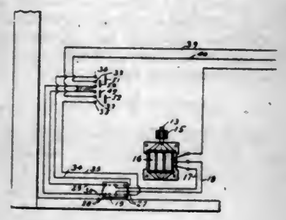
1,483,240. PRESSURE-REGULATING VALVE. CHARLES J. OLSON, Muskegon, Mich., assignor to The Olson Pneumatic Saw and Valve Company, Indianapolis, Ind. Filed July 19, 1920. Serial No. 397,204. 7 Claims. (Cl. 50—10.)

1. A device for the purpose set forth comprising a cylinder, a cut-off mounted axially within the cylinder and actuated directly by back pressure from a motor to open and close under variations in said back pressure,



means within the cylinder acting on one end of the cut-off for adjustably setting the cut-off to a normal load, and a counterbalance acting on the opposite end of the cut-off in opposition to the back pressure.

1,483,241. METHOD AND APPARATUS FOR GRANULATING LIQUID SLAG. EMIL OPDERBECK, Gelsenkirchen, Germany. Filed Nov. 24, 1922. Serial No. 602,997. 5 Claims. (Cl. 83—91.)

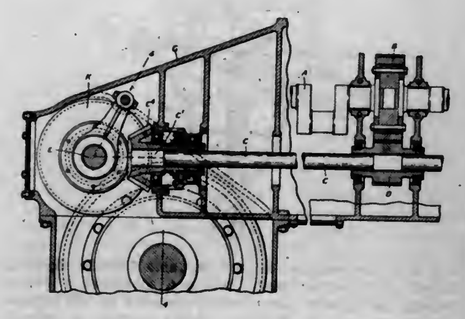


1. Method for granulating liquid slag, consisting in feeding the liquid slag onto a centrifugally operating expelling element, capable of impelling the slag against an abutment, and in supplying water onto said element in quantities limited by the amount which the heat supplied by the slag is capable of converting into steam, to cause the granulation of the slag into dry slag sand.

1,483,242. LEVEL. JESSE C. PEARCE, Sullivan, Ill., assignor of one-half to Henry A. Frederick, Kirksville, Ill. Filed Apr. 10, 1923. Serial No. 631,136. 1 Claim. (Cl. 33—213.)

A level comprising a base, posts rising from the base at the ends thereof, one of said posts being provided with a vertical slot opening through its front and rear faces and having arcuate slots in its side walls and provided upon its front face with graduations, a level indicator arranged transversely in the base adjacent the opposite post, a beam pivoted at one end in the upper end of the last-mentioned post and having its opposite end adapted to play in the vertical slot of the post having graduations and having its end arranged to co-operate with said graduations, a securing bolt carried by the last mentioned end of the beam and adapted to play in the arcuate slots of said post, means carried by said bolt for securing the end of the beam at any desired position of the beam relative to the post, and a level indicator fitted in the upper side of the said beam at the center of the same.

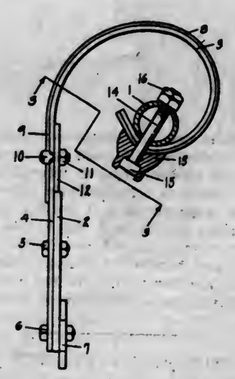
1,483,243. AUTOMATIC MINE-SHAFT GATE. ROBERT QUIGLEY and JAMES CUNNINGHAM, Portage, Pa. Filed Aug. 21, 1922. Serial No. 583,294. 5 Claims. (Cl. 187—54.)



3. An automatic gate operating mechanism for mine shafts comprising a motor for moving said gate; a reversing switch controlled by the cage in said shaft for controlling the direction of rotation of said motor; and a two way switch controlled by said gate interposed between said reversing switch and motor, adapted to alternately break the circuit from said reversing switch for operating said motor in one direction, and to make the circuit from said reversing switch preparatory to operating said motor in the other direction.

1,483,244. MACHINE FOR TREATING TOBACCO STEMS. LAURITS T. RASMUSSEN, Council Bluffs, Iowa, assignor of one-half to Niels K. Skriver, Omaha, Nebr. Filed Mar. 20, 1922. Serial No. 545,266. 4 Claims. (Cl. 131—58.)

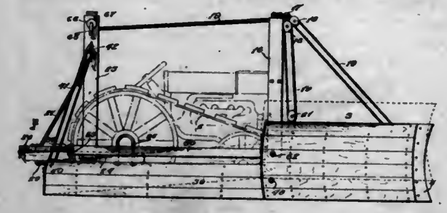
4. In a tobacco-stem treating machine, a pair of revoluble cylinders each being provided with a circular channel having projections therein, a pair of revoluble rollers provided with engaging, rugose collars each being disposed at the side of a cylinder with its collar disposed in the channel of a cylinder, and means for moving the cylinders to permit the collars of the rollers to engage the projections in the channels of the cylinders.



1,483,245. POWER-TRANSMITTING MECHANISM. HARRY RALPH RICARDO, London, England. Filed June 30, 1922. Serial No. 572,007. 1 Claim. (Cl. 74—71.)

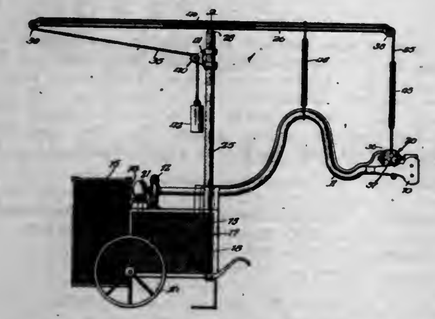
In mechanism of the class described, the combination with the crank shaft of a multicylinder reciprocating engine, of means for transmitting power without torque irregularities from this crank shaft to a member to be driven, said means including a transmission shaft arranged in substantial parallelism with the crank shaft and floatingly mounted so as to transmit torque only,

gearing connecting this transmission shaft with the crank shaft at a point intermediate in the length of the cranked portion, said transmission shaft being of resilient material to damp out torsional vibrations.



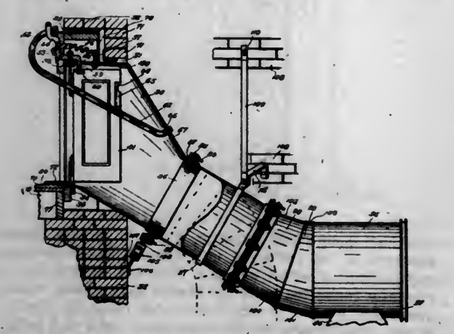
1,483,246. SPRING-SCRAPER CONSTRUCTION. FRED N. ROOT, Kalamazoo, Mich. Filed May 16, 1922 Serial No. 561,548. 4 Claims. (Cl. 37—143.)

1. The combination of a rocker shaft, a series of blade springs with flat straight end portion, with curved engaging portions suitably notched and clipped to the said rocker shaft by cross clip bar secured by cross bolts, the said springs being conformed and clamped together by U-bolts, and a scraper blade structure secured to the straight portion thereof, all coacting substantially as described for the purpose specified.



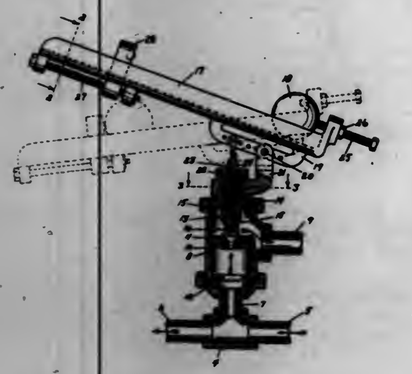
1,483,247. SNOWPLOW. WILLIAM J. ROWE, Portland Me., assignor to Westbrook Garage & Machine Company. Filed Apr. 21, 1923. Serial No. 633,685. 9 Claims. (Cl. 37—44.)

1. A snow plow comprising a push element, means for securing the push element upon the front end of a power unit, a cross bar secured to the push element, a rigid point, coupling pins carried by the point and engaged with the ends of the cross bar and the front end



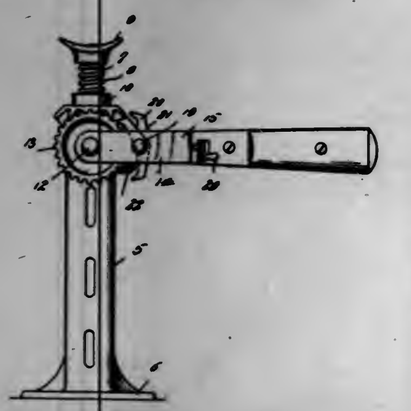
of the push element for vertical movement relative thereto, and means for raising and lowering the point bodily.

1,483,248. COTTON PICKER. LOUIS CARROLL STUKENBORG, Chicago, Ill., assignor to Frederick W. Stukenborg, Chicago, Ill. Filed Apr. 14, 1919. Serial No. 290,032. 25 Claims. (Cl. 56—32.)



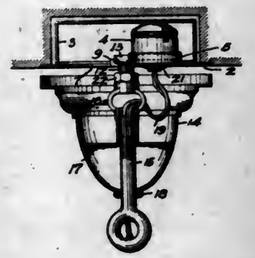
1. A cotton picker comprising interacting picker brushes and a rotative, self-clearing take-off device in contact with, and having its axis parallel to the axes of said brushes.

1,483,249. TUBULAR FIRE ESCAPE. ARTHUR H. STURGES, Omaha, Nebr. Filed Oct. 15, 1923. Serial No. 668,703. 6 Claims. (Cl. 227—7.)



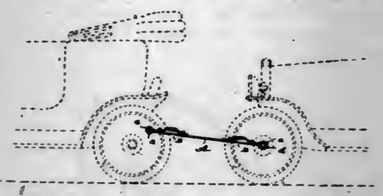
1. In a fire escape, a body portion adapted to be mounted at an opening in a building, a pair of doors hinged at opposite sides of the opening and arranged to swing into the body portion of the fire escape, and a bar disposed substantially in alinement with the entrance to the fire escape and projecting through said doors, said bar being supported at one end above the doors and at its other end having connection with said body portion beyond the doors.

1,483,250. VALVE. ROBERT E. STURMAN, Minneapolis Minn. Filed Dec. 4, 1922. Serial No. 604,722. Claims. (Cl. 251—148.)



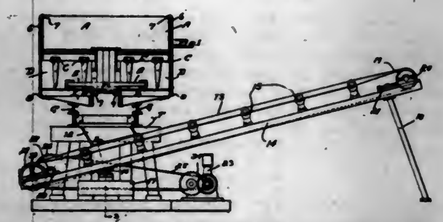
1. In a valve having a cylindrical port, a plunger or core slidably mounted in alignment with said port so as to engage therein during part of its movement, means for yieldingly keeping said core in engagement with the port, and automatic means for materially reducing the closing pressure on said plunger when the same has been removed from engagement with said port.

1,483,251. VEHICLE JACK. ANGUS A. SWAIM, Sunset, Tex. Filed Feb. 28, 1923. Serial No. 621,942. 1 Claim. (Cl. 254—103.)



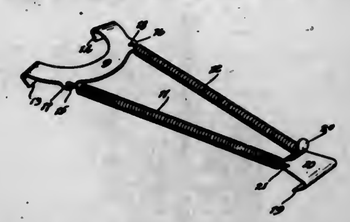
A jack comprising a casing, a screw plunger movably mounted in the casing, a nut mounted upon the casing and having a thread engaged with the plunger, a yoke pivotally connected with the casing, gear wheels mounted upon the pivots of the yoke and engaging the nut double ended dogs pivotally mounted upon the arms o the yoke, other dogs slidably mounted upon the arms of the yoke and engageable with the first mentioned dogs at points opposite the pivots upon which the first mentioned dogs are mounted, the second mentioned dogs having beveled edges which are reversely disposed, cranks connected with the second mentioned dogs and a rod pivotally connected with the said cranks and holding the beveled surfaces of the second mentioned dogs in reverse position with relation to each other.

1,483,252. DETACHABLE ELECTRIC FIXTURE. WHITMAN SYMMES, San Francisco, Calif., assignor to Thomas Day Company, San Francisco, Calif., a Corporation of California. Filed Nov. 8, 1921. Serial No. 513,661. 4 Claims. (Cl. 240—85.)



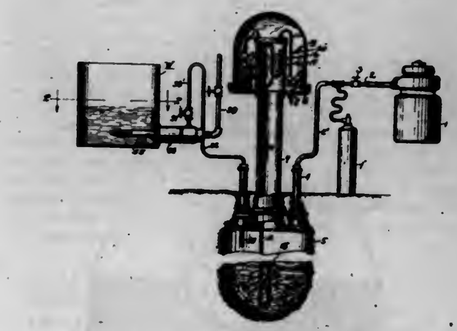
1. The combination in a removable electric lighting fixture of a ceiling plate having a slot and a recess therein, an electric outlet fitting disposed at the bottom of said recess, an electric lighting fixture, a headed stem on said fixture adapted to engage in said slot and an electric plug fitting attached to the fixture and adapted to seat in said recess and engage in said outlet fitting.

1,483,253. TOWING OR PULLING DEVICE. JOHN HOWARD TABLER, Washington, D. C. Filed June 6, 1922. Serial No. 566,261. 4 Claims. (Cl. 280—33.14.)



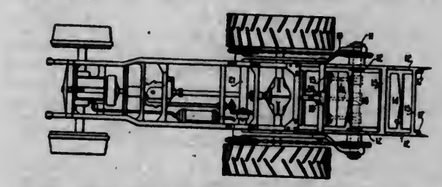
1. A pulling device comprising a flexible strap in connection with buckles each formed in a single piece having side pieces, end cross-pieces and intermediate cross-bars, one of said cross-bars being slightly raised with respect to the other, whereby an end portion of the strap is threaded through and beyond the buckle formed into a loop and the terminal again threaded in reverse direction through said buckle for binding engagement therewith and with another portion of the strap therein, providing engaging loops at the ends of the strap.

1,483,254. UNLOADING APPARATUS. DAVID TERRY, Sacramento, Calif. Filed May 9, 1922. Serial No. 559,503. 6 Claims. (Cl. 214—45.)



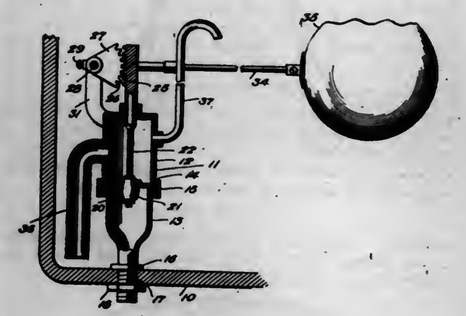
1. In combination with a bottom dump car, a chute having an inclined bottom and adapted to lie transversely under the car with one end near the side thereof, a hook rod adapted for hooking to the edge of the car and connected to the end of the chute.

1,483,255. LID HOLDER. FRANK TONGE, Moose Jaw, Saskatchewan, Canada. Filed May 1, 1923. Serial No. 635,914. 2 Claims. (Cl. 53—8.)



1. A pot holder comprising a substantially U-shaped flat metallic clip having the ends thereof terminating in downturned hook like catches and provided at opposite sides of the body part thereof with eyes, a further clip formed from a flat metallic plate having one end downturned to provide a hook like catch and the other end upturned to provide a finger grip and fitted at the sides adjoining the grip with eyes and diverging coil springs connecting the latter clip with the former, the springs being attached at the eyes.

1,483,256. METHOD OF AND MEANS FOR CHLORINATING FLUIDS. JAMES W. VAN METER, San Francisco, Calif., assignor to Justinian Caire Company, a Corporation of California. Filed Jan. 20, 1922. Serial No. 530,637. 18 Claims. (Cl. 23—3.)



1. In a method of introducing chlorine into a fluid the step of introducing chlorine into the fluid in the form of a fluid mixture and subjecting the mixture to the action of centrifugal force.

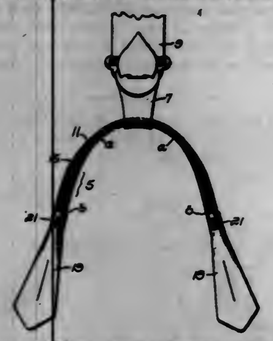
1,483,257. DITCHING MACHINE. EUGEN LUDWIG VON BALLUSECK, Godesberg-on-the-Rhine, Germany. Filed Aug. 21, 1922. Serial No. 583,270. 3 Claims. (Cl. 37—94.)

1. A ditching machine including a rotatable shaft, a ditching wheel thereon embodying a plurality of movable ditching cutters adapted to be adjusted concentrically with the shaft after the ditching action and a remover arranged entirely within the ditching wheel and against the trajectory plane of the inner surfaces of the ditching cutters in such manner and having such shape as to remove that portion of the elevated soil which adheres to the ditching cutters without interfering with the velocity of the soil as it is thrown beyond the ditch.

1,483,258. VALVE. EDWARD J. WILLMAN, Sr., Louisville, Ky. Filed Feb. 14, 1921. Serial No. 444,789. 2 Claims. (Cl. 137—104.)

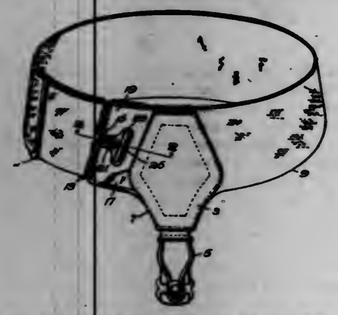
2. A valve comprising upper and lower casing sections detachably held together and divided by a transversely extending partition wall integral with the lower end of the upper section, said wall being formed with a central aperture surrounded by a downwardly facing valve seat, a valve engaging said seat and provided with a stem projecting upwardly through the top wall of the upper casing section, a rack carried by the projecting portion of the stem, a pair of offset brackets carried by the upper casing section, a rotatable shaft journaled in said brackets, a gear segment fixed to the shaft between the brackets for engaging said rack, an arm fixed to one end of the shaft and a float carried by the said arm.

1,483,259. TRANSMISSION BAND. WILLIAM HOWARD WYLAND, Sidney, Ohio. Filed Aug. 21, 1922. Serial No. 583,349. 9 Claims. (Cl. 188—259.)



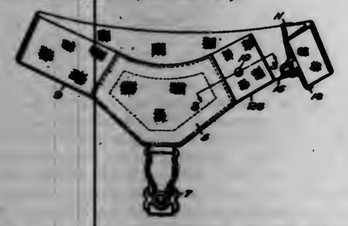
7. As a new article of manufacture, a transmission band lining of a width equal in width to the combined widths of the drums of a transmission, and equipped lengthwise of its upper edge with means to be engaged by the compressing lugs, said means being movable when engaged by said lugs, said movement causing separation of the lining joint and consequent slight movement of the lining when contracted, and inter-engagement of the joint upon retraction of the elements.

1,483,260. GARMENT SUPPORTER. ALFRED M. ZIEGLER, Newton, Mass. Filed Dec. 14, 1921. Serial No. 522,258. 8 Claims. (Cl. 241—27.)



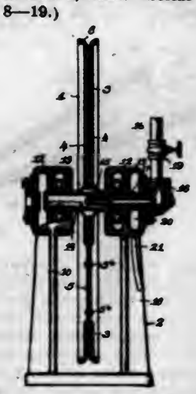
1. In an article of the class described an element of flat flexible strip, a rubber spring and a braided covering

encircling the spring, said element being secured to the covering and suspended in strain-transmitting relation



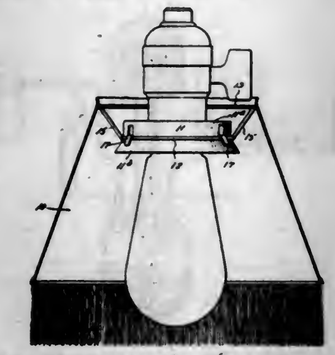
therefrom by stitching passing through the covering at separated points around the end of the spring.

1,483,261. GARMENT SUPPORTER. ALFRED M. ZIEGLER, Newton, Mass. Filed Jan. 14, 1922. Serial No. 529,376. 4 Claims. (Cl. 241—6.)



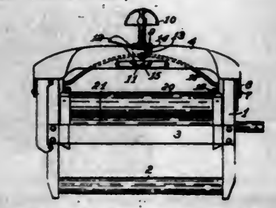
1. A garter comprising a pad, an elastic band secured to one side of the pad and carrying an element of a separable fastener, a doubled loop of similar material, a piece of inextensible material within the loop, said piece and the ends of the loop being secured to the other side of the pad and a cooperating fastener element having an engaging portion presented at the face of the loop within the margins thereof and secured to said piece.

1,483,262. GARMENT SUPPORTER. ALFRED M. ZIEGLER, Newton, Mass. Filed Mar. 8, 1922. Serial No. 542,011. 4 Claims. (Cl. 241—6.)



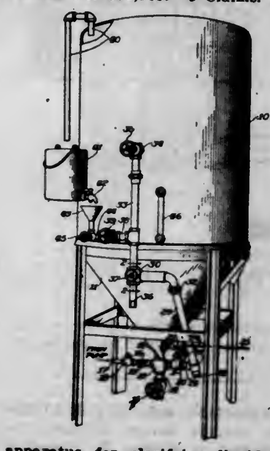
1. In a garter, a joining element, a textile web extending therefrom, a loop of textile material matching said web extending therefrom in the opposite direction, a fastener received in said loop and having a base received within the margins thereof and covered thereby and a stud-projecting therethrough, and means within the loop for securing the fastener in strain transmitting relation to said joining element.

1,483,263. DYEING MACHINE. EDWARD ALLEN, Chicago, Ill. Filed Dec. 1, 1922. Serial No. 604,186. 7 Claims. (Cl. 8—19.)



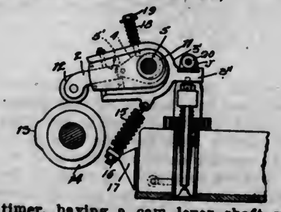
1. In a dyeing machine, the combination of a wheel provided with spaces extending radially from its axis and around its periphery, means for supplying dye to said space adjacent said axis, and a layer of absorbent material in said space.

1,483,264. SHADE HOLDER. LAURITZ W. ANDERSEN, Waterbury, Conn. Filed Feb. 6, 1922. Serial No. 534,458. 5 Claims. (Cl. 240—128.)



1. A device of the kind described comprising a resilient collar, a band surrounding said collar and arms connecting said collar and band, said band having tongues punched therefrom.

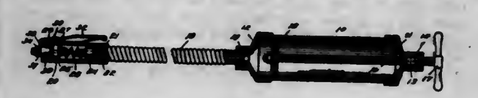
1,483,265. WRINGER. OSCAR T. ANDERSON, Waterloo, Iowa, assignor to Chamberlain Machine Works, Waterloo, Iowa. Filed Dec. 13, 1921. Serial No. 522,040. 3 Claims. (Cl. 68—32.)



1. The combination with spaced frame-uprights of a wringer, of parts hinged to the uprights to swing to and from each other laterally, coacting rollers, resilient means bearing upon said rollers, adjustable means mounted on one of said parts to releasably tension said resilient means, and means for releasably locking said parts when closed together.

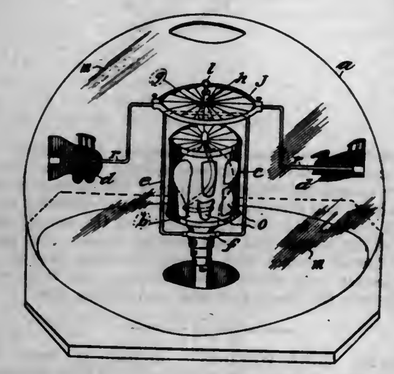
1,483,266. APPARATUS FOR CLARIFYING LIQUIDS. LOUIS J. ARCHAMBAULT, Chicago, Ill. Filed Dec. 4, 1922. Serial No. 604,960. 6 Claims. (Cl. 210—58.)

1. An apparatus for clarifying liquids embodying a container having a conical bottom provided with an outlet at the lowest point of said bottom, a discharge conduit connected with said outlet, a valve for controlling the outlet, means for supplying to the tank a clarifying solution, a draw off pipe for the tank having a plurality of communications with the tank at different levels, valves individual to such communications for controlling them, a discharge pipe communicating with the said draw off pipe at a point spaced from the delivery end of the said draw off pipe, a three way valve at the junction of the discharge and draw off pipes, means establishing direct communication between the first recited outlet and the said discharge pipe, and means for controlling the last recited means.



1,483,267. CAM-LEVER TIMING BLOCK WITH CONNECTIONS. AXEL AUGUST ASPLUND, Auburn, N. Y. Filed Feb. 17, 1920, Serial No. 359,410. Renewed July 21, 1923. 9 Claims. (Cl. 123—90.)

1. In a timer, having a cam lever shaft with an eccentric for lifting a cam lever mounted thereon, a timer block slidable in one end of said cam lever, and a link connecting said timer block with the lever shaft to retain the timer block at a constant radial distance therefrom.



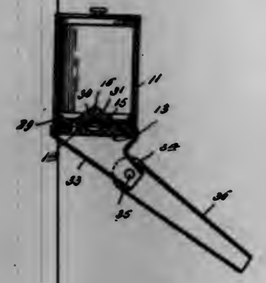
1,483,268. GREASE GUN. JOHN F. BALDAUF, Casper, Wyo. Filed Apr. 10, 1922. Serial No. 551,224. 2 Claims. (Cl. 285—173.)

2. In combination, a tubular body adapted to be connected with a pump cylinder and provided with an enlarged end terminal portion to form a conoidal shaped socket and a shoulder, a spring controlled apertured valve disk seated against said shoulder, a hollow union comprising a conoidal shaped portion seating in said socket and formed with a bore, said union having a spring con-

trolled globular valve arranged in said bore and further provided with a peripheral groove, and means carried by said body and engaging in said groove for connecting the union to said body whereby said valve will normally close the aperture in said disk.

1,483,269. ADVERTISING APPARATUS. WILLIAM GEORGE BARKER and FREDERICK ORLANDO READ, London, England. Filed Jan. 8, 1923. Serial No. 611,501. 5 Claims. (Cl. 40—40.)

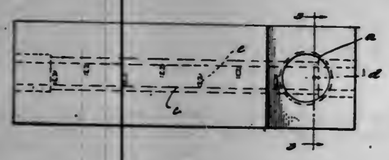
1. Advertising apparatus of the kind described comprising a source of light, a colored translucent cylinder rotatable on the axial plane about said light, an air vane pivoted in a cup shaped bearing in the axial plane of said cylinder and having a plurality of horizontal arms with downward offsets, opaque figures secured to said arms, means for causing rotation of said cylinder and figures by the heat from said lamp and a frosted shade enclosing said apparatus.



1,483,270. COMBINED SULPHIDATION AND FLOTATION OF ORES, ETC. FRANK E. BARROWS, Upper Montclair, N. J. Filed Jan. 24, 1917, Serial No. 144,116. Renewed May 24, 1923. 6 Claims. (Cl. 83—85.)

1. The method of effecting the flotation of non-sulfide metal values from ores, slimes, and other metal-bearing materials which comprises subjecting such materials containing values in solution to the combined sulfidizing and flotation action of a mixture of hydrogen sulfide and air; substantially as described.

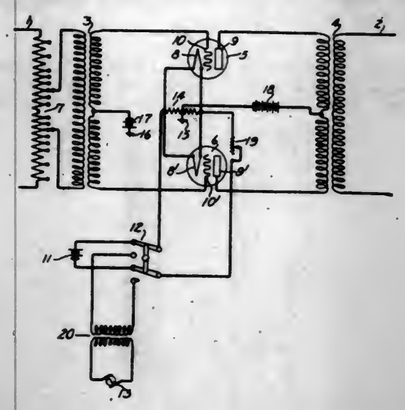
1,483,271. PLANTER ATTACHMENT FOR WALKING CULTIVATORS. JOHN THADDAUS BECK, Embry, Miss. Filed Mar. 7, 1923. Serial No. 623,357. 1 Claim. (Cl. 221—138.)



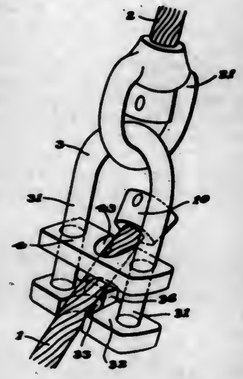
In combination, a hopper having a bottom formed with an upwardly projecting annular rib and formed with an outlet opening extending through said rib, said bottom having a central upwardly projecting stud, a seed feeding plate rotatably mounted on said stud and having bearing contact with the upper edge and extend-

ing beyond the outer edges of said rib, said plate being formed with a plurality of seed receiving openings adapted for successive registering with the seed outlet opening in said bottom, a ring gear removably connected to said seed feeding plate beyond the rib and supported by said plate, means cooperating with said gear for rotating said seed feeding plate, and a seed holder plate mounted for sliding movement in the hopper lengthwise thereof and having bearing contact with the inner side walls

of said hopper and an annular bearing face contacting with the upper face of said seed feeding disc, said plate having an annular recessed part over the annular rib on the bottom, and a centrally and upwardly extending cone shaped portion for directing seeds from the central portion of the hopper into said annular recess, said plate being further formed with a seed delivering opening in the recessed part adapted for delivering seed from said hopper into the opening of said seed feeding disc.



1,483,272. TUBE WELDING. RICHARD O. BERG, Detroit, Mich., assignor to Michigan Steel Tube Products Co., Detroit, Mich., a Corporation of Michigan. Filed Mar. 30, 1922. Serial No. 547,975. 5 Claims. (Cl. 158—27.4.)

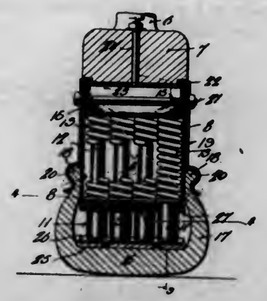


1. A welding tip having a relatively large number of jet passages having the jet passages drilled obliquely to both sides of a plane running longitudinally of the bottom of the tip and perpendicularly thereto, all of said jet passages having discharge openings arranged in line, and coinciding with said longitudinal plane.

1,483,273. CIRCUIT FOR HEATING THE FILAMENTS OF AUDIONS. DAVID G. BLATTNER, Bogota, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 4, 1920. Serial No. 414,449. 8 Claims. (Cl. 179—171.)

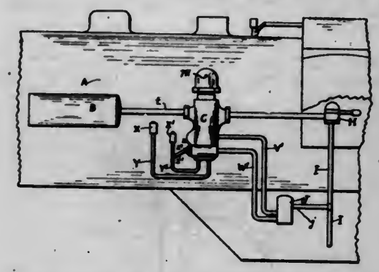
1. In a wave repeating and amplifying system, the combination of electron-discharge devices each having a cathode and an anode connected in opposition, a source of alternating currents for heating said cathodes, and a compensating circuit common to said cathodes, for preventing the alternation in the cathode heating currents from causing current variations in the output circuits of said devices.

1,483,274. CONNECTING MEANS FOR LINES. HENRY A. BOUSCHOR, Victoria, British Columbia, Canada, assignor of one-half to William E. Bouschor, Seattle, Wash. Filed Dec. 29, 1922. Serial No. 609,732. 4 Claims. (Cl. 24—123.)



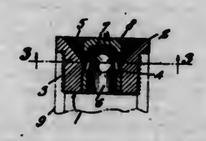
1. A connecting means for lines comprising a link secured to one line and having one end provided with a side-opening notch adapted to receive the other line, and a keeper bar slidable upon the side bars of the link and having a side opening notch complemental to the notch in the link to form therewith an enclosed line-receiving aperture, the line which is to be secured thereby having a terminal knob adapted to be passed between the side bars of the link and between said keeper bar and the notched end of the link.

1,483,275. RESILIENT WHEEL. EDWARD J. BRANDT, Watertown, Wis. Filed Nov. 11, 1916. Serial No. 130,776. Renewed June 30, 1923. 25 Claims. (Cl. 152—8.)



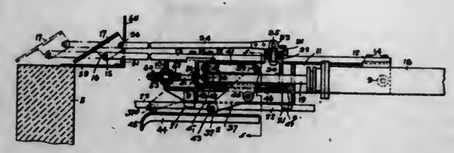
8. A spring wheel including a felly provided with annular recesses in its sides, an annular inner casing portion carried by the felly, spring plungers housed within the casing and projecting from the outer peripheral wall

thereof, a flexible casing disposed about the projecting ends of the plungers with its inner edge portions projecting inwardly of said peripheral wall, annular plates



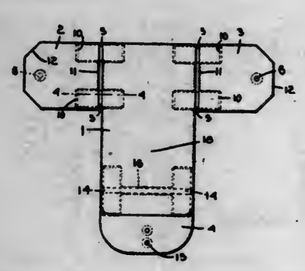
on the side walls of the first named casing portion for securing the flexible casing portion thereto and inturned flanges on said annular plates engageable in the recesses of the felly.

1,483,276. SELECTIVE APPLICATION VALVE FOR AUTOMATIC TRAIN-CONTROL APPARATUS. ANDREW J. BROOKING, Chicago, Ill. Filed Sept. 11, 1922. Serial No. 587,436. 10 Claims. (Cl. 303—18.)



1. A casing provided with a chamber in communication with the air supply of a train, means to direct air under pressure to said chamber, in combination with an additional chamber in said casing, a movably mounted member of two diameters in said first chamber, said part of smaller diameter extending through said first chamber, and a seat in said first chamber arranged to coact with said movable member to cut off communication between said chambers.

1,483,277. SPRINKLER HEAD. STOCKTON BROOME, Jacksonville, Fla. Filed July 12, 1922. Serial No. 574,459. 2 Claims. (Cl. 299—141.)

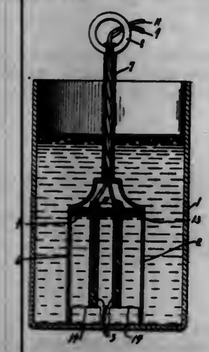


1. A sprinkler head including a body having a bore extending therethrough flared at one end, a plug seated firmly within the bore and having a closed end inclosed within the flared portion of the bore and surrounded by a substantially V-shaped channel, there being a plurality of radial openings within the plug, each opening being partly closed by the wall of the bore and having its remaining portion opening into the said channel thereby to direct a jet segmental in cross section against the wall of the flared portion of the bore and between said wall and the plug.

1,483,278. CHARGING DEVICE. JOHN N. CAREY, Oakmont, Pa. Filed Apr. 13, 1921. Serial No. 460,941. 7 Claims. (Cl. 214—18.)

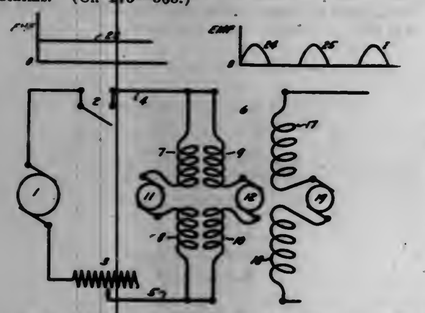
1. In a charging device, the combination of a carriage, means for advancing and withdrawing the same, a supplemental carriage on said first-named carriage, a forwardly tiltable member, connections between said member and said first-named carriage and between said member and said supplemental carriage, and automatic means for moving said supplemental carriage relatively to said first-named carriage whereby by movement of said supplemental carriage the tiltable member is operated.

1,483,279. BILL FOLDER. CHARLES C. CHENEY, Charlestown, Mass. Filed Apr. 26, 1921. Serial No. 464,593. 1 Claim. (Cl. 150—38.)



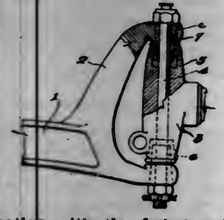
A bill folder comprising a body portion having a length substantially equal to two-thirds the length of paper currency and having two pockets in each edge thereof adjacent one end, two flaps each also having two pockets in one edge, elastic tapes for connecting the flaps and the body, one end of each tape occupying a pocket of a flap and the other end occupying a pocket of the body, said tapes being secured to the flaps and body by stitching located at the inner ends of the pocket, whereby each tape can extend throughout its entire length, means for detachably connecting said flaps when they are folded over onto the body and a flap at the opposite end of the body portion adapted to be folded over onto the folded body and detachably secured thereto.

1,483,280. SELF-CONTROLLING HEATER. FLOYD H. CHERRY, Berkeley, Calif. Filed Jan. 10, 1923. Serial No. 611,890. 3 Claims. (Cl. 219—40.)



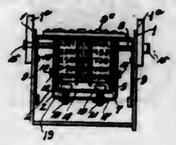
1. A self-controlling electric heater for water or the like, comprising two conductors disposed in spaced relation within the water, means for passing a current from one conductor to the other through the intervening body of water whereby the latter is heated and a hood cover-

ing the conductors adapted to entrap the steam generated by the heated water whereby the water is forced out of the space between the conductors and the flow of



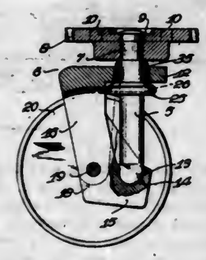
current reduced, said hood being provided with a small vent for allowing air entrapped during the initial operation to escape.

1,483,281. METHOD AND APPARATUS FOR TRANSFORMING DIRECT CURRENT. GEORGE B. COLEMAN, San Francisco, Calif., assignor to Coleman X-Ray Company, San Francisco, Calif., a Corporation of California. Filed Oct. 16, 1919. Serial No. 331,034. 10 Claims. (Cl. 175—363.)



1. In a transformation system a primary winding adapted to energization by a direct current, said winding divided at an intermediate point, and a secondary winding from which an induced current is derived, in combination with a device connected to the termediate terminals of the primary winding adapted to periodically interrupt and complete the circuit of the said primary winding.

1,483,282. BOLT SLEEVE. EDWARD C. COSTON, near Skidmore, Mo. Filed July 22, 1921. Serial No. 486,861. 1 Claim. (Cl. 280—96.1.)

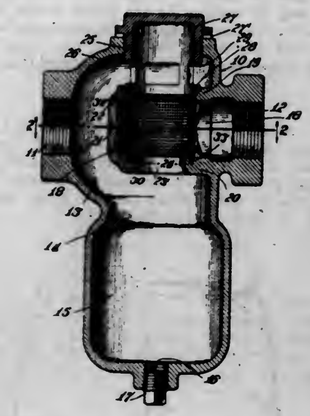


The combination with the forked end of a vehicle front axle, a spindle head, and a spindle bolt, of a substantially frusto-conical bearing bushing embedded in the ends of the spindle and provided with a bore, a portion of which is relatively large and tapered with respect to the spindle bolt, a substantially frusto-conical bearing sleeve extending through the arms of the forked end of the axle and into the tapered portion of the bore of said bearing bushing.

1,483,283. HAND STAMP. WILL T. CRESSLER, Cincinnati, Ohio. Filed Jan. 20, 1922. Serial No. 530,699. 5 Claims. (Cl. 101—105.)

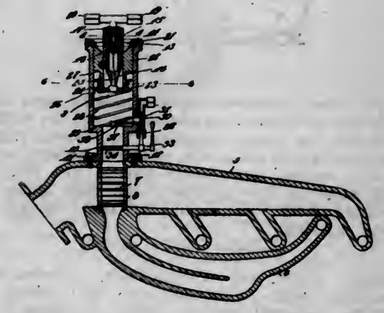
1. In a printing device, a member provided with fixed type characters, a second member associated with the first member and having movable type characters, said second member consisting of a plurality of sections, one of said sections being movable relatively to the other section, and resilient means cooperating with said sections for permitting the movable section to align the movable type characters with the fixed type characters of the first mentioned member.

1,483,284. CASTER. HUGH A. CURRIE, Chicago, Ill. Filed Nov. 18, 1921. Serial No. 516,041. 6 Claims. (Cl. 16—47.)



1. In a caster of the class described, a stem, a wheel carrying frame mounted thereupon, a collar removably mounted upon the stem and cooperable with the frame to hold the same against displacement and means engageable with the stem and said collar to hold the collar in place upon the stem.

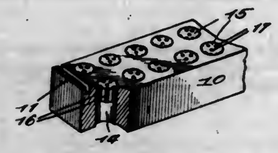
1,483,285. LIQUID STRAINER. CHARLES J. DE COSTER, Decatur, Ill., assignor to A. W. Cash Company, Decatur, Ill., a Corporation of Delaware. Filed May 25, 1921. Serial No. 472,321. 6 Claims. (Cl. 210—165.)



1. A strainer fitting having an inlet chamber, an outlet chamber extending into the inlet chamber and communicating therewith only through aligning openings in the top and bottom walls of the outlet chamber, said walls of the outlet chamber being spaced from the top and bottom walls of the inlet chamber, and the top wall of the inlet chamber having an opening of a size to permit the passage of a screen, a screen-cylinder extending between the top and bottom walls of the outlet chamber, and a plug for said inlet-chamber top-wall open-

ing having a depending open bottomed skirt provided with apertures in the plane of the water flow space above the outlet chamber and arranged to coact, at its bottom

edge, with the screen and the opening through the top wall of the outlet chamber, to hold said screen fixedly in position.

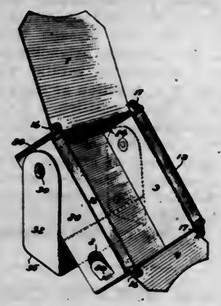


1,483,286. FUEL-MIXING DEVICE. RUAL L. DE LA MATER, San Diego, Calif. Filed May 29, 1922. Serial No. 564,538. 3 Claims. (Cl. 123—25.)

1. A fuel mixing device comprising a housing, a stationary nozzle supported within the upper end of the body portion, a movable valve supporting member operating within the housing, a coiled spring disposed within the housing and contacting with the valve supporting member for normally urging the valve supporting member to the limit of its upward movement, a needle valve carried by the valve supporting member and adapted to restrict the passage of fluid through the nozzle, and means disposed within the path of travel of the fuel passing through the housing for delivering water to the fuel, and means for controlling the passage of fuel through the housing.

1,483,287. FURNACE AND GRATE THEREFOR. WILLIAM G. DOBBS, Auburn, N. Y. Filed Apr. 16, 1923. Serial No. 632,409. 3 Claims. (Cl. 126—163.)

3. As an article of manufacture, a solid grate bar, rectangular in cross section having flat sides and flat upper and lower faces, the grate bar being formed with a plurality of apertures extending entirely through the grate bar and from the upper to the lower face thereof, each aperture being downwardly tapered, downwardly tapering plugs disposed in said apertures and fitting closely against the walls thereof, each plug having pe-

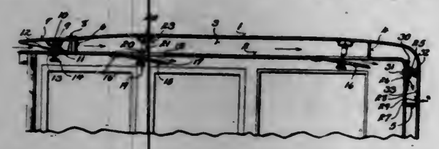


ripheral, longitudinally extending grooves, and a plurality of openings extending entirely through the plug from end to end.

1,483,288. GRAVE LINING. JAMES M. DODDRIDGE, Milton, Ind., assignor to J. M. Doddridge & Sons, Milton, Ind., a Corporation of Indiana. Filed May 13, 1922. Serial No. 560,723. 1 Claim. (Cl. 27—29.)

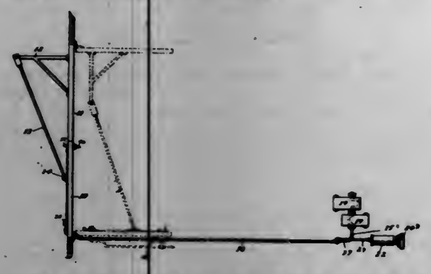
A grave lining formed of oil-cloth and comprising in combination, a skirt portion 1, a head portion 2 with its back to the back of the skirt portion, a loop portion 5, two rows of stitching connecting the skirt portion and the head portion, the major portion of the head being then turned to bring said loop on the other side of the skirt, a hem portion 7 located on the rear, and a plurality of eyelets securing said hem, the front of the head portion, and the two thicknesses of material therebetween, and means for suspending said lining in a grave by the insertion of spikes through said eyelets, all substantially as set forth.

1,483,289. DISPLAY CARTON. WILLIAM M. DOERING and CHARLES J. DOERING, Cincinnati, Ohio. Filed June 8, 1922. Serial No. 566,846. 9 Claims. (Cl. 206—44.)



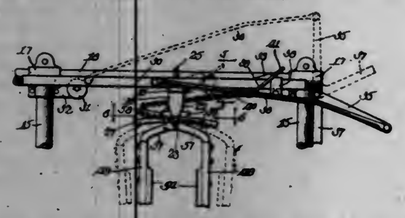
1. The combination with a carton formed by folding, to provide a bottom, sides and two overlappable covers, a collapsible band attached to said carton, and adapted to circumscribe and support the sides thereof, and a collapsible combined prop and cover-retaining means, attached to said band, adapted to retain said covers when closed and overlapped, and adjustable for the support of said carton in contents-displaying position.

1,483,290. AUTOMOBILE VENTILATOR. ERNEST EGGIMANN, Mount Horeb, Wis. Filed Dec. 12, 1922. Serial No. 606,404. 1 Claim. (Cl. 98—22.)



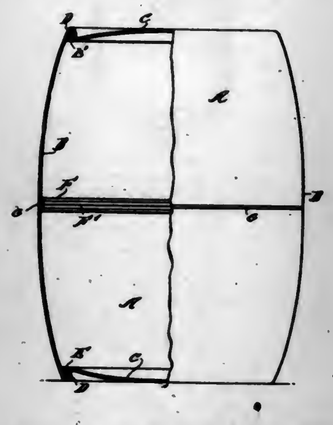
A closed automobile having a double walled top providing an air passage therebetween, a screen mounted transversely of said passage adjacent the front, an adjustable closure for the front end of said passage located in front of said screen, a ventilator providing a variable opening through the lower of the top walls for placing

the passage in communication with the interior of said automobile, a partition interposed between said walls rearwardly of said ventilator for closing the passageway



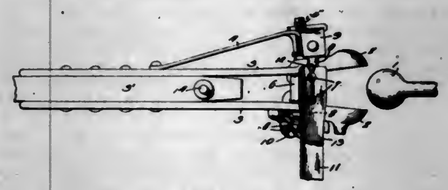
between said walls, and an adjustable rear ventilator for allowing air to flow outwardly from the rear of said automobile.

1,483,291. DOOR OPENER. ELMER LEO EMERSON, Marshalltown, Iowa. Filed Aug. 10, 1922. Serial No. 580,864. 3 Claims. (Cl. 268—9.)



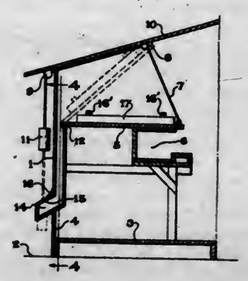
1. In a device of the class described, the combination of a hinged door, a door operating rod, means for operating said rod, said rod having one end extended to a point adjacent to the inner side of the door when it is closed and then parallel with the inner face of the door and then upwardly, a bracket secured to the door and having an opening therein through which the upwardly extending end of the door operating rod is projected, said opening being large enough to permit a limited movement of the upwardly extending end of the operating rod both in a direction parallel with the inner face of the door and in a direction at right angles to the door when it is in its closed position, a door latch secured to the door, and means operated by the movement of the door operating rod within the bracket for releasing said latch, said parts being so arranged that after the latch has been released a continued pull upon the operating rod will swing the door open, a latch mounted on the outer surface of the door, and a coacting latch device secured to the door operating rod to co-operate therewith.

1,483,292. COW STANCHION. JEREMIAH C. FITZGERALD, Dubuque, Iowa. Filed Jan. 5, 1923. Serial No. 610,760. 9 Claims. (Cl. 119—150.)



6. A cow stanchion comprising a pair of upright stanchion bars, a sway rod mounted for horizontal movement near the upper ends of said bars, a movable catch located on said rod, a loop encircling the rod and having a looped extension, a flexible connection attached at one of its ends to the upper end of one of the stanchion bars, operatively engaging the upper end of the other stanchion bar and attached at its other end to said loop for the purpose of locking the stanchion bars when the loop is engaged by the catch and so arranged that by moving the loop sidewise, till its looped extension coincides with the catch, the latter may pass through the looped extension and release the stanchions.

1,483,293. SHEET-METAL BARREL. HENRY J. FOSTER and EMIL GRUENFELDT, Cleveland, and GEORGE C. BRAINARD, East Cleveland, Ohio, assignors to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 10, 1919. Serial No. 270,474. 5 Claims. (Cl. 220—80.)

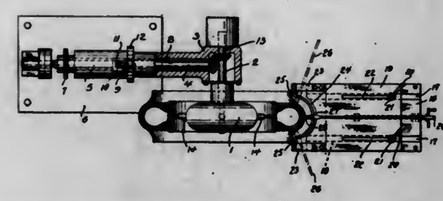


1. The herein described method of making sheet metal barrels which consists in providing two tub like sections having unturned edges, connecting a reinforcing ring to the interior edge of one section so that it projects beyond said edge, bringing said sections together with their unturned edges in close proximity and then filling the intervening space with welding material, uniting the sections and ring.

1,483,294. JOINT OR CONNECTION. GEORGE FOX, Lexington, Nebr. Filed July 24, 1920, Serial No. 398,663. Renewed Dec. 29, 1923. 6 Claims. (Cl. 287—89.)

4. A device of the character described, comprising a support; coacting arms mounted at one end upon the support, their outer ends being free; a member-engaging and retaining means on the outer end of each arm; a spreader disposed between the arms and having edge portions adapted to engage the inner surface of the arms and spread them apart when actuated; a member connecting the spreader and one of the arms; a resilient pressure device normally exerting pressure on one of the arms and tending to force it inwardly; and means for operating the spreader.

1,483,295. POULTRY HOUSE. EDWARD E. GARNER, Jacumba, Calif. Filed Aug. 9, 1922. Serial No. 580,732. 3 Claims. (Cl. 119—21.)

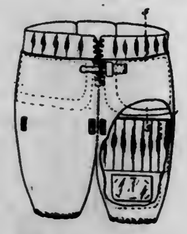


1. The combination, in a poultry house, of a droppings board, a chute to which the droppings board is connected, an outlet receptacle for the chute, a closure therefor, a roost supported from the droppings board, and means normally supporting the droppings board in horizontal position and right angularly with respect to the chute, and means for swinging the board upwardly to deliver droppings therefrom into the chute.

1,483,296. DRILL. FRED A. GILL, Lebanon, Pa. Filed July 26, 1922. Serial No. 577,584. 3 Claims. (Cl. 76—95.)

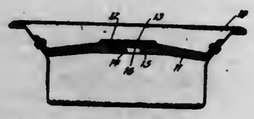
1. A dolly including a shank having a forming end, opposed guiding fingers formed at the forming end of the dolly, said forming end having a transverse groove and having convex surfaces extending from the side edges of the fingers and terminating at points adjacent to the groove.

1,483,297. TIRE-BUILDING APPARATUS. HENRY R. GILSON, New Rochelle, N. Y., assignor to Revere Rubber Company, a Corporation of Rhode Island. Filed Dec. 17, 1920. Serial No. 431,373. 11 Claims. (Cl. 154—10.)



3. Tire stitching apparatus including a lever, a roller supported at one end of said lever, the other end of said lever being manually operable, a semi-circular support for said lever intermediate its ends and shaped to facilitate manual bodily lateral movement of the lever and roller carried thereby.

1,483,298. NEW ALLOY COMPRISING IRON, NICKEL, CHROMIUM, MOLYBDENUM. PIERRE GIRIN, Paris, France, assignor to Societe Anonyme de Commentry, Fourchambault & Decazeville, Paris, France. Original application filed Dec. 9, 1918, Serial No. 265,985. Divided and this application filed Feb. 8, 1922. Serial No. 535,044. 1 Claim. (Cl. 75—1.)

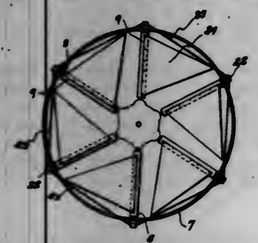


A high nickel ferrous alloy containing nickel, 60 to 70 per cent, chromium, 10 to 15 per cent, molybdenum, 1 to 3 per cent, manganese 1 to 2 per cent and carbon, 0.3 to 0.6 per cent, such alloy having at elevated temperatures great mechanical resistance to chemical agents and susceptible of retaining indefinitely its initial properties, notwithstanding prolonged service.

1,483,299. ATHLETIC PROTECTIVE PAD. HUGO GOLDSMITH, Cincinnati, Ohio, assignor, by mesne assignments, to The P. Goldsmith Sons Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 25, 1922. Serial No. 546,821. 3 Claims. (Cl. 2—122.)

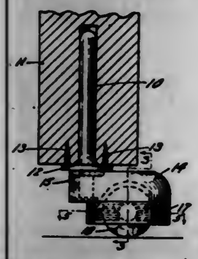
1. In a device of the class described the combination of a flexible sheet, padding mounted over one side thereof, vertical curved reinforcing strips mounted upon the opposite side thereof and extending over substantially one half of said last mentioned side, and a resilient shock absorbing pad mounted on the second half of the second mentioned side of the sheet.

1,483,300. SHIPPING AND IDENTIFICATION TAG HOLDER. JOSEPH L. GROSSMAN, Chicago, Ill. Filed Oct. 15, 1921. Serial No. 507,957. 5 Claims. (Cl. 40—10.)



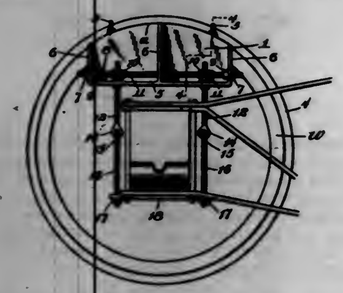
1. A shipping tag and holder of the character described comprising a stiff, flat paper tag having shipping indicia thereon and a ring shaped integral body member having a shallow restricted flanged opening, the walls of which taper slightly outwardly from the restricted entrance to the flange and into which the tag is readily removably pressed to seat against the flange, and means for securing the holder to the article to be shipped.

1,483,301. POWER WINDMILL. GEORGE C. HALKIAS, New York, N. Y. Filed June 6, 1922. Serial No. 566,252. 2 Claims. (Cl. 170—60.)



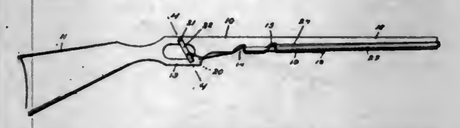
1. A device of the class described comprising a pivoted main bracket, a shaft rotatable therein, an annular rim about said shaft, radially disposed spindles having hollow masts integral therewith, flexible vanes on said masts, pulleys on said spindles, rollers offset from said pulleys

on each of said spindles and adjacent said pulleys, a string connecting a mast pulley with the roller offset from the adjacent mast, the free ends of said vanes be-



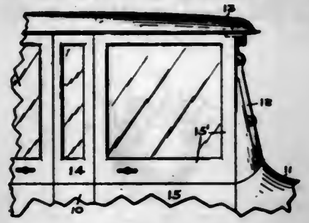
ing secured to said strings, means for furling said vanes upon the mast, and means for automatically unfurling said wind vanes.

1,483,302. CASTER. ALBERT B. HANNA, Denver, Colo. Filed Oct. 14, 1922. Serial No. 594,600. 2 Claims. (Cl. 16—46.)



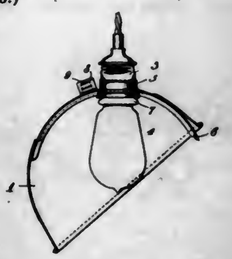
1. A caster comprising, a housing; a shank pivoted therein, and supported upon ball bearings on the top of said housing; a spherical cavity formed in the bottom of said housing eccentric to the axis of said shank; a ball shaped roller carried on two oppositely positioned bearing balls within said cavity, and notches formed in said housing for the reception of said bearing balls.

1,483,303. JOURNAL JACK. LEE U. HAWKINS, Madisonville, Ky. Filed Mar. 31, 1923. Serial No. 629,205 8 Claims. (Cl. 254—34.)



1. A journal jack of the class described comprising a plate, means carried thereby engageable with the wheels to support the device in applied position, an outstanding flange carried by the plate, a second plate adapted to underlie the journal box, shanks operatively engaged with said second plate and disposed upwardly through the flange, members threaded upon the shanks and engaging the flange from above, and means for rotating said members.

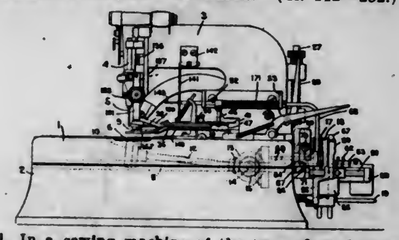
1,483,304. TOY GUN. AUGUSTUS C. HEFFNER, Crowley, La. Filed Oct. 15, 1923. Serial No. 668,711. 10 Claims. (Cl. 124—14.)



1. A device of the character described comprising a body formed as a representation of a gun and including a stock and a barrel portion, the barrel portion being formed at its lower edge with notches defining retaining shoulders, a flexible member secured at one end to the barrel and extending longitudinally of its lower edge, the barrel being adapted to have elastic bands engaged upon the end thereof and stretched whereby their other ends will be disposed at said notches in engagement with the shoulders, the flexible member being drawn into the notches and retained by the bands and the shoulders, and means for applying tension to the flexible member for unseating the bands from the shoulders.

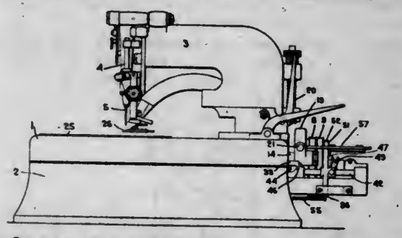
1,483,305. WEATHER STRIP FOR MOTOR-VEHICLE WINDSHIELDS. MATTHEW R. HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation. Filed Apr. 1, 1921. Serial No. 457,775. 6 Claims. (Cl. 296—93.)

1. In a vehicle body, an inclined windshield and inclined posts supporting the same, a weatherstrip fitting between a post and the adjacent side of the windshield, a demountable corner panel supporting the weatherstrip, and means for holding the panel in place, substantially as set forth.



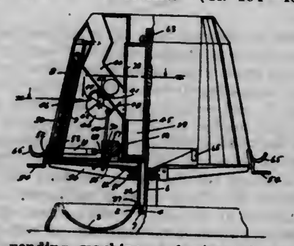
1,483,306. ADJUSTABLE REFLECTOR FOR LAMPS AND THE LIKE. AXEL THEODOR JULIN and OLOF EINAR FRÖDING, Eskilstuna, Sweden, assignors to Aktiebolaget Separator, Stockholm, Sweden, a Corporation. Filed Apr. 21, 1922. Serial No. 555,826. 1 Claim. (Cl. 240—103.)

A reflector for lamps and the like including in combination with a lamp carrying member, a reflecting body provided with a slot for the displacement of the lamp carrying member, a plate connected with the lamp carrying member and covering the slot in the different positions of the reflector relative to the lamp carrying member, and a



spring device connected with the cover plate the fore ends of which press on the side of the reflector body opposite to that with which the cover plate contacts, substantially as and for the purpose set forth.

1,483,307. THREAD TRIMMER FOR SEWING MACHINES. JOHN KIEWICZ, Boston, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed Apr. 15, 1922. Serial No. 552,926. 19 Claims. (Cl. 112—252.)

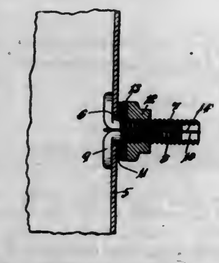


1. In a sewing machine of the type adapted to sew a short seam and then come to rest, the combination with stitch-forming mechanism including a reciprocating needle, of a stop motion for bringing the machine to rest at the end of the sewing operation, and means controlled by the stop motion but actuated independently thereof for cutting the needle thread at the end of the sewing operation and after the machine has come to rest.

1,483,308. THREAD TRIMMER FOR SEWING MACHINES. JOHN KIEWICZ, Boston, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed Sept. 27, 1922. Serial No. 590,973. 11 Claims. (Cl. 112—252.)

1. In a sewing machine, the combination with work holding means, of a pivoted pull-off arm situated beneath the work and having a cam rib, a pivoted cutter also situated beneath the work and having a cam rib, and an actuator having a forked portion to engage said ribs and thus give said elements their operative movements.

1,483,309. VENDING MACHINE. JAMES WARREN MCCOMMINS, San Diego, Calif. Filed Aug. 11, 1921. Serial No. 491,407. 5 Claims. (Cl. 194—48.)



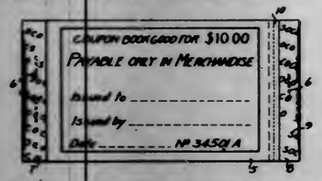
3. In a vending machine, a horizontal arm pivotally supported at one end having a closure associated with the other end and means for locking the same in an active position, comprising a lever supported above the arm, an operative connection between the arm and one end of the lever and a trigger supported above the lever engaging a notch in its other end for holding the same against upward motion.

1,483,310. ATTACHMENT FOR HAIR CLIPPERS. NICHOLAS A. MOLTRUM, Chicago Heights, Ill. Filed Nov. 13, 1922. Serial No. 600,601. 1 Claim. (Cl. 30—1.)

In combination with hair clippers having gear means for reciprocating a cutting blade; a blower attachment consisting of a hood mounted upon the casing of the clippers, and including a circular portion and a tunnel portion leading to the guard teeth and cutting blade of the clippers, a blower fan located within the circular portion of the hood and carried by a shaft journaled through the casing, and a pinion on said shaft meshing with the driving gear of the clipper mechanism.

1,483,311. REPAIR PLUG. MICHAEL G. O'BRIEN, Bristol, Conn. Filed May 7, 1919. Serial No. 295,440. 1 Claim. (Cl. 137—99.)

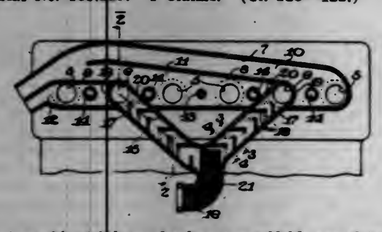
A repair plug comprising a screw threaded stud divided into two members, feet extending each at an angle to the main part of each of said members and in opposite directions from the stud as a whole, a packing located between said members and extending from side to side thereof and lengthwise therealong to the inner end of said member to prevent flow of fluid between the meeting faces of said members, a packing surrounding said members in contact with the edges of the packing between said members, and a nut to bind said last mentioned packing in place.



1,483,312. SASH LOCK. MAX OESTERLING, Cleveland, Ohio. Filed Sept. 21, 1922. Serial No. 589,569. 1 Claim. (Cl. 292—153.)

In a lock for windows of the type comprising an upper and lower sliding sash, the side sill of one of the sash members having a series of equally spaced openings therein, a box member positioned in an opening formed in one side sill of the other sash member and having an opening in its bottom wall alining with a similar opening formed in said side sill, a sleeve member secured to said bottom wall in alinement with said openings, a bolt and link pivotally connected at their meeting ends slidably associated with said sleeve, said bolt being positioned within said sleeve with the link folded at right angles thereto and positioned within said box when the bolt is in an inoperative position, said bolt being slid inwardly with the pivot connection and link positioned within said sleeve and the

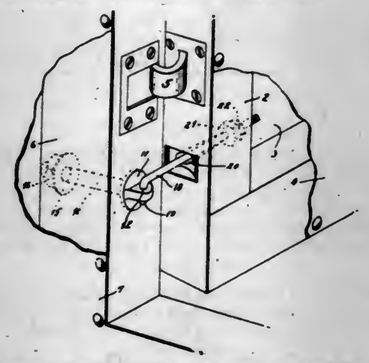
bolt in engagement with one of said openings in the first mentioned side sill when the bolt is in an operative position, a swinging door secured to said box adapted for closing its open end for the purpose of preventing the withdrawing of said bolt from its operative position, and means for locking said door in its closed position.



1,483,313. SAFETY COUPON BOOK. ABE RICH, Birmingham, Ala., assignor to Southern Coupon Company, a Corporation of Alabama. Filed Aug. 30, 1920. Serial No. 406,758. 5 Claims. (Cl. 281—18.)

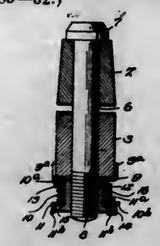
1. A coupon book composed of sheets divided by transverse lines of perforations into end tabs and interposed suitably printed coupons, and means to provide a detachable protective binding for the end tabs comprising stitching and a gummed binding strip of paper applied over the stitching on both sides of the book and of such character as to be defaced by the application of moisture, the stitched and bound tabs and covers being adapted to be torn from the book along registering lines of perforations in the sheets to expose the coupons for detachment.

1,483,314. INLET AND EXHAUST MANIFOLD. AUGUST C. ROSENBROOK, Madison, Wis. Filed May 11, 1921. Serial No. 468,539. 4 Claims. (Cl. 123—122.)



1. A combined inlet-and-exhaust manifold comprising an exhaust housing communicating with the exhaust ports of the engine and inlet conduits leading to the admission ports of the engine and having their upper ends only subjected to direct heat from the exhaust, and partitions in said exhaust housing for directing a greater part of the exhaust from some of the cylinders away from the inlet conduits, said inlet conduits being provided with a series of baffle plates arranged in staggered relation and spaced from the center of the conduits to heat and produce turbulence in the mixture passing therethrough.

1,483,315. HEAD TELEPHONE RECEIVER. HENRY G. SAAL, Chicago, Ill. Filed Aug. 10, 1922. Serial No. 581,030. 1 Claim. (Cl. 179—156.)

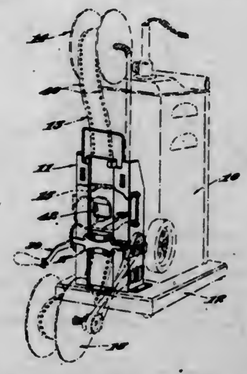


A head telephone receiver including an arcuate head band formed of spring metal; a pair of ears upon one end thereof and placed to form a slot therebetween which is transverse of the band, said ears having aligned openings that are perpendicular to said slot; a watch case telephone receiver; a threaded stem carrying said receiver and passing freely through the aligned openings in said ears; and an adjusting nut threaded upon said stem and disposed in the slot between said ears.

1,483,316. AUTOMOBILE DOORCHECK. WILLIAM J. SEELINGER, Cleveland, Ohio. Filed Dec. 8, 1919. Serial No. 343,296. 4 Claims. (Cl. 292—262.)

1. A device of the character set forth designed for use with elements comprising a door and casing, said elements having bores which align when the door is closed, an eye bolt extending through the bore of one element and having a head occupying a counterbored portion of the bore, a nut applied to the bolt for securing it within th bore, a rod having one of its ends interengaged with the eye of the bolt and extending through the bore of the other element, the rod being threaded where it protrudes beyond the bore, a stop adjustable along the threaded portion of the rod for engagement with a part of the respective element for limiting the swinging movement of the door through an angle not greater than 90°, one of the elements being recessed to accommodate the eye of the bolt.

1,483,317. CONNECTING-ROD BOLT. STEPHEN A. SLAUSON, Cedar Rapids, Iowa, assignor of twenty-five one-hundredths to John H. Brookman and twenty-five one-hundredths to L. O. Hatch, both of Cedar Rapids, Iowa. Filed June 30, 1922. Serial No. 571,955. 9 Claims. (Cl. 85—32.)

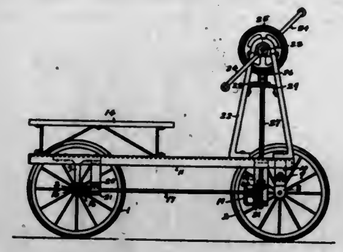


1. A device of the character deacribed, comprising a connecting bolt and a nut therefor, a coil spring surrounding said nut, means for anchoring the end of said spring distant from said nut, a collar mounted on said nut and connected with the free end of said spring, said collar being rotative on said nut for winding said spring, and means for locking said collar from rotation on said nut under the tension of said spring.

1,483,318. COMPOSITION FOR TREATING COAL. RALPH H. SMITH, Wilton, N. Y., assignor to William A. Robeson, Saratoga Springs, N. Y. Filed Jan. 26, 1922. Serial No. 532,042. 5 Claims. (Cl. 44—4.)

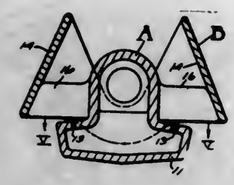
1. A fuel-treating composition of matter containing chlorate of potash, chloride of sodium and saltpeter.

1,483,319. MOTION-PICTURE MACHINE. EDWARD M. SWARTZ, Roxbury, Mass., assignor to Keystone Mfg. Co., Boston, Mass., a Corporation of Massachusetts. Filed Apr. 28, 1923. Serial No. 635,262. 3 Claims. (Cl. 88—17.)



2. A film guide for motion picture machines comprising a metal stamping providing a handle at one end, a channel housing at the other end, and two anti-friction rolls mounted intermediate said handle and housing.

1,483,320. SHEET-METAL CONDUCTOR FOR ROOFS. GEORGE K. THOMPSON, New York, N. Y., assignor to Hoyt Metal Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 9, 1920. Serial No. 350,463. 3 Claims. (Cl. 137—75.)

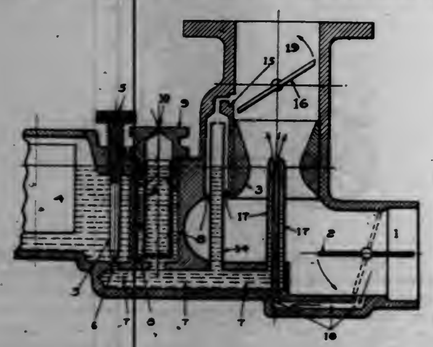


1. As a new article of manufacture, a sheet metal conductor for the purpose described composed of lead and antimony, the antimonial content in said article being not in excess of ten per cent.

1,483,321. HAND-OPERATED VEHICLE. HERBERT F. THOMPSON, Houston, Tex. Filed Oct. 16, 1922. Serial No. 594,742. 2 Claims. (Cl. 208—55.)

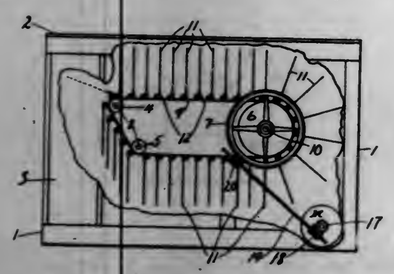
1. A vehicle including a front and a rear axle, carrier wheels supporting said axles, a yoke having downwardly turned ends formed with bearings in which the front axle runs, supports formed with bearings in which the rear axle runs, a frame to which said supports are rigidly secured, a bolster fastened to the front end of said frame and pivoted to said yoke, a propeller shaft geared to the rear axle, spaced A frames upstanding from the frame at the front end thereof, a crank shaft rotatably mounted in suitable bearings in said A frames, hand operated cranks fixed to the ends of said crank shaft, a drive shaft in operative connection with said crank shaft and said propeller shaft through which the propeller shaft may be driven from the crank shaft.

1,483,322. GAS BURNER. JEROME TRAVIS, Toledo, Ohio. Filed May 10, 1922. Serial No. 559,745. 12 Claims. (Cl. 158—108.)



1. A gas burner comprising, in combination, a heating chamber into which the fuel gas is conveyed, means providing outlets below said chamber through which the gas issues in upwardly directed jets for combustion, and means to direct the jets of burning gas in a path adjacent the heating chamber and thereby maintain the latter at a high temperature, said last mentioned means comprising a baffle wall directly in the path of said jets and arranged to deflect the fuel gas toward said chamber and cause it to mix with the air as it strikes said wall.

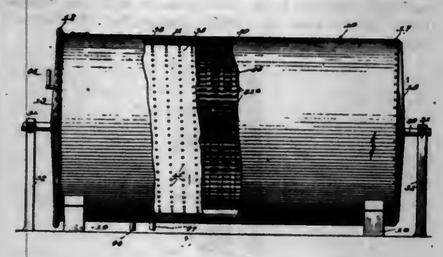
1,483,323. CARBURETOR. RAYMOND M. ANDERSON, Detroit, Mich., assignor to George M. Holley, Detroit, Mich. Filed Aug. 14, 1920. Serial No. 403,585. 2 Claims. (Cl. 261—41.)



1. A carburetor comprising a body having a constant level fuel reservoir and a mixing chamber adjacent said reservoir, a mixture outlet and a throttle valve in said mixture outlet, a fuel feeding nozzle extending into said mixing chamber, said carburetor being formed with a fuel receiver having its upper end extending to a plane above the fuel level maintained in said nozzle to permit fuel to stand in said receiver so as to be available to cause an increase of flow from the nozzle on opening

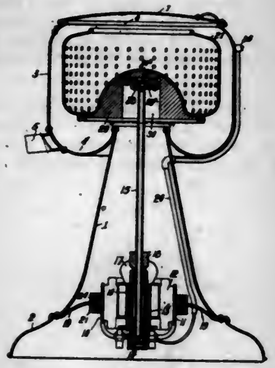
movement of the throttle, a regulated connection from said constant fuel liquid reservoir to both said nozzle and said fuel receiver, said fuel receiver having a restricted outlet at its upper end for the discharge of a jet of fuel, said carburetor being formed with an opening for the passage of air past said restricted outlet and

providing a mixing chamber for the air and fuel adjacent said outlet, the carburetor body being further formed with a passage extending from said last mentioned mixing chamber to a point adjacent said throttle valve, and an air vented auxiliary fuel reservoir in communication with said nozzle to supply an intial fuel charge to the nozzle upon an increased air flow past said nozzle.



1,483,324. AUTOMATIC DISPLAY APPARATUS. HARRY J. BALDWIN, Colorado Springs, Colo. Filed Feb. 19, 1923. Serial No. 619,925. 4 Claims. (Cl. 40—97.)

1. In an automatic display apparatus of the class described, having an enclosing case with a transparent front, the combination of an endless conveyor belt passing over an actuating revolving drum; and over two idle rollers at its opposite end from said drum; means for driving said drum from an electric motor; a multiplicity of slats rigidly secured transversely to the outer surface of said belt; pivot pins extending from the ends of said slats; and metal card-holders pivotally mounted upon said pivot pins; substantially for the purposes specified.

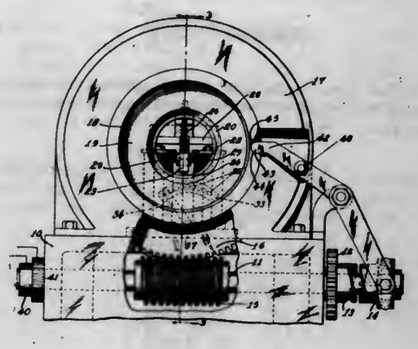


1,483,325. STERILIZING APPARATUS. GEORGE TOMAS BISHOP and WILLARD RAY HAGERMAN, Chehalis, Wash. Filed Apr. 10, 1923. Serial No. 631,142. 9 Claims. (Cl. 126—272.)

1. In an apparatus of the character described, a drum, a rotatable shaft extending through the drum, a shell arranged in the drum and mounted on the shaft, the shell and the shaft being free to partake of relative rotation, a track carried by the shell interiorly thereof, a can carrier mounted on the shaft and keyed thereto and having pockets adapted to receive cans, the track of the shell being adapted to coact with the cans of the carrier

to advance the same on the carrier, releasable interlocking means between the shell and the drum, and means for supplying a heating medium into the drum.

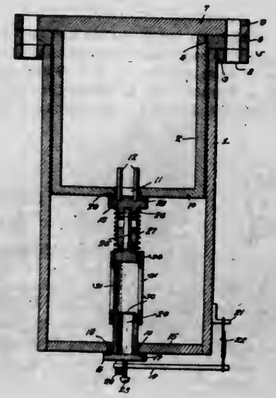
1,483,326. CENTRIFUGAL MACHINE. WILLIAM EMIL BOCK, Eagle Point Colony, Ohio, assignor to Bock Laundry Machine Company, Toledo, Ohio, a Corporation of Delaware. Filed Apr. 28, 1922. Serial No. 557,059. 29 Claims. (Cl. 210—72.)



1. In a centrifugal machine, a shaft mounted for universal rocking movements, a bowl supported by the shaft and having universal rocking connection therewith, and a motor connected to the shaft for driving the same and having rocking movements therewith, the weight of the motor being substantially centralized with respect to the rocking center of the shaft.

1,483,327. ALLOY FLUX FOR SOLDERING ALUMINUM AND PROCESS FOR FORMING SAME. WILLIAM G. BOLUS, Rhinelander, Wis. Filed Oct. 27, 1921. Serial No. 510,846. 7 Claims. (Cl. 75—1.)

1. An alloy flux for soldering aluminum to aluminum or other metals, comprising tin, aluminum, bismuth and silver, substantially in the proportions specified.

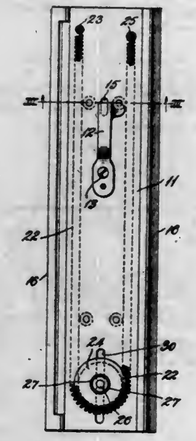


1,483,328. ELECTRIC PEENING MACHINE. RICHARD A. BOOKER, Richmond, Ind. Filed Apr. 29, 1922. Serial No. 557,472. 22 Claims. (Cl. 78—13.)

1. In a machine of the class described, the combination of a work-holder, a peening tool in operative relation to the work in said holder, an electro-magnet to actuate and effect a peening blow of said tool, and automatically

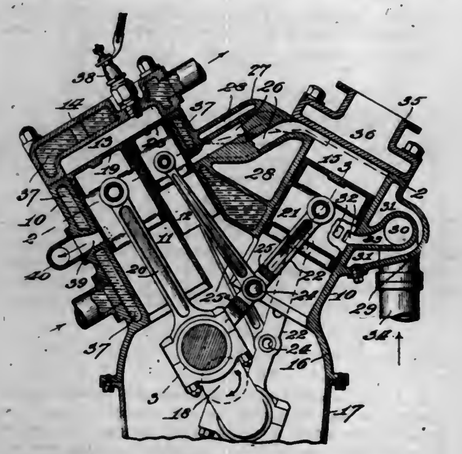
operable means for controlling current flow in said magnet to vary its actuating pull on and graduate the blow of said tool.

1,483,329. FIRE EXTINGUISHER. HAROLD A. BRAMAN, Providence, R. I. Filed Mar. 24, 1922, Serial No. 546,328. Renewed Jan. 2, 1924. 4 Claims. (Cl. 169—27.)



1. A fire extinguisher comprising a main container having an outlet opening, means in said container for containing chemical substances which when mixed together generate a fire extinguishing gas, a valve for normally closing said outlet opening, automatic means for bringing said chemical substances into contact with each other when said valve is opened, and means for closing said valve opening after said valve has been opened until a predetermined chemical reaction has taken place in said container.

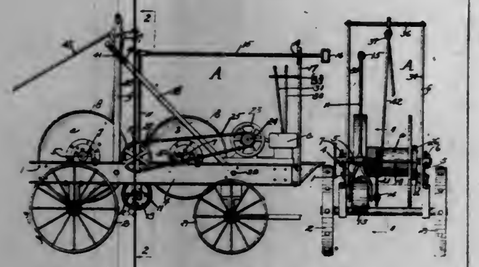
1,483,330. PAPER CARRIAGE FOR ADDING MACHINES. CHARLES E. BROMAN, Grand Rapids, Mich., assignor, by mesne assignments, to Add-Index Corporation, a Corporation of Delaware. Filed Mar. 5, 1921. Serial No. 449,995. 5 Claims. (Cl. 197—60.)



1. In a paper carriage construction for adding machines, the combination of a track, a carriage mounted

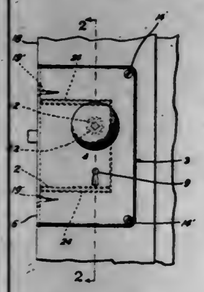
and slidable thereon, a pulley having means whereby it is adjustably mounted on the track, and an extended

and doubled helical spring passed around said pulley, and having one end attached to the track and the other end attached to the carriage.



1,483,331. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor of one-half to Charles A. Burtnett, Los Angeles, Calif. Filed Nov. 20, 1922. Serial No. 602,180. 7 Claims. (Cl. 123—53.)

7. An internal combustion engine having a pair of chambers connected at one end to form a single clearance space wherein compression, combustion and expansion take place, the axes of said connected chambers being substantially parallel, said engine also having a gaseous fuel precompression chamber, the axis of which is disposed at an angle with relation to the axes of the connected chambers, pistons arranged for operation within said connected chambers and the precompression chamber, a crank shaft to which said pistons are connected and the axes of all of the cylinders occupying a plane that is substantially at right angles to the axis of the crank shaft, the piston of one of the first mentioned connected chambers and the piston of the precompression



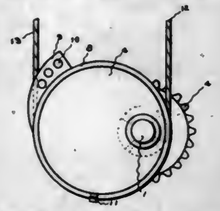
chamber being connected to one of the cranks of said crank shaft, and a connection between the piston of the other one of said connected chambers and the connection between the piston of the precompression chamber and the crank of the crank shaft.

1,483,332. SPOOLING DEVICE. CLAUDE BYLER, Sheridan, Wyo. Filed May 18, 1922. Serial No. 561,797. 6 Claims. (Cl. 242—93.)

1. A spooling device, comprising a carriage, said carriage including a rectangular frame member, two drum members journaled between sides of said frame member, an engine supported upon said carriage, a friction wheel between said drums, means for causing said friction wheel to engage one or the other of said drums, said engine being in coupled relation with said friction wheel and whereby one or the other of said drums may be rotated responsive to engagement by and rotation of said friction wheel.

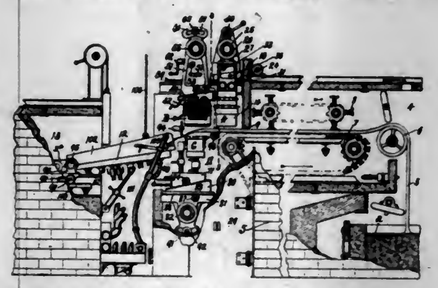
1,483,333. COMBINED DOOR-LOCK-MOUNTING UNIT. JOSEPH N. CARUCE, Astoria, N. Y. Filed Oct. 26, 1922. Serial No. 596,937. 2 Claims. (Cl. 70—16.)

1. A lock assembling and housing unit for door panels comprising an integrally formed member having two parallel side plates adapted to fit against the opposite faces of a door panel and a vertical connecting web connecting the outer edges of said plates and adapted to rest in suitable grooves or recesses formed on the door edge to form a surface flush with the surface of the door edge and said connecting web having a longitudinal opening for the reception of a door lock mechanism and face plate, the surface of the door edge, the connecting web and the face plate of the lock mechanism being flush with each other.



1,483,334. MUTE HOLDER. ABRAHAM CHERNIAVSKY, Los Angeles, Calif. Filed Aug. 24, 1922. Serial No. 584,045. 3 Claims. (Cl. 84—311.)

1. An attachment for a stringed instrument having a tail piece, including a part attachable to the forward end of the tail piece, and a part extending from the first mentioned part outwardly from the end of the tail piece

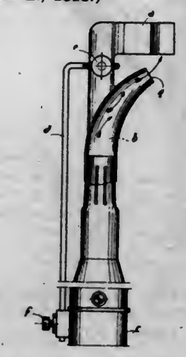


and then downwardly and having openings in the outwardly extending portion adapted to receive some of the prongs of a mute.

1,483,335. ECCENTRIC DRILLING ATTACHMENT. HARRY ALBERT CLARK, Wichita Falls, Tex. Filed Mar. 3, 1923. Serial No. 622,666. 1 Claim. (Cl. 255—7.)

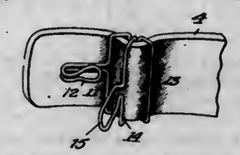
An eccentric drilling attachment of the character described, comprising a shaft mounted upon suitable bearings, a sprocket on said shaft having half of a dental clutch thereon, an eccentric cam on the shaft and having the other half of the clutch thereon, a loose band over the eccentric cam, a flange on the band and carrying rollers, and a clamp arranged transversely of said loose band.

1,483,336. METHOD AND APPARATUS FOR FORMING GLASS. ROBERT M. CORL, Maumee, Ohio, assignor, by mesne assignments, to Erie Glass Company, Toledo, Ohio, a Corporation of Delaware. Filed July 26, 1918. Serial No. 246,877. 34 Claims. (Cl. 49—17.)



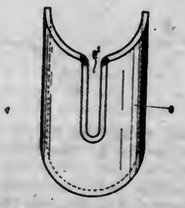
15. The method of forming sheet glass, which consists of continuously drawing a thick mass of glass in sheet form from a molten source of supply, the sheet mass being drawn in a plane at an upward angle to the surface of the molten mass, and, while conveying the sheet mass away from the drawing source and maintaining heat therein, applying a converting heat to the sheet mass to continuously flow a sheet of predetermined thickness therefrom and then conveying the thinned sheet through a gradually reducing temperature.

26. The combination with a furnace of the class described from which a column of metal feeds, of a shaft extending transversely of the column and to one side thereof, and a heater carried by said shaft for adjustment lengthwise thereof to place it in operative or inoperative relation to said column.



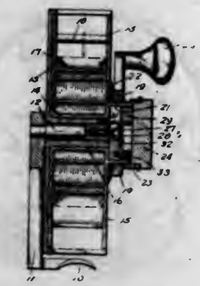
34. The combination with a furnace from which a sheet of glass continuously passes, of a substantially horizontal table for supporting said sheet at a predetermined distance from the furnace as it passes therefrom, the delivery end of said table being pivoted and the receiving end thereof being mounted for vertical swinging adjustment to vary the point of contact of the sheet therewith, the table having its sheet contacting surface corrugated, and means for tiltingly adjusting the table.

1,483,337. DEVICE FOR SOLDERING ALUMINUM. MARCEL SAID CORSAT, Bachet de Pesay, Carouge, Switzerland. Filed Aug. 2, 1921, Serial No. 489,307. Renewed July 16, 1923. 2 Claims. (Cl. 158—27.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



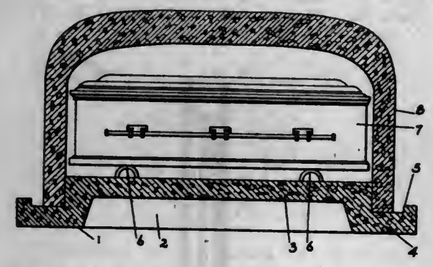
1. In combination a blowpipe, a nozzle therefor telescopically engaging said blowpipe, an extension on said nozzle extending substantially in line with said blowpipe, and a right angular portion to said extension in line with the axis of said nozzle.

1,483,338. APRON TIE. PAUL DILLING, Chicago, Ill. Filed Oct. 30, 1922. Serial No. 597,814. 1 Claim. (Cl. 2—54.)



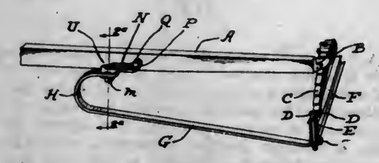
In a device of the class described, a garment having an opening therein adjacent an edge thereof, a strap adapted to encircle the upper edge of such garment, a clasp adjustably carried by said strap comprising a tubular member, a loop pivoted in said member, a hook pivoted in said member and engageable with said opening, and a keeper pivoted in said member and engageable with said hook to retain the same in said opening.

1,483,339. PERMANENT MAGNET FOR ELECTRIC MACHINES. CHARLES FREDERIC DUFAUX, Geneva, Switzerland. Filed Aug. 23, 1921. Serial No. 494,487. 1 Claim. (Cl. 175—21.)



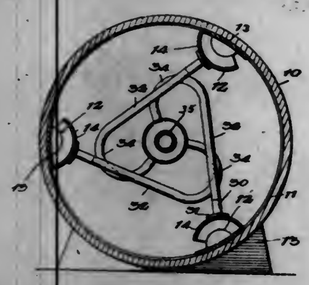
A permanent magnet for electric machines, characterized by the fact that it is composed of at least one steel-plate bent according to a cylindrical surface embracing an angle of at least 180°, and provided, at one of its extremities, with a slit separating both poles.

1,483,340. FISHING-LINE REEL. ELBERT DYER, Bandon, Oreg., assignor of one-fourth to R. V. Leep and one-fourth to L. C. Eaton, both of Bandon, Oreg. Filed Mar. 3, 1923. Serial No. 622,587. 4 Claims. (Cl. 242—84.5.)



1. In a fishing reel a bracket adapted to be supported on a fishing rod or the like, a hub carried by the said bracket, a cage mounted on said hub, provided with a central extension, a reel arranged within said cage and mounted to rotate on the central extension of said cage, a brake arranged to control the rotation of said reel and means carried by said cage for operating said brake upon a rotation of said cage.

1,483,341. GRAVE VAULT. JOHN C. FITCH, Three Rivers, Mich. Filed Oct. 29, 1921. Serial No. 511,488. 2 Claims. (Cl. 72—7.)

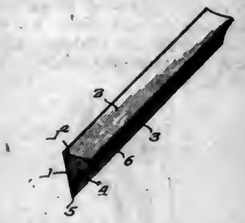


1. In a grave vault, the combination of a concrete base with a raised central platform portion, flanged edge and upturned rib, provided with supporting loops cast in the base which serve as handles, a dome-shaped top portion conformed to fit around the platform of said base, and loop handles on the said dome, as described.

1,483,342. STRUT ROD. CHARLES GITZENDANNER, Ridgewood, N. Y. Filed Aug. 18, 1921. Serial No. 493,386. 6 Claims. (Cl. 267—66.)

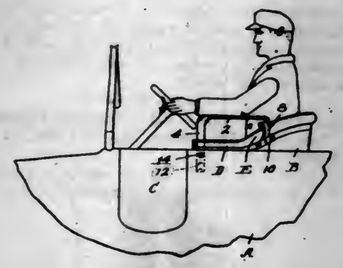
1. A radius bar for automobiles or like vehicles, comprising a bar or leaf substantially straight throughout its length, flat end portions on the straight section and an intermediate crimped or flanged portion, a return curved section contiguous with one end portion of the main section, and means for rigid attachment of the radius bar at either end respectively to the relatively moving parts of the vehicle.

1,483,343. SLASHER CYLINDER. EUGENE L. GLADIN, Manchester, Ga. Filed Apr. 18, 1922. Serial No. 554,839. 5 Claims. (Cl. 34—4.)



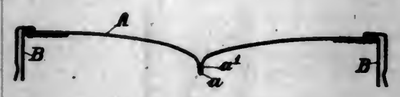
4. In a bucket for use with slasher cylinders, a combined hanger and scoop plate adapted to be disposed flush against the inner periphery of the slasher cylinder, rivets for securing said combined hanger and scoop plate to the slasher cylider, a trough integrally formed with the combined hanger and scoop plate. end plates closing the ends of said trough, and attaching means carried by the end plates and cooperable with the slasher cylinder, said attaching means including a lug carried by one of said end plates, and a bar carried by the other of said end plates.

1,483,344. LEAD PENCIL. CLARENCE O. GRONBERG, Elgin, Ill., assignor of one-third to Albert M. Price, Elgin, Ill. Filed Feb. 25, 1922. Serial No. 539,153. 7 Claims. (Cl. 120—18.)



6. A lead pencil comprising, a body portion containing a bore in which the lead, when positioned for use, extends, a magazine for leads having an outlet for discharge therethrough of the leads, lead-feeding mechanism comprising a member movable in said bore and against the lead therein, a movable member cooperating with the lead and said first-referred-to member in said bore and with said outlet, the parts being so constructed and arranged that when either a lead or said first-named member is in said bore and opposes said second-named member, said second-named member obstructs discharge of a lead from said magazine, and when neither said lead nor said first-named member opposes said second-named member, the latter is movable to a position in which a lead may discharge from said magazine.

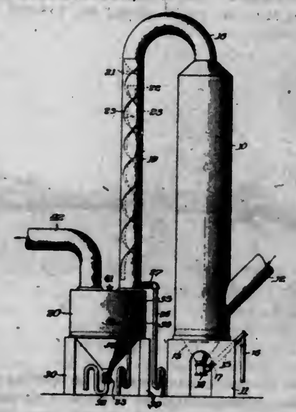
1,483,345. REPRODUCING NEEDLE FOR TALKING MACHINES. FREDERICK D. HALL, Chicago, Ill., assignor to Hall Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 4, 1922. Serial No. 541,019. 4 Claims. (Cl. 274—38.)



1. A needle of the class specified comprising a strip having a point formed at the junction of two angularly disposed longitudinally extending meeting sides, one of which is longitudinally scooped or hollowed.

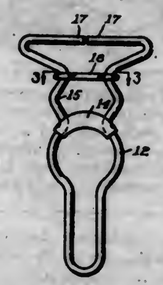
1,483,346. ARM REST. LAFE W. HARRIS and MINNIE L. TAYLOR, Kansas City, Mo. Filed Nov. 10, 1922. Serial No. 600,030. 1 Claim. (Cl. 296—1.)

A device of the character described consisting of an arm support, a curved bracket secured to the rear portion of said arm support and terminating in a transverse lower portion adapted to be secured to the back of a motor vehicle seat, a leg extending downwardly from the forward portion of the arm support and twisted to lie against the inner surface of the motor vehicle, substantially as shown and described.



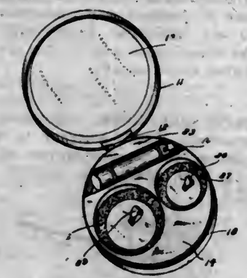
1,483,347. BOOKMARKER. JOHN WILLIAM HARRISON, Preston, England, assignor of one-half to Harry Baiding, Preston, Lancaster, England. Filed Apr. 16, 1923. Serial No. 632,396. 2 Claims. (Cl. 116—119.)

1. A book marker, comprising a strip of elastic material folded double and adapted for insertion between the pages of a book, and clips secured to the ends of the said strip and adapted to engage with the covers of the book and operating to move the strip clear of the pages when the book is opened.



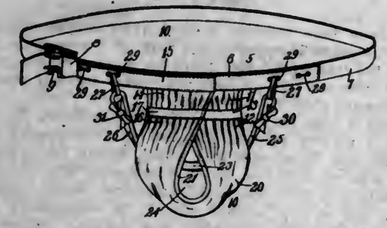
2. A book marker as set forth in claim 1, the end portions of the said strip being cut diagonally and folded over to reinforce them and strengthen their connection with the said clips.

1,483,348. MEANS FOR CLEANING AND DRYING BLAST-FURNACE GAS. JOHN C. HAYES, Jr., and HARRY L. WETHERBEE, Chicago, Ill., assignors to Freyn, Brassert & Company, Chicago, Ill., a Corporation of Maine. Filed Nov. 11, 1918. Serial No. 262,025. 11 Claims. (Cl. 183—21.)



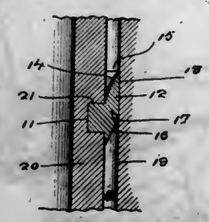
1. The combination with a gas washer including a casing having a gas inlet and a gas outlet, a gas drier disposed externally of the washer and including a casing having dust and liquid separating means therein and also provided with a gas inlet and a gas outlet, and a conduit leading continuously from the gas outlet of the washer to the gas inlet of the drier, of means within said conduit to effect separation of dust particles from washed gas passing through the conduit, and means in advance of the drier for trapping said separated dust particles and dust laden water.

1,483,349. METAL LOOP FOR GARMENT SUPPORTERS. CARL J. HAZELTON, Worcester, Mass., assignor to American Narrow Fabric Company, Worcester Mass., a Corporation of Massachusetts. Filed Dec. 15 1922. Serial No. 607,200. 2 Claims. (Cl. 24—245.)



1. As an article of manufacture, a combined button loop and attaching link consisting of a piece of wire doubled on itself at the bottom to form a bottom engaging loop, extending upwardly on each side, widened to provide a space for receiving the button and having a bridge across the top of said space, the wire flaring outwardly near the top to form two opposite nearly horizontal arms and bent inwardly at the top to form two free ends in alignment and nearly in contact at their extremities, thus forming a straight upper bar for entering a loop in a supporting strap, said bar having a space through which the strap can be inserted, and a wire link extending across the device at the bottom of said arms and connected with the wires at that point to hold them together and prevent the spreading of the two ends of the device at the top.

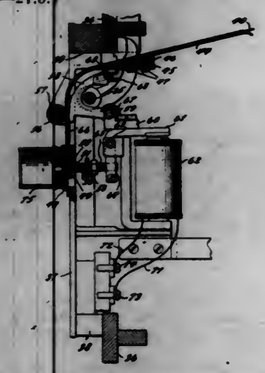
1,483,350. VANITY CASE. HERBERT D. HOUGH, Edgewood, R. I., assignor to Wightman & Hough Company, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 30, 1923. Serial No. 628,745. 3 Claims. (Cl. 132—83.)



1. A vanity case having a body member and a lid, a deck plate in the body having recesses for the reception of toilet preparations and a lip stick holder, a saddle in one of the recesses for the lip-stick holder of a length less than that of said holder, and arranged to support the holder above the bottom of the body, whereby a downward pressure on one end of the holder will raise its opposite end from its saddle into position to be readily engaged.

1,483,351. SUSPENSORY BANDAGE. CHARLES S. KEIRSTEAD, Andover, Mass. Filed Apr. 18, 1922. Serial No. 555,295. 8 Claims. (Cl. 128—158.)

1. A suspensory bandage having, in combination, a waistband, a pouch adapted to enclose the scrotum, one end of said pouch being permanently secured to said waistband, an auxiliary band fast to the other end of said pouch, said auxiliary band being detachably secured to said waistband and means to yieldingly support the rear of said pouch.



1,483,352. AUTOMATIC CYLINDER RING. EDWARD KIEFER, Falls City, Nebr. Filed May 19, 1922. Serial No. 562,157. 2 Claims. (Cl. 74—109.)

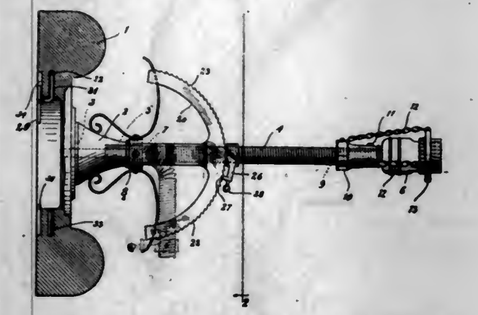
2. A piston ring comprising a transversely split member of substantially rectangular cross sectional shape, a substantially triangular circumferential flange extending around the outside of said member and providing an outer flat bearing face and an inner and upper downwardly and inwardly inclined face spaced from the face

of the piston and co-operating with the latter to provide a cross sectional wedge-shaped expansion channel and a downwardly extending cross sectional wedge-shaped flange extending from the lower edge of the ring, the outer periphery of the flange being within the plane of the bearing face and an inclined wall connecting said outer periphery with the triangular flange, said wall being spaced from the lower inner wall of the said triangular flange and defining an oil groove.

1,483,353. TAPE RECORDER. EDWARD E. KLEINSCHMIDT, Brooklyn, N. Y., assignor to Kleinschmidt Electric Company, Inc., a Corporation of New York. Filed June 21, 1920. Serial No. 390,600. 10 Claims. (Cl. 234—27.5.)

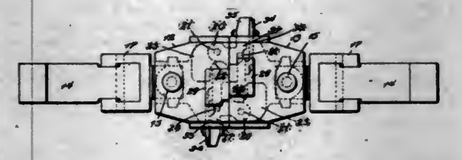
1. In a tape recorder, a feed wheel for the tape, a movable segment engaging the tape on its opposite side from the feed wheel, and means for moving said segment away from the tape operable where said segment reaches its forward limit of movement.

3. In a tape recorder, a rotatable feed wheel for the tape, a pivoted segment disposed on the opposite side of the tape from said feed wheel, means for bringing said segment into and out of engagement with the tape opposite said feed wheel, and additional means comprising a cam secured to said segment for disengaging said segment from the tape when said segment reaches its forward limit of movement.



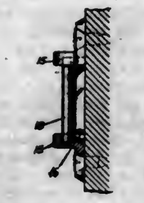
8. A plurality of tape recorders having front plates aligned side by side, a feed wheel for each recorder in front of its front plate, a rotatable shaft common to all recorders in the rear of said front plates, and means for actuating said feed wheels from said shaft.

1,483,354. GAS-ENGINE MUFFLER. FREDERICK KOPPER, Jr., Washington, D. C. Filed Nov. 25, 1919. Serial No. 340,562. 10 Claims. (Cl. 137—160.)



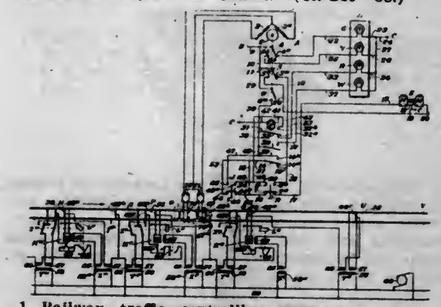
1. A muffler provided with a member having an orifice, a closure pivotally mounted to restrict or enlarge said orifice, a flexible element in operative connection with said closure, and means for bodily moving said element to vary the normal position of said closure.

1,483,355. LAMP. ALEXANDER B. KUPSCHE, Chicago, Ill. Filed Mar. 30, 1922. Serial No. 548,043. 1 Claim. (Cl. 240—81.)



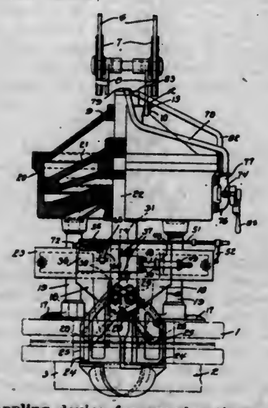
A device of the class described embodying therein a base portion, a lamp carrying portion, a flexible portion extending therebetween, and means for holding the flexible portion in any placed position, said means including a curved serrated member which does not follow the arc of a circle, but is extended farther at the ends than at the middle, and a latch for engagement therewith.

1,483,356. COMBINED AUTOMATIC CAR AND TRAIN-LINE COUPLING. ONESIME H. LE COMPTE, St. Louis, Mo., assignor to Le Compte Standard Automatic Drawbar and Connector Company, Denver, Colo., a Common Law Trust. Filed Feb. 16, 1921. Serial No. 445,474. 7 Claims. (Cl. 213—100.)



1. In a coupling construction, a draw bar, a coupling provided with a pivoted knuckle member and carried pivotally by said draw bar, and a vertically movable locking pin adapted for coupling engagement with a companion coupler and operative when in coupled relation to prevent pivotal movement of said knuckle member.

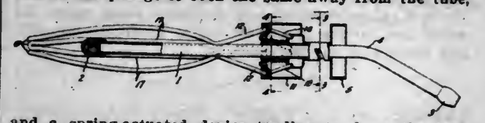
1,483,357. LOOP. CHARLES W. LEGUILLON, Akron, Ohio. Filed July 7, 1923. Serial No. 650,092. 7 Claims. (Cl. 24—265.)



7. As a new article of manufacture, a loop comprising an attaching plate, the under surface of which is recessed, and a pin receivable within the recess and confined therein upon attachment of the plate in position.

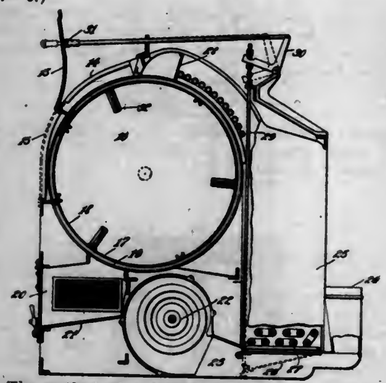
1,483,358. RAILWAY TRAFFIC-CONTROLLING APPARATUS. LLOYD V. LEWIS, Edgewood Borough, and FRANK H. NICHOLSON, Wilkinsburg, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 15, 1922. Serial No. 536,787. 19 Claims. (Cl. 246—38.)

1. Railway traffic controlling apparatus comprising mechanism on a vehicle requiring continuous supply of energy from the trackway to permit unretarded progress of the vehicle, and means on said vehicle including a manually operable device for removing said mechanism from control by trackway energy to permit the vehicle to pass without retardation through territory not equipped for supplying energy to the vehicle, said means being effective only if the manually operable device is actuated just before the supply of energy from the trackway ceases.



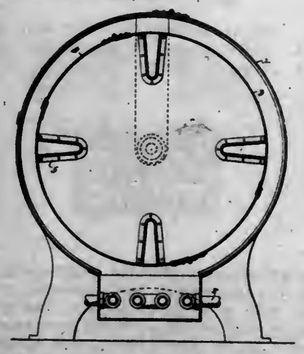
1,483,359. PORTABLE MOLD-CLOSING PRESS. HECTOR V. LOUGH, Hartford, Conn., assignor to The Hartford Rubber Works Company, a Corporation of Connecticut. Filed Apr. 1, 1921. Serial No. 457,681. 20 Claims. (Cl. 18—2.)

20. A grappling device for annular tire molds, including means to enter the mold opening from above and to engage and support the mold from beneath for transportation, means engaging the mold from above to effect clamping action thereupon, and means for applying a compressive effort to the clamping means.



1,483,360. SPRAY DEVICE. CLARENCE M. MCARTHUR, Detroit, Mich. Filed Sept. 1, 1921. Serial No. 497,677. 4 Claims. (Cl. 128—244.)

1. In a spray device, a tube, a spray nozzle, a series of wire fingers or prongs positioned about the tube and having an elongated curved form in side elevation and being normally arranged in converging relation, a support for the prongs carried by the tube, said support including a socket in which the prongs may have a rocking motion in a plane parallel with the longitudinal axis of the tube, said fingers having converging end portions beyond the point of support, means movable longitudinally of the tube and engaging the last named converging ends of the prongs to rock the same away from the tube,



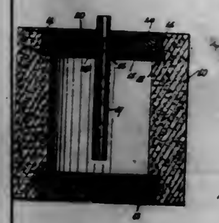
and a spring-actuated device tending to force the last named converging ends and prongs apart to force the body of the prongs or spray device to contracted or closed relationship.

1,483,361. METHOD OF RECLAIMING WASTE. JAMES P. MCCARTHY, Chicago, Ill., assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Oct. 21, 1918, Serial No. 259,119. Renewed Sept. 18, 1923. 6 Claims. (Cl. 87—6.)

4. The method of reclaiming journal box or other similar waste, comprising heating the waste without moistening the same to increase the fluidity of the oil therein, extracting sufficient oil therefrom to reduce the oil content to a known average amount, tumbling the extracted material in a current of air to separate the fibres and remove short fibres and foreign matter, and impregnating the product with a known quantity of oil.

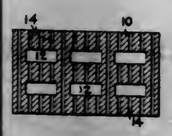
1,483,362. IMPREGNATION OF WASTE WITH LUBRICATING OIL. JAMES P. MCCARTHY, Chicago, Ill., assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 7, 1921, Serial No. 450,480. Renewed July 9, 1923. 2 Claims. (Cl. 91—68.)

1. The method of impregnating fibrous waste with oil from an oil bath, consisting in repeatedly removing a mass of the waste in loose form from the oil bath and



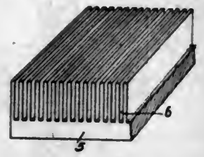
thereby allowing it to compact and the oil to drain therefrom and run into the cavities and cells of the fibres, and repeatedly restoring the mass in loose form to the oil bath, thereby exerting a squeezing action upon the waste and forcing additional oil to penetrate the cells and cavities of the fibres.

1,483,363. COLLAR BUTTON. LESLIE L. MANN, Cleveland, Ohio. Filed Sept. 27, 1923. Serial No. 665,167. 4 Claims. (Cl. 24—101.)



1. A collar button comprising a base, a head, and a shank connecting said base and head and being of greater diameter at its juncture with the head, than at its juncture with the base.

1,483,364. POROUS FILTER. WILLIAM MARTENS, Ackley, Iowa. Filed Dec. 30, 1920. Serial No. 434,087. 3 Claims. (Cl. 210—170.)



1. A filter for pump pipes formed of a porous hollow casing having one end closed and the other end formed open, a plate to cover the said open end, a pipe extending through said plate from the exterior to the interior of said casing, the inner end extending adjacent to the interior closed end of said casing, means for locking said pipe to said plate, said plate being secured to the said casing, by a plastic material capable of hardening and anchoring the same.

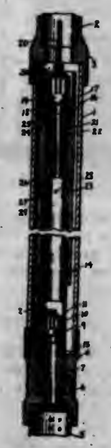
1,483,365. SOUND-ABSORBING METHOD AND MATERIAL. JACOB MAZER, Pittsburgh, Pa. Filed June 27, 1918. Serial No. 242,272. 10 Claims. (Cl. 20—4.)

1. The method of establishing predetermined acoustic conditions for an enclosure that comprises providing in connection with a boundary surface thereof a sound-absorbing material having apertures opening at the surface exposed to the sound waves, said apertures being of such number, dimensions and arrangement as to produce definite and predetermined sound-absorbing capacity per unit area of the said exposed surface.

1,483,366. SOUND-ABSORBING METHOD AND MATERIAL. JACOB MAZER, Philadelphia, Pa. Continuation of application Serial No. 242,272, filed June 27, 1918. This application filed Oct. 9, 1922. Serial No. 593,353. 9 Claims. (Cl. 20—4.)

1. The method of modifying the acoustics of a room, auditorium or other space that comprises providing such a space with a boundary surface having grooves communicating with said space, the said grooves having definite and predetermined sound-absorbing capacity per unit area of the exposed surface.

1,483,367. STORM AND SCREEN SASH HANGER. WILLIAM F. MATTHES, Faribault, Minn. Filed Nov. 3, 1922. Serial No. 598,915. 1 Claim. (Cl. 16—172.)



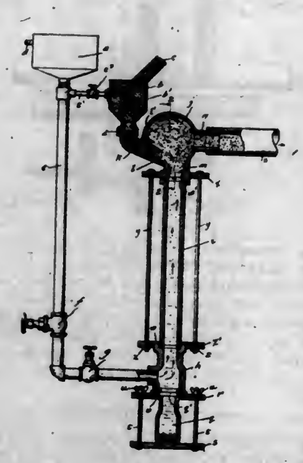
The combination with a window frame or its outside casing, of a sash detachably mounted therein, an outwardly projecting rigid hook fixed upon the sash near each upper corner thereof, an upwardly directed resilient arm fixed on the casing near each upper corner of the sash and arranged to engage under the hook of the adjacent corner of the sash, said resilient arms being arched outward from the casing and offset edgewise in over the sash and inclined with their top ends toward the usual recess for the sash so as to engage the hooks on the sash when the latter is pushed upward to its limit in the recess and said inclined ends arranged to be engaged simultaneously, by the sash, to disengage their upper ends from said hooks, for the purpose described.

1,483,368. MANUFACTURE OF RESINS. VAIKUNTH P. MEHTA, New York, N. Y., assignor to Dhanpat Rai, New York, N. Y. Filed June 12, 1923. Serial No. 644,945. 7 Claims. (Cl. 260—4.)

5. The method of making a resinous product which comprises heating a reaction mixture containing phenol and formaldehyde in about molecular proportions, potassium hydroxide and ammonia in proportions of about 1 part of ammonia to 65 grams of phenol and from 0.1083 parts to 11.2 parts caustic potash to 65 parts of phenol,

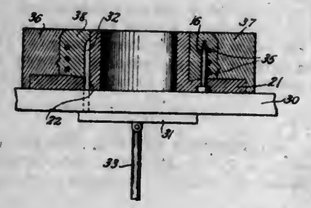
and glycerin from 1 to 10% of the mixture, under a vacuum until an oily liquid is produced, pouring the liquid into molds and continuing the heating under a vacuum and later under a higher pressure, and finally completin the process by heating to a high temperature.

1,483,369. RECIPROCATING PUMP. FRANK J. MILLER, Wichita Falls, Tex., assignor, by mesne assignments, to L. E. Trout, Oklahoma City, Okla. Filed Apr. 6, 1923. Serial No. 630,222. 7 Claims. (Cl. 103—179.)



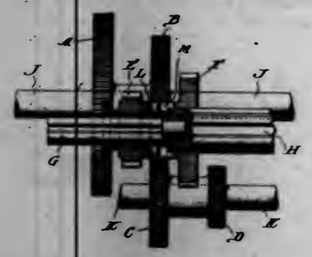
1. In a pump, a tubing, a pump barrel thereon of larger diameter than said tubing, a standing valve secured to the lower end of said pump barrel, a stationary tube projecting upwardly from said standing valve, a plunger, a tube on said plunger telescoping within said stationary tube and a tube of larger diameter secured frictionally to said plunger and adapted to telescope over said stationary tube.

1,483,370. PUMP. FRANK J. MILLER, Wichita Falls, Tex., assignor, by mesne assignments, to L. E. Trout, Oklahoma City, Okla. Filed Apr. 6, 1923. Serial No. 630,223. 3 Claims. (Cl. 103—179.)



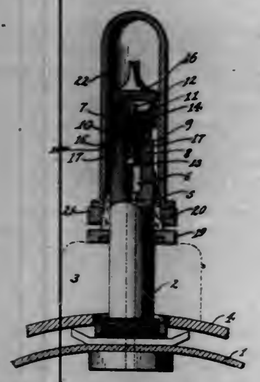
1. In a pump, a tubing, a standing valve coupling thereon, a standing valve tube projecting upwardly from said coupling in said tubing, a valve thereon, downwardly tapered grooves in said tube expansible packing rings fitting in said tapered grooves and a plunger telescoping over said standing valve tube.

1,483,371. HYDRAULIC MINERAL SEPARATOR. JOSEPH B. MILLER, Portland, Oreg., assignor of one-half to Edwin Jacobson, Portland, Oreg. Filed May 10, 1923. Serial No. 638,073. 7 Claims. (Cl. 83—82.)



1. A hydraulic mineral separator comprising a stand-pipe of uniform cross section, a connection to the bottom end of said stand-pipe from a head of water, means for controlling the flow thru such connection, an agitation-head mounted on the upper end of said stand-pipe, such head provided with a chamber having its interior wall-surfaces concaved in a vertical plane, the lower end of said agitation-head having a throat connecting with the top of said stand-pipe, said throat being deflected from the longitudinal axis of the stand-pipe towards one of said interior concaved wall-surfaces, a mineral hopper having a spout discharging into one side of said agitation-head, the agitation-head having an outlet in its wall side opposite to the inlet from said spout.

1,483,372. REENFORCED SAND CORE AND METHOD OF MAKING SAME. WILLIAM H. MILLSPAUGH, Sandusky, Ohio. Filed Jan. 10, 1920. Serial No. 350,543. 10 Claims. (Cl. 22—165.)

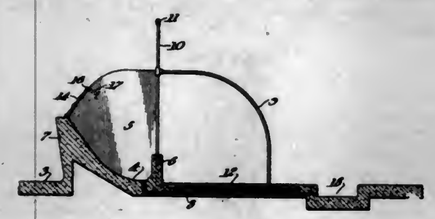


1. A core for use in centrifugal casting machines comprising a metallic support in the form of a tube having an integral outwardly extending radial flange at one end, pins projecting from the flange in spaced concentric relation with respect to the tube and a collar of sand surrounding the tube and embedding said pins, said pins strengthening the core and preventing destruction thereof by centrifugal force.

1,483,373. SPEED CHANGE AND REVERSE GEARING. WILLIAM W. PECK, Muncie, Ind. Filed Mar. 5, 1923. Serial No. 622,975. 3 Claims. (Cl. 74—58.)

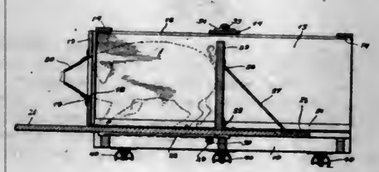
1. In a transmission, a drive shaft, a driven shaft arranged in alignment therewith, gears splined upon the meeting ends of said shafts and having their confronting faces formed with clutch members, stationary shafts located parallel with and at one side of said first named shafts, a unit consisting of two gears slidable and rotatable upon one of said stationary shafts, and a unit of two gears slidable and rotatable on the other stationary shaft.

1,483,374. TIRE VALVE. FREDERICK V. PEPPER, Los Angeles, Calif. Filed Mar. 7, 1922. Serial No. 541,752. 2 Claims. (Cl. 152—12.)



1. The combination of a tire valve having a stem; with a slip nut having a slitted body whose exterior is tapered and threaded and is adapted to be slid upon said stem; a binding nut adapted to screw upon said body and cause said body to frictionally engage the stem, said slip nut engaging the felloe when positioned for use; and a dust cap having interior threads adapted to screw upon said body and act as a nut lock to said binding nut.

1,483,375. OIL-TESTING DEVICE. WILBUR L. PLUCK and HOWARD J. PLUCK, McGuffey, Ohio. Filed Sept. 7, 1923. Serial No. 661,410. 5 Claims. (Cl. 137—139.)

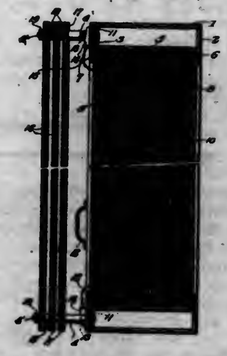


1. A device of the class described comprising an elongated handle, an operating rod mounted therein, means at the outer end of the rod for turning the same, means at the inner end of the rod for engaging the stem of a pet cock, and a cup carried by the inner end of the handle in depending relation to the pet cock for catching oil flowing from the pet cock.

1,483,376. MANGER FOR DAIRY BARNS. EDGAR F. PRICE, Port Chester, N. Y. Filed Jan. 19, 1923. Serial No. 613,716. 2 Claims. (Cl. 119—27.)

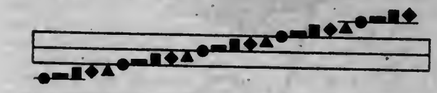
1. A manger having a wall comprising separable lower and upper portions, said upper portion being arranged to swing from its normal position about a horizontal axis until it abuts against and is supported by a fixed member attached to the manger.

1,483,377. HOG CHUTE. JESSE M. RAGSDALE and DARRYL W. RAGSDALE, Holden, Mo. Filed June 8, 1920. Serial No. 387,451. 1 Claim. (Cl. 119—98.)



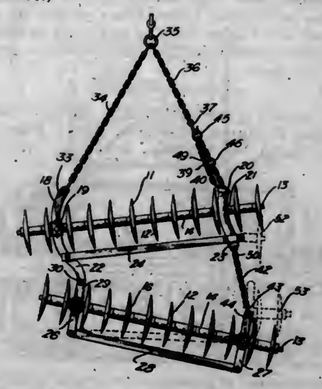
A hog chute of the character described comprising a portable frame including a door secured to the front of the frame, said door being provided with a centrally disposed round opening, a frusto-conical nose piece having open ends projecting from the outer edges of the opening, a movable floor of greater length than the sides and the top of the frame, a tail board hingedly secured to the floor, adjacent its rear end, a rod pivotally secured to the tail board and projecting rearwardly therefrom, a rack bar secured to the floor and being longitudinally arranged in the path of the rod for engagement therewith to hold the tail board in operative position, and means for moving the floor horizontally and a catch rod pivotally secured to the frame and being adapted to engage the floor moving means as and for the purpose specified.

1,483,378. SHOOTING-PRACTICE DUMMY GUN. ROBERT EDWIN REARDON, Washington, D. C. Filed Aug. 5, 1920. Serial No. 401,419. 10 Claims. (Cl. 124—15.5).



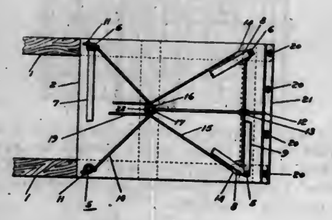
4. In a shooting practice dummy gun a spring hammer part having a sleeve casing, a cartridge insertion slot in said sleeve casing and a dummy cartridge trough in said hammer part.

1,483,379. AIR FILTERING AND CLEANING DEVICE. WILLIAM M. REED, Louisville, Ky., assignor to William Reed Engineering Company, Louisville, Ky., a Corporation of Kentucky. Filed May 15, 1923. Serial No. 639,164. 11 Claims. (Cl. 183—45.)



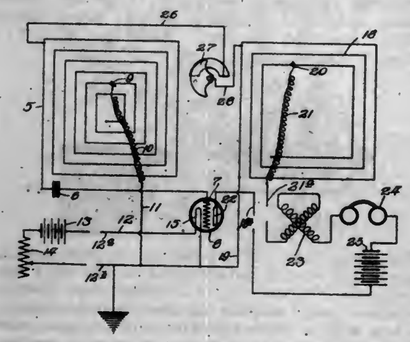
1. An air filtering and cleansing device comprising a frame, screens covering the faces of the frame, and a filter mass filling the frame between the screens comprising a body of loosely felted fibers individually covered with a solid adherent shell-like coating.

1,483,380. MUSICAL NOTATION. SIDNEY ARMOR REEDE, New Brighton, N. Y. Original application filed Mar. 6, 1913, Serial No. 752,258. Divided and this application filed July 14, 1919. Serial No. 310,636. 7 Claims. (Cl. 283—47.)



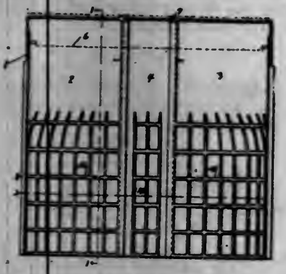
6. A musical notation comprising a blank, lines thereon forming a staff and indicating by their lateral separation certain pitch-intervals, and noteheads of contrasted form associated with said lines in such manner that the distance of the center of area of each notehead from the lines progresses with the pitch indicated by said notehead, substantially as described.

1,483,381. SINGLE AND DOUBLE TANDEM DISK HARROW. JOSEPH S. REYNOLDS, Santa Barbara, Calif. Filed Sept. 21, 1922. Serial No. 589,545. 11 Claims. (Cl. 55—83.)



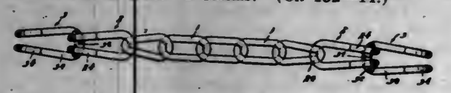
1. In a position adjusting draft device for agricultural implements of the class described, the combination of: a draft member; a divided draft member having a flexible intermediate portion, one end of said divided draft member being attached to one vehicle and the other end thereof being attached to a following vehicle; and means on said draft member for selectively engaging said flexible intermediate portion of said divided draft member at a point giving the desired proportionate lengths of the divisions of said divided draft member.

1,483,382. SNOWPLOW. GEORGE RICHARDSON, Pittsfield, Mass. Filed Mar. 22, 1923. Serial No. 626,931. 2 Claims. (Cl. 37—33.)



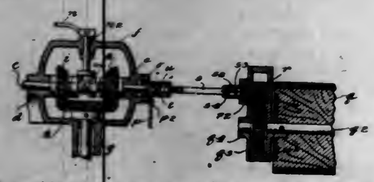
1. A snow plow consisting of two runners, cross bars connected to said runners, a bed plate, four upright supports arising from said bed plate, a center upright support arising from the bed plate and incased in a tube, bars connected to the top of said supports, a tube encasing the center upright support and two sprockets mounted thereon, a sheave rigidly connected to the top of the two forward supports, a scraper blade connected to the forward ends of the runners and to the bed plate, a V shaped back brace secured to the two rear supports by means of a clevis, a movable center blade and a standard secured thereto and arising from the forward end of said center blade, and a chain connected to the said standard, supports attached to the movable center blade and the upright tube encasing the center upright support.

1,483,383. RADIO RECEIVING SYSTEM. HENRY K. SANDELL, Chicago, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 2, 1922. Serial No. 598,553. 5 Claims. (Cl. 250—20.)



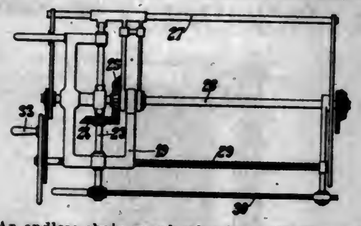
1. In a radio receiving system, a vacuum tube, a loop aerial connected to the grid of said tube, a loop in series with the plate and filament of said tube, said loop aerial and loop having their planes parallel and spaced from each other, a connection between the loop aerial and the loop, and a condenser interposed in said connection.

1,483,384. FIREPLACE LINING. ALBERT H. SANDSTROM, Portland, Oreg., assignor of one-fourth to P. M. Hall-Lewis and one-fourth to E. W. Hansen, both of Portland, Oreg. Filed Aug. 24, 1922. Serial No. 584,059. 5 Claims. (Cl. 126—130).



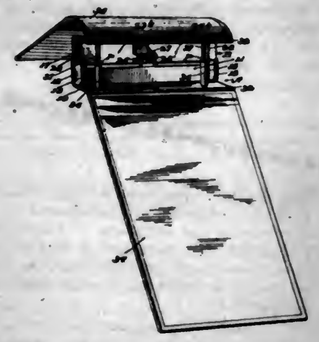
1. In a metal fireplace lining, a right and a left side section each curved to also form a portion of the back of the fireplace with their edges spaced in confronting relation, and a central back section connecting said edges in vertical grooved engagement.

1,483,385. DETACHABLE CROSS CHAIN. OSCAR SCHOYEN, Minneapolis, Minn. Filed June 16, 1921. Serial No. 477,056. 4 Claims. (Cl. 152—14.)



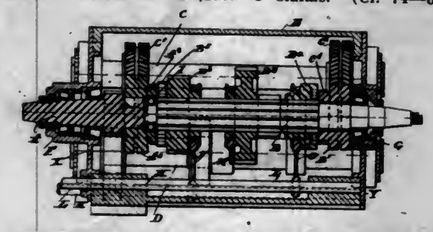
2. A cross chain comprising an end link having a bight portion and adapted to be connected to a standard side chain, a link connected to said end link also having a bight portion, the ends of which are bent in planes at right angles to the bight portion to form hooks engaging through the bight portion of the end link, said hooks being resiliently movable toward each other and being held against the side portions of the bight of the end link whereby relative longitudinal movement of said links is substantially prevented, said first mentioned link having its bight portion flattened to pass between the ends of the hook portion and the bight portion of said second mentioned link when turned and slidden out crosswise thereof.

1,483,386. IRONER. CHESTER L. SCHWARTZ, Ithaca, Mich., assignor of one-half to Jules H. Kraus, Detroit, Mich. Filed Nov. 23, 1921. Serial No. 517,172. 1 Claim. (Cl. 64—103.)



The combination with a power driven shaft journaled for reversible rotation and having at the free end a transversely extending lock pin, and a second shaft journaled for rotation, of a coupling engaging the second shaft to the first shaft to rotate therewith, said coupling comprising a shaft section at each end of which is secured a socket by means of a link loosely pivoted at one end to the shaft section and at the opposite end to the socket, one of said sockets provided with angularly extending grooves adapted to receive the lock pin carried by said first shaft to lock the socket thereto to rotate in one direction with the shaft and adapted to disengage from the shaft when rotated in the opposite direction.

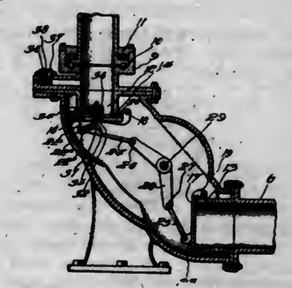
1,483,387. CHAIN-SAW MACHINE. MAURICE CAMILLE HENRI SERIN, Paris, France. Filed May 16, 1922. Serial No. 561,450. 2 Claims. (Cl. 143—32.)



2. An endless chain saw having inwardly directed teeth, a driving sprocket within the chain, guide rollers yieldingly mounted in the plane of said sprocket tending to give the loop of the saw chain a generally triangular outline, in combination with means for moving the driving sprocket towards and from the guide pulleys, and a shaft parallel to the plane of said sprocket and a gear slidable on said shaft and driving said sprocket, this sprocket, guide pulleys and saw being rotatably mounted about said shaft to change the plane of cut of said saw.

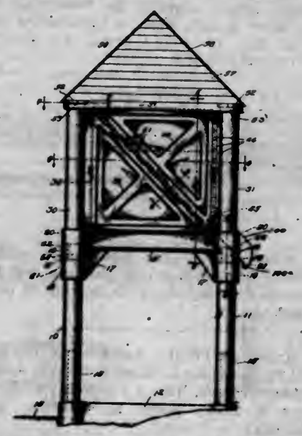
1,483,388. LOOSE-LEAF BINDER. BRUCE P. SHEPHERD and MARSHALL HOTCHKISS, Nashville, Tenn. Filed Aug. 22, 1922. Serial No. 583,554. 10 Claims. (Cl. 129—23.)

1. A binder comprising two sections, each having a base plate and a back plate, one of said back plates having return portions provided with teeth or serrations and the other back plate sliding in said return portions, and a two-part spring actuated bolt carried by said sliding section and having teeth or serrations engaging those of the return portions of the back plate, as and for the purpose set forth.



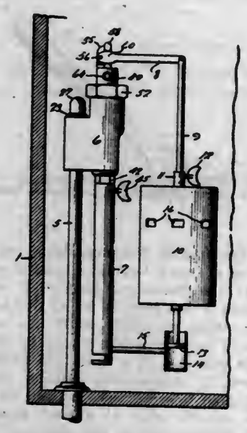
1,483,389. OVERDRIVE FOR MOTOR VEHICLES. WILLIAM C. SMITH, Cleveland, Ohio. Filed Dec. 13, 1920. Serial No. 430,199. 3 Claims. (Cl. 74—58.)

1. In a power transmission device, in combination, a motor shaft and a transmission shaft in alignment therewith, a speed reduction counter shaft and an overdrive



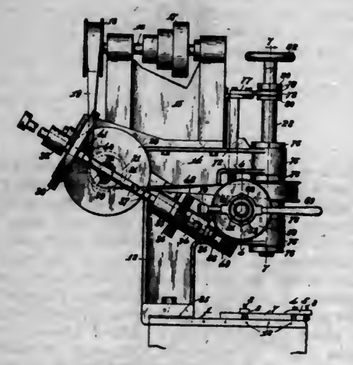
counter shaft, permanent geared connections between said motor shaft and said counter shafts, reducing gears upon said speed reduction shaft for transmitting first and second rates of speed, corresponding gears slidably movable upon said transmission shaft, one of said sliding gears also engageable with said motor shaft for transmitting a third rate of speed, and a loose speed increasing gear for a fourth rate of speed, on said transmission shaft, and a corresponding gear upon the said overdrive shaft, cooperating clutch means upon said transmission shaft and speed increasing gear, a shifting device for moving each transmission gear from neutral to engaging positions, and a locking mechanism for each shifting device.

1,483,390. VALVE MECHANISM. BARTON S. SNOW, Batavia, Ill., assignor to T. W. Snow Construction Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 11, 1920. Serial No. 416,165. 19 Claims. (Cl. 137—21.)



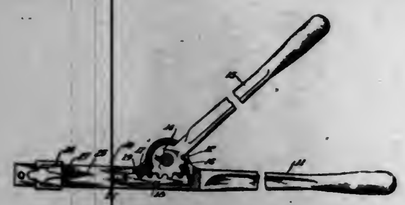
1. A valve mechanism comprising a housing having an inlet port and an outlet port, valves co-operating with said ports, the one of said valves co-operating with said inlet port opening in the direction of flow of the fluid through said housing and the other of said valves closing in the direction of flow of the fluid, said valves being connected together for movement in opposite directions, and means for reducing the pressure of fluid in the housing against the one of said valves controlling said outlet port, in the closed position of the latter.

1,483,391. BUILDING STRUCTURE. BARTON S. SNOW Batavia, Ill., assignor to T. W. Snow Construction Co. Chicago, Ill., a Corporation of Illinois. Filed Jan. 23, 1922. Serial No. 531,255. 18 Claims. (Cl. 72—6.)



1. A building structure comprising a series of girders, truss-members of angular shape supported in upright condition on said girders, and a floor and side-wall-forming members supported on said girders.

1,483,392. AUTOMATIC PRESSURE VALVE FOR FLUSHING TANKS. JOHN C. SPEARING, Cleveland, Ohio. Filed May 15, 1922. Serial No. 561,028. 5 Claims. (Cl. 4—18.)



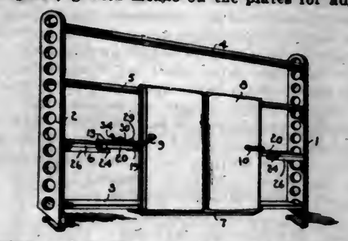
1. The combination with a flush tank and its supply and refill pipes, of a valve casing to which said pipes are connected, an outlet valve to the tank, at the bottom of the casing, said refill pipe being connected to the casing at the top thereof, and said supply pipe opening thru the side of the casing between the refill pipe and the outlet valve, a piston in the casing between the supply pipe connection and the refill pipe connection, said piston being connected to the outlet valve, and a float valve above the piston, controlling the outlet to the refill pipe.

1,483,393. PRECISION JIG-BORING MACHINE. BERNARD T. STEBER, Utica, N. Y. Filed July 1, 1921. Serial No. 481,828. 10 Claims. (Cl. 77—32.)

1. In an apparatus of the class described, the combination, with a frame and a spindle carried thereby, means for shifting the spindle, and means for rotating the spindle, of a driven belt for actuating the rotating means, an idler pulley for guiding the belt, said pulley having a face exposed away from the frame, means receiving power from the exposed face of the idler pulley for shifting the spindle, and means for adjusting the idler pulley axially away from the frame for varying its delivery of power.

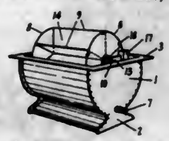
1,483,394. FASTENER-INSERTING TOOL. BERNARD M. SWEENEY, Live Oak, Calif., assignor of one-half to Charles E. Sullivan, Yuba City, Calif. Filed Jan. 3, 1923. Serial No. 610,433. 3 Claims. (Cl. 1—50.)

2. A tool for driving fasteners into tree limbs, said tool comprising a frame having a handle, an offset portion formed on the frame and adapted to extend past a limb into which a fastener is to be driven, said offset portion constituting an anvil guide, an anvil slidably mounted on said guide whereby it may be adjusted thereon and engage one side of a limb into which a fastener is to be driven, a reciprocating plunger carried by the frame and adapted to work towards and away from said anvil at the opposite side of a limb engaged thereby, means at the driving end of said plunger for releasably gripping a fastener to be driven, an operating lever pivoted on the frame, and an operating connection between said lever and said plunger whereby oscillation of the lever will reciprocate the plunger and cause the same to drive a fastener.



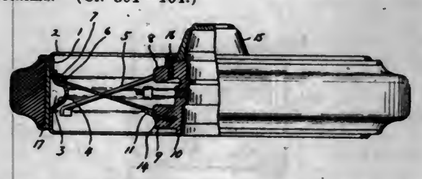
1,483,395. SPARK PLUG. JAMES M. SYME, Fitchburg, Mass., assignor to Brown Bag Filling Machine Company, Fitchburg, Mass., a Corporation of Massachusetts. Filed July 23, 1919. Serial No. 312,774. 2 Claims. (Cl. 123—169.)

1. In a spark plug, an externally threaded gland element for engagement in a plug shell, said gland having an interior seat at the inner end and also a nut faced enlargement adjacent the outer end, said gland having a thin tapered longitudinal extension outwardly of the said enlargement, a porcelain having an enlargement disposed within the gland but of less diameter, affording a clearance; a packing element between the enlargement and the seat, said enlargement being tapered, a soft metal sleeve wedge-shaped in section wedged between the porcelain and gland at the outer part, said extension being set in and against the outer end part of the sleeve, to hold it in wedged engagement.



1,483,396. BOOK AND LOOSE-LEAF HOLDER. OLIVER CLARK TERRELL, Portland, Oreg. Filed May 1, 1922. Serial No. 557,540. 14 Claims. (Cl. 45—61.)

6. A holding device comprising a frame with its upper face disposed in a plane, spaced clamping members rockably mounted on the frame with their axes perpendicular to said plane, spaced plates on the frame and perpendicular to said plane, means on the clamping members cooperating with means on the plates for adjustably

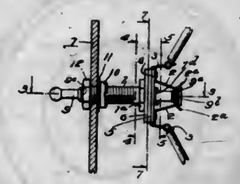


positioning and locking the clamping members longitudinally of their axes, and means for adjusting one of said plates lengthwise of the frame.

1,483,397. LIQUID WEIGHER. WALTER E. TURNER, Springfield, Ohio. Filed Dec. 22, 1922. Serial No. 608,409. 6 Claims. (Cl. 249—19.)

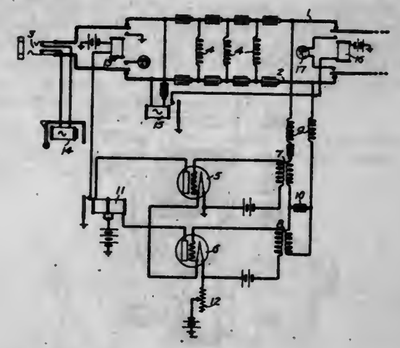
6. In a device of the type described, the combination with a casing, of a rotor having liquid receiving compartments revoluble in said casing, a liquid inlet in said casing above the rotor for discharging liquid successively into each compartment thereof, a shaft upon which the rotor is mounted, a stationary stop in the casing above the rotor, a series of stop elements secured to the rotor for successive engagement with the stationary stop to hold the rotor in a stationary position when a compartment thereof is under the liquid inlet, a swivel bearing in said casing for one end of said shaft, a depressible bearing in said casing for the other end of said shaft, a liquid outlet in the bottom of said casing, and a liquid-containing trough mounted in said casing above the liquid outlet and through which the lower side of the rotor passes for the purpose specified.

1,483,398. VEHICLE WHEEL. THOMAS C. WHITEHEAD, River Rouge, Mich., assignor to Whitehead & Kales Company, River Rouge, Mich., a Corporation of Michigan. Filed Jan. 15, 1923. Serial No. 612,719. 14 Claims. (Cl. 301—104.)



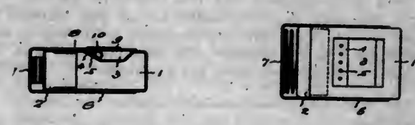
1. In a vehicle wheel, the combination with a hub and a plurality of spokes having portions cast into said hub, and means for reinforcing the portion of each spoke cast into said hub.

1,483,399. DASH SWITCH. FREDERIK G. WHITTINGTON, Evanston, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Sept. 5, 1922. Serial No. 586,079. 2 Claims. (Cl. 200—163.)



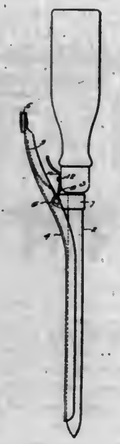
1. An electric switch for mounting on an instrument board and the like, comprising in combination with two contacts which are to be electrically connected, a reciprocable plunger and means carried thereon for connecting

and disconnecting the contacts at the respective limits of the reciprocation of the plunger; an insulated mount for the contacts; a sleeve upon which the said insulated mount is fixedly mounted and in which the plunger is mounted for reciprocation, said sleeve having a stop shoulder for stopping it against the under or back side of the board and being extended from said stop shoulder



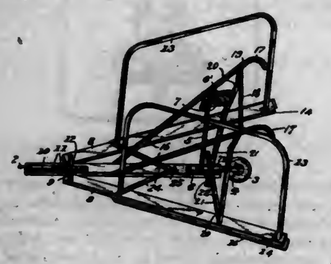
at the opposite side of the insulation from that at which the contacts are mounted thereon, and being threaded outwardly from said stop shoulder for screwing through the board, the plunger being extended through the sleeve for manual access at one end and for carrying at the other end the contact-connecting-and-disconnecting means.

1,483,400. TELEPHONE SYSTEM. RAY S. WILBUR, Lyndhurst, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1919. Serial No. 348,585. 8 Claims. (Cl. 179—171.)



1. In a signaling system, a transmission line, repeaters connected to said line for amplifying alternating current transmitted thereover, a source of alternating current, means for connecting said source of alternating current to the terminating end of said line, and means responsive to and maintained effective by direct current through said repeaters for operating the last named means during the transmission of alternating current over said line.

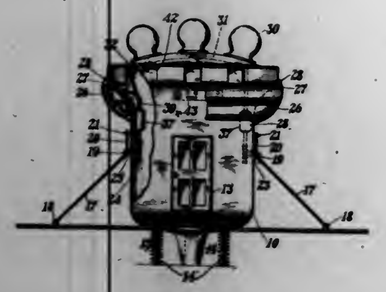
1,483,401. CONDIMENT CONTAINER. FRANK E. WOLCOTT, Hartford, Conn. Filed Dec. 27, 1922. Serial No. 609,306. 6 Claims. (Cl. 65—45.)



1. A container comprising a box having perforations in one wall, a casing in which the box is slidably fitted, said casing having an opening adjacent to the perforations in the box, means extending from the casing and normally bearing on the wall of the box over the perforations, and a spring normally holding the box with the perforations beneath a wall of the casing and closed by said means, said spring permitting the box to be moved in the casing so as to expose the perforations through the opening in the casing.

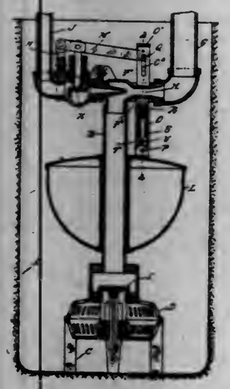
1,483,402. CURLING IRON. FRANK E. WOLCOTT, Hartford, Conn. Filed Dec. 27, 1922. Serial No. 609,307. 1 Claim. (Cl. 132—37.)

A curling iron comprising a handle, a ferrule on the end of the handle, a rod projecting from the handle, a clamp adapted to fit the rod, a loop slidably fitted on the rod, a pin pivoting the clamp to the loop, a flat spring doubled about said pin and having one end pressed outward against the inside of the handle end of the clamp, and the other end extending over the end of the rod handle and spaced therefrom, said spring having a perforated section bearing upon said ferrule, and a screw stud securing the ferrule handle and rod together, said stud projecting from the handle through the perforation of said spring, whereby the loop and clamp are positively held from sliding on the rod but may be released by lifting the free end of the spring and disengaging the perforation from the screw stud.



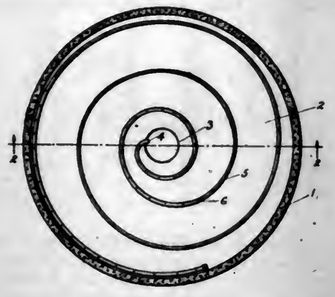
1,483,403. STALK CUTTER. CHARLES L. WOTTRING, Houston, Tex. Filed Dec. 30, 1921. Serial No. 525,826. 4 Claims. (Cl. 55—60.)

1. A stalk cutter comprising a central beam, side beams adjustable upon said central beam and diverging rearwardly therefrom, said side beams serving as runners, stalk cutting blades carried by said runners, draft



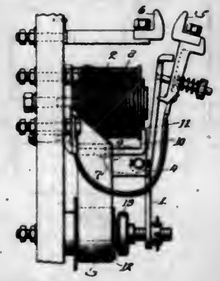
element attaching means carried on said central beam, a guide member carried on said central beam, a driver's seat mounted on said central beam, means for securing said side beams in adjusted position, and stalk engaging fenders carried by said side beams and extending upwardly therefrom.

1,483,404. SHIP'S SAFETY CABIN. JOHN WOZNIAK, Chicago, Ill. Filed June 9, 1923. Serial No. 644,311. 4 Claims. (Cl. 114—189.)



1. In a ship, a cabin resting freely on the deck thereof, a series of inclined tie ropes secured at one end to the deck and having rings on their opposite ends engaging over lugs on the cabin, and hooks releasably engaging said ropes below said lugs to hold said rings in engagement with said lugs.

1,483,405. EJECTOR. HOWARD D. YODER, Detroit, Mich., assignor to Penberthy Injector Company, Detroit, Mich., a Corporation of Michigan. Filed July 3, 1922. Serial No. 572,661. 5 Claims. (Cl. 162—3.)



1. The combination with an ejector, a valve for controlling the supply of actuating fluid thereto, and a float for operating said valve, of mechanical means cooperating with said float to delay the rising and falling thereof until a predetermined pressure is accumulated thereon, said means comprising a stationary member and a cooperating member movable with said float, and connecting means between said value and float for transmitting the accumulated pressure on the float to said valve for effecting a full movement thereof.

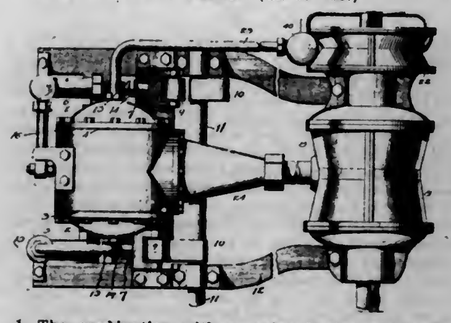
1,483,406. METHOD AND APPARATUS FOR FUMIGATING GRAIN. ARTHUR R. YOUNG, Kansas City, Mo., assignor to A. R. Young Material Company, Kansas City, Mo., a Corporation of Missouri. Filed Apr. 6, 1923. Serial No. 630,259. 1 Claim. (Cl. 83—28.)

The herein described method of fumigating grain, which consists in collecting the grain in a receptacle and subjecting it to the action of hydrocyanic acid introduced within the mass of grain in the form of a spray.

1,483,407. LOCKOUT SWITCH. THOMAS E. BARNUM, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Continuation of application Serial No. 800,700, filed Nov. 13, 1913. This application filed Feb. 5, 1915. Serial No. 6,247. Renewed Dec. 22, 1920. Serial No. 432,600. 17 Claims. (Cl. 200—94.)

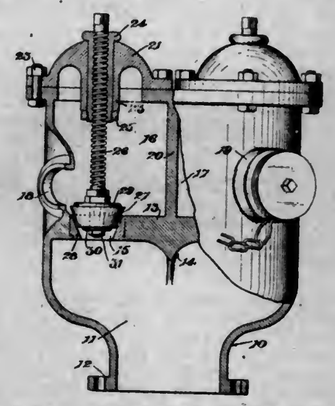
10. An electromagnetic appliance comprising two separate and independent electromagnets one having a comparatively closed or low reluctance magnetic circuit and the other having a comparatively open or high reluctance magnetic circuit, and a movable member attracted in opposite directions by said electromagnets.

15. An electromagnetic appliance comprising two separate and independent electromagnets one having a comparatively closed or low reluctance magnetic circuit of relatively large cross-section and the other having a comparatively open or high reluctance magnetic circuit, and a movable member attracted in opposite directions by said electromagnets, the low reluctance magnet having a magnetic shunt including an air gap between its poles and in shunt with its armature to provide a supplemental flux to increase the magnetization and decrease the initial pull upon the armature.



1,483,408. CARD HOLDER. ISAAC BERNSTEIN, San Francisco, Calif. Filed Mar. 21, 1923. Serial No. 626,523. 6 Claims. (Cl. 40—11.)

1. As an article of manufacture, a holder for display cards or the like formed of spring material bent to form a base having a clasp at one end and a card holding clip at the other end, a second clip detachably connected to



the base, said clips being oppositely disposed and at different angles with relation to the base.

1,483,409. PRESSURE GENERATOR. ALMER NEWTON BLAZER, Mescalero, N. Mex. Filed June 19, 1919. Serial No. 305,251. 7 Claims. (Cl. 60—45.)

1. The combination with a casing having end walls, of diaphragms confined between said end walls and the casing thereby forming fuel, water and air chambers, means supplying water and fuel to their respective chambers, and regulating devices operated by said diaphragms for controlling said supply means.

1,483,410. FIRE HYDRANT. FRANK CAVALLARO, San Jose, Calif. Filed July 6, 1921. Serial No. 482,648. 1 Claim. (Cl. 137—13.)

A fire hydrant comprising a cylindrical lower inlet compartment having a flange whereby it may be connected to a water main, a pair of upper outlet compartments formed above the inlet compartment and disposed on opposite sides of the center thereof, a horizontal partition wall separating the outlet compartment from the inlet compartment, said outlet compartments each having a discharge opening whereby they may be connected to a hose, said discharge opening being located in close proximity to said partition wall whereby the outlet compartments may be substantially drained, said horizontal partition wall having tapered valve openings formed therein between each outlet compartment and the inlet compartment, tapered valve members adapted to seat in and close said openings, a separate covering cap for the upper end of each outlet compartment, each cap having a threaded bore, a threaded valve stem for each valve member, said stem extending through said threaded bore in the cap and threadedly engaging the same, the upper ends of said stems projecting from said caps whereby they may be turned to raise the valves from their seats.

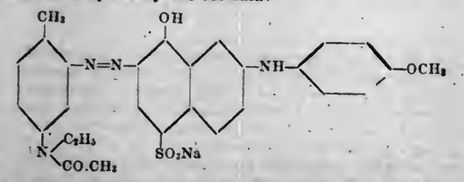
1,483,411. PROCESS OF AMMONIA SYNTHESIS AND MEANS FOR EFFECTING THE SAME. JOHN COLLINS CLANCY, Providence, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 24, 1921. Serial No. 455,352. 19 Claims. (Cl. 23—21.)

1. In a process for synthesizing ammonia from its elements the step which comprises passing the gases to be synthesized into contact with a metallic carbide to remove moisture therefrom with the formation of acetylene preparatory to synthesizing ammonia from said gases.

1,483,412. AMMONIA-SYNTHESIS CATALYST. JOHN COLLINS CLANCY, Providence, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 31, 1921. Serial No. 457,461. 29 Claims. (Cl. 23—28.)

1. The process of producing a catalyst for ammonia synthesis, which comprises heating an alkalinous metal oxygen bearing salt in the presence of a catalytically active metal, carbon and a gas containing nitrogen.

1,483,413. PROCESS FOR THE SYNTHETIC PRODUCTION OF AMMONIA. JOHN COLLINS CLANCY, Providence, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Apr. 2, 1921. Serial No. 458,019. 25 Claims. (Cl. 23—21.)

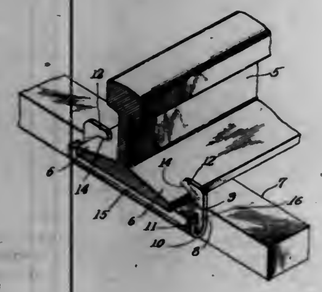


1. In a process for the synthetic production of ammonia the step which comprises passing the gases to be synthesized into contact with an alkalinous carbo-nitrid compound to remove moisture therefrom preparatory to the synthesis of ammonia from said gases.

1,483,414. PROCESS OF REGENERATING AMMONIA-SYNTHESIS CATALYSTS. JOHN COLLINS CLANCY, Providence, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Jan. 3, 1922. Serial No. 526,662. 12 Claims. (Cl. 23—28.)

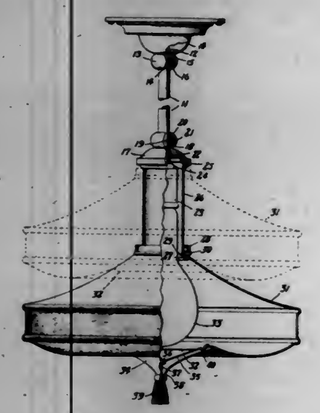
1. The process of regenerating an ammonia synthesis catalyst which comprises reacting upon said catalyst with dry ammonia gas.

1,483,415. AZO DYE. HEINRICH CLINGESTEIN, Cologne, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Mar. 29, 1923. Serial No. 628,566. 2 Claims. (Cl. 260—94.)



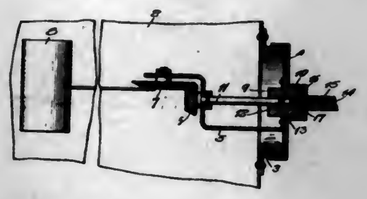
2. The herein described monazo dye having in a free state most probably the formula:

being in the shape of its dried and pulverized sodium salt a brownish powder soluble in water with a yellowish-red and in concentrated sulfuric acid with a red coloration; yielding upon reduction with stannous chlorid and



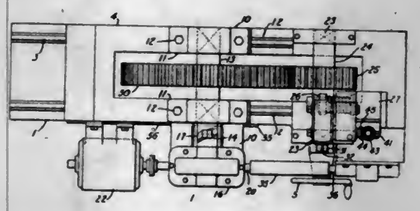
hydrochloric acid 4-ethylacetylamino-2-toluidin and para-methoxyphenyl-2.7-diamino-8-naphthol-6-sulphonic acid; and dyeing wool from said baths a pure yellowish-brown shade fast to milling, substantially as described.

1,483,416. BOLTLESS ANTICREEPING DEVICE FOR RAILROAD RAILS. ADONIRAM J. COOK, Westerlo, N. Y. Filed Aug. 2, 1923. Serial No. 655,273. 6 Claims. (Cl. 238—324.)



1. An anti-creeping device for rails consisting of a metallic plate having jaws at one edge and the opposite edge disposed parallel with and in a plane below the jaws, and a locking wedge adapted to engage the said edge and the base of a rail.

1,483,417. LIGHTING FIXTURE. LEROY C. DOANE, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Sept. 8, 1920. Serial No. 408,909. 4 Claims. (Cl. 240—78.)

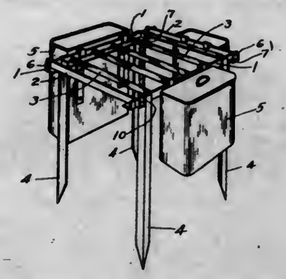


1. In a totally enclosing lighting fixture, the combination of a lamp socket, means for supporting said socket, a lamp in said socket, a canopy supported by and enclosing said socket, a reflector or shade, a member engaging said reflector or shade and slidably supported on said canopy, an aperture in the lower surface of said reflector or shade sufficiently large to provide clearance for said lamp and means for closing said aperture comprising a substantially conical cover, a spring clip attached to said cover and engaging the edges of said aperture and means for drawing said spring clip into said conical cover to disengage the edges of said aperture.

1,483,418. LIQUID-LEVEL INDICATOR. GEORGE J. DUNBAUGH, Jr., Chicago, Ill., assignor to Champion Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 10, 1922. Serial No. 551,180. 1 Claim. (Cl. 73—82.)

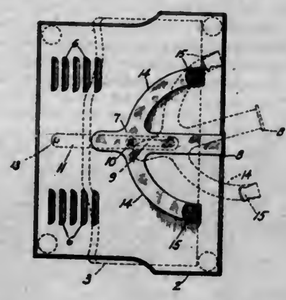
In a device of the kind described and in combination, a closure member adapted to be arranged at the opening of a reservoir, a bracket carried by said member comprising a pair of parallel legs spaced apart, and a leg extending transversely from the free end of one of said parallel legs, said last mentioned adjacent mutually transverse legs each provided with an aperture in mutually perpendicular axes, a gear rotatably journaled in each of said apertures and in mesh, a float carried by one of said gears, an indicator adapted to be mounted at a point remote from said reservoir, a flexible shaft detachably connected to the other of said gears and to said indicator, said indicator comprising a casing having a dial, a pointer movable across the face of said dial, a hollow sleeve in said casing and through which said flexible shaft extends out of contact therewith, a rotatable shaft in said sleeve and directly connected with and engaging the opposed end of said flexible shaft, the other end of said rotatable shaft enlarged so as to form a spherical bearing surface, said hollow sleeve provided with a spherical recess to receive said spherical bearing.

1,483,419. GEAR-INSPECTION MACHINE. GEORGE M. EATON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1920. Serial No. 351,829. 10 Claims. (Cl. 234—1.)



5. A gear wheel testing machine comprising a shaft journaled in the machine base, a crank shaft parallel therewith journaled in said base, means for mounting the gear wheel to be tested on said first named shaft, a master gear wheel rotatably mounted on the crank of said other shaft, a lever secured on the end of said crank shaft and a recording device associated with said lever.

1,483,420. COMBINATION CAMP STOVE AND COOKER. ALBERT L. EWING, Seattle, Wash. Filed Aug. 14, 1922. Serial No. 581,636. 1 Claim. (Cl. 126—30.)

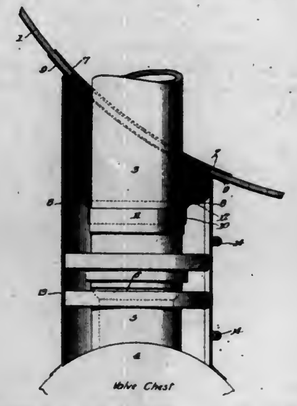


A combination camp stove and cooker of the class described comprising angular shaped horizontal side members having vertical slots and horizontal slots adjacent each end; lugs on the vertical members above the horizontal slots; horizontal angular shaped end members having horizontal slots adjacent to each end; vertical angular

shaped members having vertical slots in their upper ends and having their lower ends pointed; angular shaped

grate bars; and utensils having hooks to fit over the vertical legs of the side and end members, said utensils being of such a size that all of them will fit into the largest one.

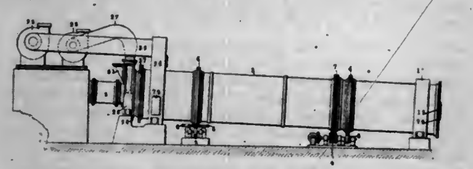
1,483,421. BOOKREST. HELEN G. FARNHAM, Minneapolis, Minn. Filed Oct. 7, 1921. Serial No. 506,185. 6 Claims. (Cl. 45—61.)



2. In a book-rest, the combination, with a base, of a plate mounted to slide forward and backward thereon and having leaf-holding fingers adapted to bear on the leaves and hold them against accidental turning, said plate being mounted to oscillate on a vertical axis to adjust said fingers for holding a greater number of leaves on one side than on the other side of the book.

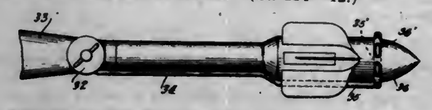
1,483,422. FOOD PRODUCT AND PROCESS OF PREPARING SAME. CHARLES EDWIN FENLON, Sandwich Ill., assignor, by mesne assignments, to The Jahn Fenlon Co., Wilmington, Del., a Corporation of Delaware. Filed Nov. 18, 1918. Serial No. 263,069. 3 Claims. (Cl. 99—8.)

1. As a new article of manufacture, a liquid cream product made from fresh cream having at least eighteen per cent of butter fat, the butter fat being finely divided and comminuted and the cream having a predetermined solid content including solids not fat, and being of a predetermined viscosity so that the butter fat remains in suspension uniformly distributed through the body of cream for an indefinite period of time.



2. The process of canning cream which consists in taking fresh cream and treating it to standardize it to a predetermined solid content of butter fat and of solids not fat; then subjecting the same to the action of a homogenizer with a pressure adapted to finely divide and comminute the butter fat; then placing the cream in hermetically sealed containers, and subjecting the same to sterilization at temperatures from 179° to 250° Fahrenheit during a period to be determined by test on a sample, until the viscosity of the cream shall reach a predetermined viscosity.

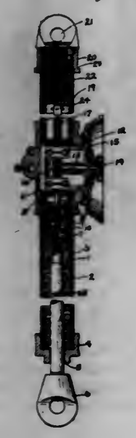
1,483,423. CASING FOR LOCOMOTIVE STEAM PIPES. ARTHUR H. FETTERS, Omaha, Nebr. Filed June 15, 1923. Serial No. 645,645. 6 Claims. (Cl. 105—37.)



1. In a locomotive, the combination of a smoke-box; a valve chest; a steam pipe passing through the smoke-box shell and connecting with the valve chest; and a casing encompassing said steam pipe, joined at one end to the smoke-box shell and at its other end to the steam pipe, and serving to seal hermetically the opening in the smoke-box shell through which the steam pipe passes.

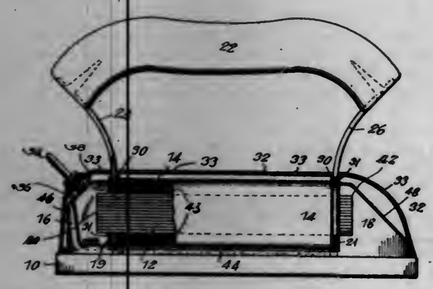
1,483,424. DRIER. FRANCIS E. FINCH, New York, N. Y., and WALTER H. GLOMB, York, Pa., assignors to Ruggles-Coles Engineering Company, York, Pa., a Corporation of New Jersey. Filed May 21, 1921. Serial No. 471,324. 31 Claims. (Cl. 34—6.)

8. In an apparatus of the character described, in combination, a rotatable drum open at one end having gas ports in its longitudinal wall, a hood surrounding said drum in registry with said gas ports, a gas flue extending through said opening, a second hood surrounding said gas flue and in communication with said drum, auxiliary flues in said drum adapted to lead gas from said gas flue to said gas ports out of contact with the material to be dried, means adapted to establish a current of air from said drum through said second hood, and means separate from said last mentioned means, adapted to establish a current of gas from said gas flue through said first mentioned hood by way of said auxiliary flues and said gas ports.



1,483,425. TOOL FOR FORMING SELVAGED FABRIC. WILLIAM C. FISHER, Middletown, Conn., assignor to The Russell Manufacturing Company, Middletown, Conn., a Corporation of Connecticut. Filed Aug. 14, 1922. Serial No. 581,849. 9 Claims. (Cl. 154—42.)

4. A fabric cutting and folding tool comprising a guiding portion, a cutting edge mounted on said tool rear-



wardly of said guiding portion, a fabric folding means located in said tool adjacent and rearwardly of said cutting edge, and a size applying means carried by said tool.

1,483,426. WEIGHT INDICATOR. HAROLD W. FLETCHER, Houston, Tex., assignor to Hughes Tool Company. Filed Sept. 6, 1921. Serial No. 498,855. 3 Claims. (Cl. 265—68.)

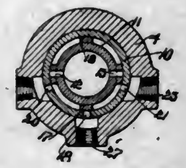
1. In a weight indicating device, a tubular housing, a load supporting shaft slidable in said housing, a spring in said housing supporting said shaft, an indicator actuating rack above said shaft, a spring between said shaft and said rack and resilient means in said housing above said rack, acting to press said rack downwardly.

1,483,427. ELECTRIC HEATING DEVICE. EDWIN G. GAYNOR, Stratford, and LEON T. WILSON, New Haven, Conn.; said Wilson assignor to said Gaynor. Filed Nov. 3, 1921. Serial No. 512,411. 13 Claims. (Cl. 219—25.)

1. An electric heating device comprising a magnetic circuit comprising a heating plate formed of iron containing less than 0.15 per cent of carbon, and an induction winding on a portion of said magnetic circuit outside of said plate.

1,483,428. PIPE-COLLAR PLATE. EDWIN G. GAYNOR, Stratford, Conn. Filed Apr. 11, 1923. Serial No. 631,369. 2 Claims. (Cl. 126—317.)

1. A device of the type described which comprises, a pair of semi-circular plates and a connecting hinge plate having a pair of integral rivet members, one extending through an opening in one plate and the other through an opening in the other plate, said connecting plate having an extension at one end bearing against an outer

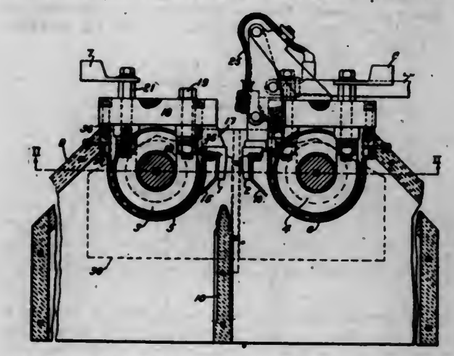


flange of one plate and rounded at the opposite end to permit swinging of its plate about the rivet at this end as a pivot.

1,483,429. REAMER. JOHN N. GOODALL, Portsmouth, N. H. Filed Jan. 4, 1923. Serial No. 610,597. 2 Claims. (Cl. 77—75.5.)

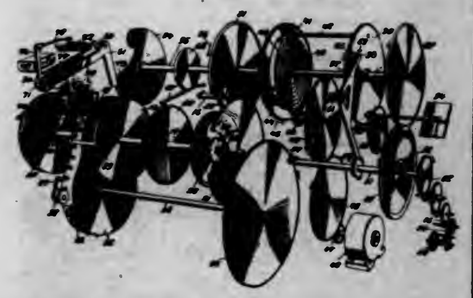
1. A reamer comprising a screw-threaded shank, cutting blades inserted in longitudinal slots in the shank, and confined against endwise movement by adjustable stop nuts engaged with the shank, center guides alternating with the cutting blades, radially movable in corresponding longitudinal slots in the shank, and confined against endwise movement by said stop nuts, and springs normally pressing the center guides outward against the stop nuts, and permitting radial inward yielding movement of said guides, the guides being normally pressed radially outward by the springs, and adapted to be displaced inward from their normal positions and inclined by contact with the bore reamed by the cutting blades, so that the guides are pressed by the springs against spaced apart points in said bore, to prevent injury to the bore by lateral movement of the cutting blades during the reaming operation.

1,483,430. REVERSING VALVE. JAMES E. GREENSMITH, Brookline, Mass., assignor of one-half to Boston Scale & Machine Company, Boston, Mass., a Corporation of Massachusetts. Original application filed Apr. 19, 1920, Serial No. 374,815. Divided and this application filed Jan. 13, 1921. Serial No. 437,068. 7 Claims. (Cl. 121—182.)



1. In a machine of the character described, in combination, a cylinder having a port at each end, a piston in said cylinder, a reversing valve, said reversing valve including a cage having ports in communication with the cylinder ports, a plug having ports adapted alternately to communicate with the ports of said cage, and an operating member; said plug having an interior inlet and a rotative bearing in said cage by means of partitions adjacent the plug ports, and a passage exteriorly of said plug permitting fluid flow between the cage and plug for exhaust from said cylinder.

1,483,431. CONTROL APPARATUS. ARTHUR J. HALL, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 7, 1919. Serial No. 281,187. 11 Claims. (Cl. 200—147.)

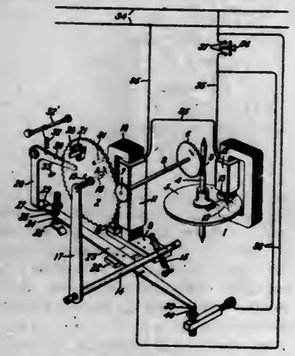


1. The combination with a plurality of relatively movable contact members, of plural means respectively located on opposite sides thereof and in proximity thereto

for inductively quenching the arcs formed between said members, means for guiding said arcs around said quench-

ing means, and means, secured to said contact members, for conducting portions of said arcs into close proximity to the respective guiding means.

1,483,432. DEMAND METER. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed July 19, 1921. Serial No. 486,006. 18 Claims. (Cl. 234—5.5.)

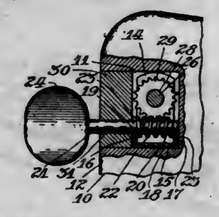


1. In an instrument having a movable member, means for printing a record of the movement of the member during equal intervals of time, comprising a platen, a type carrier actuated in accordance with the movement of the movable member, and mechanical means actuated by a constantly energized motor for causing the platen and type carrier to perform a printing operation periodically.

13. In combination, a spring, a motor arranged to be constantly energized for winding up the spring, a clock movement, a second spring for actuating the clock movement, means operated by the clock movement for periodically allowing the first mentioned spring to unwind, and a pair of friction gears operated by the unwinding of the spring and arranged to wind the clock spring.

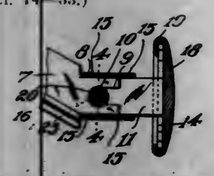
16. In a printing mechanism, a type carrier, a member having a surface upon which the printing is to be performed, a rotatably mounted platen having a plurality of active surfaces, a movable support in which the platen is mounted, means for moving said support periodically to perform a printing operation, a pad for inking the surfaces of the platen, and means for rotating the platen after each operation so as to ink the surfaces of the platen successively.

18. In an instrument having a movable member, in combination, means for printing a record of the movable member during equal intervals of time, means for indicating the extent of the movement during any part of an interval, and means for indicating the maximum of the movements of the member.



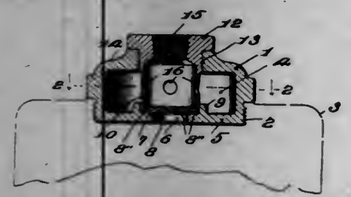
1,483,433. RELAY. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Sept. 24, 1921. Serial No. 502,914. 6 Claims. (Cl. 200—92.)

1. A definite time limit relay comprising an induction disc constant speed motor, an electromagnet having its winding in circuit with said motor, a hinged armature adapted to be attracted by said electromagnet and normally biased therefrom, a rotatable member mounted on a shaft and normally biased to initial position, means comprising said armature for moving said rotatable member into driving relationship with said motor, contacts controlled by said rotatable member, and means adapted to be operated to vary the initial position of said rotatable member whereby the time required by said motor to rotate said rotatable member to contact controlling position may be changed.



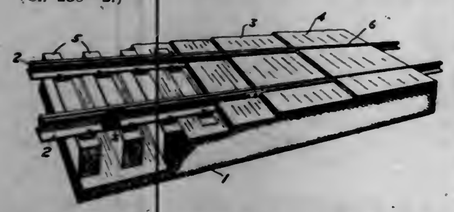
6. A relay comprising an electromagnet provided with a hinged armature normally biased therefrom, a rotatable member, means for rotating said member, a shaft on which said member is mounted supported at one end in a fixed bearing and at the other end in a bearing movable by said armature when said electromagnet is energized to place said rotatable member in driving relationship with said rotating means, a flexible switch member secured to said armature, restraining means for holding one end of said switch member whereby said armature when attracted flexes said switch member, said restraining means being adapted to be released by said rotatable member, means for varying the angular movement of said rotatable member to change the time required by said rotating means to rotate said rotatable member from initial position to releasing position, and countertorque means for rotating said rotatable member to initial position when said electromagnet is deenergized.

1,483,434. TUNING DEVICE FOR STRINGED MUSICAL INSTRUMENTS. HANS O. HAMMER, Chicago, Ill. Filed Mar. 17, 1922. Serial No. 544,465. 4 Claims. (Cl. 84—306.)



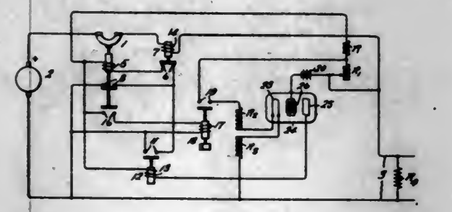
2. A tuning device for stringed musical instrument, comprising a head having a socket formed in the side thereof, a shell-like box positioned in said socket, a spindle having a worm positioned in said box, a gear operatively engaging said worm and positioned in said box and a plug carried by said spindle and positioned on the side of said box for retaining said box in said head.

1,483,435. DETACHABLE HANDLE. SAMUEL HAMMER, New York, N. Y., assignor to United Metal Box Co., Inc., Long Island City, N. Y., a Corporation of New York. Filed July 27, 1921. Serial No. 488,037. 6 Claims. (Cl. 74—33.)



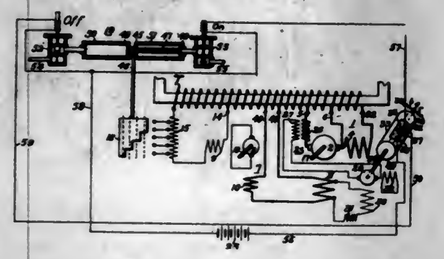
1. In combination with an operating lever, a detachable handle therefor having shank sections provided with oppositely disposed aligned aperatures of different diameters, and an adjustable element permanently connected to the handle in locked engagement with said lever, and having a free rotatable engagement with one of the apertures of said shank sections, and a threaded engagement with the opposite aperture.

1,483,436. VALVE. GEORGE EDGAR HAZARD, Rochester, N. Y., assignor to Kellogg Manufacturing Co., Rochester, N. Y. Filed Aug. 30, 1920. Serial No. 406,920. 4 Claims. (Cl. 251—127.)



1. A valve structure for air pumps, comprising a housing having a compression chamber, the bottom of the chamber having a valve receiving recess, the bottom of the recess having an air passageway the recess provided with a surrounding flat valve seat around the air passageway, a disk valve having an imperforate central portion of greater area than the air passageway, the periphery of the central portion of the valve having laterally extending arms for the purpose described, an annular member extending through the chamber of the housing with its inner end projecting into the valve recess adjacent the valve to limit its unseating movement, the annular member having lateral passageways in communication with the compression chamber, and a passageway communicating outside of said chamber.

1,483,437. RAILWAY CROSSING AND METHOD OF MAKING THE SAME. WILLIAM T. HEADLEY, Philadelphia, Pa. Filed Aug. 4, 1921, Serial No. 489,687. Renewed Mar. 20, 1922. Serial No. 545,344. 5 Claims. (Cl. 238—2.)

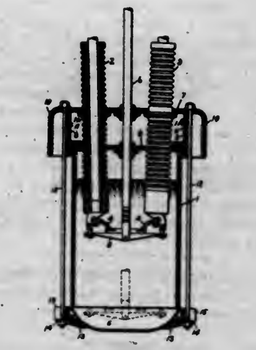


5. The method of making a railway crossing which consists in putting ballast under and in contact with the ties for drainage and air, superposing a cold course of stone and asphaltic binder upon the ballast and against the rails to roof the ties, and making flange ways in the wearing surface before it sets, substantially as described.

1,483,438. AUTOMATIC RECLOSING-CIRCUIT-BREAKER SYSTEM. FRED H. HEDIN, Willimantic, Conn., assignor to General Electric Company, a Corporation of New York. Filed Oct. 25, 1922. Serial No. 596,876. 8 Claims. (Cl. 175—294.)

2. In an automatic reclosing circuit breaker system, a source of current, a load circuit, a circuit breaker for connecting said source to said circuit, an electron discharge tube having its anode, cathode and grid connected to said system so that the potential difference between the points to which the grid and the cathode are connected is zero when the load resistance is a predetermined value, and means responsive to the current through said tube for causing the closing of said circuit breaker when the potential difference between the points to which said grid and cathode are connected is zero.

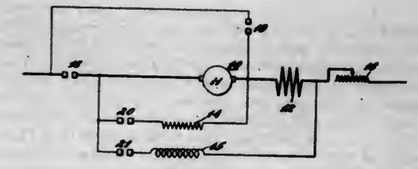
1,483,439. SYSTEM OF CONTROL. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 11, 1919. Serial No. 281,954. 5 Claims. (Cl. 172—276.)



1. In a system of control, the combination with an alternating-current commutator motor having an armature and field-producing means, of an exciter machine for said motor, adjustable phase-shifting means for influencing said exciter machine, a control device for governing said phase-shifting means, and a torque-relay device having its component elements respectively energized in accordance with the motor load current and field excitation for effecting actuation of said control device.

3. In a system of control, the combination with an alternating-current commutator motor having a working and an exciting circuit, means for adjusting the relative values of the impressed and the counterelectromotive forces of the working circuit, and other means for modifying the phase of said counterelectromotive forces, one of said means being operative at will and the other means being automatically controlled in accordance with the phase relation of certain machine circuits.

1,483,440. ELECTRIC SWITCH. EDWARD M. HEWLETT, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 31, 1918. Serial No. 260,455. 4 Claims. (Cl. 200—150.)

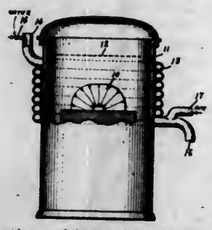


1. An electric switch comprising a vessel adapted to contain an insulating fluid, relatively movable contacts

separable within the fluid in said vessel, a cover formed with passages for the escape of gases formed at the open-

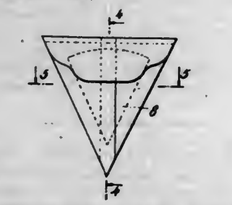
ing of the switch, and a plate secured directly to said cover and arranged to protect the cover from the shock occurring at the separation of the contacts.

1,483,441. MOTOR-CONTROL SYSTEM. LLOYD J. HIBBARD, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 12, 1920. Serial No. 423,549. 6 Claims. (Cl. 172—276.)



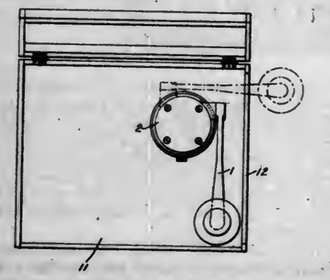
2. In a system of control for an alternating-current motor having an armature and a field-magnet winding, the combination with a reactor and a resistor, of means for effecting a series connection of said reactor and said armature during the shunt operation only of said motor, for including said resistor in a closed circuit with said armature when it is desired to electrically brake said motor, and for also separately exciting said field-magnet winding.

5. In a system of control, the combination with a supply circuit and an alternating-current motor of the commutator type having an armature and a field winding, of a resistor and a reactor, means for connecting said reactor in series relation with said armature during shunt operation of the motor, and means for connecting said resistor in a closed circuit with said armature to produce a braking current.



6. In a system of control, the combination with a supply circuit and an alternating-current motor of the commutator type having an armature and a field winding, of a resistor and a reactor, a switch for connecting said armature and field winding in series relation across said supply circuit, a second switch connected between one side of the supply circuit and a point intermediate the armature and the field winding, a third switch for connecting said reactor to the outer terminals of the motor, whereby, upon the concurrent closure of said second and said third switches, the motor operates as a shunt motor, and a fourth switch for connecting said resistor across the armature, whereby, upon the closure of said second and said fourth switches, the armature produces a braking current and the field winding is energized directly from the supply circuit.

1,483,442. MEANS FOR COOLING ELECTRICAL APPARATUS. HENRY M. HOBART, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 15, 1919. Serial No. 290,358. 3 Claims. (Cl. 257—52.)

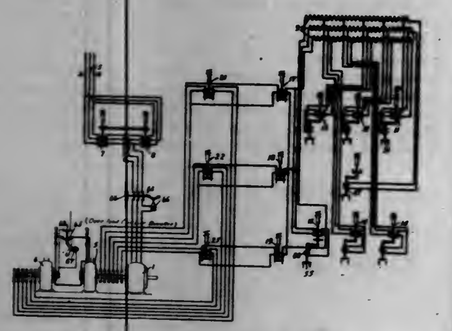


1. The combination with an electrical apparatus of a cooling pipe in the form of a vertical spiral coil, disposed in thermally conducting relation with said apparatus, means for admitting a cooling liquid to said pipe to flow downwardly therein in a current only partially filling the pipe, and means for admitting a current of air to flow through said pipe in contact with said liquid.

1,483,443. ENVELOPE. GEORGE FRANCIS HOGAN, Chicago, Ill. Filed June 14, 1922. Serial No. 568,121. 3 Claims. (Cl. 225—22.)

1. A triangular envelope of paper comprising a triangular front wall having wings extending from the lateral edges thereof, these wings being substantially in the form of triangles with their apices cut off at an angle, and being adapted to be folded back upon the front wall with their free lateral edges lying substantially parallel and in overlapping relation, sealing means for holding these edges of the wings together, a flap projecting from the base margin of the front wall adapted to be folded over the margin and sealing means on the flap to hold it to the overlapping wings whereby to seal the envelope.

1,483,444. TELEGRAPH KEY. SAMUEL C. HOEY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1918. Serial No. 266,707. 10 Claims. (Cl. 178—103.)

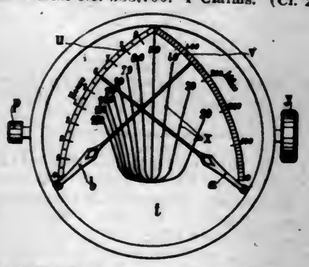


1. A telegraph key comprising an actuating lever and a rotatable base member, and two collector members mounted on said base and two stationary contact members adapted to engage said collector members, co-operating collector members and contact members being continuously in engagement for all positions of said base member.

1,483,445. COTTON-SQUARE PICKER. RUDD T. HOLTON, Hugo, Okla. Filed Sept. 16, 1922. Serial No. 588,652. 2 Claims. (Cl. 294—61.)

1. A gathering device of the class described including a shank, a plate mounted on one end of the shank, a plurality of parallel spikes extending from the plate, a cleaning device including a pair of legs piercing the plate and movable therethrough and a cleaning frame mounted on the bottom ends of the legs including a pair of U-shaped members extending above the spikes and disposed at a plane at right angles to the plane in which are disposed said legs.

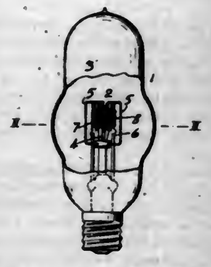
1,483,446. ELECTRICAL SYSTEM. GEORGE W. HUEY, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 8, 1917. Serial No. 173,444. 6 Claims. (Cl. 172—274.)



1. In an electrical system, the combination with a direct-current electric motor, an alternating-current motor mechanically connected thereto and a rotary converter electrically connected to said direct-current motor, of means for successively effecting the acceleration of said alternating-current motor and the connection of its secondary winding to said rotary converter, and means for preventing the connection of said windings when the field of said motor is excited.

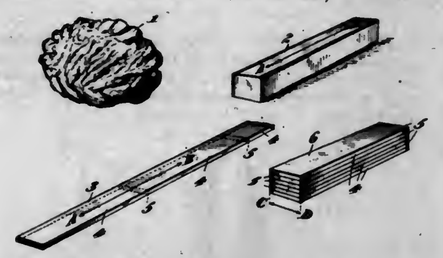
5. In an electrical system, the combination with an alternating-current motor having a primary winding and a secondary winding, of controlling means therefor comprising a master switch that is operable to successive positions for respectively closing the circuits of said secondary winding and said primary winding and operable in the reverse direction for successively opening said circuits in the reverse order.

1,483,447. AZO DYESTUFF. JOHANN HUISMANN, Wiesdorf, near Cologne-on-the-Rhine, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne on-the-Rhine, Germany. Filed Mar. 15, 1923. Serial No. 625,422. 2 Claims. (Cl. 260—44.)



1. The herein described new azodyestuffs which are after being dried and pulverized in the shape of their alkali metal salts dark powders soluble in water generally with a red coloration, soluble in concentrated sulfuric acid generally with a violet coloration; yielding upon reduction with stannous chlorid and hydrochloric acid orthosulfonic acids of aromatic amino-thiazole compounds and amino ureas containing the radicle of a 2.6-diamino-5-naphthol-7-sulfonic acid compound and the radicle of a para-aryldiamine; dying cotton pure red shades distinguished by their good fastness to water and light, substantially as described.

1,483,448. INDICATING DEVICE FOR AVERAGE SPEEDS. EDMOND JAEGER, Paris, France. Filed June 12, 1920. Serial No. 388,700. 4 Claims. (Cl. 235—61.)

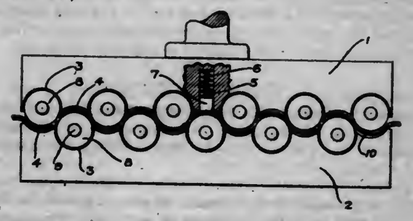


1. In an indicating apparatus comprising two needles each rotating about a different axis and arranged to cross on a graphic chart, means to set one of the needles in rotation proportionally to the time, means to actuate the other needle proportionally to the distance traversed, means to interrupt the movement of the time indicating needle during the stoppages of the distance indicating needle, the arrangement of the needles being such that the point of intersection of the needles indicates thereon a value proportional to the ratio between the angular displacements of the two needles for the purpose of obtaining an indicator of average speed stops excluded.

1,483,449. ELECTRIC LAMP FOR PROJECTION APPARATUS. BERNAYS JOHNSON, Newark, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Sept. 15, 1921. Serial No. 500,918. 2 Claims. (Cl. 176—40.)

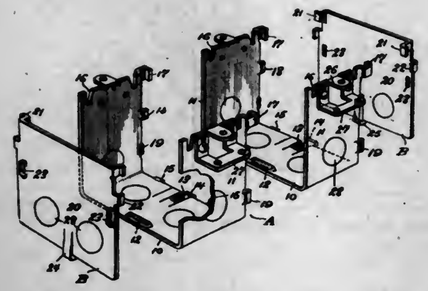
1. An electric lamp having a filament comprising a plurality of coiled sections of substantially equal length, said sections being disposed in two planes which meet to form a V, the sections in each side of the V being parallel to the meeting line and disposed behind and overlapping one another, and a coiled section at the meeting line also arranged parallel to the other sections and overlapping the sections immediately adjacent thereto, the said sections being spaced from each other a sufficient distance to avoid arcing therebetween.

1,483,450. MAKING IRON AND TUBES. EDWARD F. KENNEY, Philadelphia, Pa. Filed Feb. 21, 1923. Serial No. 620,458. 6 Claims. (Cl. 80—62.)



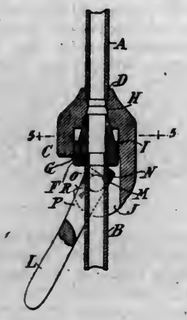
6. The method of forming a tube which consists in taking a heated ball or loup of wrought iron intermingled with slag and oxides, forging and compressing the same to a bloom of approximately rectangular cross section, then rolling said bloom longitudinally, thereby producing a muck bar, then cutting said muck bar into predetermined lengths and placing said lengths together to form a pile, then heating said pile, and rolling it in a direction transverse to the previous direction, thereby forming a wider bar, then transversely cutting strips of predetermined width therefrom, then placing said strips together to form a pile, then heating said pile and rolling the same longitudinally to form a tube skelp, then bending said skelp with its longitudinal edges overlapping, then heating it to welding temperature, and then welding said edges together in welding rolls or otherwise to form a tube.

1,483,451. IRON AND TUBE MAKING. EDWARD F. KENNEY, Bethlehem, Pa. Filed July 11, 1923. Serial No. 650,776. 6 Claims. (Cl. 80—62.)



1. The method of making wrought iron which consists in first forming a heated ball thereof, then compressing the same laterally while extending it longitudinally, thereby forming a bloom, then reducing the cross-section of said bloom while extending it laterally thereby forming a plate, then cutting said plate transversely into sections and placing said sections together to form a pile, then heating said pile and reducing its cross-section while extending it longitudinally in a direction different from the first extension, thereby forming a plate or skelp.

1,483,452. MOLDING. JOHN J. KEYES, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 14, 1921. Serial No. 452,109. 7 Claims. (Cl. 154—30.)

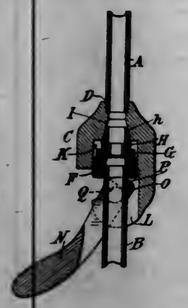


1. A mold comprising a pair of co-operating platens having a plurality of alternate deep and shallow grooves formed therein and a plurality of rotatable dies mounted in said deep grooves to co-operate with said shallow grooves.

1,483,453. OUTLET BOX. HOMER G. KNODERER, Englewood, N. J., assignor to General Electric Company, a Corporation of New York. Filed Dec. 18, 1922. Serial No. 607,497. 3 Claims. (Cl. 247—16.)

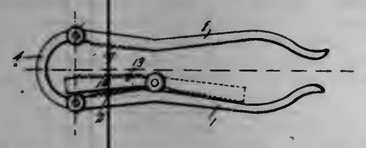
1. A gang outlet box comprising end members which are alike in structure, and body members which are alike in structure, said end members having hooks at their upper corners and said body member having notches at its upper corners at both ends and hooks on its upper corners at one end, the hooks on both the end members and the body members being adapted to engage the notches in the body members, and means for fastening the end members and body members together at their lower edges.

1,483,454. PIPE COUPLING. HENRY P. KRAFT, Ridgewood, N. J. Filed May 10, 1920. Serial No. 380,025. 7 Claims. (Cl. 285—181.)



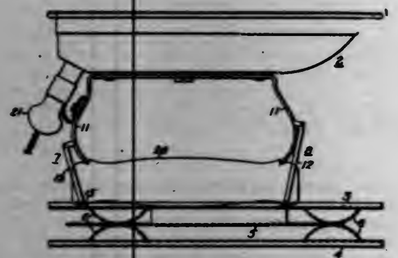
1. A coupling of the type described comprising a seat, a part adapted to contact with said seat, a pipe connected to said part, arms separated to permit the passage of such pipe and part longitudinally between the same, and a lever pivoted to said arms and adapted to act directly against said part to force it to said seat.

1,483,455. PIPE COUPLING. HENRY P. KRAFT, Ridgewood, N. J. Filed Aug. 3, 1921. Serial No. 489,445. 6 Claims. (Cl. 285—181.)



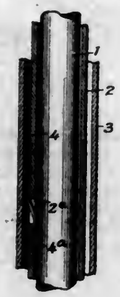
1. A coupling of the type described comprising two sections, one provided with a seat and the other with a head adapted to contact with said seat, said seat and head having non-compressible seating faces, a lever as-

sociated with one of said sections and operable to engage the other section to force the head and seat into locking



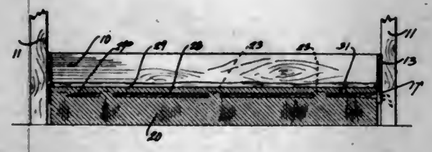
contact, one of said sections being adjustable to compensate for wear on the lever and the engaging surface on the section.

1,483,456. CRACKING DEVICE. JACOBUS PIET HENRI KROON, Amsterdam, Netherlands. Filed Apr. 22, 1922. Serial No. 556,010. 2 Claims. (Cl. 146—13.)



1. A cracking device, comprising two coordinate, relatively movable handles having coacting gripping surfaces, a coupling member connecting said handles and to the ends of which the handles are separately pivoted at their inner ends; said coupling member being bowed outwardly, away from the handles in the direction of the longitudinal axis of the cracking device, to an extent such that the article to be cracked may be brought so far between the coacting gripping surfaces that its point projects beyond an imaginary straight line connecting the centres of pivotal movement of said handles, and an auxiliary member pivoted to one handle and provided at one side with a gripping surface; said auxiliary member being movable between an inoperative position and an operative position in which its gripping surface is adapted to coact with the gripping surface on the other handle.

1,483,457. STAND FOR TRAVELER'S IRON. HENRY KRUESHELD, Mansfield, Ohio, assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Jan. 20, 1920. Serial No. 352,717. 7 Claims. (Cl. 68—27.)

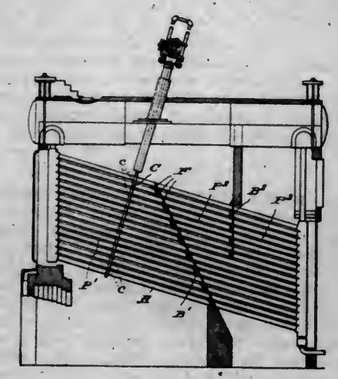


1. The combination with a stand adapted to support a sad iron in normal upright position, of a plurality of members of substantially U-shape pivotally mounted on said stand for holding the iron in an inverted position on the stand.

1,483,458. STEERING GEAR. ARTHUR H. KUMMER, La Fayette, Ind., assignor to The Ross Gear and Tool Company, La Fayette, Ind., a Corporation of Indiana. Filed Nov. 9, 1921. Serial No. 513,952. 13 Claims. (Cl. 74—39.)

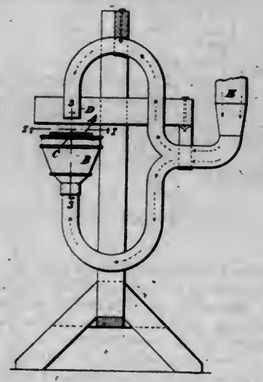
1. In a steering gear control member concentrically arranged; and anti-rattling devices each having a shank and a bowed spring portion separate from and interposed between said members to prevent rattling, said devices passing through holes in the intermediate control member.

1,483,459. METHOD FOR FORMATION AND STORAGE OF ICE. HORATIO G. LANE, Whiteball, N. Y. Filed Mar. 21, 1922. Serial No. 545,511. 4 Claims. (Cl. 62—172.)



4. That method of forming ice in an atmosphere of freezing temperature, which consists in the formation of a layer of ice, flooding the surface thereof to provide a film of water thereon, disposing supporting members upon said surface so that the film of water when frozen will bind said supporting members to said layer, again flooding the surface of said layer with a body of water to cover said supporting members, permitting said body of water to freeze to a depth just below the tops of said supporting members to a point just above the top of said first mentioned layer of ice to provide an auxiliary layer of ice supported by said supporting members, permitting the water intermediate said first mentioned layer of ice and said auxiliary layer to drain to provide an air space intermediate said first mentioned layer of ice and said auxiliary layer of ice, and augmenting the auxiliary layer of ice to provide a second layer of ice of a required thickness.

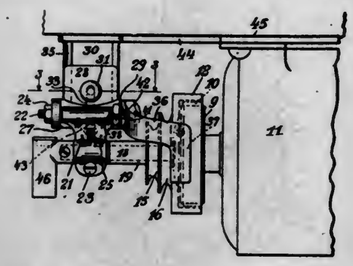
1,483,460. COMBINED TUBE SYSTEM AND CLEANER. FREDERICK W. LINAKER and THEODORE M. BRUBACK, Dubois, Pa. Filed Oct. 9, 1920. Serial No. 415,786. 3 Claims. (Cl. 122—392.)



1. In combination, a tube system having a baffle therein, a compressed fluid cleaning element adapted to blow jets of fluid into the intervals in said tube system, and a baffle protector between said cleaning element and said baffle, said cleaner element being rotary, said protector

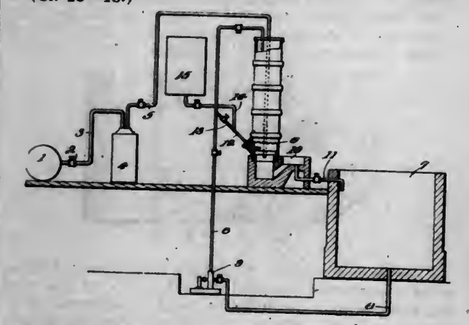
being adapted to receive the impingement of the pets in that part of the movement of the element where they

blow substantially perpendicularly to said baffle, and said protector comprising an angle bar confined between rows of tubes.



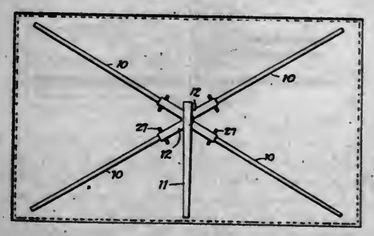
1,483,461. HEAT TREATMENT OF GLASS ARTICLES. JESSE T. LITTLETON, Jr., Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed July 19, 1921. Serial No. 485,865. 2 Claims. (Cl. 49—89.)

2. The hereinbefore described method of heat treatment of pressed glass articles to increase their thermal and mechanical endurance which consists in heating the article after pressing to equalize the temperature of different parts thereof, and in then rapidly uniformly cooling the article from a substantially uniform temperature above the annealing temperature of the glass of which it is composed by high velocity air jets directed on substantially the entire surfaec of the article.



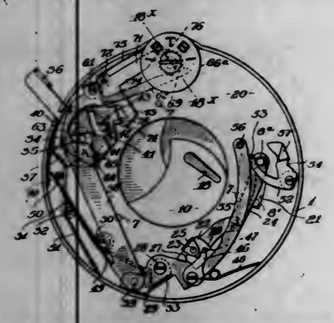
1,483,462. POWER-TRANSMITTING MECHANISM. MICHAEL MCCANN, Glenmore, N. Y., assignor to Frederick Osann Company, a Corporation of New York. Filed June 8, 1922. Serial No. 566,783. 4 Claims. (Cl. 192—4.)

1. A self contained unitary power transmitting mechanism comprising in combination a base, a motor secured thereto, a driving wheel operated by said motor, a driving unit adapted to be operated by said driving wheel, a hanger for supporting said unit, a yoke for pivotally supporting said hanger, means for adjustably supporting said yoke on the said base, means carried by said yoke for automatically normally maintaining said hanger and



driving unit in non-operative relation with said driving wheel and means for operatively engaging said driving wheel and unit.

1,483,463. MAKING BLEACHING LIQUOR AND APPARATUS THEREFOR. JOHN R. MACMILLAN, La Salle, N. Y., assignor to Electro Bleaching Gas Company, New York, N. Y., a Corporation of New York. Filed Dec. 2, 1921. Serial No. 519,417. 3 Claims. (Cl. 23—13.)

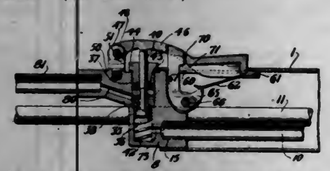


3. In an apparatus for making bleaching liquor, a source of chlorin gas, a vertical reaction tower, chlorin connections near its base, a receiving tank for alkaline liquor, means for circulating the liquor to the top of the tower and back to the tank and a connection for delivering additional alkaline liquor to the tower near the point of chlorin introduction.

1,483,464. NOSE IRON FOR SCALES. JOSEPH JOHN MAGRADY, Chicago, Ill. Filed July 2, 1923. Serial No. 649,065. 4 Claims. (Cl. 285—71.)

1. A double nose iron of the type and for the purpose described consisting of a pair of lever engaging members hingedly connected at one end, and a pivot supporting member held on the nose iron in line with the axis of adjusting movement of said socket members.

1,483,465. PHOTOGRAPHIC SHUTTER. PAUL J. MARKS, Rochester, N. Y. Filed Dec. 29, 1919. Serial No. 348,179. 33 Claims. (Cl. 95—63.)



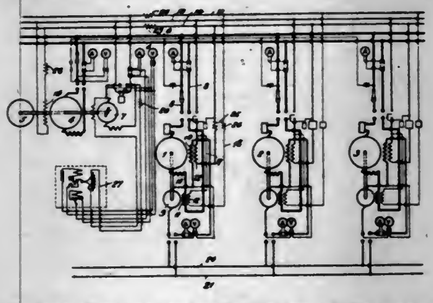
1. In a shutter, the combination of a casing having an aperture therethrough, two sets of blades movable in said casing to open and close said aperture, each set of said blades being adapted to close the aperture independently of the other set, and means for moving said blades.

1,483,466. SCENERY-FORMING PAPER AND METHOD OF PREPARING SAME. CONRAD B. MAURER and HOWARD P. MAURER, Philadelphia, Pa. Filed Feb. 2, 1923. Serial No. 616,473. 5 Claims. (Cl. 41—26.)

1. As a new article of manufacture scenery-forming paper manufactured in roll form for sale by the yard and adapted to be crumpled by hand to represent snow-capped mountain scenery, said paper being sufficiently pliable to permit crumpling without cracking and yet stiff enough to retain a fashioned position without the employment of braces and the like.

1,483,467. CUTTING BLOWPIPE. ELOF H. MEDÉN, Short Hills, N. J., assignor to American Gasaccumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 18, 1920. Serial No. 366,833. 10 Claims. (Cl. 158—27.4.)

1. In a cutting blow pipe or torch having a handle and conduits for conveying the gases to the tip of the blow pipe, the combination of a valve body situated at one end of the handle, a valve situated in said valve body exteriorly of the said handle which valve controls the passage of gas through one of said conduits, means situated exteriorly of the said handle, and in adjacent relation thereto, for actuating the said valve, and means supported within said handle and adapted to engage the said valve actuating means and hold it in position to retain the valve in open position.



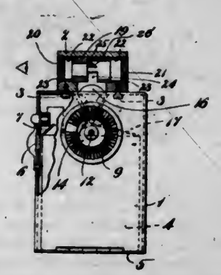
1,483,468. BASIC REFRACTORY AND PROCESS OF MAKING SAME. ALBERT P. MEYER, Pittsburgh, Pa., assignor to Allen S. Davison Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 25, 1922. Serial No. 531,764. 11 Claims. (Cl. 106—9.)

1. As a new basic refractory, an aggregation of hard, dense, angular individually fired granules of uniform nature and standardized composition, such granules being composed of a basic magnesian refractory containing enough intimately distributed fluxing material to permit bonding at open hearth furnace temperatures.

1,483,469. BASIC REFRACTORY AND PROCESS OF MAKING SAME. ALBERT P. MEYER, Pittsburgh, Pa., assignor to Allen S. Davison Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 25, 1922. Serial No. 531,765. 5 Claims. (Cl. 106—9.)

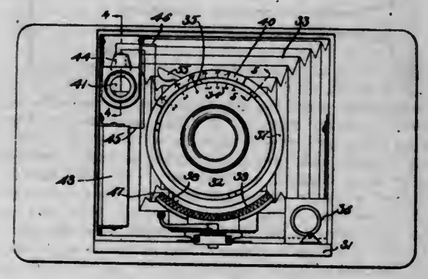
1. As a new basic refractory for open hearth furnaces, a granular aggregation of sharp edged, flat faced, hard, dense individually fired granules of a mixture of dolomite and bonding agent, the several granules being of uniform composition and the amount of bonding agent being sufficient to permit bonding of the granules at the temperatures of an open hearth furnace.

1,483,470. EQUALIZING SPEEDS OF MOTOR DRIVES. ADOLPH J. F. MONTABONE, Montreal, Quebec, Canada, assignor to General Electric Company, a Corporation of New York. Filed July 6, 1921. Serial No. 482,726. 9 Claims. (Cl. 172—293.)



1. In a direct current motor system of the kind described, the means for maintaining the fixed relative speed of a plurality of electrically connected driving motors which are adjusted or adapted to run at varying speeds, comprising the combination with each of said motors of a machine capable of running either as a motor or as a generator and mechanically connected to its respective motor, supplemental field coils for all of the motors, connected with the armature circuits of said machines, and means for adjusting the said motors and said machines in the manner set forth.

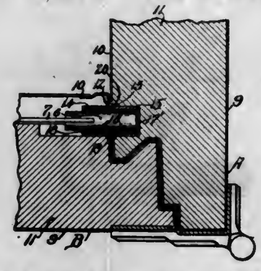
1,483,471. TOOL FOR OPERATING UPON INSOLES USED IN BOOTS AND SHOES. JACOB R. NAUGLE, Carlisle, Pa. Filed Oct. 19, 1921. Serial No. 508,724. 1 Claim. (Cl. 12—40.)



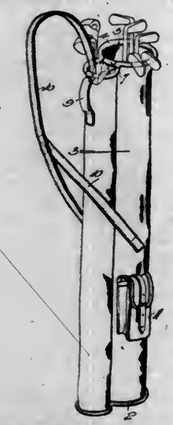
A tool for operating upon insoles including in combination a pair of main blades, a pair of angularly extending blades associated with the main blades for slitting the outer lip of an insole, one angularly extending blade formed on each main blade, said main blades being situated in the same plane with each other and said angularly extending blades being situated so as to converge toward each other, and a third blade for slitting the inner lip of the insole situated so as to have its edge adjacent the converging ends of the angularly extending blades.

1,483,472. METHOD AND MEANS FOR DETERMINING LIGHT INTENSITIES. FREDERICK H. NORTON, Hampton, Va. Filed May 26, 1921. Serial No. 472,842. 7 Claims. (Cl. 88—23.)

1. The method of ascertaining the illumination of an object field which comprises determining the visibility point of an adjustable variable illuminant comparing the illumination of the object field therewith and noting the amount of adjustment required to bring the variable illumination from its visibility point to an adjustment in which it equals the illumination of the object field.



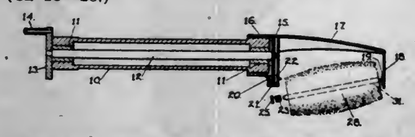
1,483,473. METHOD AND APPARATUS FOR DETERMINING PHOTOGRAPHIC EXPOSURES. FREDERICK H. NORTON, Hampton, Va. Original application filed May 26, 1921, Serial No. 472,842. Divided and this application filed Mar. 3, 1922. Serial No. 540,755. 10 Claims. (Cl. 95—10.)



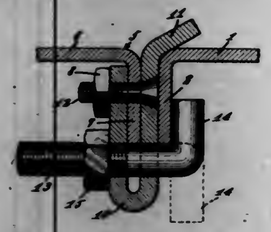
1. The method of determining the exposure of a sensitive element which comprises comparing a variable illumination with the illumination to which said element is to be exposed, and conjunctively adjusting the light opening through which said element is to be exposed and the variable illumination so that the proper exposure is indicated for any opening adjustment.

1,483,474. BOLT AND SOCKET CONSTRUCTION. ENOCH OHNSTRAND, Mohawk, N. Y., assignor to Library Bureau, Cambridge, Mass., a Corporation of New Jersey. Filed Jan. 28, 1922. Serial No. 532,445. 14 Claims. (Cl. 109—2.)

1. In a safe having a sheet metal wall provided with a bolt opening therein, a bolt socket abutting one side of said wall around said opening, and a bushing fitting in said socket, the bushing extending through said opening and overlapping the other side of said wall around the opening.

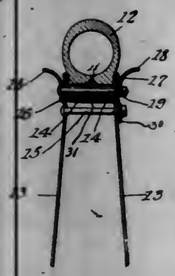


1,483,475. GOLF-CLUB BAG. RODNEY BALDWIN OSTERHOUDT, Kingston, N. Y. Filed Apr. 5, 1923. Serial No. 630,133. 3 Claims. (Cl. 150—1.5.)



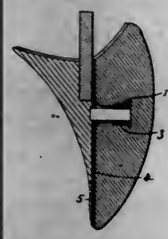
1. A golf bag comprising a top frame in the form of an 8, a bottom having the same outline as said top frame, and a flexible side wall attached at its ends to said frame and bottom, the opposed portions of said wall in line with the contracted portions of said frame and bottom being connected with each other, dividing the bag into two separate containers for wood and metal clubs.

1,483,476. TOOTHBRUSH. FRED J. PARKER, Yorkton, Saskatchewan, Canada, assignor of two-fifths to Thomas Ferguson Acheson, Yorkton, Saskatchewan, Canada. Filed Apr. 18, 1922. Serial No. 554,372. 3 Claims. (Cl. 15—25.)



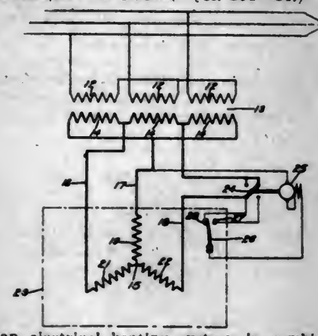
1. A rotary tooth brush comprising a handle, a guard mounted upon one end thereof and formed to provide a housing, a shaft journaled longitudinally of the handle and provided with means whereby to be rotated, a gear on said shaft within said housing, a short shaft within the housing carrying a pinion meshing with said gear, a brush head carried by a spindle having one end removably mounted in the guard, and means for connecting the other end of the spindle with said short shaft.

1,483,477. EXTENSION-WHEEL-RIM CONNECTER. HERSCHEL P. PATHEAL, Greenville, Ill. Filed Feb. 15, 1923. Serial No. 619,179. 2 Claims. (Cl. 301—39.)



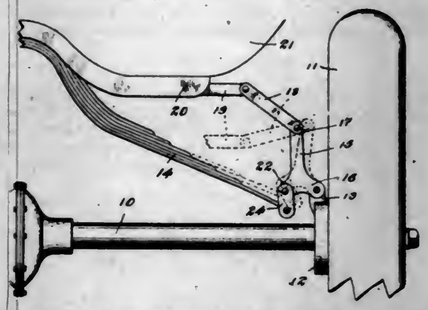
1. An extension wheel rim connecter comprising a U-shaped clip formed of a strip of flat metal with one end extended beyond the other and bent obliquely outward to form a wheel rim engaging member, means for connecting the legs of said clip to the flange of the extension rim to be connected and means carried by the clip to cooperate with said obliquely extending end for detachably securing the clip to a wheel rim.

1,483,478. WHEEL. LOUIS J. PERKINS, Lewiston, Idaho. Filed Sept. 21, 1921. Serial No. 502,098. 1 Claim. (Cl. 301—63.)



A separable wheel comprising opposed members, each of said opposed members including a pair of inwardly extending circular flanges, the inner edges of the flanges of one member being formed with grooves, the inner edges of the opposite flanges being formed with tongues to fit within the grooves, and means disposed between the flanges of the members for holding the members in their active positions.

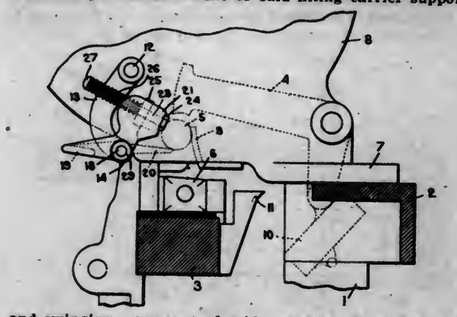
1,483,479. ARTIFICIAL TOOTH. BENVENUTO PLATSCHICK, Paris, France. Filed Feb. 21, 1923. Serial No. 620,518. 1 Claim. (Cl. 32—9.)



Process for making an artificial tooth having rings embedded in the porcelain body of the tooth before baking, and anchors soldered to the said rings, characterized by the fact that the back of the tooth is flattened through milling after the rings have been inserted and after baking, but before the anchors are attached.

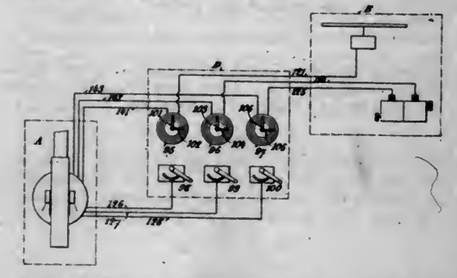
1,483,480. ELECTRIC-FURNACE CONTROL SYSTEM. THOMAS A. REID, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 555,513. 6 Claims. (Cl. 204—64.)

1. In an electrical heating system, in combination, a three-phase transformer secondary, a plurality of substantially equal star-connected resistor sections, conductors for connecting the free ends of said resistor sections to said transformer secondary, and thermally actuated means operatively connected in one of said conductors for interrupting the circuit therethrough.



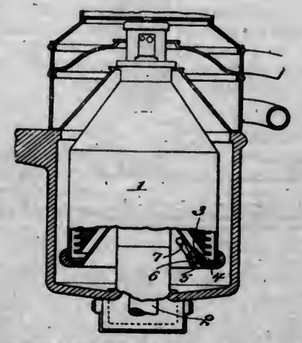
1,483,481. SHOCK ABSORBER. JOHN J. REYNOLDS, Gifford, Ill. Filed May 11, 1921. Serial No. 468,522. 1 Claim. (Cl. 267—19.)

In a device of the character described, an axle element, a body, a spring mounted upon the body, and having a flexing outer part, a lever having a lower portion mounted upon the axle and having a long arm extended upwardly therefrom a distance so that the lever will have its principal movement in a horizontal direction, a link pivotally connected to the upper end of the lever and pivotally connected to the body, and extending diagonally to the lever, said lever having a lateral extension at its lower part, said spring being hung from said extension for the purposes described.



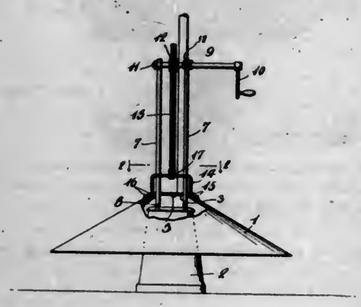
1,483,482. FILLING-CARRIER SUPPORT FOR AUTOMATIC FILLING REPLENISHING LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 19, 1922. Serial No. 595,546. 3 Claims. (Cl. 139—251.)

1. In an automatic filling replenishing loom comprising a hopper plate having a laterally extending lug, transferring mechanism, and means for arresting the filling carriers in said hopper successively in transferring position, a swinging arm, a filling carrier support pivotally mounted on said swinging arm having an upwardly extending member and a resilient device acting upon the upwardly extending member normally to hold it in contact with said lug and thereby position the support beneath the filling carrier which is positioned for transfer and adapted to permit both pivotal movement of said filling carrier support



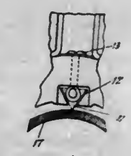
and swinging movement of said arm when the filling carrier support is engaged by the filling carrier being transferred.

1,483,483. DISTANT-CONTROL INSTALLATION FOR ANTIAIRCRAFT ARTILLERY. EMILE RIMAILHO, Paris, France, assignor to The Compagnie des Forges et Acieries de la Marine et d'Homecourt, Paris, France, French Company. Filed Oct. 9, 1923. Serial No. 667,580. 7 Claims. (Cl. 89—41.)



2. In a system of pointing or aiming at a distance for artillery, the combination of means for tracing over a plane surface, on a given scale, the course or travel of the target as the same is travelled over, and of means for forming on the same plane surface according to the tangent at the end of this tracing a rectilinear extension representing, on the same scale, the course the target is supposed to be travelling over while the projectile is moving in order to reach the same.

1,483,484. ATTACHMENT FOR SEPARATORS. LEIGH RUBERT, Forestburg, S. Dak. Filed May 5, 1923. Serial No. 636,936. 1 Claim. (Cl. 233—20.)

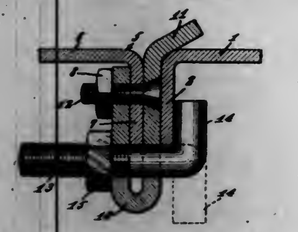


In combination with a bowl of a centrifugal apparatus, a drain in the bottom thereof, a valve in the drain and a weight connected with the valve for holding the same open but closing the valve under the action of centrifugal force when the bowl is rotated.

1,483,485. ELEVATING MEANS FOR HOVERS. HENRY F. SCHULTZ, Fairmont, Minn. Filed Apr. 19, 1923. Serial No. 633,225. 2 Claims. (Cl. 119—32.)

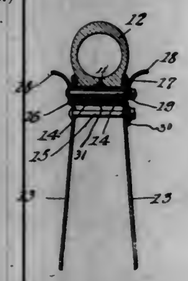
2. A device of the character described comprising in combination with a heater and a hover engaged thereover having a central opening in the same, oppositely disposed uprights fixedly secured at their lower ends to the top of said heater and passing through the opening in said hover, a horizontally positioned shaft rotatably supported in bearings upon the upper ends of said uprights, a crank handle secured to one end of said shaft, a sprocket wheel fixedly mounted on that portion of the shaft intermediate of said uprights, a sprocket chain engaged at one end to said sprocket wheel, and a substantially U shaped bracket connected to the upper side of said hover and extending over the central opening therein having spaced openings therein for slidably receiving said uprights therethrough, the free end of said sprocket chain having connection with the intermediate portion of said bracket.

1,483,486. PIPE WRENCH. FLOYD L. SCOTT, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex. Filed Apr. 11, 1922. Serial No. 551,677. 1 Claim. (Cl. 81—64.)



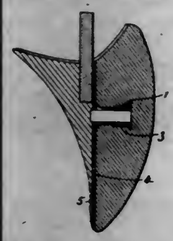
In a pipe wrench, a jaw having a concave inner face, a tooth projecting from said face, said tooth being triangular in transverse section and fitting loosely within an opening in said jaw of larger gauge than said tooth, and cotter pins in said jaw extending over each end of said tooth to prevent removal of said tooth in the operation of said wrench.

1,483,487. ROLLER EARTH-BORING DRILL CUTTER. FLOYD L. SCOTT, Houston, Tex. Filed Apr. 10, 1923. Serial No. 631,112. 5 Claims. (Cl. 255—71.)



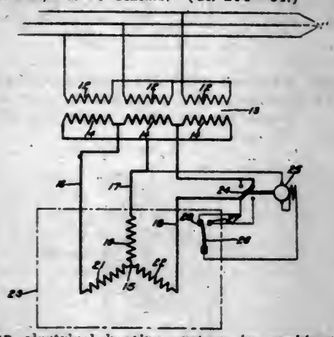
1. In a roller drill, a head, a cutter pin thereon, a bushing fitting over the end of said pin, a rotatable

1,483,477. EXTENSION-WHEEL-RIM CONNECTER. HERSCHEL P. PATHEAL, Greenville, Ill. Filed Feb. 15, 1923. Serial No. 619,179. 2 Claims. (Cl. 301—39.)



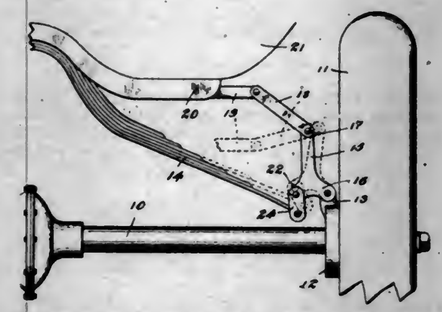
1. An extension wheel rim connecter comprising a U-shaped clip formed of a strip of flat metal with one end extended beyond the other and bent obliquely outward to form a wheel rim engaging member, means for connecting the legs of said clip to the flange of the extension rim to be connected and means carried by the clip to cooperate with said obliquely extending end for detachably securing the clip to a wheel rim.

1,483,478. WHEEL. LOUIS J. PERKINS, Lewiston, Idaho. Filed Sept. 21, 1921. Serial No. 502,098. 1 Claim. (Cl. 301—63.)



A separable wheel comprising opposed members, each of said opposed members including a pair of inwardly extending circular flanges, the inner edges of the flanges of one member being formed with grooves, the inner edges of the opposite flanges being formed with tongues to fit within the grooves, and means disposed between the flanges of the members for holding the members in their active positions.

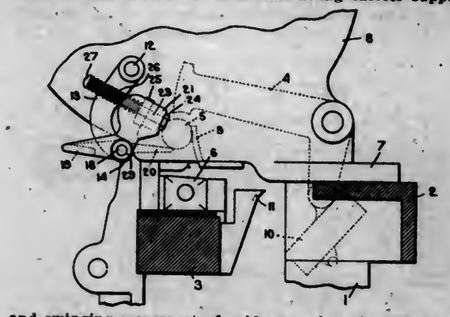
1,483,479. ARTIFICIAL TOOTH. BENVENUTO PLATSCHICK, Paris, France. Filed Feb. 21, 1923. Serial No. 620,518. 1 Claim. (Cl. 32—9.)



Process for making an artificial tooth having rings embedded in the porcelain body of the tooth before baking, and anchors soldered to the said rings, characterized by the fact that the back of the tooth is flattened through milling after the rings have been inserted and after baking, but before the anchors are attached.

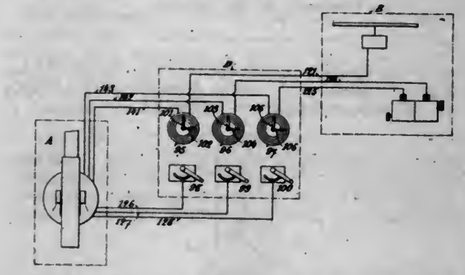
1,483,480. ELECTRIC-FURNACE CONTROL SYSTEM. THOMAS A. REID, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 555,513. 6 Claims. (Cl. 204—64.)

1. In an electrical heating system, in combination, a three-phase transformer secondary, a plurality of substantially equal star-connected resistor sections, conductors for connecting the free ends of said resistor sections to said transformer secondary, and thermally actuated means operatively connected in one of said conductors for interrupting the circuit therethrough.



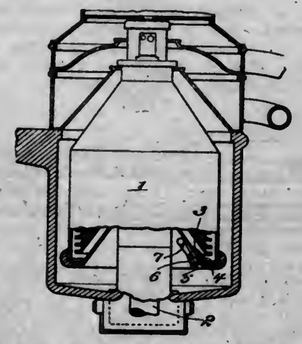
1,483,481. SHOCK ABSORBER. JOHN J. REYNOLDS, Clifford, Ill. Filed May 11, 1921. Serial No. 468,522. 1 Claim. (Cl. 267—19.)

In a device of the character described, an axle element, a body, a spring mounted upon the body, and having a flexing outer part, a lever having a lower portion mounted upon the axle and having a long arm extended upwardly therefrom a distance so that the lever will have its principal movement in a horizontal direction, a link pivotally connected to the upper end of the lever and pivotally connected to the body, and extending diagonally to the lever, said lever having a lateral extension at its lower part, said spring being hung from said extension for the purposes described.



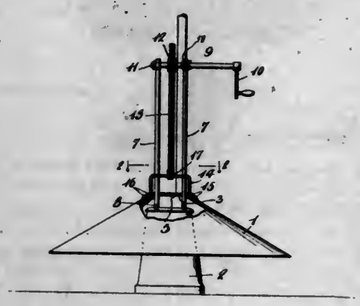
1,483,482. FILLING-CARRIER SUPPORT FOR AUTOMATIC FILLING REPLENISHING LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 19, 1922. Serial No. 595,546. 3 Claims. (Cl. 139—251.)

1. In an automatic filling replenishing loom comprising a hopper plate having a laterally extending lug, transferring mechanism, and means for arresting the filling carriers in said hopper successively in transferring position, a swinging arm, a filling carrier support pivotally mounted on said swinging arm having an upwardly extending member and a resilient device acting upon the upwardly extending member normally to hold it in contact with said lug and thereby position the support beneath the filling carrier which is positioned for transfer and adapted to permit both pivotal movement of said filling carrier support



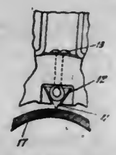
and swinging movement of said arm when the filling carrier support is engaged by the filling carrier being transferred.

1,483,483. DISTANT-CONTROL INSTALLATION FOR ANTIAIRCRAFT ARTILLERY. EMILE RIMAILHO, Paris, France, assignor to The Compagnie des Forges et Acieries de la Marine et d-Homecourt, Paris, France, French Company. Filed Oct. 9, 1923. Serial No. 667,580. 7 Claims. (Cl. 89—41.)



2. In a system of pointing or aiming at a distance for artillery, the combination of means for tracing over a plane surface, on a given scale, the course or travel of the target as the same is travelled over, and of means for forming on the same plane surface according to the tangent at the end of this tracing a rectilinear extension representing, on the same scale, the course the target is supposed to be travelling over while the projectile is moving in order to reach the same.

1,483,484. ATTACHMENT FOR SEPARATORS. LEIGH RUBERT, Forestburg, S. Dak. Filed May 5, 1923. Serial No. 636,936. 1 Claim. (Cl. 233—20.)

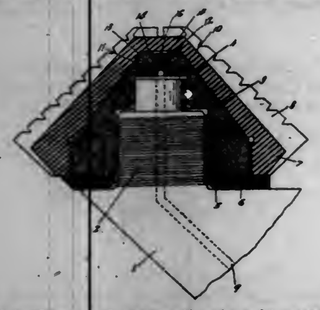


In combination with a bowl of a centrifugal apparatus, a drain in the bottom thereof, a valve in the drain and a weight connected with the valve for holding the same open but closing the valve under the action of centrifugal force when the bowl is rotated.

1,483,485. ELEVATING MEANS FOR HOVERS. HENRY F. SCHULTZ, Fairmont, Minn. Filed Apr. 19, 1923. Serial No. 633,225. 2 Claims. (Cl. 119—32.)

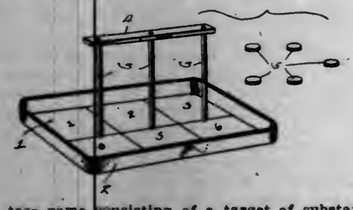
2. A device of the character described comprising in combination with a heater and a hover engaged thereover having a central opening in the same, oppositely disposed uprights fixedly secured at their lower ends to the top of said heater and passing through the opening in said hover, a horizontally positioned shaft rotatably supported in bearings upon the upper ends of said uprights, a crank handle secured to one end of said shaft, a sprocket wheel fixedly mounted on that portion of the shaft intermediate of said uprights, a sprocket chain engaged at one end to said sprocket wheel, and a substantially U shaped bracket connected to the upper side of said hover and extending over the central opening therein having spaced openings therein for slidably receiving said uprights therethrough, the free end of said sprocket chain having connection with the intermediate portion of said bracket.

1,483,486. PIPE WRENCH. FLOYD L. SCOTT, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex. Filed Apr. 11, 1922. Serial No. 551,677. 1 Claim. (Cl. 81—64.)



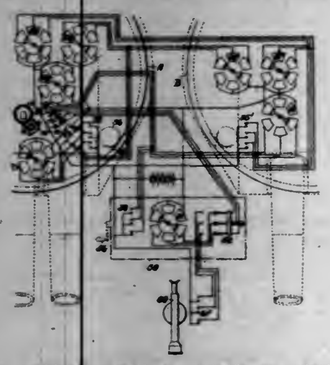
In a pipe wrench, a jaw having a concave inner face, a tooth projecting from said face, said tooth being triangular in transverse section and fitting loosely within an opening in said jaw of larger gauge than said tooth, and cotter pins in said jaw extending over each end of said tooth to prevent removal of said tooth in the operation of said wrench.

1,483,487. ROLLER EARTH-BORING DRILL CUTTER. FLOYD L. SCOTT, Houston, Tex. Filed Apr. 10, 1923. Serial No. 631,112. 5 Claims. (Cl. 255—71.)



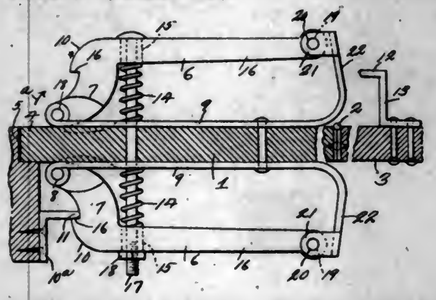
1. In a roller drill, a head, a cutter pin thereon, a bushing fitting over the end of said pin, a rotatable

cutter on said bushing, a cylindrical recess in the end of said bushing, an oil duct through said head, said pin,



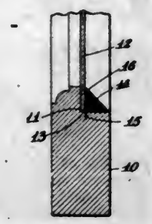
and said bushing, and terminating in said recess, a valve plate in said recess and means to hold said plate resiliently over the end of said duct.

1,483,488. GAME. HANS SKREBERG, Big Bend Township, Chippewa County, Minn. Filed Sept. 27, 1920. Serial No. 413,230. 2 Claims. (Cl. 46—59.)



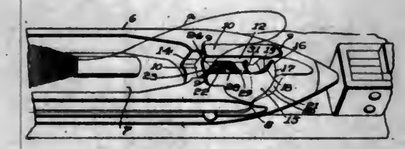
1. A toss game consisting of a target of substantially rectangular shape, a plurality of playing disks, an upstanding retaining fence surrounding the target and adapted to prevent the playing disks from leaving the target, a barrier consisting of a plurality of vertical members rising from the longitudinal center line of the target, and a cross bar connecting the tops of said members and providing an elevated disk rest.

1,483,489. SIGNALING SYSTEM FOR WARSHIPS. ELMER A. SPERRY and ELEMER MEITNER, Brooklyn, N. Y., assignors to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed May 20, 1918. Serial No. 235,449. 8 Claims. (Cl. 177—351.)



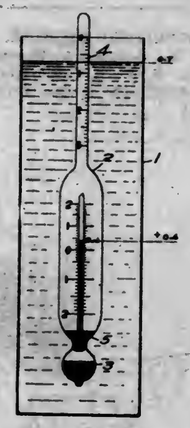
1. The combination with a rotatable gun platform, of a sighting instrument mounted therein, a transmitter for sending to a distance the bearing of said instrument, and means actuated by the rotation of the platform, said transmitter being differentially connected to said instrument and said means.

1,483,490. DOOR LATCH. HERMAN STETTNER, Hampton, Nebr. Filed Jan. 23, 1923. Serial No. 614,408. 2 Claims. (Cl. 292—128.)



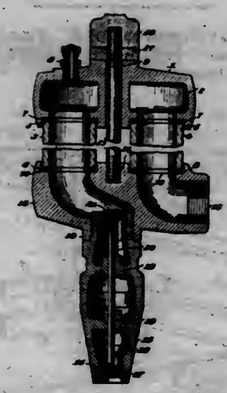
2. The combination with a door latching device, said latching device comprising angularly shaped levers having one of their arms pivotally connected to the door, spring means for normally forcing said levers outwardly and to latching position, a bolt connecting said levers, shoulders carried by the levers and cooperating with brackets for holding the door in closed or open position, of arms extending outwardly from the door, said arms being provided with apertured ears registering with apertures in the free ends of the levers.

1,483,491. WINDOW-GLASS MOUNTING. FRANK STILLWELL, Brooklyn, N. Y. Filed June 28, 1922. Serial No. 571,449. 4 Claims. (Cl. 85—15.)



1. A device of the class described comprising a strip of sheet metal provided at one side edge with spaced prongs and at the opposite side edge with spaced independent members, all portions of the strip lying in the same plane, and said spaced members being adapted to be bent at an angle to the remainder of the strip in the use thereof.

1,483,492. AUTOMATICALLY-THREADING SHUTTLE FOR LOOMS. EDWARD S. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 2, 1922. Serial No. 604,480. 15 Claims. (Cl. 139—223.)



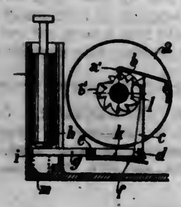
2. An automatically threading loom shuttle having a thread passage extending longitudinally thereof, a side delivery eye, and a thread casting scroll having a portion extending upwardly, laterally, and frontwardly from a point adjacent the bobbin chamber for casting the thread passage on the occurrence of an overthrow of the thread.

1,483,493. HYDROMETER. HOWARD L. TIGER, New York, N. Y., assignor to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed June 2, 1923. Serial No. 642,980. 2 Claims. (Cl. 265—46.)

1. A temperature correcting hydrometer for determining the density of hot boiler salines, such hydrometer having a stem graduated in density degrees for a particular temperature and carrying a thermometric device graduated in temperature corrections in terms of density to be applied to the density indicated on said stem.

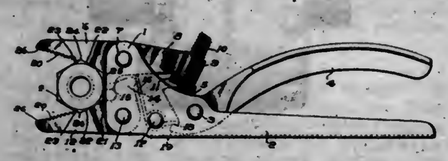
1,483,494. VISIBLE DISPLAY ATTACHMENT FOR MEASURING PUMPS. WILLIAM S. TOWNSEND and FRANK E. DOUGLASS, Rochester, Pa. Filed Nov. 14, 1923. Serial No. 674,769. 7 Claims. (Cl. 221—67.)

1. A visible display container for pumps, comprising a pair of parallel transparent tubes connected at their upper ends for through passage of the liquid, and a base for the lower open ends of the tubes; said base having a pump supply inlet port opening into the lower end of one of the tubes and an outlet or discharge communicating with the lower end of the other of said tubes, whereby the liquid will be forced by the pump up through one tube and down the other one to the outlet to exhibit same.



2. A visible display container for pumps, comprising a pair of parallel transparent tubes connected at their upper ends for through passage of the liquid, a base for the lower open ends of the tubes; said base having a pump supply inlet port opening into the lower end of one of said tubes and an outlet or discharge communicating with the lower end of the other of said tubes, and a discharge spout or nozzle leading from said outlet or discharge port and having a restricted area acting to hold the liquid in the two tubes for exhibition purposes.

1,483,495. WOOL-COMBING IMPLEMENT. JOHN VIRHOFF, Lundbreck, Alberta, Canada. Filed Sept. 15, 1922. Serial No. 588,423. 3 Claims. (Cl. 19—115.)

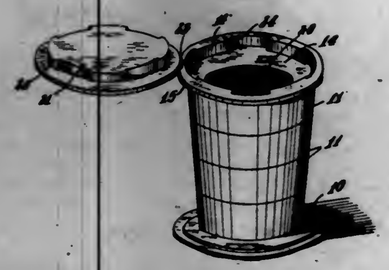


2. A comb comprising a body element, a frame pivoted therein, means for adjusting said frame on its pivoted axis, a tooth carrying element pivoted to said frame, and a longitudinally adjustable link connected at one end to said body element, and at its opposite end to said tooth carrying element at a point removed from the point of connection of said tooth carrying element to said frame.

1,483,496. ZERO-SETTING DEVICE FOR REGISTERS. CHARLES TORRES WEYMANN, Paris, France, assignor to Société des Etablissements Ed. Jaeger, Paris, France. Filed Apr. 4, 1922. Serial No. 549,514. 3 Claims. (Cl. 235—144.)

1. A zero setting device for registers including a shaft, a plurality of digit bearing drums mounted on said shaft, a ratchet arranged with each drum and rigidly attached to the succeeding drum, one of the teeth of each of said ratchets being removed, pawls for cooperating with the mutilated portion of each of said ratchets, a common pivotal axis for said pawls, a forked-shaped lever pivotally mounted on the base of the register and carrying between its arms the common axis of the pawls, and means for oscillating said lever.

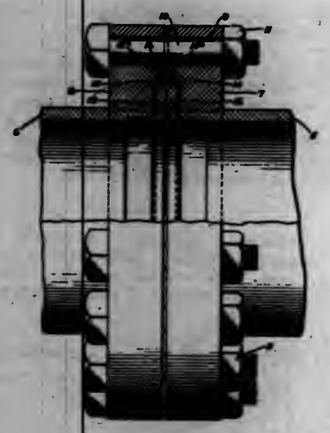
1,483,497. WRENCH. ARTHUR J. WHITFIELD, Boston, Mass., assignor to Trimont Manufacturing Company, Roxbury, Mass., a Corporation of Maine. Filed Apr. 17, 1922. Serial No. 553,883. 3 Claims. (Cl. 81—78.)



1. In a hand tool having opposing jaws for engaging the work, a head having a handle extending therefrom, a pair of pivoted cooperating jaws each having a pivot pin disposed a substantial distance from the other pivot

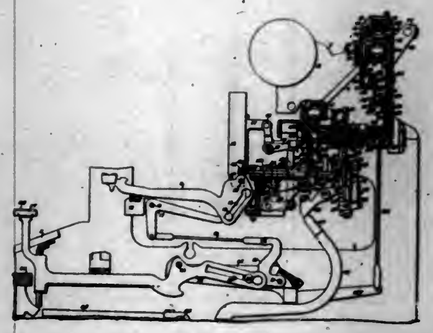
pin and extending through a jaw into the head for pivotally connecting the jaws to the head, each jaw provided with a toothed portion and a nut receiving notch disposed between the toothed portion and head to grasp and manipulate a nut having its corners seated in said notches and positioned to exert a turning torque in the direction of a pivot pin, a second handle or lever pivotally connected to the first handle, and means for imparting movement from the second handle to said jaws

---



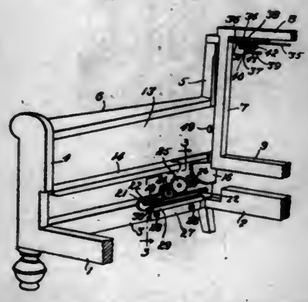
1,483,498. FILTERING DRINKING CUP. FOMA ZOLNEREVICH, Detroit, Mich. Filed Dec. 22, 1921. Serial No. 524,060. 5 Claims. (Cl. 210—163.)

1. In combination, a cup, a ring fitting in said cup, a filter member carried by said ring, and a cover hinged to said ring and adapted to frictionally engage the inner face of the cup, said ring having cut out portions through which said cover projects into engagement with the cup



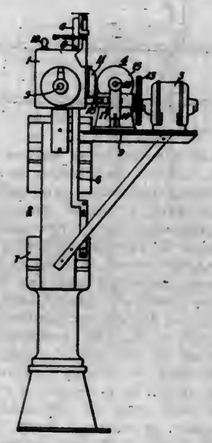
---

1,483,499. PIPE CONNECTION. DAVID A. ALLEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 29, 1921. Serial No. 496,330. 5 Claims. (Cl. 285—137.)



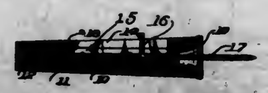
1. In a pipe coupling, flanges having opposed annular recesses in their adjacent faces, a bowed annular spring ring having its ends seated in said recesses, said annular spring ring having a mean diameter greater than the mean diameter of the annular recesses, a beveled edge in the radially outer walls of said recesses for radially compressing the ends of said annular ring as they enter said recesses and means for drawing the flanges into facial engagement.

1,483,500. TYPEWRITING MACHINE. JOHN H. BARR, New York, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed May 3, 1923. Serial No. 636,369. 41 Claims. (Cl. 197—108.)



1. In a typewriting machine, the combination of a traveling carriage, printing instrumentalities, a contact device, and line lock and bell ringing mechanism operative thereby including an element movable in different directions from a single normal position, movement in one direction actuating the bell striker and movement in the other direction locking the line.

1,483,501. CONVERTIBLE SOFA. SALVADOR BARRILE, Medford, Mass. Filed Oct. 25, 1922. Serial No. 596,772. 8 Claims. (Cl. 5—38.)

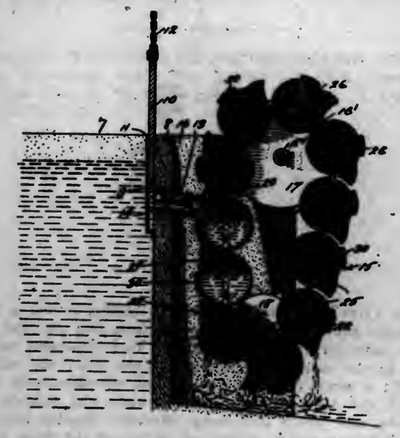


1. A convertible sofa bed having a seat, a back and ends, a slide member mounted on each of the end members of the sofa frame in such manner as to be slidable forward or back, a pivot connection between the said slide and the lower part of the back, whereby the back member is permitted to be turned down on said pivot, and means whereby when the back is turned on its pivot the said slide will be moved forward automatically and thereby bring the lower edge of the sofa back forward to meet the rear edge of the sofa seat.

1,483,502. TIMING DEVICE. ARTHUR J. BASTIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 23, 1920. Serial No. 375,992. 13 Claims. (Cl. 161—1.)

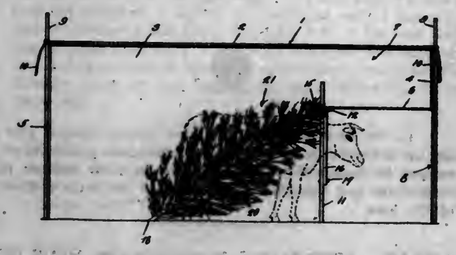
1. In a timing device, the combination with a bell, a shaft and means comprising a motor for driving said shaft at a uniform speed, of an arm turned by said shaft, an electric circuit comprising a lamp, and mechanical means actuated by said arm for ringing said bell and for opening and closing said circuit.

1,483,503. CIGAR HOLDER. ALBIN F. BOREIKO, Toledo, Ohio. Filed Oct. 18, 1921. Serial No. 508,476. 4 Claims. (Cl. 131—10.)



3. A cigar holder comprising a hollow body portion, means surrounding one end of the cigar and designed to engage the cigar and hold the latter positioned in the holder, a barrel rotatably fitted in said body portion, a pin movable longitudinally of the barrel and associated therewith, and means for holding the pin immovable incident to the rotation of the barrel in one direction.

1,483,504. CAR SEAL. BRUCE BORLAND, Chicago, Ill. Filed Dec. 13, 1920. Serial No. 430,263. 4 Claims. (Cl. 292—318.)

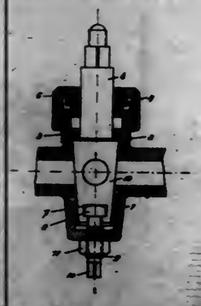


1. A seal comprising a strip having a substantially cup shaped locking head at one end with a continuous flange around the entire periphery thereof and having an upwardly raised seat in the bottom, a cap formed of a separate piece and fitting over said head, a portion only of said flange being bent down to engage with the edge of the cap to hold it securely in position, an inwardly projecting tongue on said cap and a locking tongue on the opposite end of the strip for engagement with said seat and tongue.

1,483,505. WATER-POWER DEVICE. JAMES R. BRADSHAW, Manchester, Tenn. Filed Feb. 1, 1922. Serial No. 533,331. 4 Claims. (Cl. 243—21.)

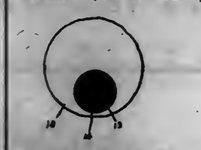
1. A water power device comprising an endless web, buckets associated therewith, each bucket consisting of a hollow cylindrical member having a portion of its curved wall removed to form a throat or inlet opening and each cylindrical member being provided with an abutment adjacent said inlet opening to engage an adjacent bucket for preventing the first named bucket being tilted by water entering the same.

1,483,506. FLY CHASER AND CATCHER. RUFUS C. BREWSTER, Lewisburg, W. Va. Filed July 20, 1923. Serial No. 652,787. 1 Claim. (Cl. 119—156.)



In a device of the class described, a casing comprising a top, sides, an end wall, a partition extended inwardly from the end wall and between the sides, to form a fly pocket and a run way therebeneath, an outer frame, means for securing the casing to the outer frame for adjustment to vary the position of the partition and the height of the run way, and an inner frame in the casing, the inner frame comprising vertically adjustable parts supporting the partition, and means for holding said parts of the inner frame in vertically adjusted positions.

1,483,507. REFRACTORY ARTICLE AND METHOD OF MAKING THE SAME. CLARENCE J. BROCKBANK, Philadelphia, Pa., assignor to Ross-Tacony Crucible Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 6, 1923. Serial No. 649,061. 3 Claims. (Cl. 18—47.5.)

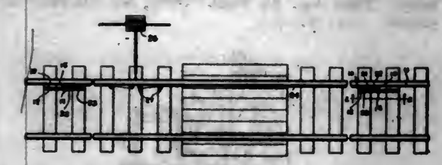


1. A dense hard refractory graphitic article of manufacture having a body bond and a continuous glaze of non-ceramic material and of the same coefficient of expansion and other physical characteristics.

1,483,508. PLUG COCK. HANS BRUNNER, Ouder Amstel, Netherlands. Filed July 27, 1920. Serial No. 400,520. 1 Claim. (Cl. 251—91.)

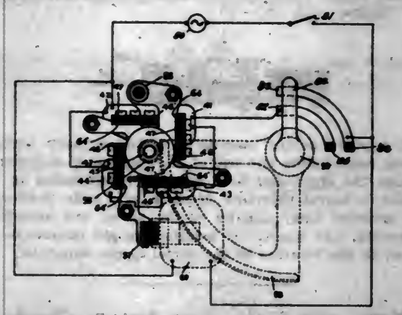
A valve structure comprising a casing having a fixed bottom provided with a threaded bore and an inlet and an outlet for fluid; a tapered plug valve rotatably mounted in the casing and provided at the lower end with a slot; a screw bolt rotatable in and disconnectable from said slot for longitudinally adjusting and holding the valve, said screw bolt being threaded directly into the fixed bottom of the casing and having at the lower end a square portion which is longer than the threaded bore in said bottom and passes, without turning through and projects outwardly through the threaded bore in said casing; and a lock nut on said screw bolt for securing said screw bolt against longitudinal movement.

1,483,509. PROCESS OF MAKING FUSED BIFOCAL LENSES. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Franklin Optical Company, Indianapolis, Ind., a Corporation of Indiana. Filed May 5, 1921. Serial No. 467,141. 6 Claims. (Cl. 49—82.1.)



1. In the process of making fused bifocal lenses, placing upon the main portion of the lens glass particles arranged in concentric zones differing in their indices of refraction, and then fusing the same to the main portion of the lens.

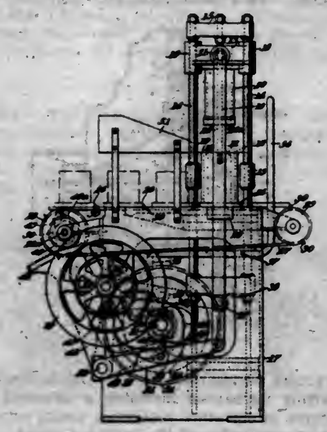
1,483,510. ACHROMATIC BIFOCAL LENS MADE OF TWO PIECES OF GLASS. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Franklin Optical Company, Indianapolis, Ind., a Corporation. Filed July 17, 1923. Serial No. 652,052. 2 Claims. (Cl. 88—54.)



1. A bifocal lens composed of a major portion of glass of a relatively low index of refraction, an added reading portion composed of glass of a relatively high index of refraction, their relative dispersions being such that when the negative dioptral power through the reading portion in the glass of low index of refraction is divided by its value r and the positive dioptral power through the reading portion of the glass of high index of refraction is divided by its value r the result in each case shall be a constant common to both.

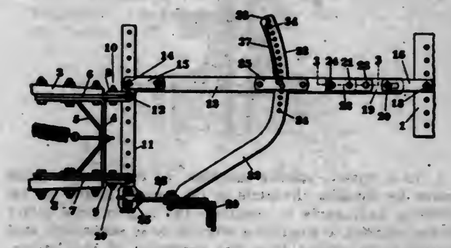
1,483,511. SIGNAL. ALBERT WADKINS HARVEY, Sulphur Springs, Tex. Filed Oct. 19, 1923. Serial No. 669,540. 4 Claims. (Cl. 246—294.)

1. A member adapted to be secured to the side of a railway track, a lever oscillatably mounted thereon, an arm on the lever projecting into proximity to one of the rails of a track, a flexible element connected mediately to the opposite end of the said lever, means for holding the lever in normal position, a semaphore stand, a shaft journaled therein, wheels on the said shaft, a flexible element operating over one of the wheels on which the first mentioned flexible member exerts a pull, a spring acting on the second mentioned flexible member against the pull of the first mentioned flexible member, semaphore arms on the shaft, a bell stationed on the said stand, the said bell having lugs on its inner surface adapted to be struck by a clapper, a shaft rotatable centrally of the bell, arms on the shaft having clappers thereon, a wheel on the said shaft, a flexible member operating over a wheel of the first mentioned shaft and the wheel of the second mentioned shaft, a signal lamp having lenses, and means carried by the first mentioned shaft in position to pass the lenses of the lamp, substantially as described.



1,483,512. MOTOR. ALFRED ERNEST HUDD, Liverpool, England, assignor to Automatic Telephone Manufacturing Company Limited, Liverpool, England. Filed July 14, 1920. Serial No. 396,244. 29 Claims. (Cl. 246—240.)

1. A railway signalling machine comprising in combination a vibratory member, means for causing said member to operate signal mechanism, a roller clutch for causing said vibratory member to engage with said signal mechanism when moving in one direction, a second roller clutch for preventing said signal mechanism from moving backwards when said vibratory member is moving in the other direction.

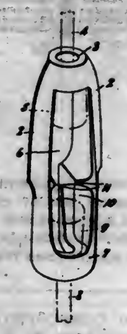


1,483,513. TILE-MAKING MACHINE. MORRIS KATCHEN, Brooklyn, N. Y., and Rowland McWilliams, Montclair, N. J., assignors to Republic Fireproofing Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 27, 1923. Serial No. 621,598. 18 Claims. (Cl. 25—45.)

1. In a machine for making hollow tile, the combination of two mould elements defining a vertical interspace for receiving the material to be moulded, a ram having a cross-sectional configuration corresponding to the interspace, a support below the mould elements, mechanism for cyclically moving the mould elements, the ram and the support relatively to each other to compress

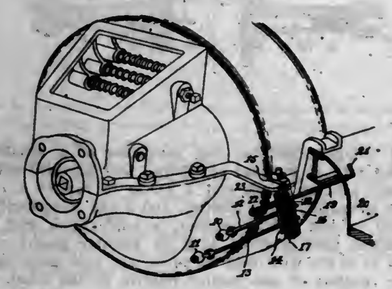
material in the mould and then lifting the mould elements to leave the moulded block upon the support, manually operable control means for setting the mechanism into motion and means for automatically stopping the mechanism at the end of a cycle of operation.

1,483,514. TRACTOR HITCH. CHRIS KIEL, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Oct. 3, 1919. Serial No. 328,239. 4 Claims. (Cl. 280—33.44.)



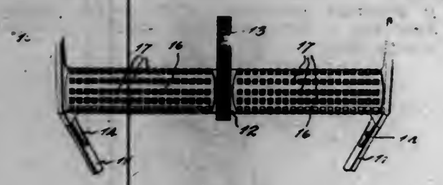
1. In a tractor hitch, the combination with a tractor and a trailing body, of a draft beam supported by the trailing body, a draft device pivotally connected to the tractor and to the draft beam and bodily adjustable laterally to vary the line of draft, a notched sector secured to the draft beam at one side of the draft device, a lever pivotally mounted on the sector and having means operative to engage the notches of the sector, and a connecting bar pivotally connected to the lever and having its forward end adjustably connected with the draft device to adjust said draft device to the line of draft irrespective of said bodily adjustment.

1,483,515. CEREAL FLAKES AND PROCESS OF MAKING SAME. JONATHAN K. LIPPEN, Battle Creek, Mich., assignor to Postum Cereal Company, Incorporated, Battle Creek, Mich., a Corporation of Delaware. Filed Dec. 6, 1922. Serial No. 605,288. 10 Claims. (Cl. 99—11.)



4. The process of making cereal flakes which consists in subjecting the cereal to moisture sufficient to dampen the bran envelope and the endosperm layers immediately thereunder, separating said dampened portion from the undampened portion, treating the former with a saline malt syrup solution, steam-cooking the same, and then flaking and drying the product.

1,483,516. WIRE-ROPE-CONNECTING MEANS. JOHN D. MCINTOSH, Vancouver, British Columbia, Canada. Filed Apr. 3, 1923. Serial No. 629,670. 1 Claim. (Cl. 24—123.)

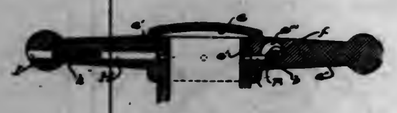


A means for connecting together the ends of wire ropes, which ends have thimbled enlargements secured to them, said means comprising a link having at one end an axial aperture adapted to receive the rope with a space between the sides of the link adapted to receive the thimbled enlargement of the rope, said space being approximately double the length of the thimbled enlargement and extending through from side to side of the link, the other end of the link having an axial aperture adapted to receive the wire rope with a chambered space adjacent adapted to receive the enlarged end of the rope, said chambered space being from one side of the link only and in length adapted to prevent endwise movement of the rope, and with a passage for the rope only from the through space of one end to the axial aperture of the other end.

1,483,517. OIL-LEVEL TESTER FOR CRANK CASES. ARCHIE L. NASH and WILLIAM P. NASH, East Spencer, N. C. Filed May 25, 1923. Serial No. 641,451. 5 Claims. (Cl. 137—139.)

1. In a device of the class set forth, a frame and means for supporting the same, a pair of wrenches supported in said frame and provided with meshing gears, a driving-gear in the frame, and an operating-shaft for the driving-gear extending to one side of the vehicle.

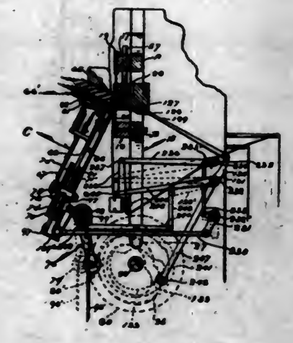
1,483,518. TROLLEY SLEET CUTTER. CHARLES T PERRY, Staten Island, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 16, 1922. Serial No. 544,217. 5 Claims. (Cl. 191—62.)



1. A trolley sleet cutter comprising, the combination with a trolley having a pair of conducting shoes arranged in longitudinal alignment and insulated from each other, of a pair of sleet cutters adapted to fit over the shoes and cut foreign matter from the trolley wires.

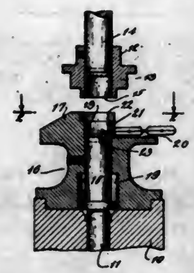
1,483,519. SOURING COMPOSITION AND METHOD. ROBERT A. PHAIR, Allendale, N. J., assignor, by mesne assignments, to H. Kohnstamm & Co., Inc., a Corporation of New York. Original application filed July 18, 1921, Serial No. 485,642. Divided and this application filed June 15, 1922. Serial No. 568,650. 7 Claims. (Cl. 8—2.)

1. In laundering or treating textile materials the method which consists in subjecting the goods after the bleaching, to treatment with a composition which sours and neutralizes the destructive effect of the bleach.



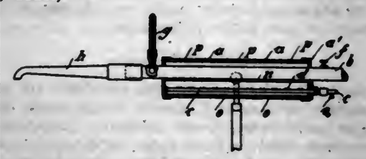
7. A souring composition for treating textile materials including a chlorine-neutralizing agent.

1,483,520. RADIATOR CAP FOR AUTOMOBILES. ADOLPH R. RAMIG, ADAM G. SHAFER, and ALEXANDER J. KRUMPECK, Chicago, Ill.; said Krumpeck assignor to said Ramig and said Shafer. Filed May 7, 1921. Serial No. 467,673. 2 Claims. (Cl. 70—90.)



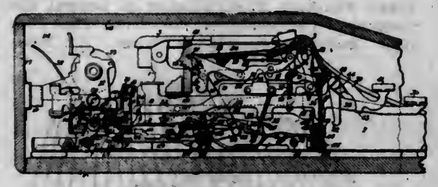
1. A two-part radiator cap, consisting of a member provided with an inverted cup-shaped part provided with an inner annular flange and a recess to receive a rotatably mounted locking member, and a pin eccentrically mounted on said locking member, in combination with a ring-shaped part provided with an annular groove arranged to co-act with said flange to join said parts and permit rotation of one thereof relative to the other, a rotatable lock member, and a longitudinally movable lock member provided with a loop at one end thereof arranged and connected to said rotatable lock member, to co-act with said eccentrically mounted pin to control the longitudinal movement of said locking member by the rotation of the locking member on which said pin is mounted, said ring-shaped part provided with a recess arranged to register with and receive said longitudinally movable bolt.

1,483,521. BOOK-SEWING MACHINE. WINFRED ELMO REAVIS, Los Angeles, and ELMER E. FREY, Long Beach, Calif., assignors to Oversewing Machine Company, a Corporation of California. Filed Apr. 5, 1920. Serial No. 371,474. 28 Claims. (Cl. 112—21.)



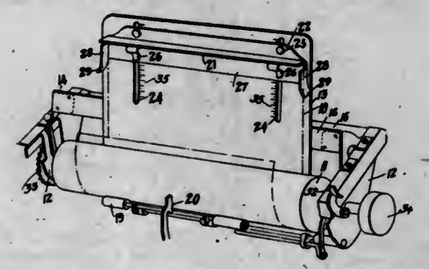
15. In a book sewing machine, the combination with a stitch forming mechanism including a punching means for signatures, of signature supporting means actuable in the region of penetration of the punching means.

1,483,522. BUTTON-MAKING MACHINE. HYMAN ROSEN, New York, N. Y. Filed July 31, 1922. Serial No. 578,637. 6 Claims. (Cl. 79—5.)



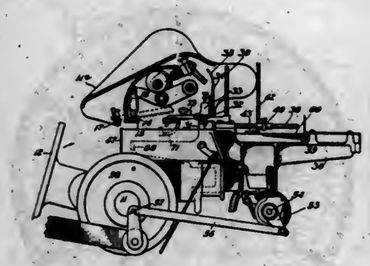
1. In a button making machine, in combination with means for forming the parts of the button, means for assembling said parts to complete the button, said latter means adapted to position a stem to be so secured to said button as to extend from the periphery of the button, said positioning means being reduced diametrically on one side at least to permit operation thereof in close proximity of an adjacent button.

1,483,523. BLOWER. SIEGFRIED SCHEFFLER, Rostock, Mecklenburg, Germany. Filed Aug. 30, 1921. Serial No. 497,053. 4 Claims. (Cl. 128—257.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



3. An apparatus for producing jets of air or steam for medical purposes, comprising a casing, an air pipe passing through the casing, a heating device within the casing below the air pipe, a thermometer projecting into the air pipe, means for introducing a medicine into the air tube consisting of a hopper opening into the air pipe from above, a thin pipe forming a prolongation of the hopper and running along within the air pipe adapted to vaporize the medicine coming from the hopper by the heated air or steam passing through the air pipe; means for regulating the stream of air passing through the air pipe, and means for regulating the heating device.

1,483,524. TYPEWRITING MACHINE. CHARLES E. SMITH, Brooklyn, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Feb. 19, 1923. Serial No. 619,827. 44 Claims. (Cl. 197—186.)



1. The combination with a typewriting or like machine having a part movable from compact position to an expanded position for use and case shifting mechanism including a case shift frame, of a lock for locking the case shift frame against case shifting movement from its normal position, and means controlled by the movement of said compactible part to compact position for rendering said lock effective.

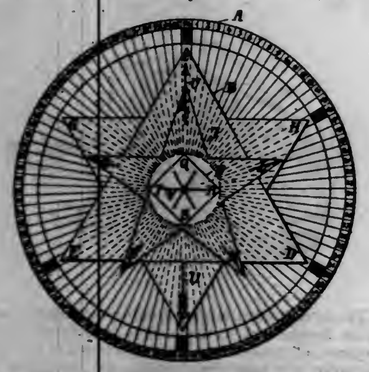
1,483,525. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 16, 1919. Serial No. 304,532. 12 Claims. (Cl. 197—140.)

1. In a typewriting machine, the combination with a rotatable platen and a directrix to guide an ordinary work-sheet inserted at the introductory side of the platen to the bottom of the platen, of means for collating a plurality of superposed sheets at the introductory side of the platen preparatory to feeding them around the bottom of the platen to typing position, said collating means comprising leading-edge gaging means in the form of feed-rolls to run on the bottom of the platen, a collating table above the usual path of ordinary work-sheets introduced between the directrix and the platen, said collating table directing collated work-sheets to said directrix to be guided thereby beneath the platen, and an adjustable trailing-edge gage on said collating table for variably collating an outer sheet of said plurality in proper registration with an inner work-sheet gaged at its leading edge by said gaging feed-rolls.

1,483,526. FEEDING DEVICE. WALTER H. SMITH, Pittsburgh, Pa., assignor to Miller Saw-Trimmer Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 7, 1922. Serial No. 527,603. 8 Claims. (Cl. 271—2.)

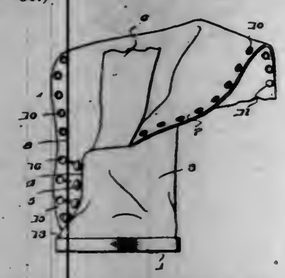
1. The combination with a feeding mechanism comprising feed means and a stock table associated with said feed means, of a secondary feeding device for substitution in operation for said stock table, said secondary device having a feeding association with the feed means of said first-named mechanism.

1,483,527. WRENCH. MARK STARC, Chicago, Ill. Filed Aug. 10, 1921. Serial No. 491,193. 6 Claims. (Cl. 81—58.)



1. A wrench of the character described comprising, in combination, a wrench head, an operating handle therefor, said head being capable of rotary and longitudinal movement upon said handle unless prevented, and being also adapted and arranged to interlock with said handle for preventing both such rotary and longitudinal movement, and means operatively connecting said handle and head but adjustable either to maintain them in the stated interlocked relation, or to release them therefrom while still connecting them.

1,483,528. COAL SAVER. WILLIAM H. STIEFEL, Angola, Ind. Filed Oct. 17, 1923. Serial No. 669,116. 2 Claims. (Cl. 44—4.)



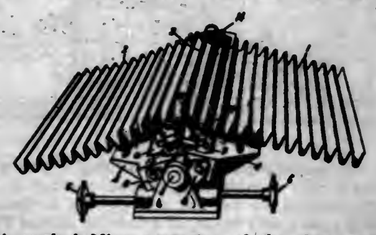
1. A composition of matter comprising five pounds of common salt, three ounces of oxalic acid and lamp black sufficient to color the composition black.

1,483,529. DEVICE FOR QUICKLY FINDING HARMONIOUS COLOR COMBINATIONS. HERMANN TANNER, Samaden, Switzerland. Filed Jan. 3, 1920. Serial No. 349,228. 4 Claims. (Cl. 88—14.)

1. A device having markings for determining at one viewing a multiplicity of harmonious color-combinations, including a color-chart provided with markings for a multiplicity of such color-combinations; and an indicating member movably mounted relatively to the color-chart and arranged with respect thereto to point out thereon a simultaneously-observable multiplicity of harmonious color-combinations comprising multiple harmonious color-combinations.

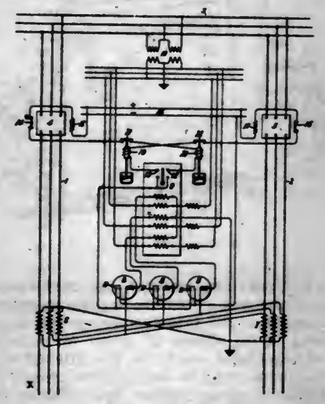
1,483,530. BOOT. ALEXANDER TETI, Torrington, Conn. Filed May 14, 1923. Serial No. 638,956. 1 Claim. (Cl. 36—50.)

A boot comprising a sole, a vamp attached to the sole and having a transverse termination at one side of the longitudinal median line of the boot and at a point above the instep of the boot, buttons on the vamp at one side of the longitudinal median line thereof and in front of and spaced relation to said termination, a leg portion merged into the vamp at the inner side of the boot, a leg portion joined through a back bight to the first-named leg portion and having its forward lower portion lapped over the termination of the vamp and connected to the sole and provided with button holes for cooperation with the said buttons, a tongue connected to the said termination of the vamp, and means for lacing the leg portions at the front of the portion of the boot above the instep vamp portion thereof.



1,483,531. MEANS FOR ADJUSTING BRAKE SHOES USED IN TRAMWAY VEHICLES AND THE LIKE. SIDNEY THOMAS, London, England. Filed Jan. 6, 1921. Serial No. 435,770. 3 Claims. (Cl. 188—197.)

3. An apparatus for adjusting the brakes of tramcars, comprising brake rods disposed on each side of the center line of the vehicle, a shaft extending transversely of the vehicle, gearing at each end of said shaft connecting said shaft to said brake rods, a non-return take-up device disposed on said shaft, said device comprising a ratchet mounted on said shaft, a ratchet arm carrying

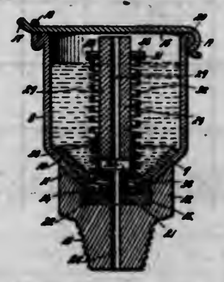


a spring pressed pawl cooperating therewith, manual means for operating said ratchet arm in one direction and means for returning said ratchet arm to its normal position when said manual means is released.

1,483,532. WORKHOLDING APPARATUS. HARRY W. TOBEY, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 17, 1922. Serial No. 601,662. 6 Claims. (Cl. 219—17.)

1. A work holding apparatus of the class described comprising a pair of pivoted work supporting members, a work holding member, provided with means for clamping the work, mounted on each work supporting member, and means whereby said working holding members may be adjusted to vary the height and inclination thereof with respect to said work supporting members.

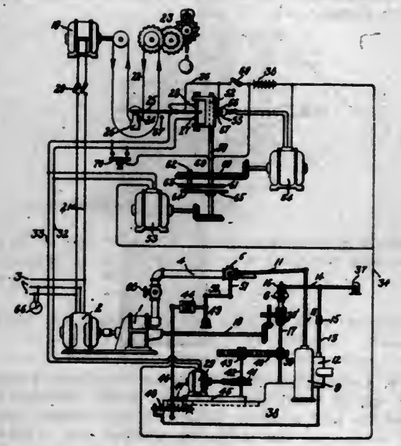
1,483,533. PROTECTION OF TRANSMISSION LINES. OLIVER C. TRAVER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 23, 1921. Serial No. 447,112. 9 Claims. (Cl. 175—294.)



2. A protective system for two transmission lines comprising means adapted to be operated to interrupt the circuits of said lines, control circuits for said interrupting means, means operative in response to abnormal conditions on either of said lines to complete the control circuit of the interrupting means in the line at fault, and electroresponsive means in circuit with said control circuits, operative in response to the closing of one of said control circuits to prevent the closing of the other control circuit for a predetermined time.

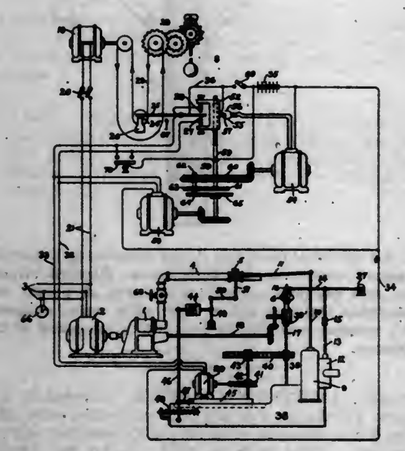
1,483,534. ELECTRIC WATER HEATER. GEORGE H. VAN NOY, Lewistown, Mont. Filed Feb. 13, 1922. Serial No. 536,166. 4 Claims. (Cl. 219—48.)

1. An electric water heating attachment for domestic boilers including a tubular body insertible into the water outlet opening in the boiler, a core of insulating material filling one end portion of the body, and a rod of conductive material extending through the core and adapted to lie close to and parallel with the water feed pipe in a boiler, said rod and feed pipe being connected to opposite terminals of an electric circuit.



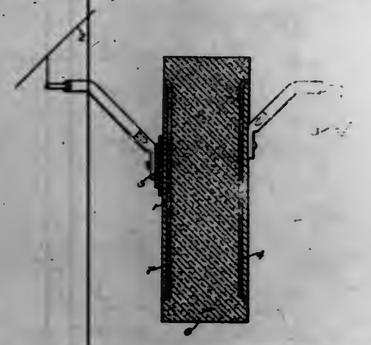
1,483,535. VIBRATORY LUBRICATOR. ALLEN A. VAN ORSDALE, Philadelphia, Pa. Filed Sept. 26, 1921. Serial No. 503,229. 16 Claims. (Cl. 184—69.)

4. A vibratory lubricator comprising a tubular body portion having a funnel shaped bottom, an inner bottom having an extension for passage through the funnel-shaped bottom, a connecting member for clamping said inner bottom and body portion firmly together, an axially central tubular nipple firmly seated in the inner bottom and having a valve seat at its upper part, an adjustable upwardly seating valve having a tubular stem, and a compression spring normally holding said valve to its seat, said valve being adapted for axial longitudinal movement whereby its bore can be brought into registry and axial alignment with the aforesaid tubular nipple.



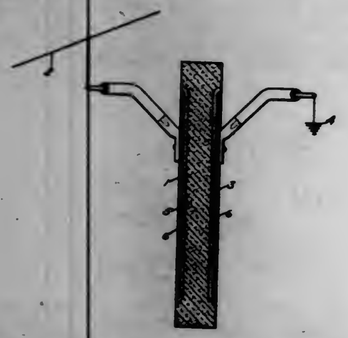
1,483,536. AUTOMATIC REGULATOR. HENRY E. WARREN, Ashland, Mass., assignor to Warren Clock Company, a Corporation of Maine. Filed Feb. 27, 1922. Serial No. 539,347. 7 Claims. (Cl. 58—24.)

1. In combination a motor, an automatic governor for said motor adapted to keep the speed thereof at a substantially constant normal value, means for measuring average errors in the speed of said motor, means dependent upon such measurements for adjusting the speed



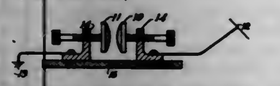
of said motor in a manner to correct for such errors, and means for preventing an over regulation of the speed of said motor.

1,483,537. GOVERNING MECHANISM. HENRY E. WARREN, Ashland, Mass., assignor to General Electric Company, a Corporation of New York. Original application filed Feb. 27, 1922, Serial No. 539,347. Divided and this application filed Dec. 18, 1922. Serial No. 607,508. 4 Claims. (Cl. 137—140.)



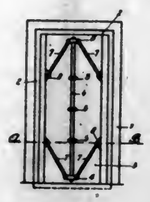
1. In combination a prime mover, a valve for regulating the flow of motive fluid thereto, a speed responsive governor for controlling said valve, means for adjusting the speed setting of said governor and an anti-racing mechanism comprising a dash-pot mechanically connected between said valve and said governor setting means arranged to adjust the same in a direction to check a movement of the valve such as would otherwise cause an over or under speeding of the prime mover.

1,483,538. LIGHTNING ARRESTER. CHESTER T. ALLCUTT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 6, 1919. Serial No. 295,162. 14 Claims. (Cl. 175—30.)



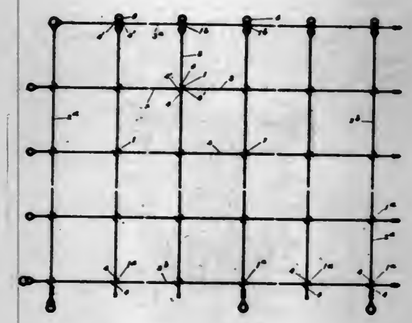
1. An electrical discharge device comprising a plurality of spaced conducting members, means disposed intermediate said members embodying intermingled particles of conducting and insulating material and a layer embodying a metal compound which becomes converted by heat into a compound of high resistance.

1,483,539. LIGHTNING ARRESTER. CHESTER T. ALLCUTT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 7, 1919. Serial No. 295,312. 11 Claims. (Cl. 175—30.)



1. An electrical-discharge device comprising a plurality of spaced conducting members, means disposed intermediate said members embodying a layer of porous noncombustible material and a layer of a metal compound which becomes converted by heat into a compound of high resistance.

1,483,540. LIGHTNING ARRESTER. CHESTER T. ALLCUTT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 12, 1919. Serial No. 296,354. 9 Claims. (Cl. 175—30.)

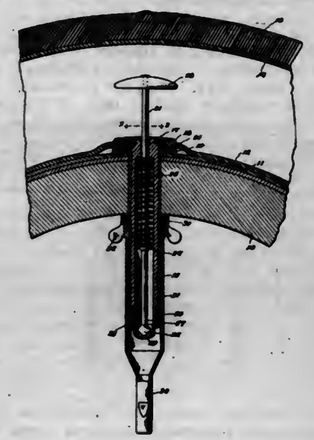


1. A discharge-gap member comprising a conducting member provided with a coating of conductive oxid which becomes converted by heat into a different oxid of higher electrical resistance.

1,483,541. DOOR FASTENING FOR SAFES AND THE LIKE. ANTONIUS HENDRIKUS MARIE BASART, The Hague, Netherlands. Filed Oct. 28, 1922. Serial No. 597,478. 5 Claims. (Cl. 109—3.)

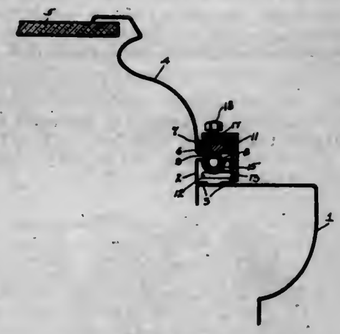
1. The combination with a door frame having a door opening, and a door adapted to close said opening, of door fastening means comprising movable members carried by the door, a member mounted on said door and adapted to expand and contract under variations of temperature, connecting means between said expansible member and movable members for moving said members into and out of engagement with the frame as the expansible member contracts and expands, and means for heating said expansible member.

1,483,542. NET. REGINALD R. BELKNAP, U. S. Navy. Filed May 10, 1917. Serial No. 167,825. 4 Claims. (Cl. 245—2.)



1. A net formed of separate or disjoined wires, stops on said wires on either side of their crossing or junction points, and rings surrounding said wires and cooperating with said stops to hold said wires in their relative positions.

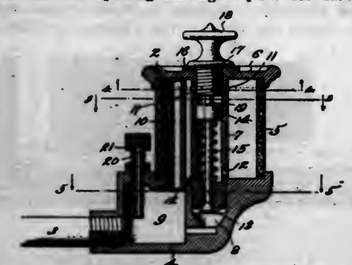
1,483,543. TIRE ALARM. IVAN BEST, Morland, Kans. Filed Aug. 12, 1922. Serial No. 581,481. 1 Claim. (Cl. 116—34.)



A tire alarm including a casing for connection to a pneumatic tube, a plunger having a continuous stem extending axially through and slidable within the casing, the stem being provided with a shoulder within the casing, and the diameter of the stem and the shoulder being less than the bore of the casing whereby to permit flow of air around the stem and the shoulder, a spring surrounding the stem and bearing between said shoulder and the outer end of the casing whereby to force the plunger inwardly, a cap threaded upon the inner end of the casing and provided with a frangible portion against which the inner end of the plunger constantly

bears, a head upon the outer end of the plunger within the pneumatic tube, and a head upon the outer end of

the casing secured within the pneumatic tube and provided with external grooves leading to the bore of the casing.

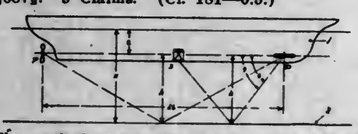


1,483,544. CASKET CONSTRUCTION. JAMES H. DONNELLY, Cleveland, Ohio. Filed July 1, 1921. Serial No. 481,792. 1 Claim. (Cl. 27—17.)

In casket construction, the combination of a casket provided with a flange at its top edge, a substantially rectangular molding having its two side edges bent inwardly to form flanges whereby said molding is attached to said casket flange, said molding being provided with a groove in its top side and with slots in its outer side, a gasket mounted in said groove, a cover for said casket having a flange adapted to rest on said molding and gasket, and clamping members adapted to be received in said slots and engage with said cover flange to seal said casket.

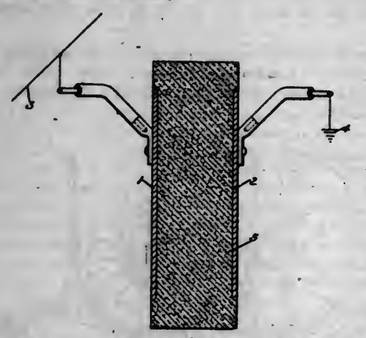
1,483,545. VALVE. THEODORE EVERS, Rock Island, Ill., assignor of one-half to Richard S. Silvis, Rock Island, Ill. Filed June 2, 1922. Serial No. 565,441. 1 Claim. (Cl. 137—68.)

The combination with a liquid reservoir, a supply device connected therewith, and comprising a chambered lower part, a cylinder seated on the lower part, a cover for the cylinder and a tubular part connected with the cover and detachably secured with the lower part, said tubular part being in communication with the chamber in the lower part, a valve controlling such communication, a spring for normally holding the valve upon its seat, said cover part having a filling opening, a closing member for the opening having a part for moving the



valve off its seat when the closing member is in closing position and an adjustable air vent extending into the chamber.

1,483,546. PROCESS FOR BLEACHING AND IMPROVING FLOUR AND MILLING PRODUCTS. HENRI CASPAR JOSEPH HUBERT GELISSEN, Berlin, Germany, assignor to the Firm Naamlooze Vennootschap Industrieele Maatschappij, voorheen Noury & Van Der Lande, Deventer, Netherlands. Filed Dec. 4, 1922. Serial No. 604,889. 5 Claims. (Cl. 83—42.)

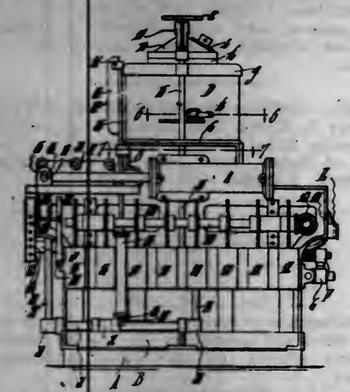


1. A process which comprises adding a substance of the herein described peraldehyde-ozonide class to flour material.

1,483,547. METHOD OF DETERMINING DISTANCES. HARVEY C. HAYES, New London, Conn., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed June 25, 1919. Serial No. 306,687½. 9 Claims. (Cl. 181—0.5.)

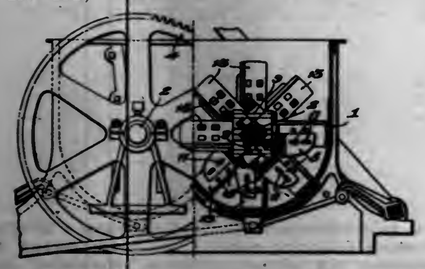
1. The method of sounding which consists in generating a sound and determining the angular direction of the sound reflected from the bottom; substantially as described.

1,483,548. LIGHTNING ARRESTER. FREDERICK A. LIND, Turtle Creek, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 6, 1919. Serial No. 295,069. 17 Claims. (Cl. 175—30.)



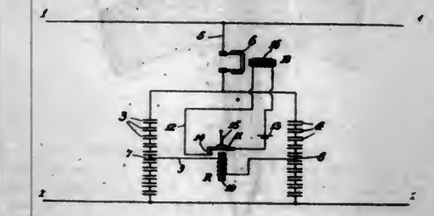
1. An electrical-discharge device comprising a plurality of spaced conducting members, and means disposed intermediate said members embodying intermingled particles of conducting material, non-conducting material, and a metal compound which becomes converted by heat into a compound of high resistance.

1,483,549. MINING APPARATUS. EDMUND C. MORGAN, Chicago, Ill.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed Mar. 27, 1916. Serial No. 86,837. 143 Claims. (Cl. 262—30.)



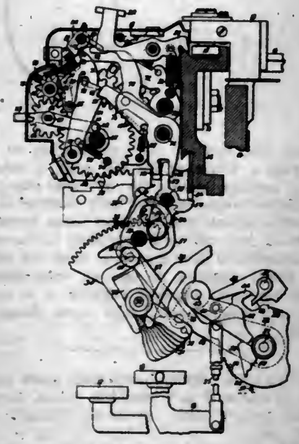
34. In a mining machine, the combination with a supporting frame, of kerf-cutting mechanism mounted thereon, and a deflector plate extending rearwardly and diagonally and arcuately and being curved upwardly to form an overhanging deflecting portion.

1,483,550. CASTING MACHINE. ALBERT W. MORRIS, Springfield, Mass., assignor to Kenneth W. McNeil, Bridgeport, Conn. Filed Dec. 31, 1919. Serial No. 348,658. 48 Claims. (Cl. 22—69.)



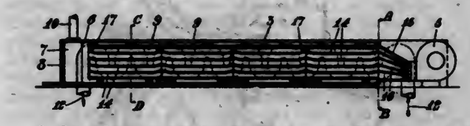
1. In a casting machine, of the type wherein a mold is clamped against a crucible with its filling opening in communication with the outlet of the crucible, a combined valve and plunger operable to first open said outlet and allow the mold to be filled with the fluid to be cast and subsequently as a plunger to intensify the pressure of the fluid in the mold and finally to close said outlet.

1,483,551. ADJUSTABLE BLADE FOR MIXING MACHINES. CLIFFORD C. MOSHER, Lima, Ohio. Filed May 14, 1923. Serial No. 638,807. 4 Claims. (Cl. 259—104.)



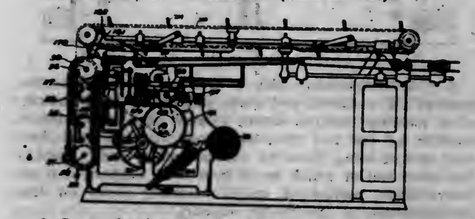
1. An adjustable blade for mixing machines, comprising a blade-holding arm adapted to be clamped on a shaft and having two radial plane faces at right angles to each other, and a blade adapted to be secured to either of said faces so as to act with either a right or left hand screw action on the material.

1,483,552. PROTECTIVE MEANS FOR CONDENSER INSTALLATIONS. GREENLEAF WHITTIER PICKARD, Newton Center, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Nov. 9, 1920. Serial No. 422,759. 3 Claims. (Cl. 175—294.)



2. In a condenser power-factor installation comprising parallel-connected condensers connected across the mains of an electric transmission system, the means for preventing breakdown of the entire condenser installation by a fault in any part of it, which comprises a main electromagnetic switch arranged to cut-out the entire condenser installation from the mains; a controlling electromagnetic switch therefor having its coil connected to the two branches of the condenser installation to cause the operation of said controlling switch by the current flow in the coil thereof resulting from a fault in any part of the condenser installation; and a circuit closed by said controlling switch and containing the coil of the main condenser-cut-out switch and a source of E. M. F.

1,483,553. CALCULATING MACHINE. ARTHUR F. POOLE, Kenilworth, Ill., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed July 6, 1921. Serial No. 482,787. 6 Claims. (Cl. 235—59.)

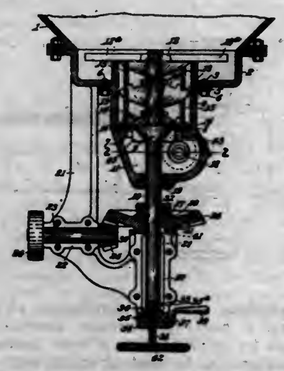


1. In a calculating machine, the combination of a totalizer and an actuator, one traveling relatively to the other, a set of keys, a register-state-controlled device in said totalizer, and two key operated devices one at each side of the totalizer whose action is controlled by said register-state-controlled device to indicate to the operator the state of the register as to clear or not clear.

1,483,554. FURNACE FOR DRY DISTILLATION OF WASTE LIQUORS AND SIMILAR MASSES. ERIK LUDVIG RINMAN, Djursholm, and GUNNAR FREDRIK MAGNUSON, Skoghall, near Karlstad, Sweden, assignors to Aktiebolaget Cellulosa, Stockholm, Sweden, a Company of Sweden. Filed June 6, 1921. Serial No. 475,268. 6 Claims. (Cl. 203—6.)

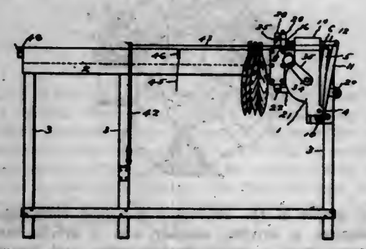
1. In a furnace for dry distillation of waste liquor and similar masses, the combination of a heat chamber, heating elements in said heat chamber, a distillation chamber communicating at both ends with said heat chamber, trucks in said distillation chamber having a number of floors for receiving the material to be distilled, said trucks being adapted to be connected to one another in a row in such manner that said floors form continuous horizontal passages through said row of trucks, and means for effecting circulation of gases in said chambers and through said passages in said row of trucks.

1,483,555. WEB TENSION MECHANISM FOR WRAPPING MACHINES. HENRI A. SEVIGNE, Winthrop Mass., and FRANK K. ARNOLD, Nashua, N. H., assignors to National Bread Wrapping Machine Company, Boston, Mass., a Corporation of Massachusetts. Original application filed Dec. 4, 1917, Serial No. 205,385 Divided and this application filed Nov. 17, 1921. Serial No. 515,764. 4 Claims. (Cl. 242—75.)



1. In mechanism for drawing a web of paper from a roll, means for compensating for the gradually reducing size and inertia of said roll, said means comprising a plurality of elongated weights, one above another, in position to bear in a single loop of the web and mounted to be progressively lifted by said loop.

1,483,556. SWIVEL. OTIS H. SLEEPER, Exeter, N. H., assignor to Perley B. Sleeper, Exeter, N. H. Filed Jan. 29, 1923. Serial No. 615,463. 3 Claims. (Cl. 24—40.)

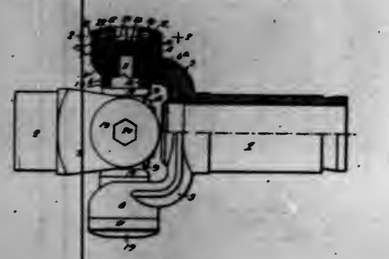


1. In combination with the swivel cap of a chain swivel, said cap having a locking slot, a chain ring rigidly anchored at one end to said cap and having its opposite end releasably engaged in said slot.

1,483,557. FEEDER FOR PULVERIZED COAL. GEORGE Z. SMITH and EDWIN B. HERBERT, Follansbee, W. Va. Filed Nov. 13, 1920. Serial No. 423,891. 5 Claims. (Cl. 302—42.)

1. In a pulverized fuel feeder, a casing having an inlet opening, a receptacle situated above the casing for supplying fuel to the casing through said inlet, a shaft extending through the casing carrying a valve for controlling said opening and carrying feeding devices including spiral propeller blades situated above the inlet opening arranged to elevate the fuel and to keep it in a constant state of upheaval, a motor for driving said shaft carrying said feeding devices at constant speed producing, in conjunction with the action of gravity, a steady flow of fuel from the receptacle to the casing at a rate depending upon the setting of the valve, and means for discharging the fuel from the casing.

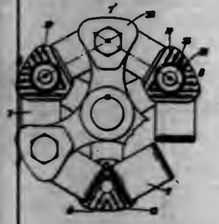
1,483,558. MACHINE FOR STRINGING TOBACCO LEAVES. CHARLES W. SPONSEL, Wethersfield, Conn., assignor to The Sponsel Company, Hartford, Conn., a Corporation of Connecticut. Filed Oct. 3, 1921. Serial No. 504,855. 15 Claims. (Cl. 131—21.)



1. A machine for stringing tobacco leaves comprising means for the attachment of a string, longitudinally movable means for piercing leaf stems, and means for pushing stems from the piercing means on to the string.

14. A machine for stringing tobacco leaves comprising a reciprocatory piercing hook, a reciprocatory pusher movable lengthwise of the hook, a reciprocatory needle movable transversely of the hook and pusher, and means for reciprocating the hook across the path of the needle and reciprocating the needle across the path of the hook, whereby a looped string will be transferred back and forth from needle to hook.

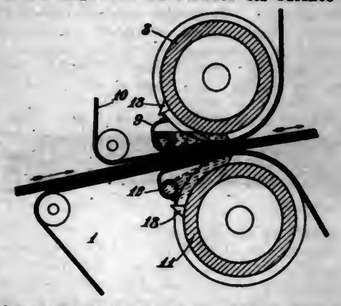
1,483,559. CARBON REMOVER. PATRICK A. SULLIVAN, Cincinnati, Ohio. Filed Sept. 13, 1920. Serial No. 409,957. 5 Claims. (Cl. 87—5.)



1. A carbon removing compound composed of kerosene, oil of mirbane and creosote oil.

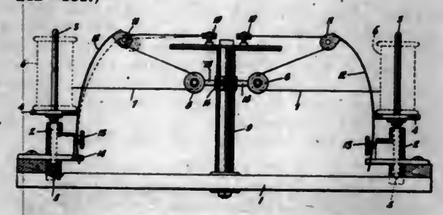
1,483,560. UNIVERSAL JOINT. WILLIAM H. THIEMER, Cleveland, Ohio, assignor to Frederick W. Peters, J. H. Wills, and himself, all of Cleveland, Ohio. Filed Nov. 17, 1922. Serial No. 601,459. 11 Claims. (Cl. 64—102.)

1. In a universal joint, the combination of a bearing block having a bore therethrough provided with a thread within its outer portion, a cross member having a trunnion adapted to be received within said bore, said trunnion being provided with a shoulder, a bushing having a flange adapted to rest upon the outer end of the bearing block and having a threaded portion adjacent to said flange and adapted to engage the threaded portion of said bore, said bushing adapted to surround said trunnion and there being packing interposed between the inner end of the said trunnion and the said shoulder, the peripheral portion of said flange being threaded reversely from the other portion of said bushing, and a cap having a flange provided with a thread adapted to mesh with the last-mentioned thread.



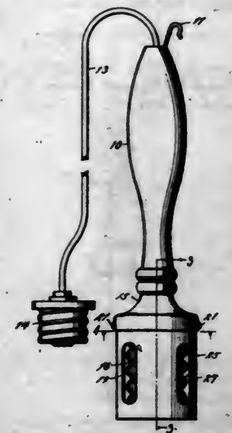
1,483,561. FLEXIBLE COUPLING. GUSTAVE A. UNGAR, Pelham Manor, N. Y., assignor to F. R. Blair & Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 11, 1919. Serial No. 344,030. 15 Claims. (Cl. 64—96.)

1. A device of the character described comprising, in combination, a driving member and a driven member, each comprising a spider having arms, and means, for attaching a flexible torque transmitting element to said arms with the arms of one spider alternating with those of the other around the axis of rotation, said flexible element including spirally wound cord-loop links connecting the arms of one spider with those of the other, the cords of a loop crossing each other between the ends of such loop.



1,483,562. ROTARY PRESSING APPARATUS. RUDOLF ERNST WAGNER, Karlstad, Sweden, assignor to Aktiebolaget Karlstads Mekaniska Verkstad, Karlstad, Sweden, a Manufacturing Company of Sweden. Filed Feb. 14, 1921. Serial No. 444,818. 3 Claims. (Cl. 92—49.)

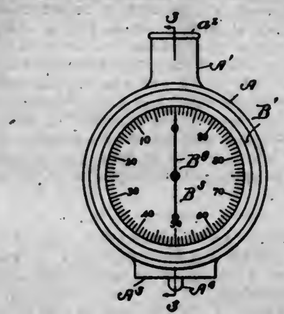
1. In a rotary pressing apparatus for pressing out liquid from fibrous substances, the combination of two press rollers adapted to press against a sheet of material run between the same, at least one of said rollers being provided with circunferential slots in its surface, and a suction device located in front of such slotted roller in the angle formed between its surface and the



sheet of material and adapted to draw off liquid pressed out from the sheet of material into said angle in front of the roller and into the slots in the roller.

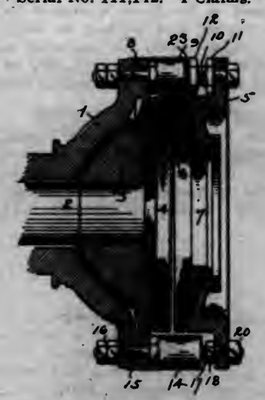
1,483,563. SPRING-TENSION CREEL. WILLIAM S. WELLS, Bethlehem, Pa., assignor to Johns-Manville, Incorporated, a Corporation of New York. Filed Oct. 26, 1922. Serial No. 596,947. 5 Claims. (Cl. 242—131.)

2. The combination with a circular revoluble bobbin support for a thread and guide sheaves for said thread, of a yielding tension sheave located at a point intermediate of the two first mentioned sheaves, said tension sheave being mounted on one end of a flat spring, the other end of which is set in a fixed support, and an intermediate portion of which normally bears on the circumference of the bobbin support.



1,483,564. LIQUID-HEATING DEVICE. FREDERICK H. WICKES and CHARLES H. GOODMAN, Roanoke, Va. Filed Feb. 28, 1922. Serial No. 540,058. 1 Claim. (Cl. 219—41.)

An electrical heater comprising a cap, a centrally bored handle connected to the cap, a core member de-

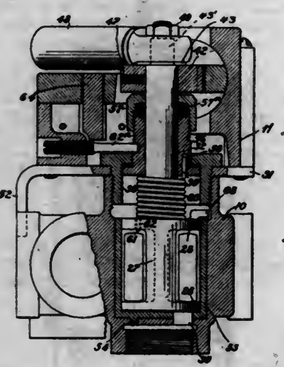


pending from the said cap and having a central bore aligning with the bore of the said handle, said core presenting upper and lower flanges having slots opening radially from the said central bore, a resistance coil encircling the said core between the said flanges and having the opposite terminal-wires extending inwardly of the said radial opening and upwardly thru the said aligned bores of the handle and the core member, a filler of plastic material within the said central bore and radial slots of the said core and enveloping the said terminal wires of the said coil, and a tubular shield encircling the said bore and supported by the flanges thereof in spaced relation to the said core, said shield having perforations thru which the said coil is exposed.

1,483,565. DEVICE FOR TESTING HARDNESS. RALEIGH B. ADAMS, Newton, Mass., assignor to Stowe & Woodward Company, Newton Upper Falls, Mass., a Corporation of Massachusetts. Filed Dec. 9, 1922. Serial No. 605,957. 2 Claims. (Cl. 265—19.)

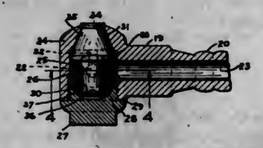
1. A device of the character described comprising a casing having an abutment to engage the material to be tested; a spindle mounted to move inwardly with reference to said casing when pressed by the material, said spindle having an end to engage the material; a spring tending to resist the inward movement of the spindle, the size of said end and the resistance of said spring having a predetermined relation when the material engages said abutment; means to adjust the compression of said spring; and means operatively connected with said spindle to indicate the hardness of the material.

1,483,566. ADJUSTING DEVICE FOR CRUSHERS. HARVEY S. ANDERSON, Germantown, Ohio. Filed July 25, 1916. Serial No. 111,142. 4 Claims. (Cl. 83—10.)



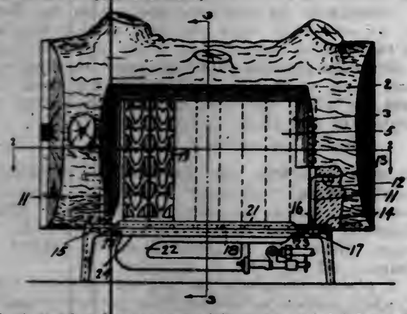
1. A crusher of that type involving two relatively movable heads arranged in spaced relation, one of which is provided with a peripheral shoulder, characterized by an internally screw threaded sleeve abutting upon the inner or adjacent fact of one of said heads and extending entirely across the intervening space between said heads and overhanging the peripheral shoulder of the other head, an externally screw threaded member abutting upon the inner or adjacent face of the shouldered head and adjustably engaging within the screw threaded bore of said sleeve to limit the approach of said heads one toward the other, and limiting means preventing the separation of said heads.

1,483,567. PROCESS OF PRODUCING TUNGSTEN OXIDE FROM TUNGSTEN ORES. KOJI ANJOW, Tokyo-Fu, Japan, assignor to Mitsubishi Kogyo Kabushiki Kaisha, Tokyo, Japan, a Corporation of Japan. Filed Apr. 26, 1923. Serial No. 634,924. 4 Claims. (Cl. 23—13.)



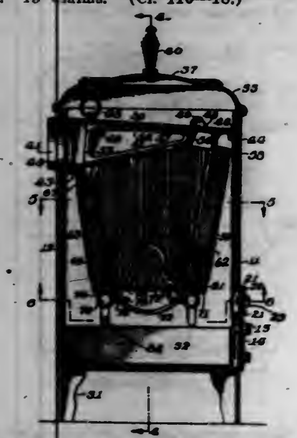
1. A process for producing hydrated oxides of tungsten, which consists in treating finely powdered tungsten ore with dilute sulphuric acid under pressure in a closed vessel to eliminate impurities contained therein.

1,483,568. VALVE-OPERATING MECHANISM. WILLIAM L. BLISS, Niagara Falls, N. Y., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed Sept. 9, 1918. Serial No. 253,162. 7 Claims. (Cl. 137—139.)



1. In a valve mechanism of the character described, a valve, means biasing said valve to obstructing position, valve holding means biased to inoperative position, said valve biasing means being adapted to cooperate with said valve holding means for maintaining said holding means in operative position, and fluid pressure means for overcoming said valve biasing means to effect a release of said holding means.

1,483,569. LUBRICATING ATTACHMENT FOR PERCUSSION TOOLS. DANIEL BRANDRIFF, Short Beach, Conn., assignor to Malleable Iron Fittings Company, Branford, Conn. Filed July 21, 1920. Serial No. 397,962. 20 Claims. (Cl. 184—14.)



7. In a lubricating attachment, a fluid passage having a tapered opening for the introduction of a lubricant therein, and a correspondingly tapered valve within said passage normally urged to close said opening.

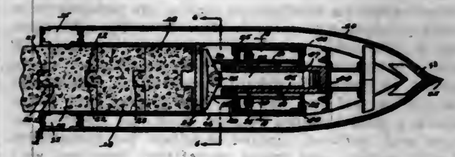
1,483,570. GAS-LOG HEATER. EUGENE S. BROWN, Oak Station, Pa. Filed Mar. 30, 1923. Serial No. 628,847 7 Claims. (Cl. 129—92.)

1. A gas-log heater comprising an artificial log-section recessed at the front, grooves formed in said section, a removable fire-back fitting in said grooves, and a burner-plate connected to said log below said fire-back.

1,483,571. INCINERATOR. GEORGE L. CAMPBELL, Philadelphia, Pa. Filed Dec. 15, 1919. Serial No. 344,794. 15 Claims. (Cl. 110—18.)

1. An incinerator wherein a retort is mounted in a supporting structure in juxtaposition to an ignition burner, and having an access opening for the deposit of material therein, characterized by a movable hollow closure for the access opening of said retort, said closure having a passage therethrough for the products of combustion, communicating with the interior of the retort through a vent opening adjacent to one edge of the bottom thereof leading from the retort to the interior of said closure, and communicating through an exit opening in the marginal edge farthest removed from said vent with a flue opening leading from said structure.

1,483,572. INHALER. FRANK I. CLARK, Baltimore, Md. Filed May 23, 1922. Serial No. 562,950. 4 Claims. (Cl. 128—198.)

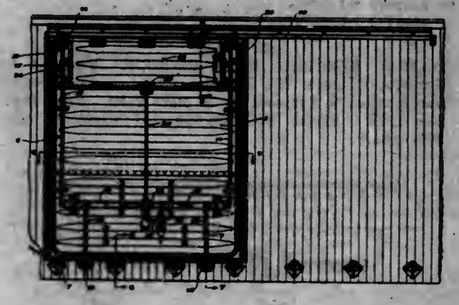


1. An inhaler comprising two telescoping sections each section having a nozzle opening into the interior of the section, said sections having circumferential openings located in a plane between the two nozzles and a wire clamping frame detachably connected to the sections at one of said openings, said frame being shaped to engage the nose of a person to hold the inhaler in place.

1,483,573. PHONOGRAPH APPLIANCE. FRED DARROW, Cuyahoga Falls, Ohio. Filed Jan. 10, 1921. Serial No. 436,200. 6 Claims. (Cl. 274—9.)

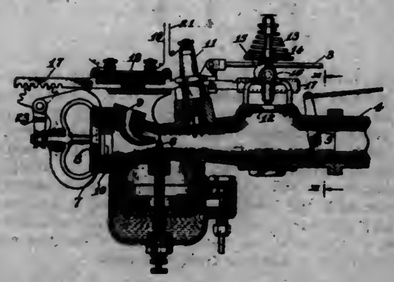
1. In a phonograph, in combination, a frame for the working parts thereof, a turn table, a record thereon, a tone arm carrying a playing stylus and a stop, said stop including a base plate, means to secure said plate against the upper face of the phonograph motor frame and between the said frame and the phonograph turntable, a lever overlying said plate and pivotally secured thereto, means to regulate the position of said lever relative to said frame and means associated with the forward end of said lever for stopping the playing arm with the playing stylus at the beginning of the groove in said record.

1,483,574. METHOD AND APPARATUS FOR PLACING CONCRETE SHEET PILES. DOMINICK J. EMILIO, Jersey City, N. J., assignor of one-half to James L. McDonald, Tottenville, N. Y. Filed Sept. 14, 1921. Serial No. 500,619. 2 Claims. (Cl. 61—63.)



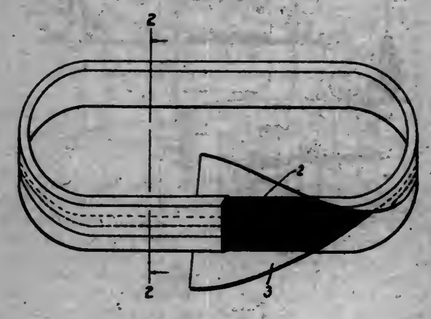
1. A device of the class described comprising an earth displacer, open at the rear and adapted to receive a number of prepared piles for closing the opening in the rear, means for pressing the piles into intimate contact, means for using said pressing means for advancing the displacer as soon as the pressure exceeds its resistance, means at the front of said displacer for making a trough in the river bottom, means for operating said pressing means and means for allowing the placing of a new pile in front of the first prepared pile in said displacer.

1,483,575. TOILET-PAPER PACKAGE. CHARLES FISHER, Chicago, Ill., assignor of one-third to Albert C. Grunwald, one-third to Carl E. Carlson, and one-third to Fred H. Loescher, all of Chicago, Ill. Filed Sept. 18, 1920. Serial No. 411,235. 3 Claims. (Cl. 281—15.)



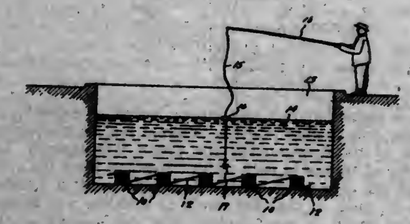
1. As an article of manufacture, a package of toilet-paper sheets having a longitudinal slit extending therethrough near one end of the pack, and a fastener comprising a paper strip folded at an intermediate transverse line and having an edge-wise offset head portion affording a shoulder, the members of the folded strip extending through and lining said slit and having their extremities bent, thus affording a guide adapted to permit the entry of a supporting blade when the package is introduced into a service cabinet.

1,483,576. METAL GRAIN DOOR. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 3, 1922. Serial No. 526,602. 2 Claims. (Cl. 189—46.)



1. In a freight car having a side door opening and a side door supported to close and uncover said opening, a beading about the exterior of the door opening and a corresponding recess upon the inner side of the door adapted to receive and engage the beading to form a grain tight closure, said door support allowing reciprocation of the door transversely of the car, and means for holding the door in closed grain tight position, comprising sockets secured to the car sides and bolts mounted upon the door adapted to be operated to engage the sockets and wedge the door against the car side.

1,483,577. ENGINE PREHEATER. JOHN GOOD, Garden City, N. Y., assignor to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Filed May 24, 1917, Serial No. 170,680. Renewed July 14, 1921. Serial No. 484,821. 20 Claims. (Cl. 123—122.)

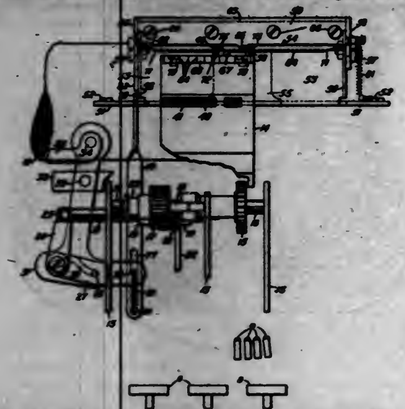


1. A means of starting combustion engines comprising a device connected to the intake and provided with air and fuel inlets normally functioning to automatically deliver explosive fuel mixture thereto and with an electric igniter, a switch controlling the circuit of the igniter, and means for operating said device first to pass flame into said intake and then to deliver said fuel mixture through the same to the engine.

1,483,578. FAN BELT. ROBERT L. GOODBAR, Minneapolis, Minn., assignor to GoodBar Rubber Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 4, 1919. Serial No. 328,375. 1 Claim. (Cl. 74—63.)

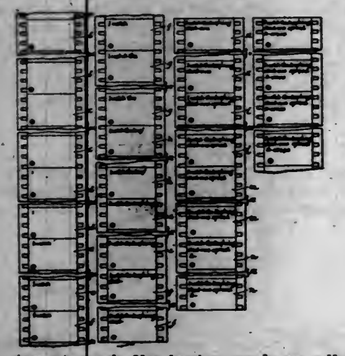
An endless belt composed of several rubberized vulcanizable fabric strips, each strip forming a single ply and cut obliquely to the direction of the threads of the fabric to allow longitudinal stretch thereof, said strips being cut out separately and laid concentrically one upon the other with their corresponding longitudinal edges in substantial alinement and forming an endless core, and a rubberized vulcanizable jacket wrapped around said core and having its longitudinal edges lapping each other lengthwise of the belt and on its exterior periphery, its transverse edges lapping each other transversal of the belt, and a single row of stitches through the overlapped portion of the jacket, said jacket concealing and protecting the edges of the fabric and said strips and jacket being vulcanized to form a homogeneous elastic endless belt.

1,483,579. ELECTRICAL AMUSEMENT DEVICE. EMERY M. GOODWIN, Cleveland, Ohio. Filed May 29, 1922. Serial No. 564,383. 1 Claim. (Cl. 46—49.)



A device of the kind described comprising an electric circuit and a plurality of submerged coils, a rod, and a line depending from said rod, a metallic member attached to the lower end of said rod and adapted to be submerged, and a float connected to said line and adapted to maintain the metallic member at a definite depth, the rod and line serving to direct the metallic member into alignment with one of the coils so that said member may be attracted and the float submerged.

1,483,580.—CALCULATING MACHINE. FREDERICK A. HART, New Britain, Conn., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed June 27, 1922. Serial No. 571,204. 14 Claims. (Cl. 235—59.)



2. In a calculating machine, the combination with a carriage, a totalizer, keys, and means controlled by said

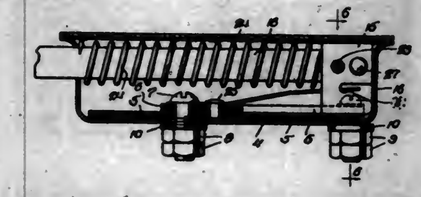
keys and carriage for operating said totaliser in one denomination after another, of a latch adapted to move

into engagement with a co-operating part to lock the carriage, and means controlled by the state of the totaliser for controlling the movement of said latch.

1,483,581. CINEMATOGRAPH FILM. GUSTAVE G. HEGEMAN, Chicago, Ill. Filed May 27, 1922. Serial No. 564,195. 2 Claims. (Cl. 88—16.)

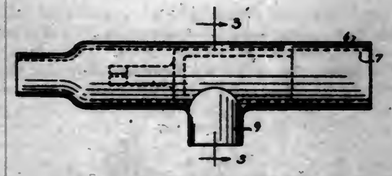
1. A cinematograph film having words or syllables of a song text applied thereto progressively to succeeding series of its frames until the entire text appears, the number of frames in each series depending upon the quality of the note to which the respective word or syllable is to be sung, so that the words or syllables will appear on the screen in synchronism with the playing of the respective music notes when the screen is run off at a uniform rate.

1,483,582. PISTON RING. GRANT JACOBS, Des Moines, Iowa. Filed Aug. 1, 1922. Serial No. 578,943. 2 Claims. (Cl. 74—109.)



1. An improved piston ring comprising a body portion made of spring metal and split, said body portion being formed with an annular groove in its outer surface, and a second ring formed of heat resisting, fibrous, flexible material mounted in said annular groove and formed into a complete circle extended across the split portion of the metal piston ring body, for the purposes stated.

1,483,583. TUBE FOR PERMANENT HAIR WAVING. HANNAH JACOBS, Brooklyn, N. Y. Filed Aug. 18, 1922. Serial No. 582,697. 3 Claims. (Cl. 132—36.)

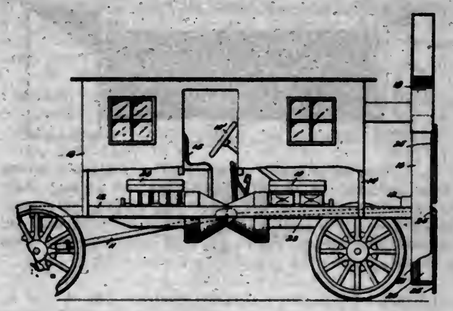


1. A tube adapted to enclose a curler in the process of permanently waving hair, said tube having an external spring adapted to engage the exterior of a tubular heater when the latter is passed endwise over said tube, for the purpose set forth.

1,483,584. ELECTRIC PULL SWITCH. THOMAS J. KERWIN, Chicago, Ill., assignor to Edmunds & Jones Corporation, a Corporation of New York. Filed Feb. 23, 1922. Serial No. 538,499. 6 Claims. (Cl. 200—161.)

1. An electric switch including an elongated casing of rectangular section, an operating member movable longitudinally thereof and having a head slidably engaging two opposed longitudinal walls of the casing, and a guide pin fast upon and extending transversely of the head and slidably engaging the other two longitudinal walls of the casing.

1,483,585. VALVE. JOHN KINCHELOE, Fresno, Calif. Filed Aug. 22, 1922. Serial No. 583,634. 4 Claims. (Cl. 251—100.)

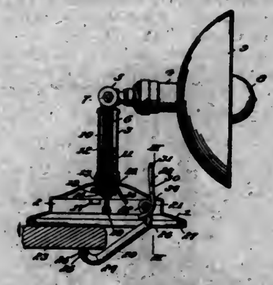


4. A valve comprising a tubular casing having one end reduced in size to form a narrow concentric neck and an opening in the side thereof centrally of its length and being interiorly screwthreaded throughout except at said neck; a cup-shaped valve mounted within said casing in screwthreaded engagement therewith having an opening in the side thereof, adapted to be brought into register with the side opening of the casing and having a stem; said casing and valve being so proportioned and arranged that said valve stem is always inclosed within said casing at a distance from said neck.

1,483,586. SNOW REMOVER. PETER EDWARD LARSON, Orfordville, Wis. Filed May 3, 1923. Serial No. 636,430. 6 Claims. (Cl. 37—43.)

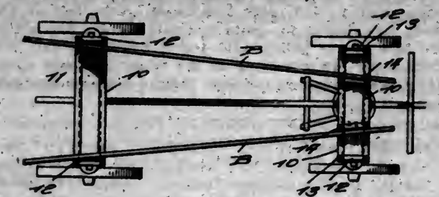
1. An apparatus for removing snow from roadways, comprising a truck having a propulsion power plant, a frame mounted on the chassis of said truck, a pair of housings having open front ends secured to the forward end of said frame, said housings having discharge pipes

extending upwardly and tangentially therefrom and having laterally curved extensions, a motor mounted on each side of said frame adjacent the rear end thereof, a shaft driven by each of said motors projecting forwardly therefrom into said housings, a plurality of blades in each



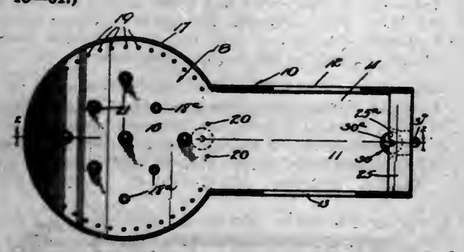
of said housings secured to said shafts radially thereof, each of said blades having a cutting edge inclined in the direction of rotation, said cutting edges extending in front of said housings and beyond the outer peripheries thereof.

1,483,587. VARNISH AND PAINT REMOVING COMPOSITION AND PROCESS FOR USING THE SAME. GERALD H. MAINS, Detroit, Mich., dedicated, by mesne assignments, to the citizens of the United States. Filed Feb. 23, 1923. Serial No. 620,822. 5 Claims. (Cl. 87—5.) (Filed under the act of Mar. 2, 1883, 22 Stat. L., 625.)



4. A process for removing paint and varnish from surfaces, consisting in applying to said surfaces a paste made up of a furfur-alcohol-containing liquid ingredient and starch, in permitting said paste to remain upon said surfaces for a period sufficient to exert efficient solvent action but short enough so that the interior portion of the paste layer is still moist, and in subsequently removing from said surfaces the loosened paint and varnish together with the paste residue.

1,483,588. ELECTRIC-LIGHT-STAND ADJUSTER. ANTHONY MEYERS and HARRY SIMMONS, New York, N. Y. Filed Jan. 13, 1923. Serial No. 612,492. 7 Claims. (Cl. 242—52.)



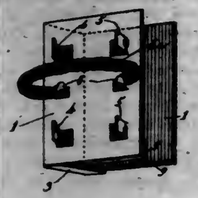
1. A lamp having a base, a clamping member hinged at one end to the base, said clamping member comprising a piece of looped wire having its end portions spaced apart at the hinged end of the member, a spring for normally holding said clamping member in engagement with a fixture, and an operating member for the clamping member extending through the base and having oppositely extending portions engaging said spaced end portions of the looped wire of the clamping member.

1,483,589. HAYRACK OR BODY SUPPORTING CLEAT FOR WAGONS AND SLEIGHS. PETER J. MICHAELIS, Kievenville, Wis. Filed Aug. 28, 1923. Serial No. 659,022. 4 Claims. (Cl. 280—143.)

3. The combination with a vehicle having forward and rear bolsters, of cleats adapted to rest upon and engage said bolsters, each cleat consisting of a pair of angle irons having downwardly extending flanges spaced from each other to receive a bolster between them, the angle irons being connected at their ends by angle irons extending longitudinally of the wagon and having upwardly extending flanges having bolt holes, and intermediate angle irons having upwardly extending flanges formed with bolt holes, the intermediate angle irons extending in the general direction of the length of the wagon and being removably engaged with the first named angle irons.

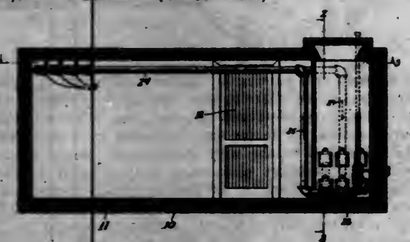
1,483,590. GAME. JOSEPH MORANG, Chicago, Ill. Filed Feb. 24, 1919. Serial No. 278,692. 1 Claim. (Cl. 46—61.)

A game comprising a walled enclosure, a spinning member located therein, said enclosure including an approach and an enlarged playing field, resilient pins located within the latter and extending in a line substantially parallel to the wall thereof and spaced from said wall, said resilient pins being spaced apart a distance less than the diameter of said spinning member to prevent impact of the latter with said side wall, a resilient pin located in said approach at the entrance of the latter into said field and spaced from the nearest of the first named pins a distance greater than the diameter of said spinning member in order to provide a plurality of gateways through which the latter may enter said field, and overturnable pins located in said field to be engaged by said spinning member.



1,483,591. FAN BELT. LEE MURRAY, Minneapolis, Minn., assignor to Durkee-Atwood Company, Minneapolis, Minn., a Corporation of Minnesota. Filed May 23, 1921. Serial No. 471,848. 1 Claim. (Cl. 74—63.)

An endless belt composed of a concentrically arranged series of fabric strips cut obliquely to the direction of the threads of the fabric to allow longitudinal stretch

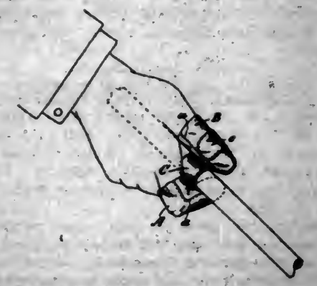


thereof, said strips being laid unattached to each other one upon the other with their corresponding longitudinal edges in alignment substantially and a rubberized jacket wrapped around said strips and having its longitudinal edges lapping each other lengthwise of the belt on the inner face thereof for contact of said lapping edges with the face of the pulley, said jacket concealing and protecting the raw cut edges of the fabric and said strips and jacket being vulcanized to form a homogeneous endless belt.

1,483,592. MATCH-BOX HOLDER. HENRY G. PELSTRING, Covington, Ky., assignor, by mesne assignments, to The Kemper-Thomas Company, Norwood, Ohio, a Corporation of Ohio. Filed Sept. 17, 1921. Serial No. 501,441. 4 Claims. (Cl. 224—29.)

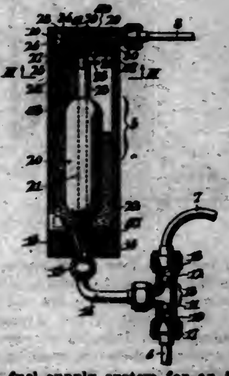
1. A device of the character described, comprising a three-sided holder for a box of safety matches or the like, abutments on said holder adapted to straddle and find a bearing against other than a flat steering column, and a spring, said spring and holder having inter-engaging means thereon, whereby the spring can be set around a steering column and hold the box abutments thereagainst, as and for the purpose described.

1,483,593. REFRIGERATING SYSTEM. LEWIS PENWELL, Chicago, Ill., assignor, by mesne assignments, to Refrigerator Car Equipment Company, a Corporation of Washington. Filed Feb. 3, 1921. Serial No. 442,071. 5 Claims. (Cl. 62—101.)



1. In a system of the class described, the combination with a body having a refrigerating chamber therein, of a plurality of circulating units arranged in said chamber, a pair of refrigerant tanks arranged exteriorly of said refrigerating chamber, one of said tanks serving as a source of supply and the other serving to receive the refrigerant discharged by said units, said tanks communicating with each other for effecting transfer of the refrigerant from the receiving tank to the supply tank, means for preventing back-flow of the refrigerant in its circulation, whereby to insure uni-directional movement of the refrigerant through the tanks and units, feed extensions connected to said circulatory units and communicating with the interior of the supply tank, said feed extensions being subject to the relatively high temperature of the refrigerating chamber, and discharge extensions also connected to said circulatory units, said discharge extensions being located within the receiving tank and subject to the relatively low temperature thereof, whereby to vary the specific gravity of the refrigerant at separated points to maintain circulation of the same through the units.

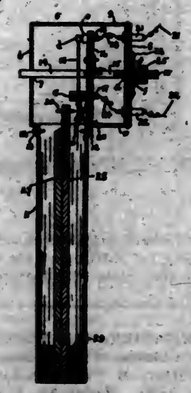
1,483,594. GRADING MACHINE. CHARLES G. PFEIFFER, Philadelphia, Pa., assignor to Specialty Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 4, 1922. Serial No. 549,569. 10 Claims. (Cl. 82—56.)



1. A grading machine comprising a rotatable screen drum mounted on an axial shaft, one end of said shaft being universally and the other end eccentrically journaled, means for moving the eccentrically journaled end of said axial shaft, and a friction drive operable from a source of power to actuate the screen drum.

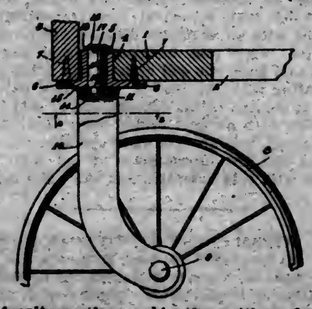
1,483,595. GOLF-CLUB-GRIPPING DEVICE. LINUS G. READ, Bridgeport, Conn. Filed Aug. 10, 1922, Serial No. 580,904. Renewed Nov. 28, 1923. 5 Claims. (Cl. 46—4.)

1. A golf club gripping device comprising a pair of finger sheaths, a golf club embracing and positioning strap, one flat end portion of which is secured against one sheath and the other end portion secured flat against the other sheath in a manner to connect the adjacent faces of the finger sheaths together, and to embrace the club intermediately the ends of said other sheath and with the club in parallel relation to said other sheath.



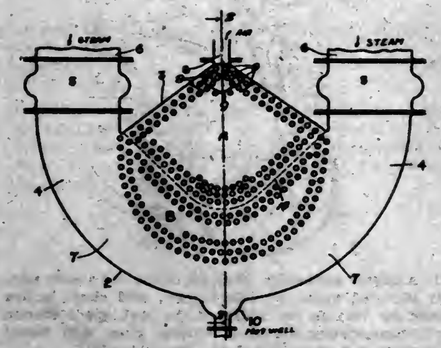
1,483,596. FUEL-SUPPLY SYSTEM. JOSEPH PERCY REMINGTON, Philadelphia, Pa., assignor to Remington Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 10, 1920. Serial No. 380,121. 18 Claims. (Cl. 158—36.)

1. In a liquid fuel supply system for an internal combustion engine, the combination with a pump chamber drawing from the source of fuel supply and delivering



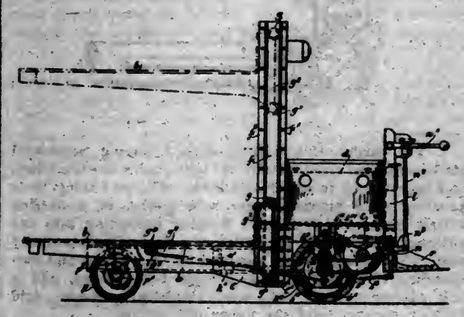
to the engine feed device, and means of connection from the engine intake to said pump chamber for bringing the liquid under the influence of the intake suction; of means responsive to the flow of liquid to said engine feed device for controlling the periods of such influence; and a plurality of differentially responsive ball valves responsive to the intensity of the said intake suction itself for controlling the period of such influence according to the operating requirements of the engine.

1,483,597. BIMETALLIC ELECTRIC THERMOREGULATOR. ERNEST HENRY RUDDIGER, Bismarck, N. Dak. Filed Apr. 21, 1922. Serial No. 555,886. 3 Claims. (Cl. 200—138.)



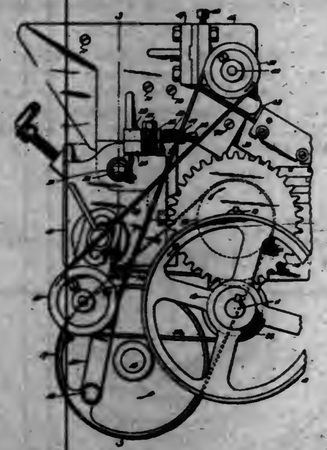
1. A bimetallic electric thermo-regulator, comprising in combination with a casing and a communicating receptacle, an adjusting-arm mounted upon and extending within the casing, an insulating-bar mounted on the adjusting-arm, an electrical contact-post on said bar, a second electrical contact-post on said bar, an electrical conducting-rod pivotally mounted between its ends on the first named post and normally engaging the second post to form a part of an electrical circuit, the parts of said rod outwardly of its pivotal mounting being approximately of equal weight, a bimetallic bar in the receptacle normally disengaged from said rod and adapted, when subjected to a change in temperature to be moved into engagement with said rod to cause disengagement of the latter from the second electrical contact-post, said arm being adjustable longitudinally for maintaining the electrical conducting-rod at selected distances from the bi-metallic bar.

1,483,598. CASTER WHEEL. HENRY G. RUNNS, Rochester, N. Y., assignor, by direct and mesne assignments, to E. Maurice Trimble, Rochester, N. Y. Filed Mar. 21, 1922. Serial No. 545,535. 2 Claims. (Cl. 16—18.)



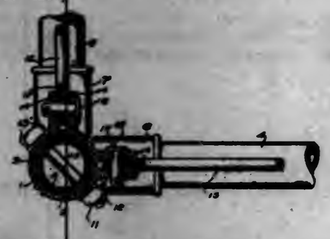
2. In furniture, the combination with a frame piece having a vertical bearing therein, of a wheel, an axle yoke supported thereby and upon which the yoke rests, a stud fixed to the yoke and extending rotatably through the frame piece to project from the upper side thereof such projecting portion being provided with a head, and a spring locking clip embracing the stud beneath the head, said clip being of a bifurcated formation permitting it to be snapped into or out of engaging position.

1,483,599. CONDENSER. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 20, 1920, Serial No. 360,188. Renewed Apr. 20, 1921. Serial No. 462,998. 16 Claims. (Cl. 257—43.)



1. A condenser comprising a shell and a nest of tubes within the shell, the said shell being provided with a pair of spaced inlet passages adapted to admit fluid to opposite sides of the nest of tubes and a non-condensable fluid offtake between the said inlet passages and above the nest of tubes.

1,483,600. INDUSTRIAL TRUCK. WILLIAM SCHROEDER, Jr., Brooklyn, N. Y. Filed Sept. 17, 1921. Serial No. 501,287. 3 Claims. (Cl. 187—9.)

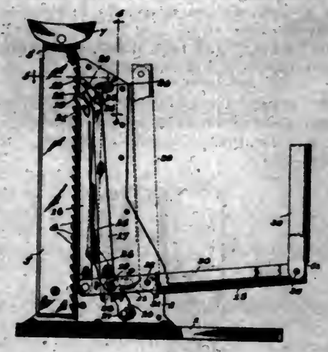


3. In an industrial truck, in combination with the chassis, having side frame members, a platform supporting frame formed of commerical rolled stock of standard cross section and comprising vertical plates secured to said side frame members, angle pieces secured to said plates in parallelism and in spaced relationship to form trackways on the outer faces thereof, an elevating platform, and a traveling carriage carrying said platform and supporting it by a cantilever suspension formed by means of two spaced rollers at each side thereof adapted to rest in the respective trackways.

1,483,601. HOPPER MECHANISM. LARS W. THORSELL, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 1, 1921. Serial No. 481,863. 37 Claims. (Cl. 10—167.)

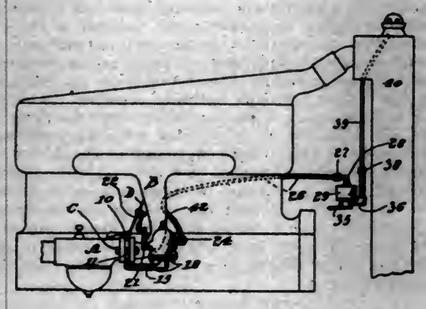
1. A hopper mechanism having a chute, and a slide movably mounted upon one side thereof, said chute having means for varying the width of the open space therein for accommodating blanks of various sizes, said means comprising a fixed plate and an adjustable plate.

1,483,602. DERRICK FITTING. RICHARD RALPH BLOSS and WILLIAM SCHWEMLEIN, Parkersburg, W. Va., assignors to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed Dec. 24, 1920. Serial No. 432,916. 2 Claims. (Cl. 189—19.)



1. The combination with a derrick having horizontal girths arranged substantially at right angles to each other, and legs formed in upper and lower sections having their abutting ends arranged near said girths, of a derrick fitting comprising a tubular member projecting into the adjacent ends of said leg sections, a pair of substantially semi cylindrical members mounted on said girths and surrounding the adjacent ends of said leg sections, and a bolt passing through said semi-cylindrical members, said tubular member, and the upper leg section.

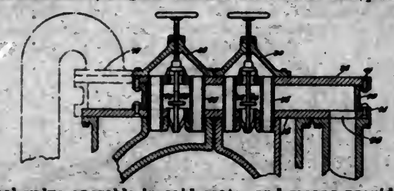
1,483,603. AUTOMOBILE JACK. THOMAS WILLIAM BINE, Ellensburg, Wash. Filed Apr. 11, 1923. Serial No. 631,455. 8 Claims. (Cl. 254—111.)



2. In a jack, a rack, a lever operated dog for actuating the rack and pawl means operative both to secure the rack and to return the dog and its lever to operative position.

5. A jack comprising a frame, a rack slidable in the frame, a lever having a sliding pivotal mounting in the frame, a dog pivotally mounted on the lever, a pawl pivotally mounted on the lever eccentrically with respect to the latter's pivot, resilient means connecting the

dog and pawl, stop means operative on said resilient means and means whereby the shifting of the pivotal mount of the lever relative the frame will operate the stop.



1,483,604. HUMIDIFIER FOR MOTORS. EDWARD J. CUNNINGHAM, Chicago, Ill., assignor to Walter G. Critchlow and Harry M. Valentine, both of Chicago, Ill. Filed Oct. 13, 1920. Serial No. 416,711. 4 Claims. (Cl. 123—25.)

1. In a device of the character described, a block adapted to be interposed between a carburetor and the intake manifold of an internal combustion motor, said block being provided with a central bore transversely therethrough and with an angularly disposed hollow extension, a perforated vapor tube mounted in said block transversely of said bore, one end of said tube being open and communicating with the bore of the hollow extension, a valve casing secured to the opposite end of said extension and provided with an inlet orifice communicating with a moisture supply, and an externally operated valve within said casing disposed intermediate of the point of communication with said extension and said inlet orifice.

1,483,605. STEAM-CHEST CONSTRUCTION FOR TURBINES. ALEXANDER T. KASLEY, Essington, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 4, 1921. Serial No. 505,276. 11 Claims. (Cl. 253—78.)

1. In a pressure chest construction for fluid pressure turbines, the combination with an outer plate, of an inner plate, a sealing wall structure therebetween to form a closed chamber, aligned valve seats in said two plates, a

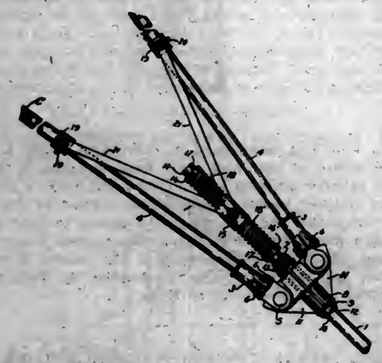
spool valve operable in said seats, and means providing a path for fluid flow for the fluid passed through said outer plate to the inner side of the inner plate.

1,483,606. DIFFERENTIAL GEARING. JOHN KROHN, Chicago, Ill. Filed Apr. 2, 1923. Serial No. 629,316. 7 Claims. (Cl. 74—99.)

1. A differential gearing of the class described comprising a casing having an annular series of teeth on its inner surface, a pair of driven gears, and an intermediate member between said gears having teeth for engaging said gears and a set of teeth for meshing with the teeth on said casing.

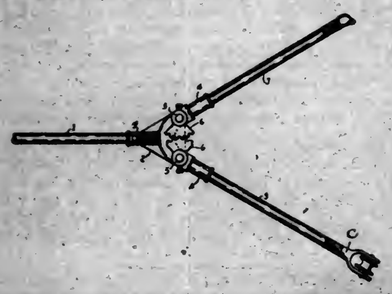
1,483,607. FOLDING STRETCHER. HORST LIEDTKE, Berlin-Schoneberg, Germany. Filed July 28, 1923. Serial No. 654,402. 1 Claim. (Cl. 5—82.)

In a folding stretcher, a frame composed of two sections pivotally connected at their adjacent ends, handles carried by the outer ends of the frame sections, means for locking the sections in alinement, pairs of legs pivotally connected to the frame sections at points located outwardly of the pivotal connection between the sections, a rod connecting the opposite extremities of said legs, supporting wheels journaled on said rod, additional legs pivotally secured intermediate their ends to the medial portions of the first mentioned legs, means pivotally connecting certain ends of the second mentioned legs in pairs, and wheels carried by the opposite extremities of the second mentioned legs, the sections of said frame being adapted, subsequent to the release of the locking means, to be folded together, the handles carried by said frame sections moving downwardly and inwardly relative to the pivotal connection between the sections and the first and second mentioned legs folding together into close compact relation, the handles being of such length as to project below the wheels when the stretcher is folded and thus support the latter in an upright position when the wheels are elevated.



1,483,608. CURRENT-COLLECTOR SUPPORT. ELLIS S. LINCOLN, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Sept. 30, 1921. Serial No. 504,430. 27 Claims. (Cl. 191—57.)

1. The combination with a plurality of conductors of a support comprising a main member, a head swivelly mounted thereon to rotate about the axis of the main member, a plurality of arms pivotally mounted upon the head to move in a common plane and forming angles

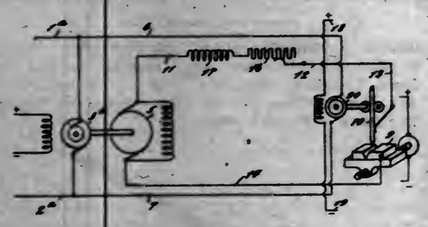


with said axis and means for the attachment of current collecting means to each of the arms to engage the conductors.

1,483,609. CURRENT-COLLECTOR SUPPORT. ELLIS S. LINCOLN, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Oct. 5, 1921. Serial No. 505,455. 18 Claims. (Cl. 191—57.)

1. A supporting arm as described, two auxiliary arms pivotally mounted thereon each to receive a current collector and move toward or away from each other in the same plane about the pivotal point and means yieldably holding the auxiliary arms in a predetermined position.

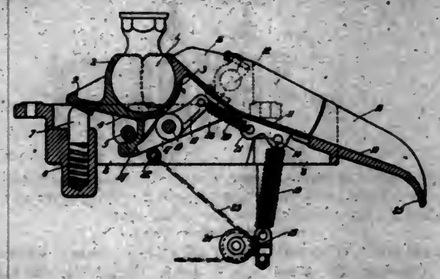
1,483,610. CURRENT-COLLECTOR SUPPORT. SAMUEL S. MATTHES, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Oct. 10, 1921. Serial No. 506,652. 19 Claims. (Cl. 191—57.)



1. A support for current collecting means comprising an arm, a pair of inter-connected collector supporting auxiliary arms pivotally mounted to said arm to pivot simultaneously towards or away from each other.

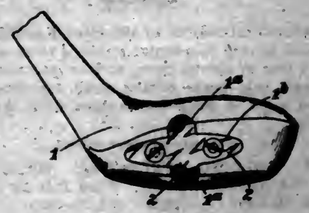
1,483,611. HYDRAULIC EXPANDER FOR WELL DRILLS AND THE LIKE. JESSE PERKINS MILLER, Houma, La., assignor of one-half to J. H. Thatcher, Houma, La. Filed Jan. 9, 1922. Serial No. 527,933. 10 Claims. (Cl. 255—75.)

1. A well tool comprising a cylindrical body, a bit head attached to said body, said head including a wash hole, a cylinder situated in the cylindrical body, a piston in said cylinder having a rod, blades carried by the bit head, and means through which the piston rod has contact with the blades for the expansion thereof under the influence of fluid pressure against the piston in said cylinder, said wash hole also conducting the fluid past the blades to wash out the cuttings.



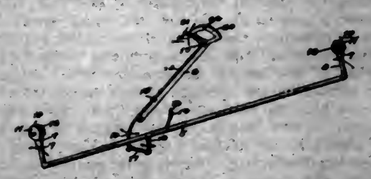
1,483,612. APPARATUS FOR WELDING AND METHOD OF OPERATING THE SAME. HARRY D. MORTON, New York, N. Y. Filed Nov. 17, 1922. Serial No. 601,475. 28 Claims. (Cl. 219—8.)

1. The method of electric arc welding which consists in automatically feeding a welding strip toward the work at a constant rate and so proportioning the voltage of the welding circuit external to the arc to the voltage applied to the welding circuit as to produce a normal arc voltage in excess of one-half the impressed voltage.



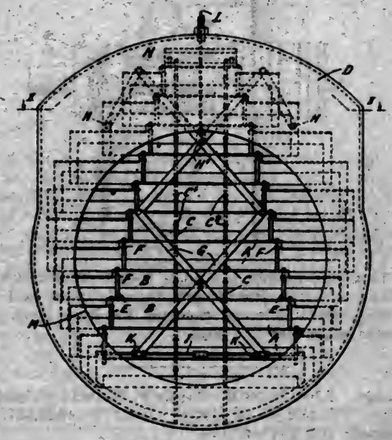
1,483,613. MEANS FOR COUPLING VEHICLES. MATT PAYNE, London, England. Filed Mar. 6, 1923. Serial No. 623,256. 4 Claims. (Cl. 280—33.1.)

1. A device for coupling vehicles, comprising a ball member depending from one vehicle, a ball socket on another vehicle having a movable portion, and a movable inclined guide for guiding said ball member into



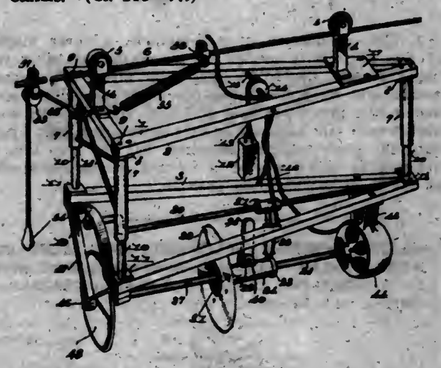
said socket, said movable portion of the ball socket being carried by said movable inclined guide.

1,483,614. GOLF CLUB. WILLIAM F. REACH, Chicopee, Mass., assignor to A. G. Spalding & Bros., Chicopee, Mass., a Corporation of Massachusetts. Filed Oct. 21, 1921. Serial No. 509,370. 2 Claims. (Cl. 46—4.)



1. A wooden golf club head having a hard metal weight embedded or countersunk in the rear face thereof, said weight being of substantially wedge shape in cross section and having its forward edge curved on substantially the arc of a circle, said weight having elongated bosses projecting above and below the body of the weight, said bosses being countersunk in the rear face of the head and terminating at the upper and lower faces respectively of the rear portion of the club head.

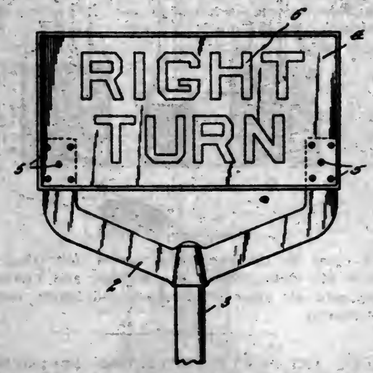
1,483,615. SIGNALING DEVICE FOR VEHICLES. DAVID ALEXANDER RITCHIE, Centralia, Ill. Filed Dec. 4, 1922. Serial No. 604,931. 1 Claim. (Cl. 116—47.)



A signaling device comprising a longitudinal tubular member, means for rotatably supporting the tubular member in position to extend longitudinally of a vehicle, similar signal arms at the opposite ends of said longitudinal tubular member, and extending substantially at right angles to the latter, incandescent lamps carried by the extremities of said signal arms, each of said incandescent lamps having the portions of the globes thereof proximate to the vehicle colored, conductors leading from said incandescent lamps through the longitudinal tubular member and adapted for connection with a suitable source of electric current supply and means for rocking the longitudinal tubular member to vary the angular relation of said signal arms to a horizontal plane.

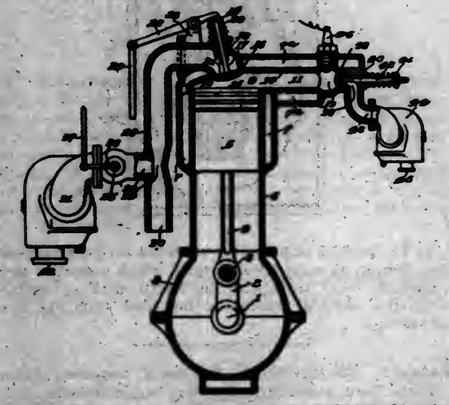
1,483,616. SHUTTER FOR THE HEADLIGHTS OF MOTOR CARS, MOTOR CYCLES, AND OTHER VEHICLES. FRANCIS W. J. ROBINSON, Germiston, Transvaal, South Africa. Filed Apr. 23, 1923. Serial No. 634,100. 2 Claims. (Cl. 240—45.2.)

1. A shutter for headlights, comprising a vertical set of connected leaves, a horizontal member secured to the upper part of the bottom leaf and provided with a pair of spaced slides, a case or holder wherein the leaves are disposed, a lazy-tongs device within the case for operating said leaves pivotally connected at its lower end to said slides and at its upper end to one wall of said case, and a member connected to the upper portion of the lazy-tongs device to actuate the same; substantially as described.



1,483,617. MEAT CUTTER. GENIAN B. RUNYAN, Kusa, Okla. Filed May 22, 1923. Serial No. 640,759. 15 Claims. (Cl. 146—77.)

1. A meat cutter comprising a rotary knife for making the initial cut, a rotary saw normally spaced from the knife to make room for the knife, means by which the saw is moved into close proximity to the knife for the cutting of a bone when reached, a shaft upon which the knife and saw are mounted and means by which the saw may be clutched to and from the shaft at will.

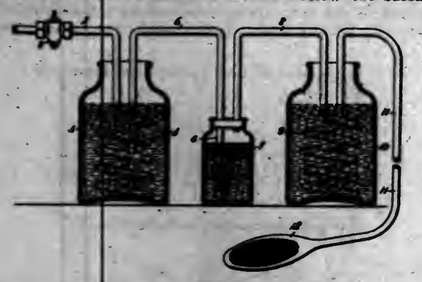


1,483,618. SIGN. THORNTON SECOR, New York, N. Y. Filed Oct. 16, 1922. Serial No. 594,701. 1 Claim. (Cl. 40—125.)

A sign comprising a plate surrounded around its edge by an upstanding flange, signal indicia applied to the surface of the plate and located within the flange, a gasket applied to the edge of the flange, a transparency applied to the gasket and disposed over the intermediate portion of the plate and the indicia thereon, the lower portion of the flange being provided with drain openings disposed between the gasket and the intermediate

portion of the plate, a rim member applied to the outer surfaces of the flange and having an inwardly disposed flange lying over the edge portions of the transparency, and securing devices passing transversely through the rim member and the first mentioned flange and holding the transparency in close contact with the gasket.

1,483,619. INTERNAL-COMBUSTION ENGINE. GEORGE W. SMITH, Jr., Riverton, N. J. Filed Dec. 2, 1921. Serial No. 519,340. 9 Claims. (Cl. 123—75.)



1. In an internal combustion engine, the combination of a cylinder, a working piston therein, means for supplying to said cylinder a constant volume of air on each intake stroke, means for mixing with said air a variable amount of fuel, said amount being substantially proportional on each intake to the load then on the engine, a relatively small explosion chamber, means comprising a tapering passage or chamber connecting said explosion chamber with the interior of said cylinder, the small end of said passage or chamber opening into said explosion chamber, and means for supplying a constant volume of explosive mixture to said explosion chamber and to said passage on each intake stroke of the engine.

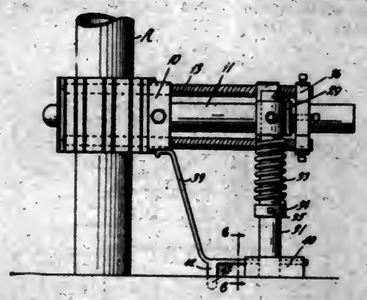
1,483,620. MEANS FOR ADMINISTERING AN ANÆSTHETIC. CHARLES SPINOLA, Vancouver, British Columbia, Canada. Filed Dec. 27, 1921. Serial No. 525,004. 2 Claims. (Cl. 128—192.)

1. A means for administering ether, said means comprising a tube, means for delivering air under pressure

into the tube, means for heating the tube, a container in which a body of liquid ether is maintained, means delivering the air as heated in the tube below the surface

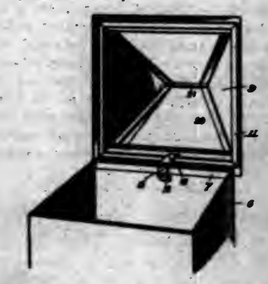
of the ether in the container, means delivering such etherized air alone from the container, and means for heating said air after etherisation and before delivery to the patient.

1,483,621. ART OF ELECTROTYPING. EDMUND VOIGT, Chicago, Ill. Filed Feb. 19, 1923. Serial No. 619,936. 5 Claims. (Cl. 204—8.)



1. The method of preparing a matrix for electrodeposition thereon of an electrotype-shell, which comprises providing the outer surface of the matrix with an electroconductive surface electrically insulated from the matrix-surface.

1,483,622. STREET SIGN. WALTER K. VOORHEES, Cedar Falls, Iowa, assignor to Standard Manufacturing Company, Cedar Falls, Iowa. Filed Jan. 8, 1923. Serial No. 611,359. 1 Claim. (Cl. 40—145.)



Superposed signs having on their abutting edges flattened bearing extensions provided with arcuate concentric slots, and securing devices in said slots to adjustably secure one sign in a desired position of relative horizontal rotatable adjustment on the other sign.

1,483,623. PIPE WRENCH. FELIX E. VOORHEES and OSCAR V. JONES, Dallas, Tex. Filed Mar. 25, 1922. Serial No. 546,564. 9 Claims. (Cl. 255—35.)

1. In a pipe wrench, a head, a hook lever mounted on the head, a flexible jaw for gripping an article, said jaw having a ball at one end engaging the hook lever, and a handle supporting the head.

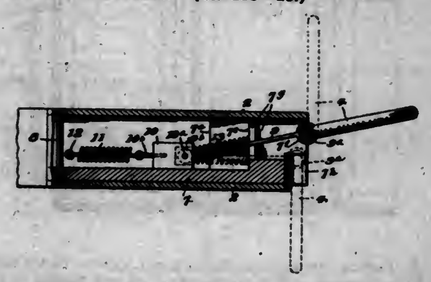
1,483,624. STOP HINGE. JAMES P. WALKER, Columbus, Ohio. Filed Mar. 29, 1923. Serial No. 628,627. 3 Claims. (Cl. 217—57.)

1. The combination of a receptacle, a cover hinged thereto on an axis outside the receptacle and below the upper margin thereof; a stop arm pivotally mounted within said receptacle below the upper margin thereof; and a link pivoted to said stop arm and pivotally connected with said cover on an axis spaced from said hinge axis, the parts being so arranged that the stop arm is arrested by collision with a portion of the receptacle, as the cover reaches open position.

1,483,625. SPRING ATTACHMENT FOR ACCELERATOR PEDALS. SAMUEL E. ARMSTRONG, Washington, D. C. Filed Dec. 24, 1921. Serial No. 524,598. 4 Claims. (Cl. 74—81.)

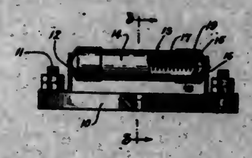
1. The combination with a throttle operating mechanism for an automobile, including an accelerator pedal, of a spring about the stem of said pedal to counteract the pressure of the driver's foot, said spring being held against rotation on said stem at its ends but being slidable thereon that either end may be removed from said stem and rotated to adjust the tension of said spring.

1,483,626. MINER'S CAP. JOSEPH F. GAYESKI, Shamokin, Pa. Filed May 17, 1923. Serial No. 639,485. 1 Claim. (Cl. 2—106.)



1. A miner's cap including a cap portion, a visor carried thereby having the portion at the front of the cap spaced from said cap portion, a lamp bracket mounted on the visor at the front of the cap and secured to the top of said cap portion, and a protecting shield secured to said visor at the front of said cap portion between said cap portion and the lamp bracket.

1,483,627. PROCESS OF SEPARATING THE CONSTITUENTS OF MINERAL SILICATES. JOHN B. LA RUE and SHERMAN W. SCOFIELD, Cleveland, Ohio; said La Rue assignor to said Scofield. Filed Sept. 2, 1920. Serial No. 407,724. 1 Claim. (Cl. 23—22.)

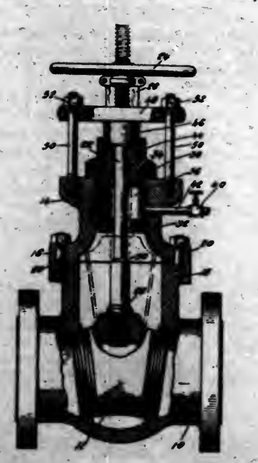


In the process of converting potash-feldspar into potassium silicate and aluminate by means of converting crystalline feldspar into amorphous feldspar and heating a mixture of said amorphous feldspar and a solution of caustic potash in a closed vessel, the step of converting silicic acid into silica which consists in continuing the heating until the moisture is absorbed by the crystalline mass, resulting in a material reduction of the pressure and a material increase in the temperature.

1,483,628. MINE-CAR COUPLER. CHARLES W. LAUBY, Vincennes, Ind. Filed Nov. 6, 1922. Serial No. 599,237. 11 Claims. (Cl. 213—18.)

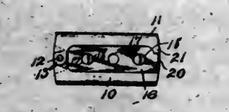
1. Coupling mechanism for cars embodying a bumper, a draw head carried thereby and arranged longitudinally thereof and laterally swingable with respect thereto, and a coupling draw bar arranged longitudinally of said head and carried thereby and vertically swingable with respect thereto.

1,483,629. CURRENT REGULATOR. SAMUEL RUTTENBERG and MEYER F. LEIBOWITZ, New York, N. Y. Filed July 18, 1922. Serial No. 574,805. 7 Claims. (Cl. 219—68.)



1. A device in cartridge form for automatic regulation of the current in an audion tube filament.

1,483,630. METHOD OF PRESERVING AND TREATING PAPER PULP. JUDSON A. DE CEW, Mount Vernon, N. Y., assignor to Process Engineers Incorporated, New York, N. Y. Filed Aug. 24, 1921. Serial No. 495,096. 4 Claims. (Cl. 92—21.)

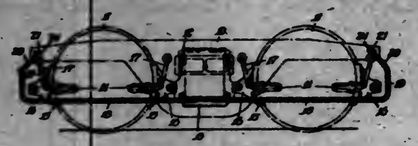


1. A method of preserving and hardening paper which consists in adding to the pulp a solution of formaldehyde and completely mixing it with the pulp before passing the pulp to the paper machine.

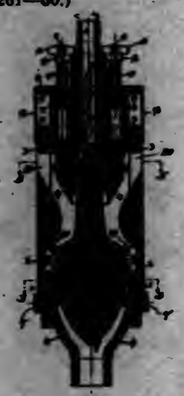
1,483,631. VALVE-OPERATING MECHANISM. JOHN W. FORBES, Flint, Mich. Filed Apr. 25, 1923. Serial No. 634,485. 12 Claims. (Cl. 251—32.)

1. Valve operating mechanism comprising, in combination, an axially movable valve stem, and a guide therefor, the stem being provided with a pair of spaced shoulders, and the guide being provided with an expansion chamber surrounding the stem and with a pair of seats at opposite ends of the expansion chamber constructed and arranged to be engaged by said shoulders to act as spaced seals to prevent the escape of fluid from the valve when the valve is open.

1,483,632. KNIFE. ALBERT L. FRY, Elizabeth, N. J. Filed July 26, 1922. Serial No. 577,503. 2 Claims. (Cl. 30—10.)



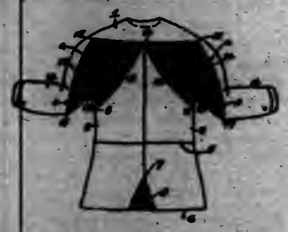
1. A knife comprising hinged members, one of said members having its back folded over to form a channel to receive one edge of a blade and having a shoulder at one end and ears at the other end to engage the ends of the blade, one wall of the member extending upward to form hooks extending toward the shoulder, and a second narrow channelled member hinged to the first member and having a projecting part at its end to engage the shoulder when the handle is closed.



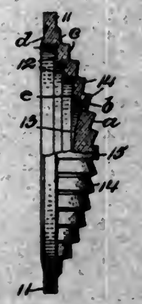
1,483,633. BRAKE-BEAM SAFETY MEANS. WILLIAM C. HEDGCOCK, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Jan. 23, 1922. Serial No. 531,109. 4 Claims. (Cl. 188—210.)

4. In a railway car truck, the combination of a side frame, a spring plank supported thereby having an aperture therein, a brake beam normally supported from said

side frame, and a brake beam safety bar having a longitudinally extending portion projecting through the aperture in said spring plank and partially supported by the latter and having another portion extending vertically upwardly and suspended from the side frame.

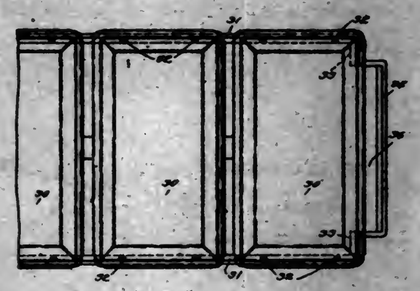


1,483,634. CARBURETOR. DAVID GUMBRAUM, Syracuse, N. Y. Filed Mar. 14, 1921. Serial No. 452,361. 4 Claims. (Cl. 261—50.)



1. A carburetor comprising a casing open at both ends and having air inlet openings in its periphery; a fuel supply pipe having a closed end and peripheral discharge ports extending into one end of said casing with its closed end secured in the other end thereof so as to leave a discharge opening around the closed end of said pipe; a sleeve valve reciprocating on said fuel supply pipe to control the thickness of the fuel sheet stream and a second sleeve valve adjustably secured to the first mentioned sleeve valve and reciprocably mounted in the end of the casing to control the thickness of the air sheet stream, substantially as and for the purpose specified.

1,483,635. SPORTSMAN'S VEST. FRANK HORAK, Valparaiso, Ind., assignor of one-half to Max Hirsch, Valparaiso, Ind. Filed Aug. 19, 1921. Serial No. 493,746. 5 Claims. (Cl. 2—61.)

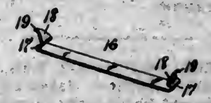


1. In self adjusting garments a body part, sleeve extremities and a shoulder piece formed of a relatively inelastic fabric, an elastic fabric under the arm and the rear side thereof from the elbow to the shoulder, and diagonal areas of similar fabric joined to the body below the shoulder line and extending from the center of the back diagonally downward terminating in a point under each arm, and also joined to the sleeve portions.

1,483,636. LENS. PAUL P. HORNI, Newark, N. J. Filed Dec. 7, 1922. Serial No. 605,430. 1 Claim. (Cl. 240—106.)

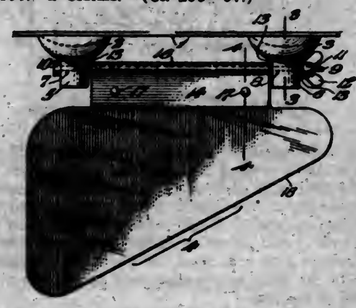
A lens of generally concavo-convex form, the concave face having a central bull's-eye and a series of concentric annular refractory prisms, the convex face having a series of straight parallel refractory prisms, the annular prisms being graduated so that those nearest the rim have a greater angle than those nearest the centre, the straight prisms being graduated so that those nearest the centre have a greater angle than those nearest the rim.

1,483,637. PEELING MECHANISM. ARTHUR KATZINGER, Chicago, Ill., assignor to Edward Katzinger Company, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1919. Serial No. 299,614. 18 Claims. (Cl. 33—7.)



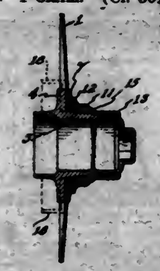
1. Peeling mechanism comprising a handle, and a pan-lifting member adjustably mounted on the handle.

1,483,638. SIX-WHEEL RAILWAY-CAR TRUCK. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 9, 1921. Serial No. 521,077. 10 Claims. (Cl. 105—195.)



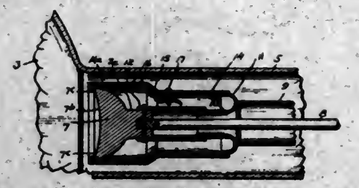
1. In a six-wheel truck, the combination of a side frame, an intermediate journal box, and an equalising lever in the form of a truss operatively connected to said side frame and journal box whereby the wheel base is reduced to a minimum.

1,483,639. COMPACT HOLDER FOR VANITY CASES. ERNEST W. LOUSSEN, Belleville, N. J. Filed Feb. 17, 1922. Serial No. 537,152. 2 Claims. (Cl. 132—82.)



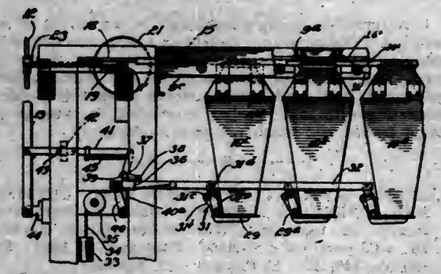
1. A compact holder for vanity cases comprising a strip of metal with a bottom portion to rest on the bottom of a vanity case, and having a hook-shaped end with an outwardly inclined prong, the hook-shaped part being adapted to be placed laterally on the edge of a compact and then carried with the compact flatwise within the case and pressed by the compact into close spring contact with the side wall of the case.

1,483,640. GLARE SHIELD. GEORGE E. MANNING, Philadelphia, Pa. Filed May 17, 1923. Serial No. 639,507. 2 Claims. (Cl. 296—97.)



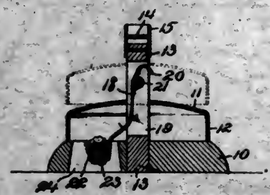
1. In a device of the character described, a plurality of suction cups having rearwardly projecting perforated bosses, a bolt passing through the perforated bosses, a supporting clip positioned between said cups and swingable on the bolt, washers intermediate the ends of said clips and on the bolt, a shield having its upper edge rigidly secured to said clip, and means on the bolt for locking the clip in a plurality of different positions.

1,483,641. DISK WHEEL. CLAUDE K. MONTGOMERY and CLAUD R. TROMLEY, Detroit, Mich. Filed July 19, 1920. Serial No. 397,479. 1 Claim. (Cl. 301—9.)



In a disk wheel, a hub having a flange provided with a radially corrugated outer face, a cylindrical portion adjacent the said face, a succeeding threaded portion adjacent the cylindrical portion, a second cylindrical portion adjacent and of less diameter than the said threaded portion, a second threaded portion adjacent the said second cylindrical portion extending to the hub end, one of said threaded portions being left hand threaded, a tapered clamping member having an inner corrugated face complemental to that of the hub flange and apertured to fit the first cylindrical portion of the hub, the two corrugated parts being adapted to secure a radially corrugated disk therebetween, a nut having a flange engaging against the said tapered clamping member, and a second nut providing a cap for the hub end and having a cylindrical part engaging over the said second cylindrical portion of the hub with the inner end seating against the first nut.

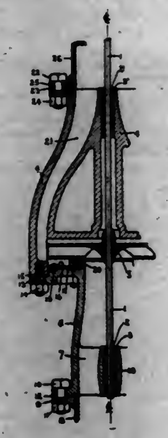
1,483,642. SAFETY DEVICE FOR VACUUM TUBES. ARTHUR MUTSCHELLER, New York, N. Y., assignor to Wappler Electric Company, Inc., a Corporation of New York. Filed July 17, 1919. Serial No. 311,518. 7 Claims. (Cl. 250—35.)



1. In a safety device for X-ray tubes the combination, with an exhausted glass cathode neck and a cathode shield and cathode located within said cathode neck, of a discharge gap located within said exhausted cathode neck and provided with means for localizing, at a particular point, the discharges from said cathode shield to said cathode.

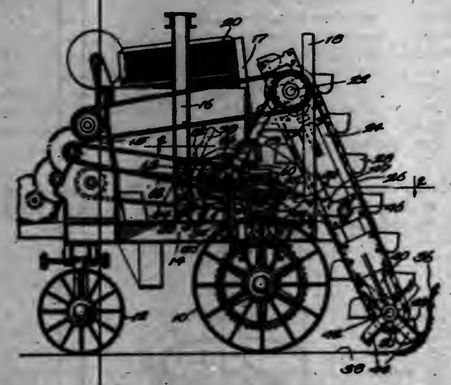
1,483,643. APPARATUS FOR MEASURING MATERIALS IN CONCRETE CONSTRUCTION. HERMAN D. PALMER and JOHN W. BEHEL, Hartford, Wis., assignors to The Kissel Motor Car Company, Hartford, Wis., a Corporation of Wisconsin. Filed Dec. 5, 1921. Serial No. 519,896. 19 Claims. (Cl. 214—1.)

1. An apparatus for measuring and discharging materials in concrete construction having, in combination with a supporting structure, a bin mounted on said structure, a plurality of hoppers carried by said structure and having their upper ends in communication with the bin, valve means between the bin and hoppers adapted to control the flow of materials from the bin into the hoppers, and means adapted to release the materials from the respective hoppers simultaneously into a vehicle body located therebeneath.



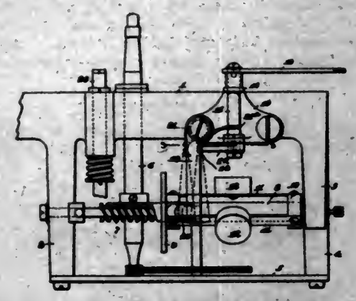
1,483,644. MOUSETRAP. JACOB RÖSE and FRANK E. BOWNE, Montclair, N. J. Filed Mar. 9, 1922. Serial No. 542,259. 3 Claims. (Cl. 43—78.)

1. A trap comprising a base, a killing element mounted so as to move to and from the base, a trigger having a bait-holding part and adapted to hold the killing ele-



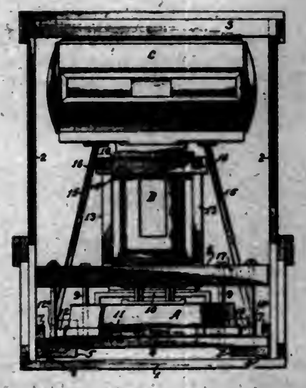
ment in raised position, and a spring for snapping the killing element shut when released, said spring being arranged on the back of said killing element and extending transversely, thereby forming a means whereby the trap can be set.

1,483,645. CENTRIFUGAL PUMP. CHARLES ROBERT SESSIONS, San Francisco, Calif. Filed Apr. 11, 1922. Serial No. 551,490. 5 Claims. (Cl. 103—111.)



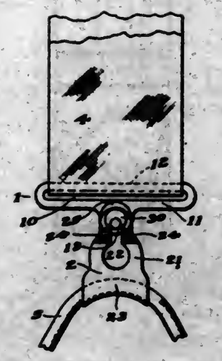
1. A centrifugal pump comprising a casing having an intake and a discharge port therein; a rotary impeller journaled in said casing between said intake and discharge ports; and annular diaphragm within said casing around said intake port; and resilient means on said diaphragm contacting with said impeller to prevent the passage of liquid around said impeller to said intake port.

1,483,646. SAFELY-CONTROLLED SAND CUTTING AND SCREENING MACHINE. JOHN S. TOWNSEND, Harvey, Ill., assignor to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed Apr. 13, 1921. Serial No. 461,162. 13 Claims. (Cl. 198—9.)



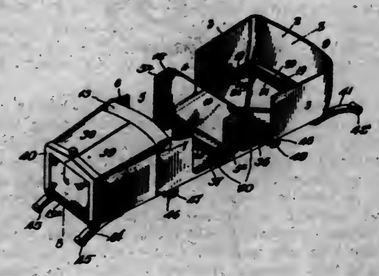
1. In mechanism of the class described, a wheeled vehicle, an elevator mechanism having a working nose near the floor, means for moving the nose of the elevator toward and from the floor, power driven mechanism for operating said elevator moving means and a manually controllable clutch having saw shaped interfitting teeth interposed between said power driven mechanism and the elevator moving means.

1,483,647. SPEED REGULATOR FOR TALKING-MACHINE MOTORS. ANTHONY VASELLI, Newark, N. J., assignor to General Phonograph Corporation, a Corporation of New York. Filed Aug. 23, 1920. Serial No. 405,227. 4 Claims. (Cl. 188—187.)



1. In a phonograph, a frame, a rotating shaft carried by the frame, a braking disk mounted on the shaft, means for operating said disk along said shaft in response to speed changes of the shaft, a bed plate carried by the frame, an arm pivoted to the plate, a braking shoe carried by the arm, a cam journaled in the plate, said cam adapted to rotate said arm upon its pivot, and a spring attached to the plate and holding said arm in contact with the face of the cam.

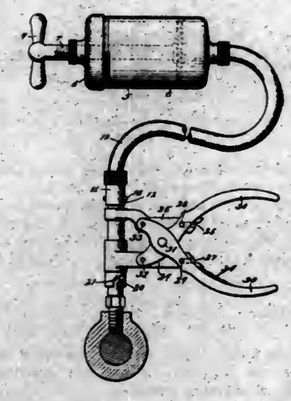
1,483,648. SHIPPING CRATE. JOHN WHITWORTH and CHARLES RODERICK, Woodstock, Ill., assignors to Sanitary Scale Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 19, 1923. Serial No. 625,958. 14 Claims. (Cl. 217—52.)



1. In a shipping crate for objects having bases upon which they stand when in use; a crate bottom, a bed adapted to the crated object and a bearing between the bottom and bed having a horizontal dimension materially less than that of the crated object base and positioned beneath the bed to leave the crated object supported upon essentially a rocking bearing and with a substantial overhanging portion, beyond said bearing, depressible under shocks directed upwardly beneath said overhanging portion.

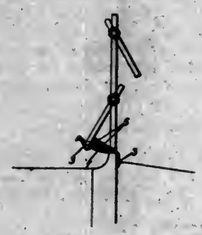
1,483,649. CAST-OFF FOR SUSPENDERS. GEORGE A. CLARK, Seattle, Wash. Filed Aug. 31, 1922. Serial No. 585,396. 5 Claims. (Cl. 241—18.)

1. A cast-off for suspenders comprising a member having a pin provided with a head and a member complemental thereto and having two resiliently separated arms each provided with a keyhole slot for the reception of said pin, one of said arms having a projection from its general plane and located between the small and the large end of the slot, and engageable by the head of the pin when the latter is moved from the small end towards the large end of the slot.



1,483,650. VEHICLE BODY. ELBERT A. CORBIN, Jr., Swarthmore, Pa. Filed Sept. 18, 1922. Serial No. 588,753. 14 Claims. (Cl. 296—28.)

1. The herein described blank for the sides and back of a vehicle body, comprising a strip having a solid central portion adapted to form the back, side members having cut-out portions forming door openings when the blank is bent at two points and the sides moved toward each other, and front upper cut-out terminal edges forming angular cowl supports when the blank is bent.

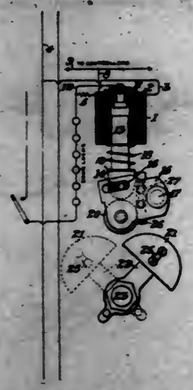


1,483,651. LUBRICATING SYSTEM. JOHN L. CREVELING, Oracle, Ariz., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Original application filed Oct. 11, 1920, Serial No. 416,148. Divided and this application filed July 20, 1923. Serial No. 652,730. 5 Claims. (Cl. 184—105.)

1. The combination with a lubricant compressor having a discharge conduit provided at its free end with a coupling member for making a detachable connection with a lubricant receiving nipple, of means for increasing the pressure on the lubricant delivered to the nipple, comprising a high pressure pump, means for detachably

connecting the intake of said pump with said coupling member, and means for detachably connecting the discharge conduit of said pump with a lubricant receiving nipple.

1,483,652. SCREEN FOR WINDSHIELDS. HORN G. DONIGAN, St. Louis, Mo. Filed Aug. 29, 1921. Serial No. 496,309. 1 Claim. (Cl. 296—95.)



As an article of manufacture, a collapsible and extendable screen for automobile windshields comprising a reticulated screen having upturned ends, a flexible frame enclosing the edges of said screen, and means for detachably securing the frame between the adjacent edges of two panels of a ventilating windshield or between the panel and the frame of the windshield in any one of various ventilating positions of the windshield.

1,483,653. SAFETY DEVICE FOR ELECTRIC APPARATUS. PETER J. DUGAN, Bronx, N. Y. Filed Dec. 31, 1920. Serial No. 434,295. 4 Claims. (Cl. 187—31.)

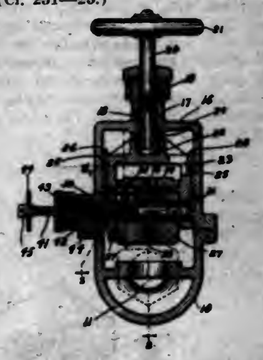
4. In an electric elevator apparatus, the combination with a car, a source of electric supply for said car, control devices connected to said electric supply and mounted on the car, and mechanism for operating said control devices also mounted on the car, of an electric magnet in operative relation to said current source and having an armature for closing the circuit of said control devices, a pivoted support for said armature in operative relation to said operating mechanism, a cam

connected with the operating mechanism and coperating with the said armature to close the circuit of the

control devices and to open said circuit when no current is flowing in the magnet coil and the operating mechanism is out of starting position.

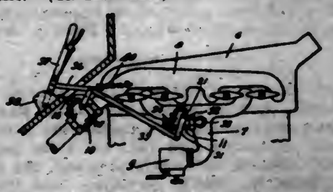
1,483,654. VEHICLE WHEEL. ALBERT ESCHWIG, Seattle, Wash. Filed June 8, 1921. Serial No. 475,897. 1 Claim. (Cl. 301—64.)

A vehicle wheel, comprising a hub member and a disk secured thereto, said disk member being bent outwardly near its upper end and thence rebent in an opposite direction to provide a rim with a channel open at one end between the rebent portions of the disk, rim supporting bolsters seated within said channel to support rebent portion of the disk in spaced relation relatively to the outwardly bent portion thereof, said bolster being provided with a hook shaped head which abuts the disk at the first mentioned bend thereof, and means extending from said rim supporting bolster through the disk for engagement with the demounted rim lugs to retain a demountable rim upon said disk wheel.



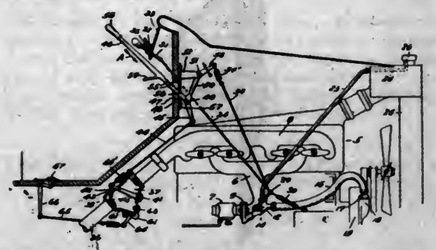
1,483,655. DIRECTION INDICATOR. ALFRED E. FAULL, Oakland, Calif., assignor to Right-of-Way Signal Company, Oakland, Calif., a Corporation of California. Filed Dec. 18, 1919. Serial No. 345,842. 2 Claims. (Cl. 177—337.)

1. A direction indicator comprising a casing provided with a display opening, a shaft mounted in the casing, a plurality of sign plates, each having legs at its ends swingingly connected to said shaft and one leg of each plate being longer than the companion leg and having a cam end, an electric circuit in the casing, an indicating device included in such circuit and an electric switch in the circuit located for actuation by the cam



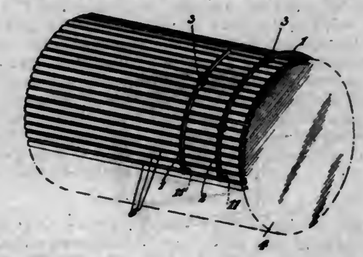
projecting end of each longer leg of the respective plate to close the switch when the respective sign plate is swung on said shaft.

1,483,656. VALVE. EMANUEL FISHER, Providence, R. I., assignor of one-half to George W. O'Kneel, Providence, R. I. Filed Dec. 2, 1921. Serial No. 519,488. 9 Claims. (Cl. 251—25.)



9. In combination with a valve casing having a valve seat, a yoke in said casing, a valve member having a plurality of working faces and mounted on a pivot pin to be rotated in said yoke to present said faces to said seat as desired, a spring pressed bolt engaging said yoke to lock said valve in different operating positions, a key mounted in said casing adapted to be moved to a position for rotating said valve, and a finger connected to said bolt and extending into the path of movement of said key whereby the bolt is moved to release the valve as the key is being positioned to rotate the same.

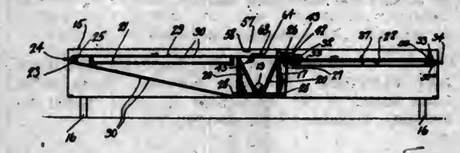
1,483,657. CONTROLLING DEVICE FOR INTERNAL-COMBUSTION ENGINES. ARTHUR R. GLIDDEN, Sultan, Wash. Filed Apr. 11, 1921. Serial No. 460,412. 3 Claims. (Cl. 123—119.)



3. An internal combustion engine having a fuel inlet conduit and an exhaust conduit, a shut off valve for said exhaust conduit, a compound valve affording communication from said fuel inlet conduit to the atmosphere, and manually operated means connected to said valves for simultaneously opening one of the valves with the closing of the other valve the opening movement of one of the valves permitting operation prior to effective operation of the closing movement of the other valve.

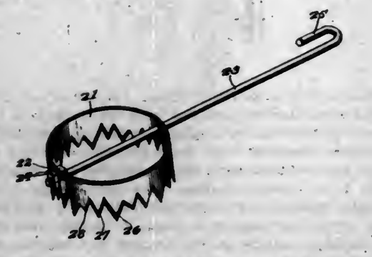
1,483,658. FUEL ECONOMIZER FOR INTERNAL-COMBUSTION ENGINES. ARTHUR R. GLIDDEN, Seattle, Wash. Filed Feb. 6, 1923. Serial No. 617,334. 3 Claims. (Cl. 123—25.)

1. An automobile engine, a coupling member located between the carburcter and the intake manifold of the engine, said member having a side inlet opening, a tubular connection between said opening and the crank case of the engine, a tubular connection between said opening and the steam space of the water cooling radiator, a normally closed inlet valve between said opening and both of said connections a normally open valve provided for the exhaust manifold of the engine, means whereby said inlet and exhaust valves are respectively moved in unison into their open and closed positions and means whereby the inlet valve may be moved independently of the exhaust valve into its open position.



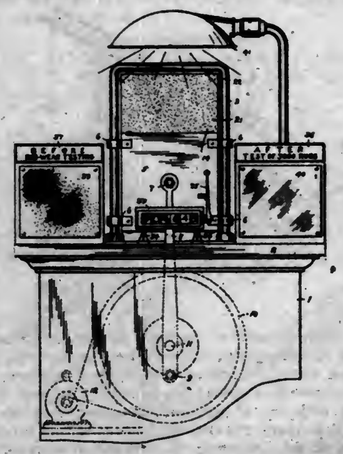
1,483,659. PRINTING MEMBER FOR TYPE-DUPLICATING MACHINES. CHARLES FREDERICK GREEN, Romford, England, assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 20, 1922. Serial No. 595,738. 2 Claims. (Cl. 101—377.)

1. In printing devices, the combination with a member having type channels, of a line printing strip having at one end an integral projection shaped for engagement in one of said type channels, and a block recessed to receive and hold said strip in the recess, the lower portion of said block conforming with the cross-sectional shape of said type channels and being engageable therein to hold said strip in position on said member.



1,483,660. EGG-CANDLING DEVICE. THOMAS GRUBB, St. Louis, Mo. Filed May 24, 1922. Serial No. 563,359. 4 Claims. (Cl. 99—6.)

4. An egg testing device having an elongated casing provided centrally with a compartment containing a source of light, an endless apron travelling through one end portion of the casing and above the top of said compartment, said apron being provided with rows of holes constituting seats for eggs, a receiving imperforate conveyor movable along the other end portion of the casing, means for simultaneously driving said apron and said conveyor, a bridge plate extending from the discharge



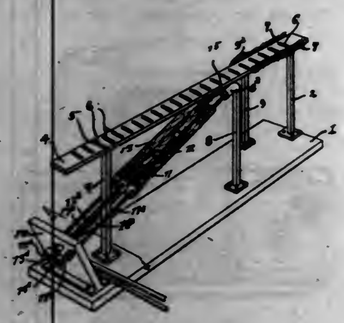
end of said perforated apron onto the receiving end of the imperforate conveyor, the combination of a plurality of trough members pivoted within the casing above said compartment, means for lifting the eggs from said holes, means for forcing said lifted eggs onto said trough members, and means for tilting said trough members.

1,483,661. CAN OPENER. SAMUEL J. HALL, Anniston, Ala. Filed Apr. 20, 1922. Serial No. 556,734. 2 Claims. (Cl. 30—3.)

2. A can opener comprising a strip of material having its ends overlapped and perforated and with a single perforation in its intermediate point diametrically opposite to the overlapped ends, teeth on the edge of the strip, and a handle disposed through the single perforation and through the perforations of the overlapped ends and secured to said latter ends.

1,483,662. TESTING AND DISPLAY DEVICE. MITCHELL F. JAMAR, Duluth, Minn. Filed Sept. 25, 1922. Serial No. 590,521. 2 Claims. (Cl. 73—51.)

1. A device of the character described comprising in combination a suitable support, an upright horisontally yieldable fabric holding block upon the support, means

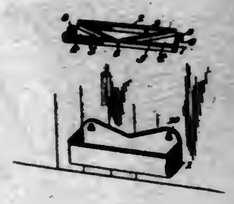


for supplying constant yielding pressure to said block, a vertically reciprocable fabric holding block in front of the first mentioned block, and normally contacting same means for reciprocating said last mentioned block, and means for visually recording the number of reciprocations of said last mentioned block.

1,483,663. COMBINATION SINK HANGER AND OUTLET FIXTURE. WILLIAM JOHNSON, Green Point, Long Island, N. Y. Filed Sept. 7, 1922. Serial No. 586,629. 2 Claims. (Cl. 4—170.)

1. Means for supporting sinks, comprising a divided straight wall bracket provided with offset pockets to receive the projections of a sink member, said bracket being further provided with longitudinally disposed openings to receive fastening means adapted to attach the bracket to a vertical surface, pipe connections integral with said bracket and comprising outwardly and downwardly projecting hollow members provided with transverse outlet openings to receive taps and inlet openings at the free ends to receive stand pipe connections, and a divided bridge piece integral at opposite ends with the said hollow members.

1,483,664. MACHINE FOR REMOVING THIN RUBBER ARTICLES FROM FORMS. JOHN A. KEMPEL, Coventry Township, Summit County, Ohio. Filed Dec. 29, 1921. Serial No. 525,679. 9 Claims. (Cl. 18—2.)

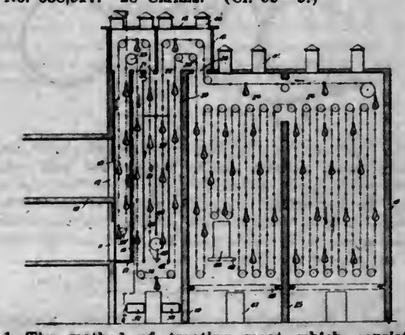


1. A machine of the character described including a slideway having bearing rollers journaled therein, a pair of rolling elements arranged below said slideway, said rolling elements mounted in a plane inclined to said slideway with one of said rolling elements on each side of a vertical plane running in parallel spaced relation to the edge of said slideway, a form board adapted to be moved over the slideway and forms depending from said board at each side of the slideway extending between the rolling elements.

1,483,665. BRAKE-OPERATING MECHANISM. AUGUSTUS F. KLASING, Chicago, Ill., assignor to The Klasing Car Brake Company, a Corporation of Colorado. Filed Feb. 1, 1922. Serial No. 533,267. 15 Claims. (Cl. 74—119.)

1. A brake operating mechanism comprising a movable member for applying power to a brake, a rotary member adapted upon rotary movement to travel in the direction in which said first-named member is movable, and means movably mounted on said rotary member adapted normally to cause said two members to move together in one direction while permitting the rotary member to move in the opposite direction independently.

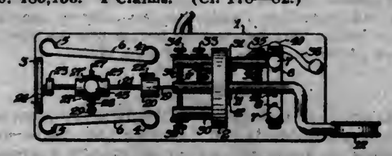
1,483,666. UMBRELLA RACK. EDWARD C. KOVARIK, New York, N. Y. Filed Mar. 24, 1922. Serial No. 546,319. 2 Claims. (Cl. 45—33.)



1. An umbrella holder of the class described comprising a support formed of a single strip of spring metal, said strip having its ends bent at predetermined points to form outwardly extending arms, said arms converging to provide a central pocket, the free ends of said arms extending laterally in opposite directions and then rearwardly, said rearwardly extending portions terminating at points adjacent said arms to provide supplementary pockets, the free ends of the rearwardly extending portions being curved outwardly to provide a guide means between the outer faces of said arms and the rearwardly extending portions, the converging ends of said arms and the free ends of the rearwardly extending portions forming spring closures for said central and supplementary pockets respectively.

1,483,667. SEWAGE-SCREENING APPARATUS. CLARENCE P. LANDRETH and WALTER H. MACVAUGH, Philadelphia, Pa.; said MacVaugh assignor to said Landreth. Filed Nov. 6, 1919. Serial No. 336,193. 10 Claims. (Cl. 210—152.)

6. Apparatus for screening liquids, as sewage, comprising a screen terminating in an upwardly extending curved end portion, means delivering liquid to the upper side of said screen, and brushing mechanism for brushing material retained upon the screen longitudinally thereof from one end to said curved portion.

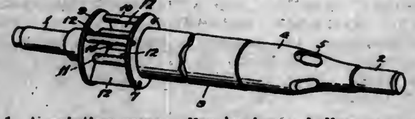


1,483,668. METHOD OF AND APPARATUS FOR TREATING ORGANIC SUBSTANCES. LUCIUS F. LITTLE, Owensboro, Ky. Filed May 14, 1923. Serial No. 638,917. 28 Claims. (Cl. 99—9.)

1. The method of treating meat which consists in subjecting the meat to a cure, treating it with smoke without a drying heat and prior to drying, and then drying the meat.

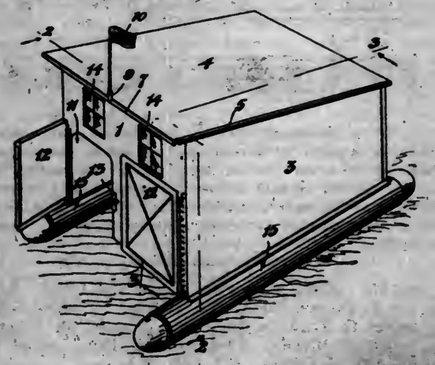
14. The method of treating particles of meat in batches, portions of which vary in moisture content, which consists in preliminarily and simultaneously smoking and electrifying the entire batch uniformly, separately and simultaneousy subjecting the several portions of the batch to different degrees of heat, the heat varying in direct ration with the moisture whereby the several portions may be dried within substantially the same period of time, and subsequently smoking and simultaneously electrifying the entire batch.

1,483,669. TELEGRAPHIC INSTRUMENT. WALTER S. LYTLE, Philadelphia, Pa. Filed July 16, 1921. Serial No. 485,153. 4 Claims. (Cl. 178—82.)



1. A transmitting telegraphic instrument having a base, a lever fulcrumed relatively to said base and adapted to be oscillated in different planes, said lever having on opposite sides of its fulcrum a relatively fixed contact and a relatively oscillatory contact, a plurality of contacts carried by said base and adapted respectively for engagement by the relatively fixed contact of said lever when oscillating in different planes, and a pair of contacts carried by said base and adapted respectively for engagement by said relatively oscillatory contact when said lever is moved laterally in different positions thereof.

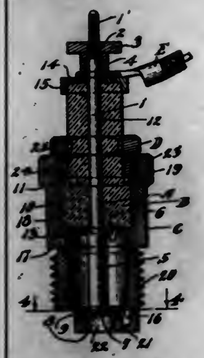
1,483,670. GEAR DRIFT AND BUSHING THEREFOR. RALPH J. MCKEE and FRED STONEBERG, Chicago, Ill., assignors to Zim Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed July 17, 1922. Serial No. 575,706. 3 Claims. (Cl. 29—85.)



1. In a gear drifting tool, in combination, a drift pin having a forwardly facing shoulder intermediate its ends and an impact transmitting bushing removably engaging said shoulder and extending beyond the end of said pin.

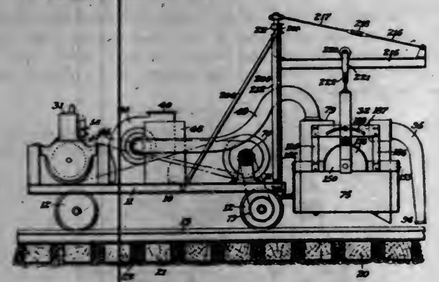
1,483,671. VENTILATED PRINTING-PRESS ROLLER. CHARLES HUGH MARTIN, Los Angeles, Calif., assignor of one-half to Angelo Frediani, Los Angeles, Calif. Filed Aug. 9, 1922. Serial No. 580,639. 7 Claims. (Cl. 91—67.8.)

1. A printing press roller having a hollow core open at one end and perforated at the other end to allow flow of air therethrough, and means at such other end to produce pressure drop for the purpose of causing a flow of air through the roller.



1,483,672. FLOATING TOY. ALBERT C. MOSS, New York, N. Y. Filed Apr. 17, 1923. Serial No. 632,633. 3 Claims. (Cl. 46—37.)

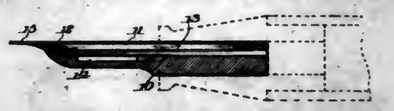
1. A toy comprising a body representing a house, a removable roof thereon, front openings in said body, doors for covering said openings, floats for supporting the



toy upon the water, and the bottom of said house located between the floats opening directly on the water, whereby objects can rest upon the water and be retained within said house.

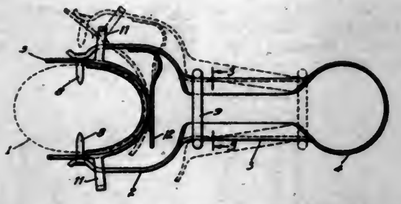
1,483,673. SPARK PLUG. EDWARD O'CONNELL, Philadelphia, Pa. Filed Aug. 30, 1920. Serial No. 406,855. 2 Claims. (Cl. 123—169.)

1. A spark plug, including a shell, a flat ring shaped electrode carried thereby, a disc electrode arranged in a spaced and parallel relation with the ring electrode and having laterally projecting teeth at its periphery which overhand the ring shaped electrode, and a stem carrying the disc electrode, said stem being slidable and rotatable to bring the disc electrode into engagement with the ring electrode and rotate it while in such engagement, the lateral teeth of the disk electrode then sweeping over the face of the ring electrode.



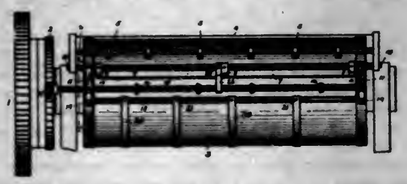
1,483,674. METHOD AND APPARATUS FOR CLEANING RAILROAD BALLAST. NEWTON C. OWEN, Wilkes-Barre, Pa., assignor to Owen-Pennsylvania Corporation, Wilkes-Barre, Pa., a Corporation of Pennsylvania. Filed June 10, 1921. Serial No. 476,430. 19 Claims. (Cl. 262—1.)

1. In a pneumatic device, the combination with a movable support, of a separator carried by said support and provided with an air inlet and an air outlet, and means carried by said support for withdrawing air from said separator, said separator being arranged to be moved in a predetermined horizontal plane with respect to said support.



1,483,675. FEED BAR FOR FOUNTAIN PENS. STANLEY E. PETERS, Chicago, Ill., assignor, by mesne assignments, to Krittikson Bros., Inc., Chicago, Ill., a Corporation of Illinois. Filed Dec. 29, 1920. Serial No. 433,826. 7 Claims. (Cl. 120—50.)

1. A feed bar for fountain pens having an air passage and an ink passage the former being arranged above the latter, a slot arranged transversely of the feed bar below the ink passage and having communication at its end with the atmosphere, the upper wall of the slot and the bottom of the ink passage being arranged to intersect

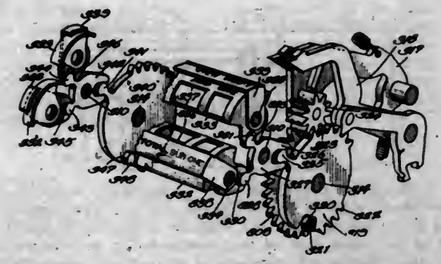


each other and having that portion of the material at the intersection removed to provide an opening through which ink may pass from said ink passage into the slot and from the slot into said passage.

1,483,676. FRUIT PARER. FREDERICK C. PETERSEN, Los Angeles, Calif. Filed Aug. 13, 1923. Serial No. 657,234. 2 Claims. (Cl. 146—203.)

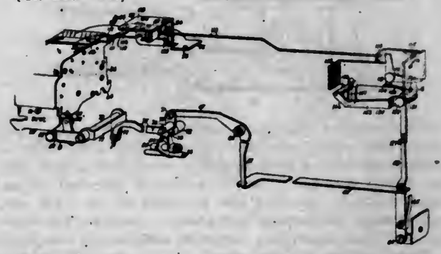
1. A fruit parer of the class described, an elastic cutter holding band, multiple blades within the said elastic cutter holder band, a forceps adapted to hold the said elastic cutter holder means in alinement therewith, a spring secured between the said forceps and elastic cutter holder means, adapted to feed the said multiple blades into the skin of the fruit, as set forth.

1,483,677. PERFORATOR FOR PRINTING PRESSES. HENNING E. PETERSON, Duluth, Minn. Filed Mar. 26, 1923. Serial No. 627,761. 3 Claims. (Cl. 164—100.)



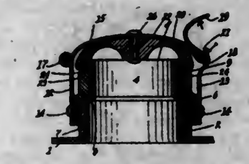
1. The combination with a cylinder printing press of the character described including a cylinder gear, frame, and cylinder, of a perforating device therefor comprising three parallel shafts, one of which is nonrotatably secured to the frame of the press and supports the other two shafts, another of said shafts having a gear upon one end thereof meshing with the cylinder gear perforator wheels attached to said last mentioned shaft, and sheet guards upon the other of said shafts.

1,483,678. CALCULATING MACHINE. ARTHUR F. POOLE, Kenilworth, Ill., assignor, by mesne assignments, to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 10, 1917. Serial No. 206,452. 150 Claims. (Cl. 235—59.)



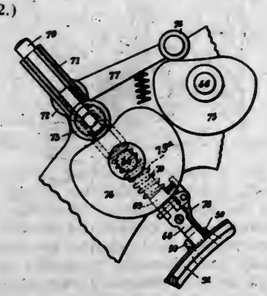
18. In a calculating machine, the combination of an algebraic totalizer, a master wheel adapted to insert numbers therein seriatim, a set of digit keys to operate said master wheel a differential amount, and means operated by said master wheel to insert a unit in said totalizer independent of the action of said digit keys.

38. In a calculating machine, the combination of an algebraic totalizer, a master wheel, a shutter adapted to be operated by said master wheel, a second shutter, and means to automatically operate said second shutter whenever said totalizer passes through zero.



133. In a calculating machine, the combination of a jumping decimal carriage, a traveling carriage adapted to pick up said decimal carriage at certain predetermined intervals, a rack on said decimal carriage, a lock cooperating with said rack, a rack on said traveling carriage, a second lock cooperating with said rack, a digit key, and means to connect said digit key with both of said locks to operate said locks upon the initiation of the downstroke of said key and to release them upon the completion of said downstroke.

1,483,679. COMBINED TYPEWRITING AND CALCULATING MACHINE. ARTHUR F. POOLE, Kenilworth, Ill., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 19, 1921. Serial No. 462,628. 20 Claims. (Cl. 235—59.)



1. In a calculating machine, the combination of a plurality of totalizers, a lock, means controlled by one of said totalizers for operating said lock, and means controlled by the state of another of said totalizers for neutralizing such operation.

1,483,680. CAP FOR CONTAINERS. HUGO F. RIPKEN, Minneapolis, Minn., assignor of one-half to Charles A. McCulloch, Minneapolis, Minn. Filed Apr. 2, 1923. Serial No. 629,354. 6 Claims. (Cl. 220—24.)

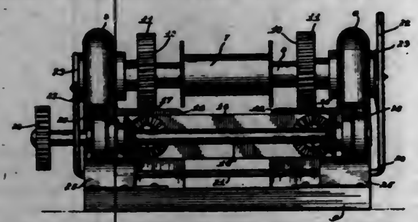
1. In a device of the class described, comprising in combination, a ring adapted to have threaded engagement with the threaded inlet pipe of a container to make a leak proof joint therewith, a seat forming the top edge of said ring, a closure adapted to engage with said seat to close the top of the ring, and spring devices arranged in coacting relation to extend across the top of said closure and having connection with said closure and ring for holding the former under tension of said spring devices against said seat, said spring devices including a pivotable joint at one side of the ring and a separable joint constructed to yield, to separate, responsive to an administered separating pull of predetermined degree, said separable joint being located on the opposite side of said ring with respect to said pivotable joint.

1,483,681. WRAPPING MACHINE. HENRY ROSE, deceased, by William Henry Rose, administrator, Gainsborough, England. Original application filed Jan. 13, 1921, Serial No. 437,025. Divided and this application filed Mar. 10, 1922. Serial No. 542,807. 1 Claim. (Cl. 93—2.)

In wrapping machines of the kind aforesaid, a folding device provided with yielding fingers hinged to a crosshead operated as hereinbefore explained, the said crosshead having mounted upon it, and reciprocable with it, a blade which acts to fold a projecting portion of the end of the wrapper onto the side of the article being wrapped; substantially as, and for the purpose, hereinbefore explained.

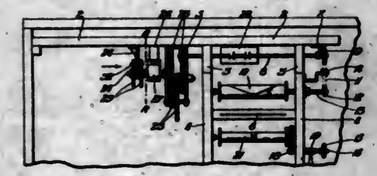
1,483,682. ELECTROMAGNETIC APPARATUS. JOSEPH A. ROSTRON, Boston, Mass. Filed May 3, 1920. Serial No. 378,476. 4 Claims. (Cl. 200—90.)

1. A vibrator comprising, in combination, a casing having fixed within it an electromagnet and one electrical contact; and an armature, secured in the casing between them and bearing the other electrical contact; the magnet core and said armature being flat metal sheets arranged with their broad surfaces parallel to each other; the said magnet sheet being relatively thick, constituting a straight bar and having the winding about its middle; and the said armature sheet being relatively thin, elastic and flexible, and having its end portion bent around the end portion of the said winding on the magnet, to proximity with the magnet core, for vibrating toward and from the broad side of said core.



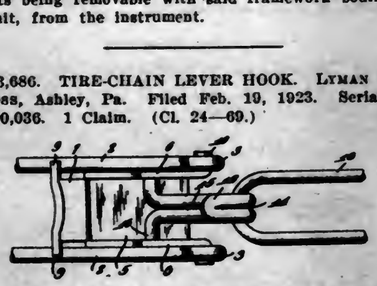
4. A make and break apparatus comprising in combination an electromagnet whose core is of straight bar iron whereon is wound medially an electric coil, the sides of the ends of the bar being exposed; an armature of sheet metal bowed around said coil with the sides of its ends against and parallel with the said sides of ends of the magnet; a tongue extension of the sheet metal comprising the armature, perpendicular thereto, supporting it and constituting part of the electrical circuit; and a base to which it is secured at a distance from the armature, thereby to vibrate to and from the side of the bar.

1,483,683. POULTRY FEEDER. JAMES L. RUSH, Memphis, Tenn. Filed Aug. 10, 1920. Serial No. 402,591. 1 Claim. (Cl. 119—55.)



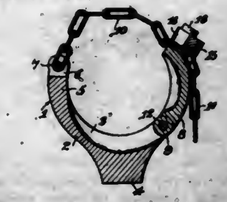
A feeding device comprising a feed containing hopper including a base and side walls, each of said sides having its lower portion extending forwardly and downwardly to provide a feed trough, and further having its base extended beyond said trough, bearings mounted upon said walls and extending forwardly of the front edge thereof at the angle formed to provide the trough, a closure carrying shaft extending across the face of said hopper and having its ends mounted in said bearings, each end of said shaft being provided with a transverse bore, cross rods mounted in said bores, a pair of rearwardly and upwardly extending shiftable side arms pivotally mounted at the front edge of said base, link connecting means between the inner ends of said arms and said cross rods, and a platform carried by said arms.

1,483,684. STUMP PULLER. JOHN W. RYDER and WILLIAM O. SKIPPER, Enterprise, Ala. Filed May 15, 1922. Serial No. 561,057. 1 Claim. (Cl. 254—186.)



In a device of the character described, a base, a shaft supported on the base and extending transversely thereof, beveled pinions secured to the shaft to rotate therewith, relatively short shafts extending at right angles to the first mentioned shaft and carrying beveled pinions meshing with the first mentioned beveled pinions, worms on the relatively short shafts, bearings extending upwardly from the base, a shaft extending at right angles to the relatively short shafts and having its ends eccentrically mounted within the bearings, gears on the last mentioned shaft and adapted to be moved into engagement with the worms to receive movement therefrom, said shafts having squared ends, links having squared portions fitted over the squared ends, a controlling arm having right angled extremities, connecting links for connecting the right angled extremities and first mentioned links whereby movement of the controlling arm will move the gears with respect to the worms, and said controlling arms and links being controlled and connected to lock the gears in mesh with the worms.

1,483,685. MECHANISM FOR AUTOMATICALLY REWINDING THE MUSIC ROLLS OF PLAYER PIANOS AND THE LIKE. JAMES L. SCOTT, Melbourne, Victoria, Australia. Filed Mar. 6, 1922. Serial No. 541,488. 13 Claims. (Cl. 84—133.)



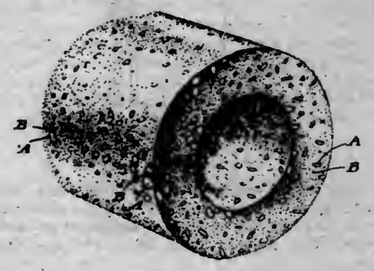
1. Improved mechanism for automatically rewinding the music rolls of player pianos and the like, consisting in the combination of a framework removably mounted in the upper part of the instrument, a shaft carried by said framework, means for operatively connecting said shaft with the music roll spindle, a reduction gear carried by the framework and adapted to be driven by said shaft, a shaft driven by the reduction gear, and a power storage device, likewise carried by said framework operatively connected with the second-named shaft and adapted to accumulate energy from the unwinding of the music roll to automatically rewind the latter, the reduction gear, the power storage device and both shafts being removable with said framework bodily, as a unit, from the instrument.

1,483,686. TIRE-CHAIN LEVER HOOK. LYMAN SEABROSS, Ashley, Pa. Filed Feb. 19, 1923. Serial No. 620,036. 1 Claim. (Cl. 24—69.)

In a device of the class described, a connection comprising side pieces provided at their ends with eyes, a trough-shaped lever including side walls and a base, the base being extended to form a tongue disposed at an obtuse angle to the base and provided at its outer end with lateral projections adapted to engage the side pieces of the connection, the side walls being provided, at those corners thereof which are diagonally opposite to the base of the tongue, with trunnions mounted to rock in the eyes, and a hook made of a single piece of material bent upon itself to form a two-part shank and a two-part bill, the constituent members of the shank being outwardly extended to form pivot elements journaled in the side walls of the lever.

1,483,687. WHEEL LOCK. JOHN W. SHEPARD, Tucson, Ariz. Filed Dec. 1, 1921. Serial No. 519,076. 8 Claims. (Cl. 70—90.)

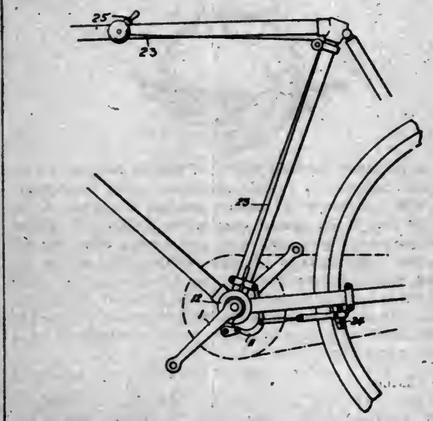
1. A wheel lock comprising a curved body portion adapted to overlap the tire of a wheel and including a stationary arm, a shiftable arm hinged at its lower end



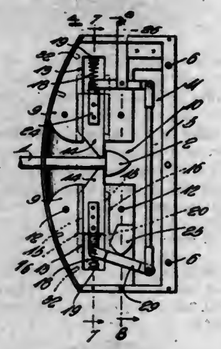
to the lower end of the stationary arm and a ground engaging element projecting outwardly from the lower portion of the stationary arm, a lug and an ear angularly disposed with respect to and integral with the upper end of the shiftable arm and further opposing each other in spaced relation, a chain attached to the upper end of said stationary arm and extended between said ear and lug, and a releasable latching element pivoted to said ear and shiftable towards said lug to extend between a pair of links of the chain and further having means engaging in said lug for locking the body portion in position with respect to the tread of a wheel.

1,483,688. ANIMAL TRAP. PERCIVAL J. GRANT SMITH, Port St. Mary, Isle of Man. Filed Feb. 16, 1923. Serial No. 619,421. 2 Claims. (Cl. 43—81.)

1. An animal trap comprising a base, a spring breakback, a rigid bait, a cable passing round said bait and held taut thereby, and a detent held in position by the taut cable.



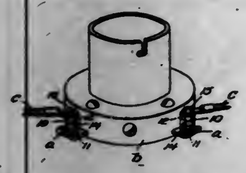
1,483,689. TUBULAR TILE. WILLIAM R. SMITH, Buffalo, N. Y. Filed Sept. 24, 1923. Serial No. 664,488. 2 Claims. (Cl. 61—10.)



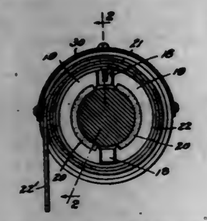
1. A porous tile composed of a mixture of ingredients including rigid coarse porous material in the form of lumps of irregular shape, finer material, and hydraulic cement, sufficient water being added to the mixture to crystallize the cement, the said mixture being molded into tile form and solidified by the crystallization of the cement, which is in suitable quantity to form, with the finer material, a rigid porous binder adhering firmly to the rigid lumps, and filling the interstices therebetween, so that the wall of the tile does not contain open spaces between the lumps, and is uniformly porous and rigid throughout any section of the tile.

1,483,690. BRAKE MECHANISM FOR PEDAL-DRIVEN BICYCLES, TRICYCLES, AND LIKE MACHINES. THOMAS SPEDDING, Welling, England. Filed July 22, 1922. Serial No. 576,851. 4 Claims. (Cl. 192—5.)

1. In pedal-driven bicycles, tricycles and like machines in which a road wheel has an overrunning clutch by which it is driven and an overrunning clutch on the pedal crank axle to operate a brake directly by a reverse movement of said crank axle; the combination therewith of hand-operable means within reach of the rider, disengaging means in connection with said overrunning clutch on said crank axle, and connecting means between said hand-operable means and said disengaging means, whereby by the operation of said hand-operable means the pawl members of said overrunning clutch on said crank axle can be disengaged by the rider to permit the machine to be wheeled rearwardly without applying the brake or to be driven forwardly with said overrunning clutch of said crank axle out of action, or alternatively when said hand-operable means is placed in another position to permit said overrunning clutch on said crank axle to act to apply said brake to said road wheel by a reverse movement of said pedal-crank axle.



1,483,691. CAR COUPLER. ALBERT STACY, Lothair, Ky., assignor of one-half to Monroe Sheppard, Lothair, Ky. Filed July 13, 1922. Serial No. 574,679. 2 Claims. (Cl. 213—186.)

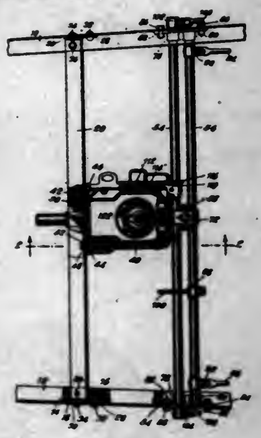


2. In a car coupler, a draw-bar clutch comprising a housing having a central passage leading from an inlet and communicating with a transversely extending chamber in the rear portion of the housing, the housing being further provided with pockets leading from the entrance passage intermediate the length thereof, jaws slidably mounted in said pockets, hinge brackets carried by said jaws and extending longitudinally thereof beyond the inner ends of the jaws, springs in said pockets engaging the inner ends of said jaws and yieldably holding the jaws extended in operative position across said inlet passage, a handle bar extending into said housing through one side and having a cross head at its inner end extending transversely of the head and having one end pivotally connected with the hinge bracket of one jaw, a link extending longitudinally in said chamber and pivotally connected with the other end of the head of said handle bar, a fulcrum, and a lever-engaging said fulcrum and pivotally connected with said link and the hinge bracket of the other jaw.

1,483,692. SAFETY FUSE. HOVEY B. STONEMAN, Council, Idaho. Filed May 22, 1922. Serial No. 562,724. 7 Claims. (Cl. 200—131.)

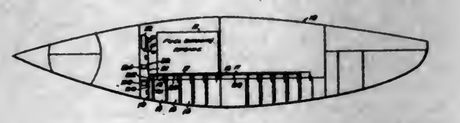
1. A terminal fuse comprising a tubular body of an insulating material, a fusible conductor strip coextensive with and positioned throughout against the wall of the bore of said body, spaced conductive means for closing the opposite ends of said body and having edge contact with the opposite ends of said fusible strip, means engaging within the conductive means at one end of said body for attaching it to the usual terminal of an electric socket, and means engaging within the conductive means to the other end of said body for the attaching of a circuit conductor.

1,483,693. SHOCK ABSORBER. WILLIAM G. STRUTHERS, Seattle, Wash. Filed Nov. 20, 1922. Serial No. 602,017. 4 Claims. (Cl. 267—10.)



1. In a shock absorber, the combination of a stationary drum, two opposed jaws revolubly mounted upon said drum, a rotatable yoke member having arm elements extending into the spaces between said jaws at diametrically opposite sides of the drum, a flexible member coiled about said jaws and having one of its ends connected to said yoke, and a spring connected to said yoke for rotating the same to retract said flexible member when tension thereon is relieved.

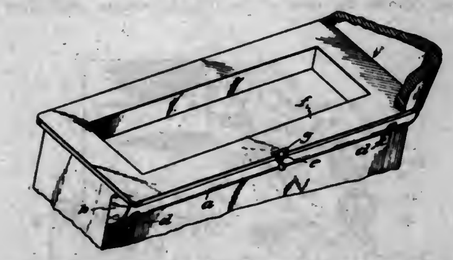
1,483,694. BREATHING CORRECTOR. ALBERT F. STUKEY, East Hollywood, Calif. Filed Feb. 2, 1921. Serial No. 441,761. 1 Claim. (Cl. 128—136.)



A breathing corrector comprising a soft marginal rubber tube; a rubber dam integrally connected to said tube; and a reinforcing spring wire inserted in said tube, said wire adapted to hold said tube and dam in the form of an elliptical concavo-convex lens and said wire having a central portion thereof bent inward toward the center of the rubber dam and arranged so that the marginal tube is held out of irritating contact with the ligamentous protrusion between the upper gums and the upper lip, and said wire having its ends spaced apart in said marginal tube opposite to the inward bent portion thereof to leave a soft portion of the marginal edge not reinforced so that the soft portion not reinforced will overlay the ligamentous protrusion between the lower gums and the lower lip when said breathing corrector is arranged in a mouth with the inward bent portion thereof astride the upper ligamentous protrusion between the upper gums and lip.

1,483,695. TRANSMISSION-SUPPORTING STRUCTURE. ALFRED T. STUBT, Flint, Mich., assignor to Durant Motors Incorporated, a Corporation of Delaware. Filed June 8, 1922. Serial No. 566,746. 8 Claims. (Cl. 180—70.)

1. In a motor vehicle, in combination with the main chassis frame, a brake operating shaft supported by said frame, a transmission and means supported by said brake operating shaft for supporting one end of said transmission.

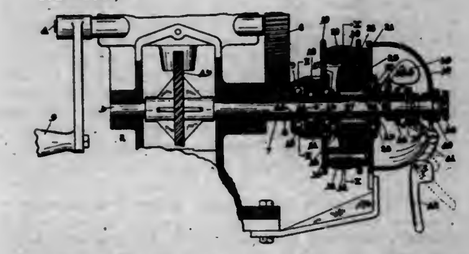


1,483,696. COMPENSATOR FOR SUBMARINES. JOSEPH E. SWENDEMAN, Philadelphia, Pa. Filed June 3, 1920. Serial No. 386,273. 11 Claims. (Cl. 114—16.)

1. In a boat, the combination of a hull, a liquid fuel-burning power plant, a fuel pump supplying fuel to said power plant, means for controlling the admission of water to said hull, and means governed by the demand of said power plant for fuel to control the operation of said fuel pump and said water admission means.

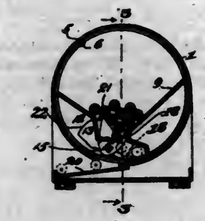
1,483,697. AUTOMOBILE-CURTAIN CONTAINER. GEORGE W. SYKES, Vancouver, Wash. Filed Oct. 17, 1921. Serial No. 508,111. 2 Claims. (Cl. 224—29.)

1. In combination for the purpose of forming a receptacle, the back of a seat of an automobile, a casing, comprising a longitudinal portion of a cylinder hingedly attached at lower edge of said casing and to said seat and two flanged-quadrant shaped end pieces, the ends of said cylinder being beaded over the flanged portions of said end pieces, hinge means attached to the lower edge of said casing and the back portion of the seat, a slot



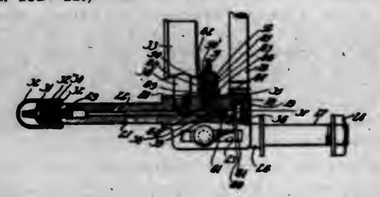
provided on said seat, and fastening means carried by said casing fitting into said slot, substantially as described.

1,483,698. AUTOMOBILE RIM-SECURING MEANS. CHARLES B. THOMAS, Alto, Tex., assignor of one-half to William Blanton, Alto, Tex. Filed Feb. 24, 1923. Serial No. 620,977. 2 Claims. (Cl. 301—11.)



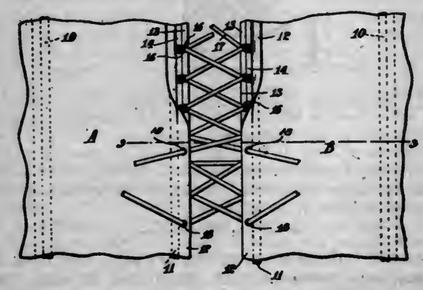
1. In combination a felly provided at each side with a groove, a rim surrounding and spaced from said felly and having an inwardly extending flange projecting into one of said grooves, a bearing ring projecting from the felly and engaging the inner face of the rim, said ring extending into the other of said grooves, and said flange and ring adapted to be connected to said felly for securing the rim therewith.

1,483,699. DRIVING GEAR. HERBERT THOMPSON, Toronto, Ontario, Canada, assignor to Massey-Harris Company, Limited, Toronto, Ontario, Canada. Filed Aug. 28, 1922. Serial No. 584,922. 6 Claims. (Cl. 192—104.)



1. In combination a shaft; a friction clutch member slidably and non-rotatably mounted on the shaft; a complementary friction clutch member rotatable relative to the shaft; a collar co-axial with the slidable clutch member and rotating therewith; a centrifugal member rotating with said slidable clutch member and adapted to engage said collar; a thrust member co-axial with the shaft and engageable by the collar; a spring tending to throw in the clutch; a pulley co-axial with the shaft; a ratchet clutch driving connection between said pulley and the rotatable clutch member adapted to permit the said member to run ahead of the pulley; a rotatable member loose on the shaft; and a ratchet clutch driving connection between said member and the rotatable clutch member adapted to permit the clutch member to run ahead of the said rotatable member.

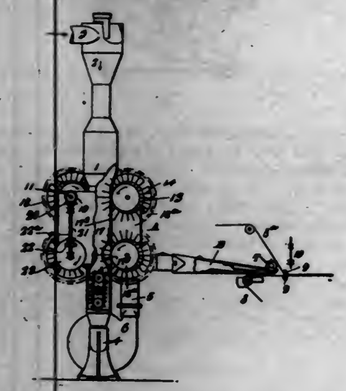
1,483,700. DISCHARGING DEVICE FOR VENDING MACHINES. MARSHALL J. WAPLE, Washington, D. C. Filed Jan. 5, 1923. Serial No. 610,821. 4 Claims. (Cl. 211—8.)



1. In a dispensing machine, the combination of a casing provided with an outlet a hopper in the casing having an outlet above the outlet of the casing, a plurality of oscillating article agitating and discharging devices mounted in the casing and movable through the hopper and outlet thereof, each of said devices being provided with an article receiving pocket and with a finger extending from the pocket for engaging an article to be dispensed and preventing discharge of the article through the outlet of the casing until the discharging device has been swung in one direction its full extent and then partially returned to its original position.

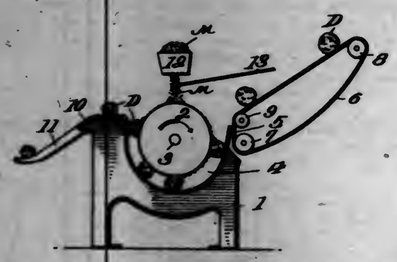
1,483,701. TIRE GAUGE. OTTO WEBER, Manteno, Ill. Filed May 22, 1922. Serial No. 562,590. 6 Claims. (Cl. 152—12.)

1. In a tire inflating attachment, a tube, a check valve in said tube, a safety valve communicating with said tube to prevent harmful pressures being produced therein, means for joining said tube to the valve stem of a tire on a wheel, and a valve between said safety valve and the valve stem arranged to permit the free passage of air to the stem but restrict the passage of air in the opposite direction.



1,483,702. GARMENT LACING. OSCAR WEINGARTEN, New York, N. Y. Filed Nov. 4, 1920. Serial No. 421,627. 2 Claims. (Cl. 2—74.)

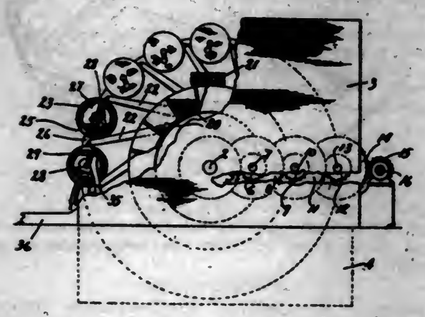
1. Lacing means for the edges of garments, comprising orificed lace receiving members, and eyes attached to the garment edges, the members being supported in



the openings in said eyes and each opening being sufficiently large to permit the corresponding member to rotate, to rock from side to side and to move back and forth in said opening.

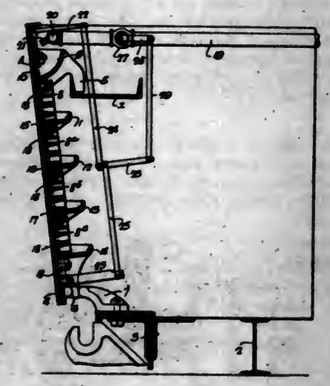
1,483,703. APPARATUS FOR MAKING FEATHER-LINED FABRICS. FRITZ WEVER, Stuttgart, Germany. Filed Oct. 24, 1918. Serial No. 259,561. 14 Claims. (Cl. 19—142.)

1. In an apparatus of the character set forth, the combination of a casing for the material to be treated with a pair of material-advancing devices, both arranged to move in the same direction and to act on the material in the casing, said advancing devices being arranged one behind the other with respect to the line of feed and spaced apart, and means for varying the speeds of the said advancing devices relatively to one another, to regulate the amount of accumulation of material between the advancing devices.



1,483,704. PROCESS OF PREVENTING AN EDIBLE FROM ADHERING TO THE SURFACE ON WHICH IT IS COOKED. PHILIP WAKEMAN WILCOX, Atlanta, Ga. Filed May 9, 1923. Serial No. 637,786. 4 Claims. (Cl. 99—13.)

1. The method of preventing an edible from adhering to the utensil in which it is cooked, consisting in applying to one of the contacting surfaces an oil in such finely powdered form as to adhere to the surface to which it is applied and to form thereon a coating which, when heat is applied for cooking, melts and prevents said contacting surfaces from adhering.

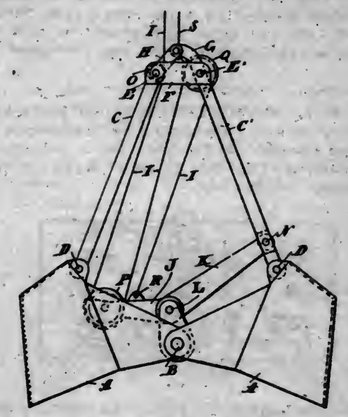


1,483,705. OVERSHOT WATER WHEEL. WILLIAM O. WILLIAMS, Redlands, Calif. Filed Sept. 29, 1922. Serial No. 591,293. 2 Claims. (Cl. 253—30.)

1. In an overshot wheel, an annular series of water chambers, each having an outlet, a series of tiltable buckets disposed to receive the discharged water from respective water chambers, means for tilting the said buckets during the rotation of the wheel, and an encasing cylinder for each of the tiltable buckets, said cylin-

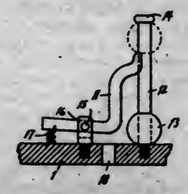
ders each being provided with inlet and outlet mouths and being operative to check the discharge of water after it is released from the inverted buckets.

1,483,706. FURNACE LINING. MAXWELL ALPERN, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 2, 1922. Serial No. 604,494. 13 Claims. (Cl. 126—144.)



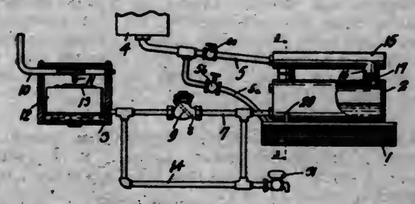
8. The combination in a furnace lining of a plurality of sections each having a relatively smooth heated front face and a relatively extended rear face; means for delivering films of water to be evaporated to the rear faces of said sections; means for independently controlling the supply of water to each section; with means for collecting and returning to the sections unevaporated water delivered therefrom.

1,483,707. GRAB BUCKET. STANLEY E. ATHERTON, Cleveland, Ohio. Filed June 3, 1922. Serial No. 565,642. 5 Claims. (Cl. 37—184.)



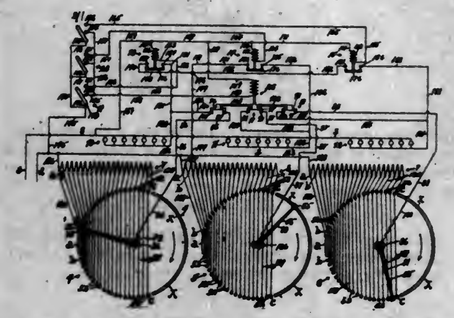
1. In a clam shell bucket, the combination with a bucket shaft, of scoop members pivoted thereon at their adjacent inner and upper edges, a head, sets of ball arms connecting the respective outer ends of said scoop members with said head, a pivot shaft secured adjacent to said bucket shaft and above the same, a closing lever pivotally mounted intermediate of its ends upon said

pivot shaft, one end of said lever being fulcrumed upon one set of ball arms, and block and tackle mechanism



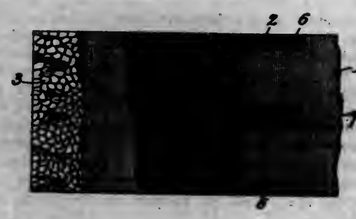
operatively connected with the other end of said lever and with a point in the upper part of said bucket for operating said closing lever.

1,483,708. TELLTALE. SAMUEL J. BELL, Springfield, Mass., assignor to Bell Register Corporation, Springfield, Mass., a Corporation of Delaware. Filed July 12, 1923. Serial No. 651,191. 6 Claims. (Cl. 116—14.)



5. A tell-tale comprising, with a supporting member, a post rising from said member and provided with a head, a ball slidingly mounted on said post, a lug rising from said member, an angular lever having a horizontal arm pivotally connected with said lug, and an upstanding arm adapted normally to have its free end contact with said post at a point sufficiently distant from said head to enable said ball to be received between said head and said end, and a spring arranged between said member and the free terminal of said horizontal arm normally to retain said end of said lever in contact with said post, the weight of said lever being sufficient to overcome the resistance of said spring.

1,483,709. GAS GENERATOR AND BURNER. SAMUEL BIDDISON, Los Angeles, Calif. Filed Apr. 29, 1920. Serial No. 377,496. 4 Claims. (Cl. 158—56.)

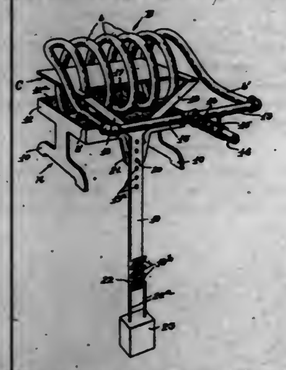


4. A gas generator and burner comprising a basin supporting a boiler at one side thereof; a horizontal U-shaped superheater; a pipe leading from said boiler and having a delivery end communicating with said superheater; a pipe for supplying oil to the superheater and having a delivery end communicating therewith adjacent the delivery end of said first-named pipe; a partition separating the delivery ends of said pipes and extending a considerable distance into the superheater; a vertical U-shaped superheater communicating with the first superheater, and supported at the other side of the basin; and a burner pipe leading from the vertical superheater and disposed centrally of the basin in operative relation to the superheaters and the boiler.

1,483,710. ELECTRICAL VARIED-LIGHT APPARATUS. GEORGE L. BLACK, San Bernardino, Calif. Filed Apr. 30, 1919. Serial No. 293,875. 18 Claims. (Cl. 175—312.)

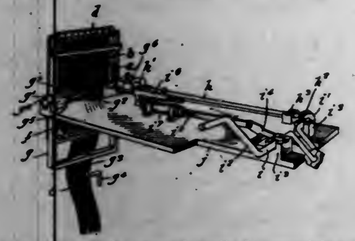
1. In a varied light apparatus, a dial switch; means for continuously revolving said switch in one direction; a lamp; an electrical connection between said dial switch and said lamp; a resistance interposed between said dial switch and said lamp whereby the candle power of said lamp will vary as said dial switch revolves.

1,483,711. ROOFING PAPER. MAURICE BLUMENTHAL, Brooklyn, N. Y. Filed Mar. 29, 1919. Serial No. 286,127. 4 Claims. (Cl. 154—51.)



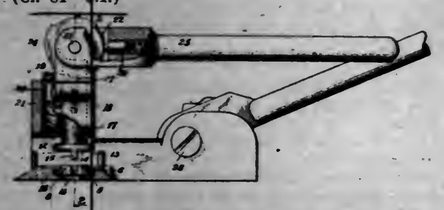
1. An improved composite sheet of the class described, comprising superposed pliable body sheets united and adhesively secured together at their opposed surfaces by an adhesive compound and impregnated therewith, longitudinal reinforcing strips or tapes extending intermediately of said body sheets, and an outer surfacing consisting of scales of mica covering the surface of the top body sheet.

1,483,712. BURNER. FREDERIC BORMANN, Ipswich, S. Dak. Filed Feb. 6, 1923. Serial No. 617,212. 5 Claims. (Cl. 158—53.)



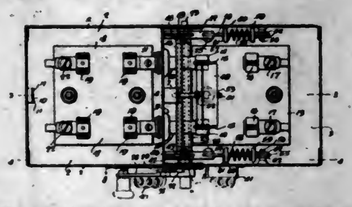
1. In a burner for liquid fuel adapted to be placed in the heating chamber of a stove or furnace, a base formed with a generating fluid receptacle and designed to be supported upon the stove grate, a pipe having a plurality of turns therein forming a generating coil, said coil resting horizontally in said receptacle, fuel conduits communicating with said coil at both ends thereof, an intermediate loop of said coil being formed at the bottom

thereof with an upwardly issuing gas outlet, a horizontal spreader plate reaching through the coil, an upright hanger-bar connected at its upper end with and carrying said plate, said bar having a plurality of intermediate



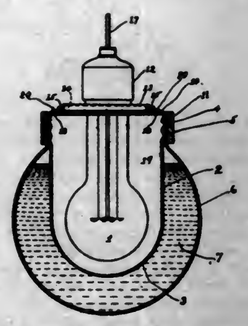
apertures therein, a supported pin on the frame for selective insertion in said apertures and a weight having a vertically adjustable connection with said hanger-bar at its lower end.

1,483,713. TRANSFORMATION-MAKING MACHINE. ALBERT BOURGEOIS, Paris, France. Filed Oct. 11, 1921. Serial No. 507,129. 6 Claims. (Cl. 132—56.)



1. A machine of the class described, comprising a table, a frame mounted thereon for retrograde movement, a work carrying member slidable in the frame, means carried by the frame automatically producing a step by step movement thereof actuated at the end of each stroke of the frame, a screw connection with the frame, means for rotating the screw, means for automatically changing the direction of rotation of the screw for producing the retrograde movement of the frame, a needle mounted for reciprocating movement on the table, and means for reciprocating the needle to operate on the work in the member.

1,483,714. METHOD AND MEANS FOR SEALING STRAPPING. EDWARD J. BROOKS, East Orange, N. J. Filed Mar. 14, 1922. Serial No. 543,789. 4 Claims. (Cl. 81—9.1.)



2. The method of forming a seal which consists of associating with overlapped strap ends, by straddling it with respect thereto, an open-face sheet metal seal consisting of a main horizontal portion provided with vertically upstanding wings, then bending the wings beneath the strap ends into a position parallel to the main portion to form substantialy a flat sleeve, then tightening the strap ends lengthwise with respect to each other, and then interlocking the sleeve and overlapped strap ends.

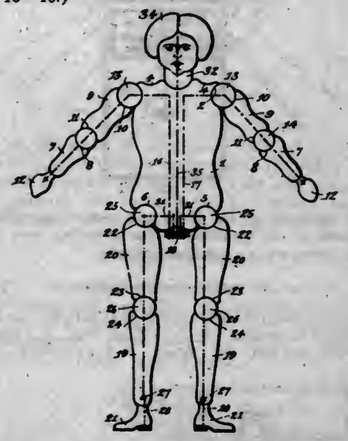
1,483,715. SWITCH-CONTROLLING MECHANISM. JAMES F. BURNS, Philadelphia, Pa., assignor to V. V. Fittings Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 27, 1920. Serial No. 361,852. 6 Claims. Cl. 200—67.)

1. The combination of a switch; an operating member therefor; an intermediate member movable independently of the switch and of the operating member for transmitting movement from the latter to the former; an arm pivoted to the intermediate member and connected to the switch; and means for causing said intermediate member to independently actuate the switch through said arm after said member has been brought by the operating member to a predetermined position.

1,483,716. ELECTRIC-LAMP GLOBE. BRUNO B. CHOINSKI, Milwaukee, Wis., assignor of forty-nine one-hundredths to Stanley A. Lange, Milwaukee, Wis. Filed Apr. 6, 1921. Serial No. 459,113. 3 Claims. (Cl. 240—107.)

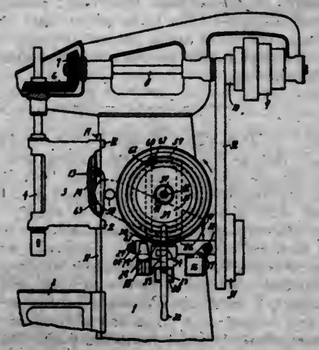
1. The combination with an electric lamp, of a globe supporting member detachably connected therewith and provided with an annular screw threaded flange, and a globe having spaced inner and outer walls provided with cylindrical threaded portions adapted to be screwed together, one of said threaded portions being adapted to be screwed to said threaded flange, and a body of light diffusing liquid interposed between the unthreaded portions of said walls whereby the liquid may freely vaporize, said threaded portions being adapted to allow the vapor to escape from the cavity formed by the said inner and outer walls.

1,483,717. GUARD FOR ACCELERATOR PEDALS. DUVILLO GRANT CHRISTMAN, Endicott, N. Y. Filed Nov. 6, 1922. Serial No. 599,226. 4 Claims. (Cl. 74—81.)



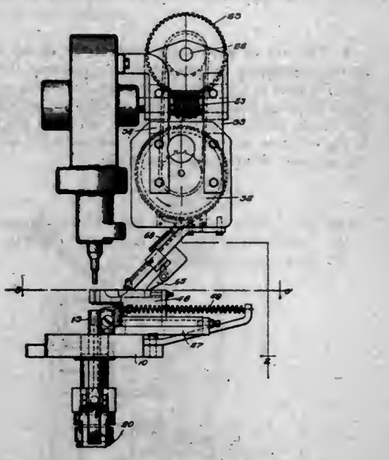
1. A safety device for automobiles, of the character described, consisting of a base to be fastened to the floor board, of an upright member attached thereto, of a stop

on said upright member, a pedal pivotally mounted on the upright member, yielding means for holding said pedal



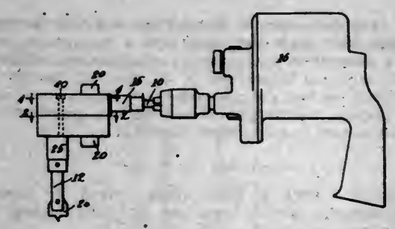
against said stop, the stop limiting the downward movement of the pedal beyond a predetermined point, as and for the purpose described.

1,483,718. TOY DOLL. PAUL E. CORRUBIA, St. Louis, Mo. Filed June 15, 1922. Serial No. 568,448. 2 Claims. (Cl. 46—40.)



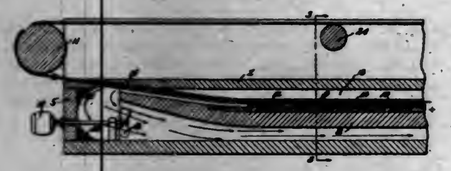
1. In a doll a body portion having seat at the shoulder and hip portion thereof, a sectional arm having a seat opposing the said seat at the shoulder of the said body portion, a sectional leg having seat opposing the seat at the hip of said body portion, a globular member interposed between the shoulder seat and arm seat, a globular member interposed between the hip seat and the leg seat, means to provide said arm with an elbow socket, means to provide said leg with a knee socket, bendable adjusting coupling wires extending through said leg, arm, socket, members and body portion and a terminal plate having said wires attached thereto, said plate arranged exteriorly of the body portion.

1,483,719. VARIABLE-FEED MECHANISM. GEORGE V. CURTIS, West Springfield, and WILLIM H. MINER, Springfield, Mass.; said Miner assignor to said Curtis. Filed Nov. 14, 1922. Serial No. 600,873. 7 Claims. (Cl. 77—33.)



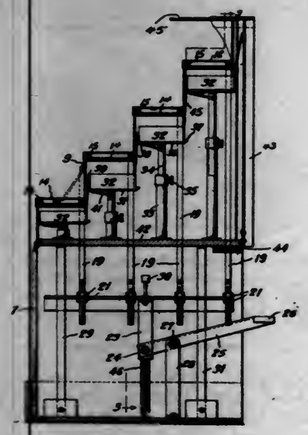
1. A feed mechanism for drill spindles comprising a member adapted to be reciprocated, a pivotally-mounted slotted lever operatively connected with said member, a suitably journaled crank-shaft having an arm, a slide adjustably connected with said arm, said slide being provided with a pin, a block mounted on said pin and adapted to slide in the slot in said lever, and revoluble means for said crank-shaft.

1,483,720. FEEDING MECHANISM FOR RIVET MACHINES. JOHN DLESK, Jr., and SIDNEY R. COOPER, Chicago, Ill., assignors to U. S. Ball Bearing Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 5, 1922. Serial No. 579,891. 7 Claims. (Cl. 78—48.)



1. In combination, a riveting machine having a longitudinally movable anvil, a rivet holding means in said anvil, a chute through which rivets may be fed, a shuttle having an opening adapted to receive a rivet, and means associated therewith for carrying a rivet from said chute to said anvil on each longitudinal movement of the anvil.

1,483,721. VALVE GRINDER. DELBERT F. DUNHAM, Los Angeles, Calif. Filed Mar. 20, 1922. Serial No. 545,006. 3 Claims. (Cl. 74—50.)



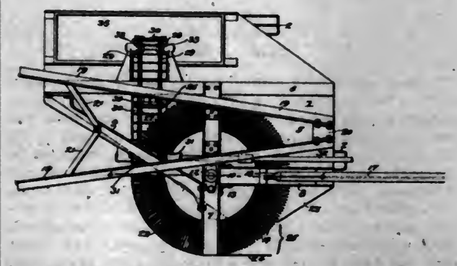
1. In a device of the character described, two spaced parallel counter shafts, worm gears on said counter shafts, a drive shaft at right angles to the counter shafts, a worm on said drive shaft and arranged between said worm gears to engage them and drive them in opposite directions, a spindle parallel to the countershafts, a gear in operative connection with the spindle, and gear segments in operative connection with the counter shafts and adapted to alternately engage the gear to cause oscillatory movement of the gear.

1,483,722. ART OF MAKING ELECTROLYTIC METAL AND APPARATUS THEREFOR. FREDERIC A. EUSTIS, Milton, Mass., assignor of one-half to Charles Page Perin, New York, N. Y. Filed June 13, 1922. Serial No. 567,948. 10 Claims. (Cl. 204—11.)

1. The art of producing electrolytic metal which comprises depositing the metal by electrolysis from an electrolyte upon a continuous, flexible, traveling belt cathode while keeping that part of the electrolyte which surrounds the anode away from the cathode, carrying the deposit out of the solution on the traveling belt cathode, and removing the deposit from the belt cathode.

1,483,723. SHOWCASE. HENRY FREDHOLM, Chicago, Ill. Filed Nov. 18, 1922. Serial No. 601,712. 6 Claims. (Cl. 211—26.)

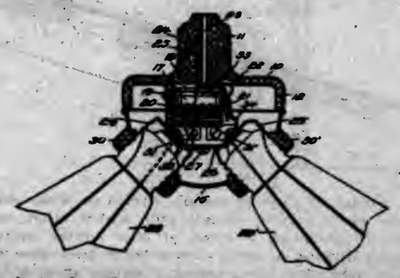
1. In a show case the combination of a body having a stepped front, each step comprising a transparent front and a transparent top, means for supporting an article beneath each top in position to be observed through the front and the top, and means for elevating the rear edges and sliding the front edges of said tops rearwardly to permit access to the articles displayed.



1,483,724. OFFICE INDICATOR. OTTO G. GRENER, Minneapolis, Minn. Filed Mar. 30, 1923. Serial No. 628,710. 3 Claims. (Cl. 177—337.)

1. In an office indicator, a stationary, upright casing, a second casing hinged to the top and adapted to be swung downwardly to the front or to be swung upwardly from the stationary casing, a name-plate and words of information and a numbered dial on the side of the second casing that is exposed when said casing has been swung downwardly to the front of the stationary casing, an obscured announcement-plate provided with words and a movable push-button on the side of the stationary casing adapted to be exposed when the second casing has been swung upwardly, a name-plate and words of direction on the second casing adapted to be exposed when said second casing has been swung upwardly, hands pivoted to the second

casing centrally of the dial, and means operative by a movement of the push-button for directing rays of light to the obscured announcement plate.

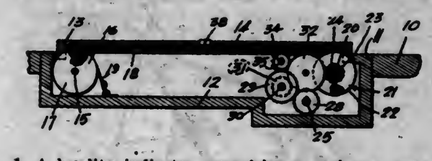


1,483,725. BERRY-STRIPPING MACHINE. ISAAC HARRISON, Creamridge, N. J. Filed Feb. 8, 1922. Serial No. 534,916. 11 Claims. (Cl. 56—330.)

1. The combination in a machine for removing the berries from low growing vines, of a frame; a hub having substantially a vertical axis and having a series of prongs projecting horizontally from the periphery thereof and so located, in respect to the ground, as to engage the vines under the berries; means for preventing the vines engaging the prongs except at one side of the center of the hub so that the vines will turn the hub as the machine is moved past the vines; and guards for preventing the vines from being drawn past the ends of the prongs, the vines being drawn through the spaces between the prongs, the berries remaining upon the surface of the prongs.

1,483,726. AUTOMATIC NIGHT-LAMP FIXTURE. ALBERT J. HEITZ, Vincennes, Ind. Filed May 31, 1922. Serial No. 564,842. 3 Claims. (Cl. 175—374.)

2. An electric light fixture comprising a contact strip in circuit with a source of electrical supply, a pair of lamps in electrical contact with said strip, a pair of conducting members each electrically connected with a lamp and one provided with an extension, an iron yoke, an electro-magnet arranged within said yoke and including an armature, a conducting element in circuit with said source and formed of a fixed and a resilient part, said fixed part secured to and insulated from said yoke and electrically connected with the coil of said magnet, said resilient part carried by and insulated from said armature and coperating with said extension and normally out of contact with said extension when the magnet is energized and contacting with said extension to close the circuit to one of the lamps when the magnet is de-energized, circuit forming connections leading from the other of said members to the coil of the magnet to close the



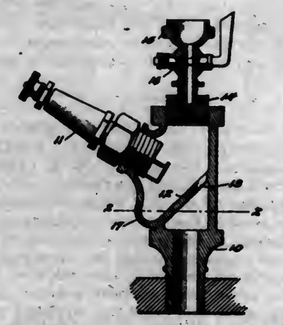
circuit to the other of said lamps when the magnet is energized, a body portion of insulation provided with a chambered extension having said yoke and magnet arranged therein, and socket forming members supported from said body portion and each receiving one of said lamps.

1,483,727. OPHTHALMIC LENS. HARRY W. HILL, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Sept. 16, 1919. Serial No. 324,087. 3 Claims. (Cl. 49—84.)

1. The process of producing a blank for a bifocal lens consisting in polishing a portion of glass in flat sheet form, forming a mold with a major or distance curve portion and a projecting center curve portion, placing the blank supported on the center curve portion and subjecting the mold and blank to gradual heat to cause the blank to subside onto the mold, substantially as illustrated.

1,483,728. LOCALITY INDICATOR FOR VEHICLES. SCHUYLER H. HOLMES, Venice, Calif. Filed Oct. 6, 1921. Serial No. 505,710. 3 Claims. (Cl. 40—42.)

1. A locality indicator comprising a casing, a pair of shafts journaled in the casing, drums on the shafts, a flexible map carrying member trained about one of the drums and extending to the other drum, a gear loosely mounted on the shaft of the second mentioned drum, resilient means for normally urging the gear toward the drum so as to frictionally engage the latter, a shaft extending from the casing, and means for operatively connecting the last mentioned shaft with said gear.

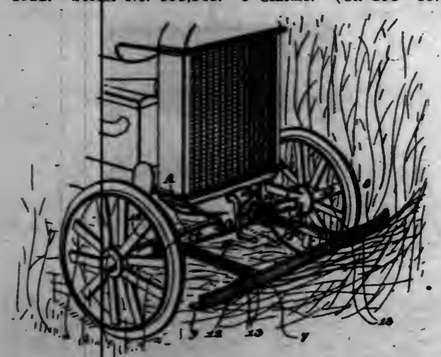


1,483,729. DOMESTIC DEVICE FOR WINDING AND HOLDING WOOL. ALBERT EDWARD ISTED, London, England. Filed May 9, 1923. Serial No. 637,820. 2 Claims. (Cl. 242—146.)

1. A device for winding and holding wool and the like for domestic purposes comprising a cylindrical or other suitably shaped container provided with end caps or lids, an opening in said container for the passage of the wool or the like, a spindle connected to one of the said

lids and passing through a hole in the other lid, a pair of discs on said spindle and an operating knob at the outer end of said spindle.

1,483,730. IGNITION DEVICE FOR INTERNAL-COMBUSTION ENGINES. HARRY C. KIRBY, Macon, Ga. Filed May 19, 1923. Serial No. 640,029. 4 Claims. (Cl. 123—169.)

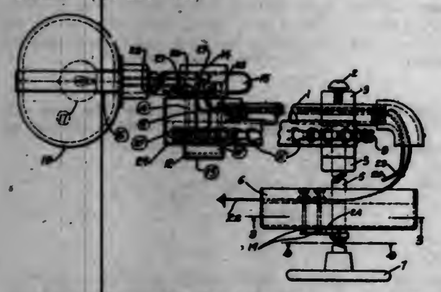


1. An ignition device for internal combustion engines, comprising a nipple adapted to be attached to a cylinder head and having a restricted passage adapted to communicate with the interior of the cylinder, and having a chamber provided with an inclined partition extending over said passage provided with an opening therethrough adjacent its upper end out of alignment with said passage, a spark plug attached to said nipple and extending into said chamber above said partition, said chamber being formed with a pocket directly below the terminals of said plug, and a screw plug in the side of said pocket normally closing a vent below said terminals.

1,483,731. CUFF PROTECTOR. VOLNEY E. KIRK, Los Angeles, Calif. Filed Apr. 16, 1923. Serial No. 632,303. 6 Claims. (Cl. 2—79.)

1. A cuff protector comprising a band adapted to encircle the wrist and be received over the shirt cuff and having means for connecting the meeting edges of said band between the upper and lower edges thereof, and means tending to expand the upper edge of said wrist encircling band so as to pivot its meeting edges at their fastening connection and thereby contract the lower edge of the band around the wrist.

1,483,732. CLEARER OR SHIELD FOR TRACTORS. JOHN F. KLEIN, Wilmington, N. C. Filed Oct. 18, 1922. Serial No. 595,343. 5 Claims. (Cl. 293—55.)

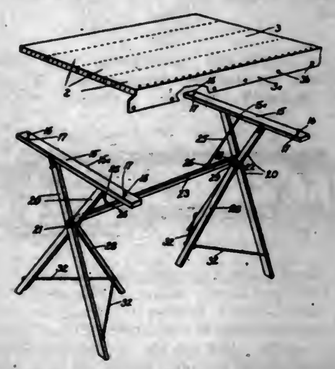


1. The combination with a tractor, of a shield member rigidly supported from the front axle thereof across the front of the tractor and so constructed and arranged as to crush or break down vegetation in front of the tractor.

1,483,733. PROCESS OF TREATING WOOD FOR THE MANUFACTURE OF MUSICAL INSTRUMENTS. LOUIS KOESLER, Schenectady, N. Y. Filed July 5, 1922. Serial No. 572,799. 3 Claims. (Cl. 91—70.)

1. The process of treating wood for the manufacture of stringed musical instruments consisting in first subjecting the wood to the action of dry heat to remove all moisture and volatile substances therefrom and substantially carbonize the wood, then allowing the heat in the wood to radiate and applying a heavy coat of varnish thereto, again subjecting the varnished wood to the action of heat of a temperature less than the initial application thereof, and finally rubbing the wood with grease obtained from roasted pigs' feet.

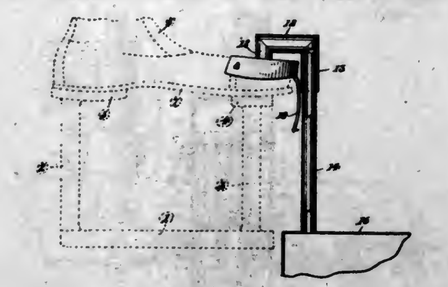
1,483,734. TRAFFIC SIGNAL FOR AUTOMOBILES AND THE LIKE. WILLIAM J. KRAMER, St. Louis, Mo., assignor of one-half to Ira W. Hendricks, St. Louis, Mo. Filed May 9, 1921. Serial No. 467,862. 4 Claims. (Cl. 116—54.)



1. An automobile-signaling attachment comprising, in combination, a supporting-bar adapted for rigid location horizontally upon the automobile forwardly of the instrument-board thereof, spaced bearings fixed on the bar, shafts mounted for rotation in said bearings at right angles to the bar, a shiftable signalling-arm fixed at an end upon one of the shafts and disposed at a right angle thereto, gears fixed upon both the shafts, a flexible member connecting the gears, and an operating-member fixed upon the other shaft for manually actuating the gears to shift the arm through rotary actuation of said one shaft.

1,483,735. METHOD OF CONSTRUCTING ROOFS. BERNIE C. KEIDLER and JAMES C. BOYLE, Flint, Mich. Filed Feb. 20, 1923. Serial No. 620,163. 1 Claim. (Cl. 108—9.)

A method of forming roofing structures when using shingle sheets having shingle ends spaced apart, consisting in mounting a series of clips having upright sections disposed in service at a lower level than the body of said clips; then setting a shingle sheet having shingle ends spaced apart so that the said upright sections rest within said spaces and in engagement with said shingle sheet at the upper ends of said spaces; then setting a furring strip on the rafters of the standing structure so that the upper edge of said strip coincides with the upper edge of said shingle sheet; then securing the furring strip on the roof rafters; then setting a second series of clips having upright extensions at the lower ends thereof, said second series of clips being disposed in staggered relation to the first series of clips and in position coinciding with the spaces between the shingle ends of a second shingle sheet; then setting said second shingle sheet so that the extremities of the shingle ends thereof rest in contact with the upright sections of the first series of clips and the inner ends of the spaces holding the upright sections of the second series of clips; and then overturning the upright sections of the first series of clips.



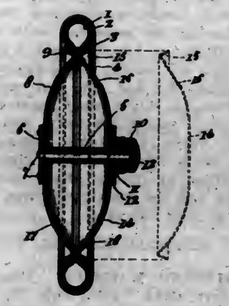
1,483,736. COLLAPSIBLE CAMP TABLE. MADS M. LARSEN, Colton, Calif., assignor of one-fourth to Michael A. Bausch, Colton, Calif. Filed Dec. 12, 1922. Serial No. 606,432. 5 Claims. (Cl. 190—12.)

2. In a collapsible camp table, a table stand consisting of sets of pivotally connected legs, cross pieces attachable to the top ends of the legs when they are in diverging positions, a longitudinal brace for connecting the sets of legs, and supplementary bracing leg sections.

1,483,737. SHOE-HEATING DEVICE. ADOLF LESZKOWICZ, Binghamton, N. Y. Filed Sept. 21, 1922. Serial No. 589,604. 2 Claims. (Cl. 12—1.)

1. In combination with a support for a shoe, means for heating and moistening the toe of the shoe and positioned adjacent thereto, said heating means comprising a steam chamber having communication with a steam

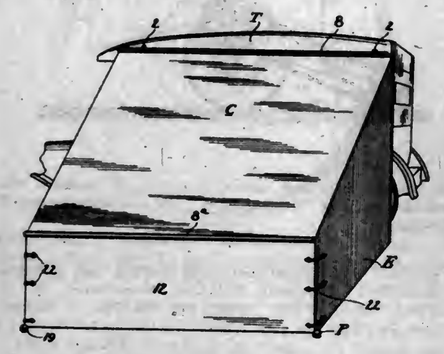
dome, and being so constructed as to permit of relative swinigng and sliding movements of the steam chamber toward and away from the toe of the shoe.



1,483,738. PROCESS OF MAKING HIGHLY-ETHERIFIED ETHERS OF CELLULOSIC BODIES. LEON LILIENFELD, Vienna, Austria. Filed Jan. 10, 1921. Serial No. 436,380. 27 Claims. (Cl. 260—152.)

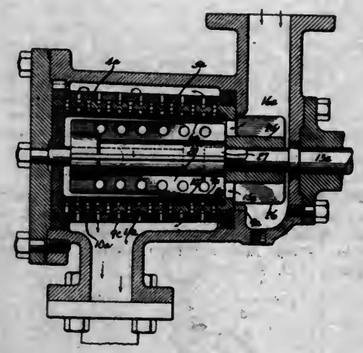
27. Process of manufacturing ethers of cellulosic bodies by converting such ethers of lower degrees of etherification into ethers of higher degrees of etherification which process comprises adding caustic alkali to a reaction mass containing a cellulosic ether of a lower degree of etherification to form a mixture containing an amount of water not substantially in excess of five times the weight of the cellulose under etherification and treating the thus obtained mass with an ester of an inorganic acid.

1,483,739. TURPENTINE SUBSTITUTE. KARL MARX, Dessau, Germany, assignor to the Firm Tetralin Gesellschaft mit beschränkter Haftung, Berlin, Germany. Filed Aug. 2, 1921. Serial No. 489,257. 3 Claims. (Cl. 134—56.)



2. A product comprising a mixture of turpentine and hydrogenated naphthalene as a solvent or diluent.

1,483,740. DISK WHEEL. JAMES R. MONTGOMERY, Butte, Mont., assignor of one-fourth to Thomas F. Golden and one-fourth to William J. McIntosh, both of Butte, Mont. Filed Jun. 15, 1923. Serial No. 612,782. 3 Claims. (Cl. 301—63.)

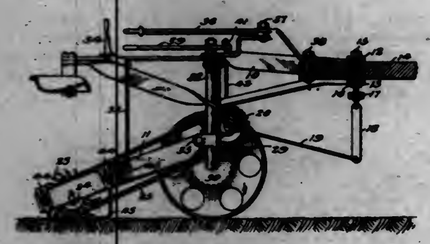


2. A wheel comprising a hub, an inner disk secured to the hub and having a flanged outer end adapted to engage one side portion of a demountable rim, means arranged between said disk and the rim to drive the rim with the disk, an outer disk entirely free of the inner disk and the rim but having a flanged edge portion bearing against the outer part of the demountable rim, and means engaging the hub to removably support the outer disk in place.

1,483,741. AUTOMOBILE CAMP TENT. HENRY C. MOFFETT, Hanford, Calif., assignor of one-third to J. L. Moffett, Visalia, Calif., and one-third to Harry V. Brenton, Hanford, Calif. Filed Apr. 12, 1923. Serial No. 631,653. 6 Claims. (Cl. 135—4.)

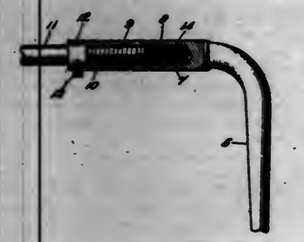
1. A collapsible tent outfit including brackets adapted to be fastened to automobile top elements, a tent top rail frame member secured to the brackets, and collapsible tent frame forming members attached to the top rail and adapted to be set up in lateral, extended position from the automobile top, which latter forms the primary support for the top of the frame.

1,483,742. METHOD AND MEANS FOR THE TREATMENT OF FATS AND OILS. JOHN STEVENS NICOL, Putney, London, England, assignor to William Douglas & Sons, Limited, London, England. Filed Jan. 12, 1922. Serial No. 528,754. 19 Claims. (Cl. 87—12.)



1. In a method of treating fats or oils, forcing the same through successive transverse openings in differentially moving elements in close juxtapositions.

1,483,743. SOIL PULVERIZER. FRANK H. PAGE, Waverly, Iowa. Filed May 13, 1922. Serial No. 560,686. 2 Claims. (Cl. 97—40.)

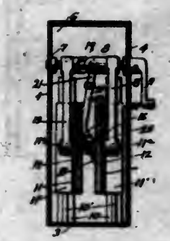


1. In an implement of the class described, a wheeled axle, a shaft having radially disposed shovels thereon, a sprocket wheel on said shaft, a pinion on the axle adapted to turn with the turning of one of the wheels, a

shaft adjacent the axle, a sprocket wheel on the last-mentioned shaft, a chain running over said sprockets, a pinion on the last-mentioned shaft meshing with the pin-

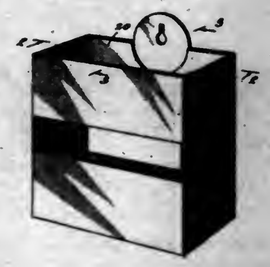
ion on the axle, and means to clutch or uncluteh the second-mentioned pinion and the second-mentioned sprocket.

1,483,744. OVERWINDING PREVENTER FOR SPRING MOTORS. THEODORE PHILLIPS, Washington, D. C. Filed Nov. 1, 1922. Serial No. 598,378. 5 Claims. (Cl. 74—33.)



1. A device of the class described comprising means adapted to engage the shaft of a spring motor to rotate the same; means for rotating said first named means; and a threaded frictional connection between said first and second named means adapted to normally transmit motion from said second to said first named means, and to permit relative movement between the two when said first named means meets with a predetermined resistance.

1,483,745. MAGNIFIER. CARL F. PROPSON, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed May 2, 1919. Serial No. 294,135. 3 Claims. (Cl. 88—39.)

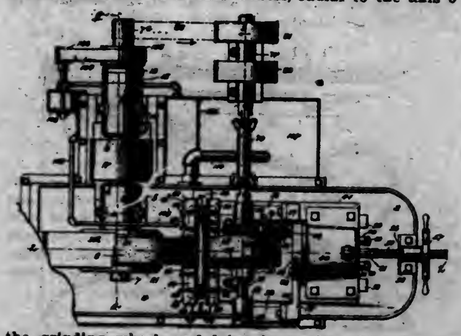


1. A flexible handle magnifier, including a lens engaging rim having outwardly deflected terminal portions, an elongated resilient tube mounted on said terminal portions and of length to provide a handle, the terminal portions extending through said tubular member and terminating thereberond in flared parts frictionally engaging the tubular member to retain the latter in position.

1,483,746. SAFETY-RAZOR-BLADE-SHARPENING DEVICE. JOSEPH B. RUATTI, Los Angeles, Calif. Filed Apr. 15, 1922. Serial No. 553,150. 7 Claims. (Cl. 51—65.)

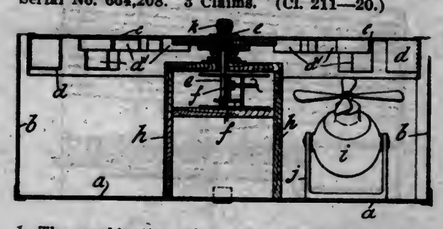
1. A machine for sharpening safety razor blades comprising fixed guides having slides with stropping faces, means for reciprocating the slides concurrently in reverse motions, and means for holding a blade between and alternately moving the blade against the slides.

1,483,747. FOLDING MATCH SAFE. WALTER SAMMIS, Brooklyn, N. Y. Filed May 9, 1922. Serial No. 559,624. 5 Claims. (Cl. 206—30.)



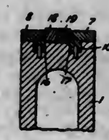
1. A folding match safe, comprising an upper compartment, a lower compartment spaced therefrom, said compartments having the same end walls which extend from one compartment to the other, and a supporting tab arranged adjacent the upper compartments, the walls of said compartments, said tab and said end walls being formed from a single blank having a tab provided with adhesive, said blank being creased to readily fold into said upper and lower compartment with certain of the parts interlocking sufficiently to retain their folded position by friction after receiving matches or other articles and the remaining parts held in their folded position by said adhesive.

1,483,748. GRINDING MACHINE. FRANCIS C. SANFORD, Bridgeport, Conn. Filed July 30, 1920. Serial No. 400,150. 40 Claims. (Cl. 51—103.)



1. A grinding machine comprising a grinding wheel carried in bearings; a work support arranged across and near the periphery of said wheel; a second wheel peripherally opposed to the periphery of the grinding wheel, located on the opposite side of the work support

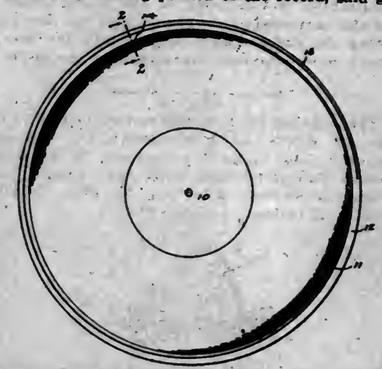
and journaled in a yoke rotatable about an axis passin through the centers of said wheels, radial to the axis o



the grinding wheel, and lying in a plane bisecting the peripheral working face of the grinding wheel; and means for rotating said wheels at suitable speeds.

1,483,749. ROTATING PLATFORM. ALFRED HAROLD SEEAR, Wembley Park, England. Filed Sept. 22, 1923. Serial No. 664,208. 3 Claims. (Cl. 211—20.)

1. The combination of a rotatable platform provided on its underside with propelling vanes, a casing surrounding the platform, and a rotary fan within the casing which directs air currents to the vanes and thus causes the platform to rotate by air currents initially confined within the casing.

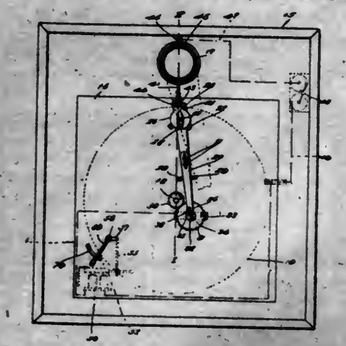


1,483,750. PACKING. JOHN W. SHEPARD, Tucson, Ariz. Filed June 21, 1922. Serial No. 569,914. 3 Claims. (Cl. 74—108.)

1. In a packing of the character described, a piston, said piston at the periphery thereof being formed with a pair of annular grooves substantially rectangular in cross section, a pair of packing rings L-shaped in cross section and engaging the periphery of the piston with one leg depending into the respective grooves, each of said bearing rings being cut at one point, means for securing said bearing rings to said piston so that the bearing rings will not have independent rotary movement but will be permitted to expand, and a plurality of packing rings arranged between said bearing rings.

1,483,751. PHONOGRAPH RECORD. LEONARD SLINGLAND, Paterson, N. J. Filed Aug. 18, 1922. Serial No. 582,783. 1 Claim. (Cl. 274—42.)

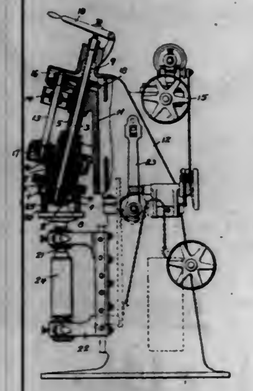
As a new article of manufacture, a phonograph disc record having a smooth portion lying between the marginal edge and the sound producing portion and provided with a spiral groove having its outer end adjacent the outer margin of said smooth portion, said groove extending more than one full turn around the record and having its inner end terminating immediately in advance of the sound producing portion of the record, said groove



being larger, deeper and having its convolutions of greater pitch than the sound producing grooves, substantially as and for the purpose set forth.

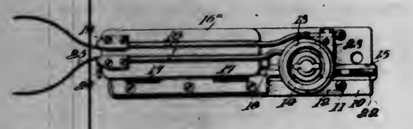
1,483,752. DITCHING, GRADING, AND LEVEE-BUILDER MACHINE. WILLIAM A. STEELE, Owensboro, Ky., assignor to Owensboro Ditcher & Grader Company, Owensboro, Ky., a Corporation of Kentucky. Filed Feb. 14, 1921. Serial No. 444,788. 2 Claims. (Cl. 37—173.)

1. A machine of the character described including a land side, a mold-board or cutting-blade, brackets secured to the forward ends of said parts, a bolt pivotally connecting these brackets, one bracket of greater length than the other, and means removable from the bolt and insertible between adjacent ends of the brackets for maintaining an adjusted position between the forward end of the land side and mold-board.



1,483,753. STOP FOR TALKING MACHINES. RICHARD W. STEWART, Auburn, N. Y. Filed June 21, 1922. Serial No. 569,858. 5 Claims. (Cl. 192—123.)

1. The combination with a sound reproducing machine including a disc record, a brake for holding the record against movement and a tone arm movable over the



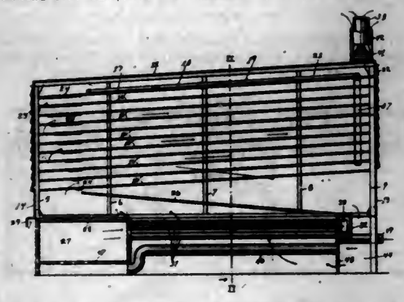
record, of a circuit closer including a pivotally mounted arm, means controlled by the operation of the machine for controlling the operation of the circuit closer and means also controlled by the operation of the machine for rendering the circuit closer inactive until the tone arm reaches a predetermined inward limit of movement.

1,483,754. MACHINE FOR GRINDING ROLLERS HAVING AN ARC-SHAPED GENERATRIX. VICTOR A. SVENSSON, New York, N. Y., assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Aug. 24, 1920. Serial No. 405,636. 7 Claims. (Cl. 51—130.)

1. Machine for grinding rollers having an arc shaped generatrix, comprising in combination, a rotary grinding disc having a curved working surface to act on the rollers and form said arc shaped generatrix, a race ring for holding the rollers with their peripheral surface presented to the curved working surface of the grinding disc, the axis of said race ring intersecting the axis of the grinding disc, and a roller cage adapted to cause the rollers to rotate relatively to the race ring during the grinding operation.

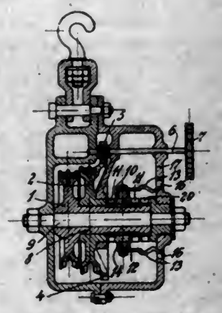
1,483,755. CAPPING-OFF DEVICE. GUS W. SWANSON, Morgantown, W. Va., assignor to The United States Window Glass Company, Morgantown, W. Va., a Corporation of West Virginia. Filed Aug. 8, 1922. Serial No. 580,553. Renewed Jan. 4, 1924. 17 Claims. (Cl. 49—50.)

1. A capping-off device comprising a heating wire, means for temporarily anchoring the ends of said wire, conductors having terminals, and means whereby said terminals may be moved into and out of engagement with said heating wire to bring them into and out of circuit.



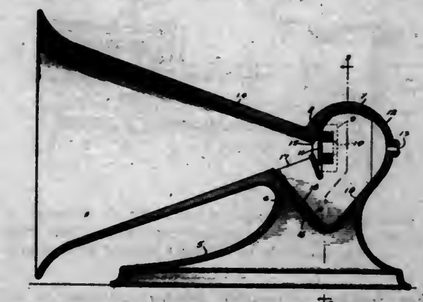
1,483,756. CAPPING-OFF DEVICE. GUS W. SWANSON, Morgantown, W. Va., assignor to The United States Window Glass Company, Morgantown, W. Va., a Corporation of West Virginia. Filed Aug. 8, 1922. Serial No. 580,554. Renewed Jan. 4, 1924. 20 Claims. (Cl. 49—50.)

1. A capping-off device comprising a heating wire, conductor members secured to the ends thereof, means for temporarily anchoring said conductor members, conductors having terminals, and means whereby said terminals may be moved into and out of engagement with said conductor members.



7. A capping-off device coprising a base, a carrier movably mounted on said base, conductors secured to said base and provided with terminals mounted to move with said carrier, a heating wire having normally free ends positioned to register with said terminals, and means on the base capable of anchoring the ends of said heating wire during movement of the terminals.

1,483,757. DEHYDRATING APPARATUS. HARTWICH D. TODT, San Francisco, Calif. Filed Mar. 17, 1923. Serial No. 625,753. 2 Claims. (Cl. 34—39.)



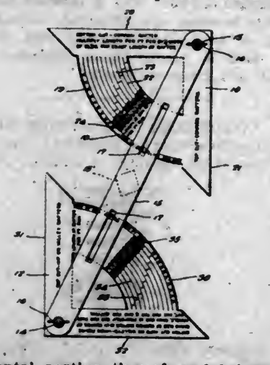
1. In a device of the character described, a drying chamber having a plurality of supports, parallel spaced on the sides thereof, and adapted to receive trays slidably disposed thereon, a plurality of baffle plates of varying lengths secured to said supports, a deflector plate mounted below said supports and inclined downwardly from the lowermost of said baffle plates and means for conducting heated air upwardly against said deflector plate, means for exhausting a portion of said heated air from said chamber, and means for re-heating the balance of said air, substantially as and for the purpose specified.

1,483,758. PULLEY BLOCK. KARL TORP, Christiania, Norway. Filed Sept. 13, 1922. Serial No. 588,017. 4 Claims. (Cl. 254—171.)

1. In a pulley block the combination with a chain wheel, a sleeve connected with the hub thereof, a second chain wheel rotatably mounted on said sleeve, and adjustable coupling means for connecting or disconnecting the two wheels comprising a disk slidably and non-rotatably mounted on said sleeve.

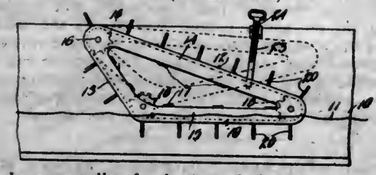
1,483,759. HORN. RALPH R. WILLIAMS, Detroit, and JAMES T. MALLOY, Richmond, Mich., assignors to The Williams Radio Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 25, 1922. Serial No. 596,910. 6 Claims. (Cl. 181—27.)

1. A device of the character described comprising a reflecting chamber adapted to receive a sound producing diaphragm, an amplifying horn having an inlet opening in its vertex end communicating with said chamber, and a reverberatory sinus communicating between said chamber and said horn.



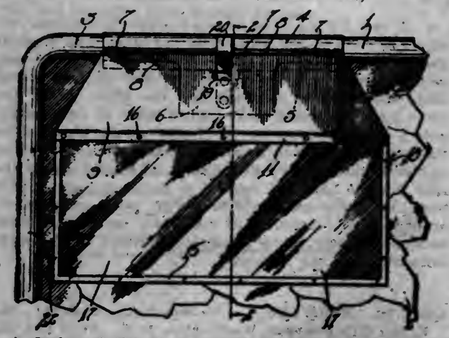
1,483,760. COMBINED BRUSH AND SCRAPER. GINJIRO YOSHIZAWA, San Francisco, Calif. Filed Feb. 10, 1923. Serial No. 618,361. 1 Claim. (Cl. 15—111.)

In a brush, a hand grip and scraper fixed to the end of the hand grip, said scraper having three scraping edges, one edge being semi-circular and the other two being straight edges, one of the straight edges being cut at an obtuse angle to the other straight edge and extending inwardly toward one side of said hand grip to leave a relatively sharp pointed corner at the meeting ends of the two edges, the grip having one end kerfed and receiving said scraper and said scraper being provided with a pointed projection which is driven in the grip axially thereof and a single fastening device securing the scraper to said grip and serving to hold said projection in said grip and the blade against rocking thereon.



1,483,761. COMBINED ROOF SQUARE, TRY SQUARE, AND BEVEL SQUARE. WESLEY THEODORE YOUNGBLOOD, Port Arthur, Tex. Filed June 5, 1922. Serial No. 565,926. 1 Claim. (Cl. 33—93.)

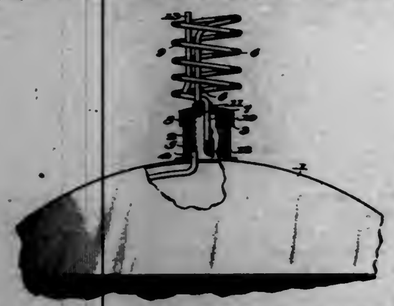
In a device of the class described, a plate having edges at right angles with each other and having a segmental portion, a bar pivoted near the point of juncture of these edges, the plate carrying a series of graduations permitting the device to be set for a given rise of a rafter per foot run, said bar having a slot for registration with the graduations, and the plate carrying another series of graduations, indicating by marks appearing through said slot, when the bar is set as specified, the length of the rafter per foot run for a given rise per foot run, the last named series of graduations increasing progessively from one edge of the plate toward the center



of the segmental portion thereof, and being designated by concentric curves, and by numbers increasing progressively from a point near the pivotal mounting of the bar, outwardly from said point.

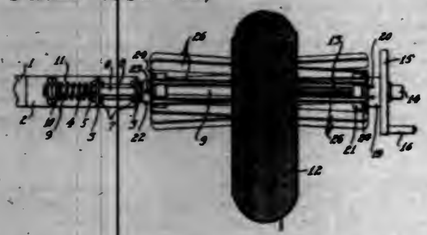
1,483,762. PROPELLER FOR BOATS. JOSEPH ALCORN, Contesville, Ind. Filed July 5, 1923. Serial No. 649,743. 8 Claims. (Cl. 115—63.)

2. In a propeller for boats and the like, a propelling unit at each side of the boat, each unit comprising a pair of triangular frames spaced from each other and having one side parallel to the surface of the water, a shaft at the angle remote from the water forming a pivot for said frames, a sprocket on said shaft, means for driving said sprocket, guides at the other angles of the triangular frame, a sprocket chain passing over said sprocket and said guides, and blades extending transversely of the chain, substantially as set forth.



1,483,763. GLARE ELIMINATOR. CHARLES HENRIC ANDERSON, Walworth, Wis. Filed Oct. 28, 1922. Serial No. 597,640. 1 Claim. (Cl. 296—97.)

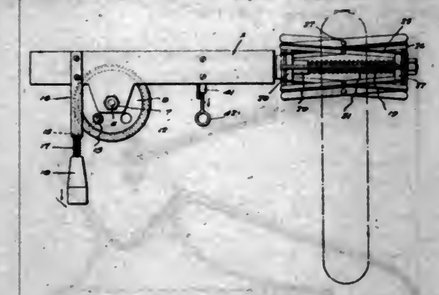
A device of the character described comprising a resilient clamping member adapted to yieldably engage with and be supported upon the rail of a wind shield, a plate hingedly mounted on said clamping member, a



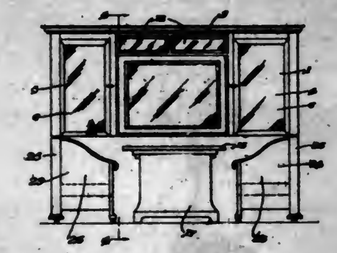
frame carried by said plate at the outer end thereof, a sheet of tinted transparent material mounted in said frame, said plate having an opening therethrough adjacent its hinged support, and a resilient strap fixed to said clamping member and arranged to project through the opening in said plate, whereby said plate may be frictionally held in predetermined positions by the engagement of said strap therewith.

1,483,764. CONDENSER FOR AUTOMOBILE RADIATORS. CLARENCE BARNES, Stillwater, Okla. Filed May 9, 1921. Serial No. 468,153. 3 Claims. (Cl. 257—25.)

1. In combination, an auto radiator cap, a condenser carried thereby, consisting of a spirally-wound coil having its upper end projecting downwardly and connected through the cap and in communication with the radiator forming the inlet end of the condenser, the lower outlet end of said condenser passing through the radiator cap and in communication with the radiator and being provided with an automatic outlet valve, and a vent connected to said condenser coil adjacent the outlet end thereof.



1,483,765. WIRE REEL. DALRIDGE B. BEAVERS, Washington, D. C. Filed Sept. 21, 1921. Serial No. 502,213. 2 Claims. Cl. 242—112.)



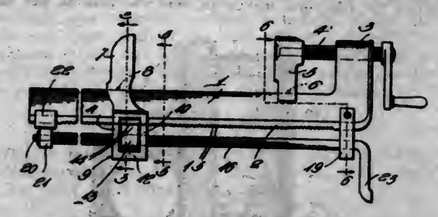
1. A reel having heads, one of which is movable rectilinearly toward and away from the other, and straight blades arranged in pairs with the blades pivotally connected together at their centers and with one end of one blade connected to one head and the other end of the other blade connected to the other head, in combination with a shaft carrying the said heads and having an outer threaded portion, and a manually-movable nut mounted on the threaded portion of the shaft outwardly beyond the said movable head and coupled in swivel manner to said head; the inner portion of said shaft being journaled in an appropriate support, and tensioning means interposed between the said support and an abutment on the shaft inwardly from the support.

1,483,766. WIRE REEL. DALRIDGE B. BEAVERS and PATRICK D. BEAVERS, Washington, D. C. Filed Dec. 23, 1921. Serial No. 524,474. 8 Claims. Cl. 242—112.)

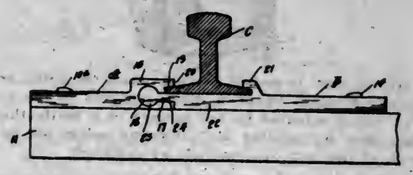
2. The combination in a reel, of coil carrying means capable of expansion and contraction, a frame, a toothed plunger rod movable lengthwise in the frame and connected to a part of the carrying means and supporting said means, a spring on the rod and bearing against said part, a dentent to detachably hold the plunger rod in retracted position, a movable member arranged to act against an abutment on and retract the plunger rod, and means operable by an attendant to move said movable member.

1,483,767. FURNITURE. OLIVER H. BECKTEL and WILLIAM E. O'BRIEN, Chicago, Ill. Filed Sept. 17, 1921. Serial No. 501,251. 4 Claims. (Cl. 45—51.)

1. In an article of furniture, a cabinet, guides carried thereby, a table top, extensions on said table top engaging in said guides, longitudinally extensible braces pivotally connected to the guides and to said table top, and a leg structure hingedly connected to the table top.



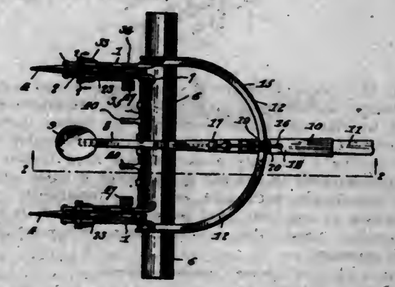
1,483,768. SILENT-ALARM WRIST WATCH. RALPH BICKERTON, Brooklyn, N. Y. Filed June 15, 1922. Serial No. 568,592. 1 Claim. (Cl. 58—57.)



A wrist watch alarm comprising a watch casing, a spring actuated drum mounted for rotation in said casing, a plurality of undulations formed on said drum, a plunger mounted in said casing and arranged parallel to the vertical axis of said drum, and a spring co-operating with said plunger for normally holding the same in retracted position and into engagement with said undulations, whereby rotation of said drum will cause said plunger to be gradually extended from said casing.

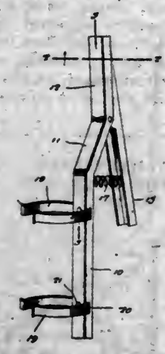
1,483,769. CLAMP. THEOPHILUS BILLINGTON, Clearwater, Fla. Filed Apr. 9, 1923. Serial No. 630,891. 2 Claims. (Cl. 144—303.)

1. A clamp comprising a shank having a relatively stationary jaw adjacent its front end, said front end of the shank having a bearing at the side of the shank opposite said jaw, a relatively movable jaw slidable along said shank and having a yoke at the last named side thereof, a rotatable cam in said yoke to wedge between a portion of the latter and said shank and hold said movable jaw in adjusted position, and a shaft for turning said cam, said shaft extending rotatably through the aforesaid bearing and having a handle at its front end.

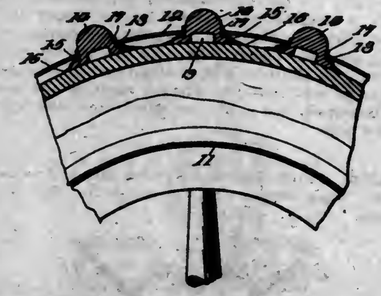


1,483,770. RAIL SEAT OR BRACE. WILLIAM W. BLACKWELL, Marblehill, Ga. Filed May 10, 1923. Serial No. 638,010. 3 Claims. (Cl. 238—34.)

1. A rail chair having sections, means on the sections to hold the rail, a tenon on one of the sections, the other section having a mortise to receive said tenon, said tenon having a projecting portion, and the latter section having means into which said projecting portion extends.



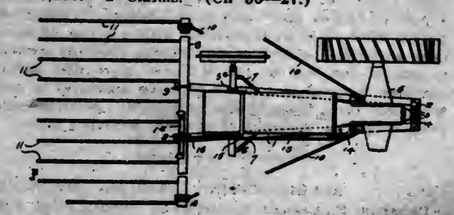
1,483,771. PLOW. JOSEPH BOUCHARD, Lachine, Quebec, Canada. Filed Nov. 25, 1922. Serial No. 603,285. 1 Claim. (Cl. 37—164.)



A plow comprising a body portion, a post rotatably carried thereby, a wheel journaled in said post, a fork secured to the post, a disk mounted within the fork and engaging the sides thereof, a shaft eccentrically fixed to the disk, a handle for turning the shaft, a scraper secured to said body portion, a curved member mounted on said scraper and fixed thereto, a draft element pivoted to the scraper, and means for adjustably engaging said element with the curved member.

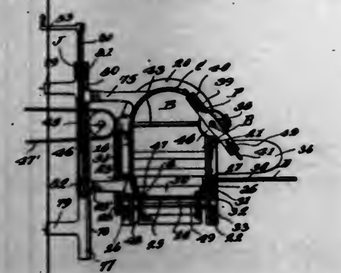
1,483,772. COW-TAIL HOLDER. LEO PETER BRANDWIE, Houston, Ohio. Filed Apr. 23, 1923. Serial No. 634,084. 4 Claims. (Cl. 119—105.)

3. A holder of the character described comprising an elongated bar having open loop like clips engageable upon the leg of the operator, one end portion of said bar constituting a jaw, a second bar pivotally connected with the first named bar and constituting a jaw co-operating with the first named jaw, and a spring for urging said jaws into clamping relation, both bars being channel shaped in cross section and the second named bar fitting within the first named bar and having its side edges notched.



1,483,773. ANTISKID WEAR-RESISTING ARMOR FOR TIRES. HARRY S. BRICKELL, deceased, late of Pittsburgh, Pa.; by Emma D. Brickell, executrix, Pittsburgh, Pa., assignor to said Emma D. Brickell, Pittsburgh, Pa. Filed Jan. 7, 1920. Serial No. 350,005. 8 Claims. (Cl. 152—16.)

1. A wear-resisting anti-skid device of the character described comprising a protector casing shaped to be retained in position around an inflated tire by the expansion of the latter, and a plurality of independent tread members projecting through said casing and having their inner portions shaped to engage the surface of a tire and provided with suction recesses.



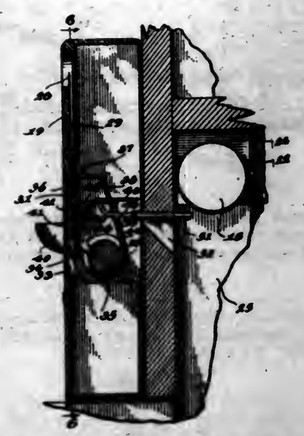
1,483,774. TRACTOR-SWEEP HITCH. OMER BROOKS, Stanton, Nebr. Filed July 25, 1922. Serial No. 577,270. 2 Claims. (Cl. 56—27.)

2. An appliance of the character specified comprising forwardly diverging beams, a plate connecting the converging ends of the beams and adapted to couple the same to the hitch plate of a tractor, means coupling the beams to the front axle of the tractor, a sweep head having piv-

otal connection with the front ends of said beams, braces between the outer ends of the sweep head and the rear portions of the said beams, teeth extending forwardly from the sweep head, a standard extending upwardly from the sweep head, an operating lever mounted upon one of said beams, and connecting means between the operating lever and standard whereby to pivotally adjust the sweep head and effect a raising or a lowering of the teeth.

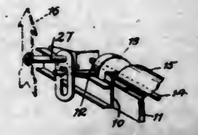
1,483,775. CORN HARVESTER. CARTER F. BUSSE, Chamois, Mo. Filed Apr. 9, 1921. Serial No. 459,887. 8 Claims. (Cl. 56—18.)

1. A corn harvesting machine comprising a longitudinally extending hopper, a conveyor belt mounted within said hopper, a forwardly extending platform carried by the hopper, the platform including a plurality of spaced prongs, a rotatable reel carried by the hopper and arranged above the platform, a plurality of spring pressed sliding stripping fingers carried by the reel for cooperation with the platform, and an elevating belt arranged on one end of said conveyor belt for receiving the ears of corn therefrom and means for raising and lowering said elevator belt.



1,483,776. PLOW. ROBERT H. CADENHEAD, Brownwood, Tex. Filed Feb. 2, 1923. Serial No. 616,530. 1 Claim. (Cl. 97—205.)

A plow foot having a plow blade secured thereon by a bolt and nut, said blade having a lug directed toward the foot, a substantially V-shaped plate having its outer edges sharpened and provided with an opening to receive the lug therethrough, and said V-shaped plate resting directly on the foot and having its arms at their inner edges contacted by the bolt, said V-shaped plate having a pair of spaced lugs thereon and having its arms adjacent their outer ends provided with a series of openings, sweep blades each of which being pivotally secured to one of the lugs of the V-shaped plate and having openings designed to register with the apertures in said V-shaped plate, and means adjustably securing said sweep blades to the arms of the said V-shaped plate.

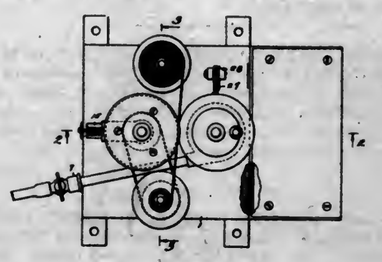


1,483,777. REFRIGERATING VENDING MACHINE. CHARLES F. CALLAHAN, Memphis, Tenn. Filed Feb. 12, 1923. Serial No. 618,630. 3 Claims. (Cl. 194—39.)

1. A refrigerator comprising a refrigerated cabinet containing bottled goods and having a delivery chute, a slide to control the movement of bottles to the chute, means to normally lock the slide and to release same on inserting a proper coin, said means comprising a casing having a coin slot with means to unlock the slide actuated by the presence of the coin, said casing having an outlet for the coin, means to hold the coin in the slot

until the slide is moved, means to mask the outlet as the coin is released, means to divert the coin to the outlet, and means actuated by the passage of a bottle through the chute for shifting said diverting means out of the path of the cam, substantially as described.

1,483,778. GUIDE. COLIN J. CAMPBELL, East Orange, N. J., assignor to Standard Auto Parts Company of America, Newark, N. J., a Corporation of New Jersey. Filed June 21, 1921. Serial No. 479,371. 4 Claims. (Cl. 74—14.)



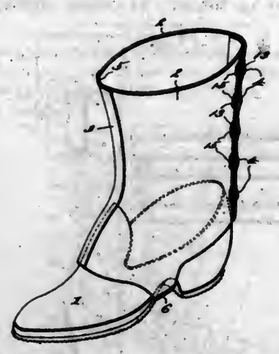
1. In a signal wherein a signal member and a longitudinally slotted lever are fixed upon a rotatable shaft, and wherein the signal is rotated by means including a longitudinally reciprocable and axially rotatable member having a laterally projecting rod fixed thereto and loosely engaged in the slot of the lever, a guide adapted for association with said rod to automatically cause swinging of the latter and partial rotation of its longitudinally reciprocable member upon reciprocation of said member.

1,483,779. HEADLIGHT ATTACHMENT. JOHN A. CARSON, Huntington, N. Y. Filed Mar. 11, 1921. Serial No. 451,553. 1 Claim. (Cl. 240—46.)

In a device of the class described, the combination with a headlight, a light chamber having front and rear walls and open at its bottom, a portion of the rear wall being cut-away to fit the contour of the headlight, means for removably securing said light chamber to the headlight, a bull's-eye mounted in the front wall of said light chamber and disposed in the path of light rays from said headlight and adapted to deflect a portion of the light into the upper part of the light chamber, a bull's eye mounted in the rear wall of said light chamber and disposed above the headlight and adapted to utilize the light deflected to the upper part of said light chamber.

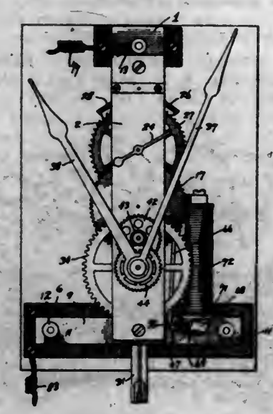
1,483,780. GILDING APPARATUS. TIBURCE CATALA, Englewood Cliffs, N. J. Filed June 11, 1923. Serial No. 644,770. 3 Claims. (Cl. 41—7.)

1. A gilding apparatus which includes an embossing roller having a design formed along its periphery, said roller loosely mounted for rotation, a heating means disposed beneath said roller, and a shield surrounding said heating means and extending up to a point substantially closed to the under surface of the roller whereby the heat of the burner will be confined.



1,483,781. MOUNTING FOR FALSE TEETH. ARTHUR H. CHURCHILL, Yarmouth, Nova Scotia, Canada. Filed Jan. 31, 1920. Serial No. 355,470. 2 Claims. (Cl. 32—12.)

1. A false tooth mounting consisting of a backing, a facing having its masticating edge in contact with the backing for reinforcement thereby, a tenon on the backing above and out of contact with said edge, said facing being applicable to the backing and the tenon to the facing by movement substantially laterally of the backing to enable removal and replacement of the facing whereby bending of the backing for insertion or removal of the facing is avoided to enable the backing to be reinforced at its masticating edge, said facing having a mortise to receive said tenon, and the facing being unbroken about said mortise to avoid undue weakening of the facing particularly at said masticating edge.

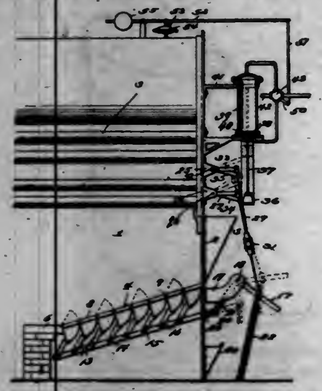


1,483,782. STORM GAITER. WILLIAM C. COLE, Canonsburg, Pa. Filed Jan. 29, 1923. Serial No. 615,659. 1 Claim. (Cl. 36—2.)

A gaiter comprising major sections of soft and pliable vulcanized rubber, said sections being arranged with their forward edges spaced apart, a central connecting strip of comparatively thin soft and pliable rubber connected to the outer sides of the forward edge portions of the major portions and flexibly connecting said sections together, fasteners carried by the major sections for detachably connecting in lapped relation the other edge

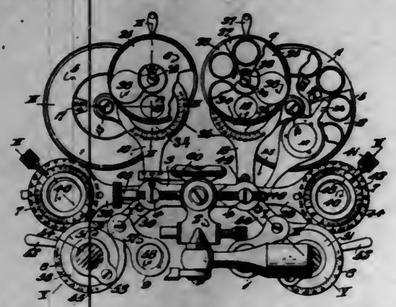
portions thereof, and means on the major sections for holding the same against upward movement relative to a shoe.

1,483,783. ELECTRIC CLOCK. ULYSSES L. COLLINS, San Diego, Calif. Filed Oct. 12, 1922. Serial No. 594,146. 4 Claims. (Cl. 58—41.)



1. Means for actuating a clock, comprising a working mechanism, a shaft for driving the same having a lever arm thereon, a weight at the free end of the arm adapted to rotate the shaft and a spring cooperating with the weight disposed so as to decrease in tension as the weight gains in effectiveness due to the circular curve described by the same.

1,483,784. MOVABLE CAP FOR SMOKESTACKS. WILLIAM ALBERT COLLVER, Marshfield, Oreg. Filed June 6, 1923. Serial No. 643,759. 3 Claims. (Cl. 236—45.)

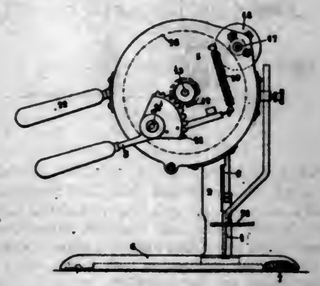


1. A structure of the class described including a smokestack, a cap over the smokestack and adapted to move vertically toward or from the top of the smokestack, and weighted levers fulcrumed between their ends, on which levers at an end of each said cap is mounted.

1,483,785. AUTOMATIC STOKER FOR FURNACES. JOHN T. CULLEN, Jr., Clinton, Iowa. Filed Sept. 26, 1921. Serial No. 503,307. 14 Claims. (Cl. 110—34.)

1. In combination with a source of heat supply, an automatic stoker comprising movable sets of grate bars, fluid pressure actuated means communicating with said source of heat supply for alternately moving said sets of bars, and means for returning said bars at once to normal position after said movement.

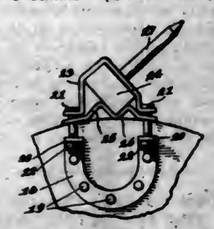
1,483,786. OPTICAL INSTRUMENT. HENRY L. DE ZENG, Moorestown, N. J. Filed Apr. 1, 1921. Serial No. 457,782. 24 Claims. (Cl. 88—22.)



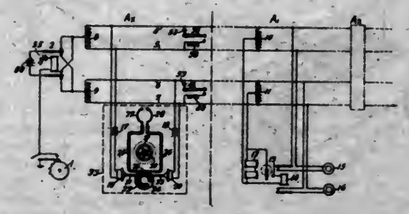
1. In an instrument of the character described, the combination of a testing unit support, a bracket pivotally mounted on the support, a plate having a central opening rotatably mounted on the bracket, means for rotating the plate, a cell plate pivotally mounted on the rotatable plate, a lens in the cell adapted to align with the opening in the plate, a second cell plate pivotally mounted on the bracket, and a displacing prism mounted in the cell adapted to align with the opening in the rotatable plate.

1,483,787. THERMOSTAT FOR ELECTRICAL FIRE-ALARM SYSTEMS. THOMAS STOKER DIXON, Christchurch, New Zealand, assignor to The Vigilant Automatic Fire Alarm Company Limited, Christchurch, New Zealand, a Company of New Zealand. Filed May 8, 1922. Serial No. 559,426. 4 Claims. (Cl. 200—137.)

1. In an electrical fire alarm thermostat having an arm operable by the heating of the thermostat, a flexible leaf upon the end of said arm adapted to rest against a closed circuit contact in order normally to complete a closed circuit and in which upon heating of such thermostat such leaf will leave such closed circuit contact and will touch open circuit contacts in order to complete an open circuit from alternative lines; means, characterized in this, that said closed circuit contact also forms one of the open circuit contacts, said other open circuit contact located upon the other side of the said leaf at such a position in relation to the said closed circuit contact as to form a fulcrum for the leaf whereby as the thermostat arm continues moving after the leaf touches the first contact the front end of the leaf will bend so as to again touch the second contact, substantially as described.

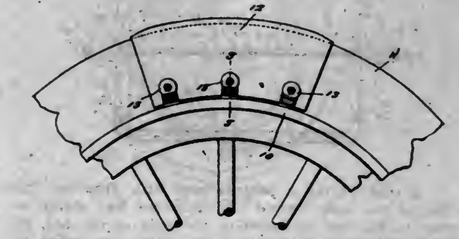


1,483,788. HAND MACHINE FOR CUTTING OUT SEVERAL THICKNESSES OF FABRIC. ETIENNE DUPLESSIS, Paris, France. Filed Feb. 20, 1922. Serial No. 538,034. 5 Claims. (Cl. 164—75.)



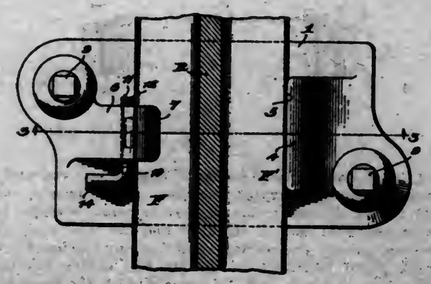
1. A hand machine for cutting out several thicknesses of fabric comprising: a horisontal supporting runner,—balls in the said runner projecting under the lower face of the latter,—a vertical guide post integral with the said runner,—a casing carried at the upper end of the said guide post,—a cutter in the said guide post and a slide rod operatively connected to the said cutter,—a crank-plate carried by the casing,—a crank-pin on said crank-plate,—a pitman attached to the said crank-pin and to the slide-rod,—means carried by the casing and arranged to transmit to the crank-plate a movement of rotation in one direction and spring means for rotating said plate in the other direction, and, consequently, an up and down movement to the cutter,—and means for guiding the machine during the cutting out operation.

1,483,789. ROTARY CULTIVATOR. WILLIAM A. EARHART, East Radford, Va. Filed Apr. 25, 1922. Serial No. 556,379. 3 Claims. (Cl. 97—215.)



1. A combined roller and cultivator comprising a roller, brackets carried upon the ends of the roller, a plurality of bars adapted to extend across the periphery of the roller, socket members in the bars, and clamping means engaging the bars of the socket members and detachably mounted on said brackets for binding the bars on the socket members against the roller.

1,483,790. METHOD AND SYSTEM FOR DETECTING SOURCES OF VIBRATION. GEORGE D. EDWARDS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 15, 1919. Serial No. 323,973. 2 Claims. (Cl. 177—386.)



2. In a system for the location of a source of vibration, a plurality of pairs of vibration detectors located at the ends of base lines successive ones of which are at right angles to each other, a plurality of observing stations, and means for simultaneously subjecting the pairs to binaural observation from independent observing stations.

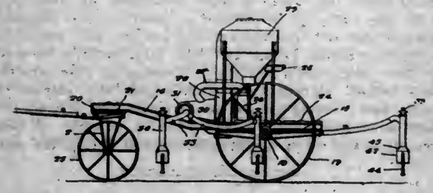
1,483,791. BLOW-OUT PATCH. HARLEY W. EDWARDS, Thetford Mines West, Quebec, Canada. Filed Mar. 26, 1923. Serial No. 627,723. 1 Claim. (Cl. 152—24.)

A pneumatic tire protector comprising a flexible protecting member, rim engaging members, plates secured to the opposite side edges of the protecting members, sleeves carried by the plates, sleeves also carried by the rim engaging members, pins extending through said sleeves and links connecting the adjacent ends of the pins to provide a flexible connection between the tire protector and rim engaging member.

1,483,792. ANCHOR TIE PLATE. JOHN M. R. FAIRBAIRN, Montreal, Quebec, Canada. Filed Sept. 22, 1922. Serial No. 589,826. 8 Claims. (Cl. 238—304.)

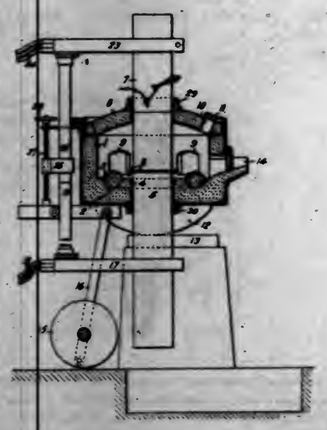
5. The combination of a tie plate having an inclining and crowned rail seat, an abutment shoulder provided at one side of the seat, an abutment member located at the opposite side of the said seat, and an anti-creeping means interposed between one of said abutments and one rail flange.

1,483,793. CLOTHES PROTECTOR. WILLIAM S. FERDON, Omaha, Nebr. Filed Apr. 17, 1922. Serial No. 553,393. 5 Claims. (Cl. 206—7.)



1. A clothes protector comprising a receptacle having an upper open end, depending U-shaped straps positioned in the receptacle and having their upwardly extending arms secured to opposed walls of the receptacle adjacent the upper open end of the receptacle and movable towards and away from each other during opening and closing of the receptacle whereby when the receptacle is open a clothes hanger may be placed in the receptacle and supported by said straps.

1,483,794. CHANGEABLE PRICE TAG. JOHN L. GARLAND, Youngstown, Ohio. Filed Nov. 6, 1922, Serial No. 599,340. Renewed Dec. 10, 1923. 1 Claim. (Cl. 40—5.)



A changeable tag comprising a body of resilient sheet metal having an opening and rearwardly directed resilient bracket portions at opposite sides of said opening, and cubes interposed between and held in side by side relation by said bracket portions and having numerals on their sides.

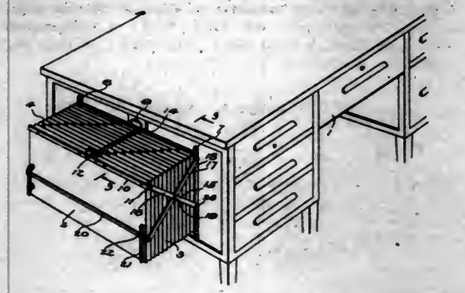
1,483,795. BOLL-WEEVIL EXTERMINATOR. WILLIAM H. GIBSON, ALLAN M. GIBSON, and GEORGE S. KLUTTZ, Concord, N. C. Filed July 12, 1922. Serial No. 574,531. 5 Claims. (Cl. 43—140.)

3. In a vacuum type insect exterminator, a nozzle consisting of a cylindrical shell having its lower end carrying a flaring hood, a valve located within the cylinder at its juncture with the hood and having an operating stem extending axially through and beyond the upper end of the cylinder.

1,483,796. MELTING OR SMELTING LOW VOLATILE METALS. JAMES H. GRAY, New York, N. Y. Filed Aug. 20, 1920. Serial No. 404,727. 12 Claims. (Cl. 204—64.)

1. A furnace for low volatile charges comprising electrodes having their opposed faces very much larger than the arc and very close together so as to cause the heat of the arc to escape transversely from the space between them, and an annular hearth for the charge located around the electrodes, said furnace being practically closed closed against the admission of air.

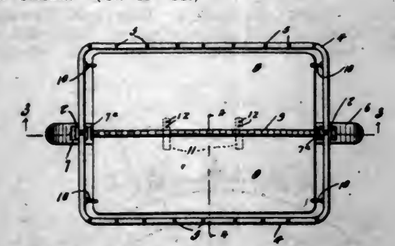
1,483,797. DYEING AND PRINTING ACETYL SILK AND MATERIALS CONTAINING IT. ARTHUR G. GREEN and KENNETH H. SAUNDERS, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Filed Mar. 20, 1923. Serial No. 626,425. 11 Claims. (Cl. 8—5.)



1. In the dyeing, including printing, of acetyl cellulose, the process which comprises rendering an amido-azo dye soluble in water by a treatment of such dye with an aldehyde and a bisulfite and breaking up the new soluble combination so formed in the presence of the acetyl cellulose to be dyed.

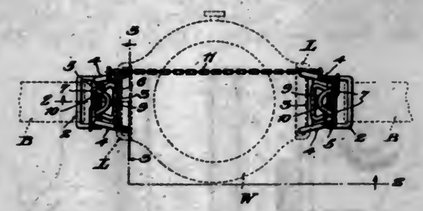
1,483,798. DYE AND PROCESS OF MAKING THE SAME. ARTHUR GEORGE GREEN and KENNETH HERBERT SAUNDERS, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Filed July 7, 1923. Serial No. 650,154. 8 Claims. (Cl. 260—96.)

8. The new dyestuff particularly adapted for dyeing acetyl cellulose, being an amido-azo dye not containing more than two diazo groups solubilized by association with one amino group thereof of aldehyde and bisulphite groups and still containing said groups, and containing a further amino group, said dye being soluble in water to form solutions which slowly decompose when acidified and heated, setting free formaldehyde and sulphur dioxide and yielding an amido-azo compound derived from para-phenylene-diamine and cresidine capable of being readily taken up by acetyl cellulose and dyeing the same.



1,483,799. FILE. WILLIAM HALL, New York, N. Y. Filed Nov. 21, 1922. Serial No. 602,363. 6 Claims. (Cl. 129—15.)

6. In a file of the character described, a substantially rectangular body formed with a plurality of compartments, a vertical bracket connected with said body near each end for supporting the same, and a pair of cross bracing bars at each end of the body connected respectively with said brackets and with the front part of the body for

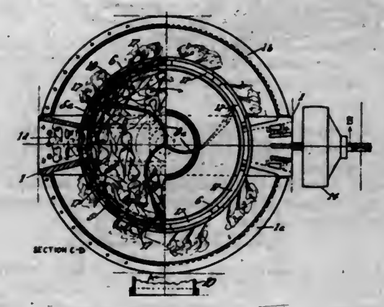


normally holding the body distended and for causing the body to collapse in a horizontal direction when supported from said brackets.

1,483,800. TRAP. WILLIAM JOSEPH HAMILTON, Chokoloskee, Fla. Filed Dec. 14, 1922. Serial No. 606,912. 2 Claims. (Cl. 43—88.)

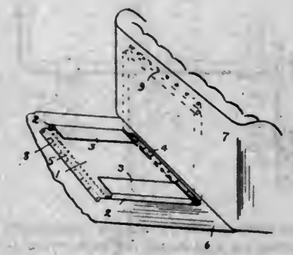
1. A trap having a bar provided with upturned lugs adjacent the ends thereof, an operating leaf spring secured to the bar intermediate the ends of the bar, coacting jaws pivoted to said lugs, trip plates hinged together and surrounded and carried by the jaws, and said spring being slotted adjacent opposite ends to normally engage said lugs and to receive the adjacent corner portions of the trip plate when the trap is sprung.

1,483,801. CLASP. GEORGE D. HARRISON, North Attleboro, Mass., assignor to Providence Stock Company, Providence, R. I. Filed June 21, 1923. Serial No. 646,910. 4 Claims. (Cl. 24—235.)



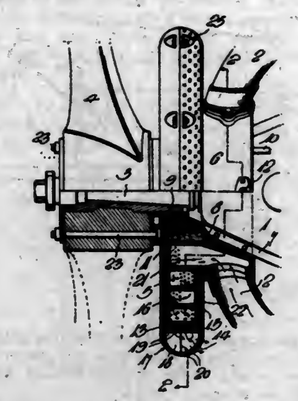
1. In a clasp, a body having a loop on one end and a hook having an elongated cross-bar on its opposite end, and having divergent side supporting arms, bearings between the inner ends of the arms and the loop, a pin extending through the bearings, and a spring tensioned bell-crank guard journaled on the pin and having loop-like arms, one of which arms is engaged with the cross bar of the hook and the other arm of which forms a finger engaging part, both of the bell-crank arms being disposed between the arms of the hook.

1,483,802. BRACELET CLASP. GEORGE D. HARRISON, North Attleboro, Mass., assignor to Providence Stock Company, Providence, R. I. Filed July 28, 1923. Serial No. 654,440. 3 Claims. (Cl. 24—191.)



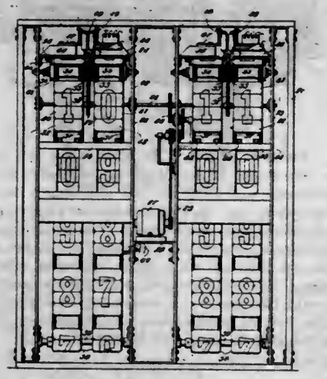
3. In a bracelet, a member receiving one end of the bracelet, a pressure plate carried by the member, a clamping member pivoted to the first member, a member connected to the opposite end of the bracelet, and means to pivotally connect the clamping member and the said member at the opposite end of the bracelet to allow said last named members to lie at an angle relative to each other when in operative position.

1,483,803. BEET CUTTER. HERMAN LOUIS HARTBURG, Denver, Colo. Filed Mar. 17, 1922. Serial No. 544,617. 7 Claims. (Cl. 146—93.)



1. In a beet cutter, the combination of stationary slicing elements, a rotating element having a centrally located inlet passage diverging into a plurality of spiral peripheral outlet pasages which match with the stationary slicing elements, and blank elements in position to be substituted for the slicing elements.

1,483,804. WALL POCKET. ARTHUR A. HARTOGH, Duluth, Minn., assignor of one-half to James W. Beaudin, Duluth, Minn. Filed Feb. 6, 1923. Serial No. 617,201. 2 Claims. (Cl. 224—29.)

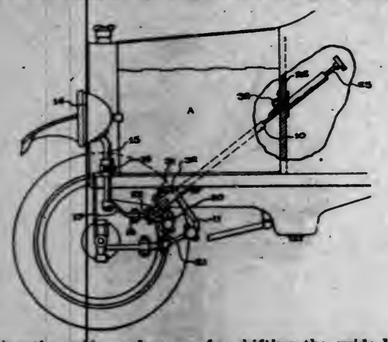


2. The combination with a back upright wall of a vehicle seat of a pocket comprising a major body portion of thin suitable material having inwardly foldable ends for engaging the contents of the pocket, and means for holding the longitudinal edges of the pocket either permanently or removably against the upright wall.

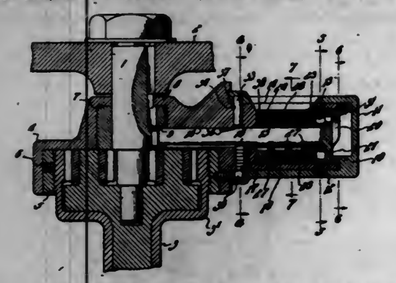
1,483,805. ENGINE MUFFLER. LAURENCE R. HEATH, Quantico, Va., assignor of forty-nine per cent to Joseph Labbee, jr., Quantico, Va. Filed Apr. 17, 1922. Serial No. 553,775. 10 Claims. (Cl. 137—160.)

1. The combination with an aircraft engine having a forwardly extending shaft and a propeller for the aircraft thereon; of a muffler about the shaft interposed between said engine and propeller and comprising a non-rotatable exhaust-receiving section and an exhaust-discharging section rotatable with the aircraft propeller.

1,483,806. ELECTRICAL SCOREBOARD. CECIL A. HENDRIX, Flora, Ind. Filed Oct. 13, 1922. Serial No. 594,354. 9 Claims. (Cl. 235—92.)



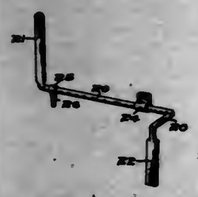
1. A score indicator comprising a casing formed with sight openings, a pair of endless indicator members mounted within the casing and traveling behind said sight openings, drive members for said endless members carrying ratchets, elements about which said endless members are trained carrying pawls pivoted thereon and co-operating with the adjacent ratchets, and electromagnetically operated trip mechanism associated with each pawl whereby to control the position thereof.



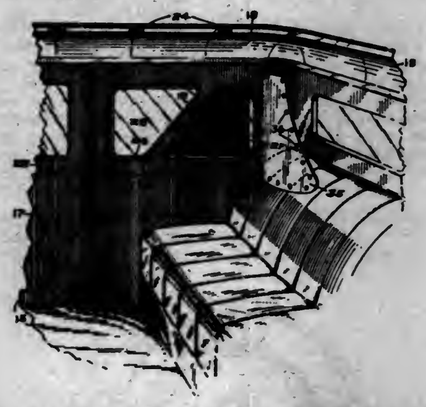
1,483,807. DIRIGIBLE HEADLIGHT. JOHN W. HOSMER and BENJAMIN O. GUEST, Crossville, Ala. Filed Dec. 9, 1922. Serial No. 605,925. 1 Claim. (Cl. 240—62.)

The combination with the lamp posts of a motor operated vehicle, of means for simultaneously turning said posts incident to the steering of the vehicle, said means including a clutch member slidable on the steer-

ing post and movable therewith when in one position thereon, a channelled shaped member partly surrounding the steering post and constituting a guide from which the clutch member operates, means for pivotally supporting the guide, and means for shifting the guide longitudinally of the post, and positioning the clutch member to allow the vehicle to be steered without imparting movement to the lamps.

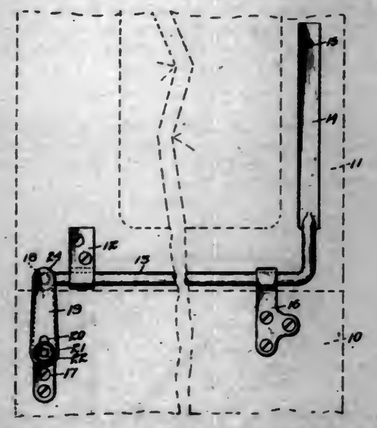


1,483,808. STEERING-WHEEL LOCK. LOUIS J. HUGUES, Topeka, Kans. Filed Jan. 29, 1923. Serial No. 615,655. 4 Claims. (Cl. 70—129.)



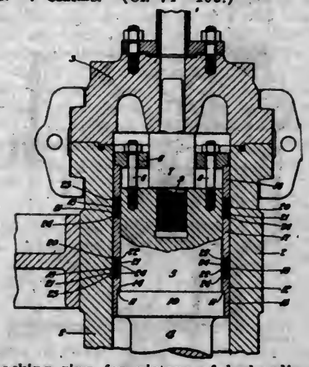
1. A steering wheel lock comprising a housing, a tubular extension, a locking bolt slidably mounted in the extension and part of the housing, a keeper part connected with the steering wheel for receiving the end of the locking bolt, a spring for normally holding the locking bolt in retracted position, a barrel rotatably mounted on the extension and having a part thereon for pushing the bolt inwardly against the action of the spring, said bolt having a recess for receiving said part when the bolt is retracted and combination means for holding the bolt in projected position.

1,483,809. CONNECTER FOR TWO-PART AUTOMOBILE DOORS. MATTHEW R. HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation. Filed Dec. 30, 1921. Serial No. 525,927. 5 Claims. (Cl. 296—45.)



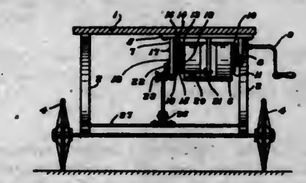
4. In a door for automobiles, a permanent lower door section, a removable upper door section, and a connecter therefor comprising a resilient rod bent between its ends to form angularly related parts lying in the same plane and having its ends bent to extend respectively up and down approximately perpendicularly to said plane, substantially as set forth.

1,483,810. TOP FOR MOTOR VEHICLES. MATTHEW R. HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation. Filed June 9, 1922. Serial No. 566,971. 5 Claims. (Cl. 296—45.)



1. An automobile top including a deck having a depending section and the section having in each side a major opening divided to form a pair of minor openings of equal areas, so as to admit a window removed from one minor opening to be inserted back of the window in the remaining opening.

1,483,811. CONNECTER FOR TWO-PART AUTOMOBILE DOORS. MATTHEW R. HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation of Indiana. Filed Dec. 9, 1922. Serial No. 605,968. 3 Claims. (Cl. 296—44.)

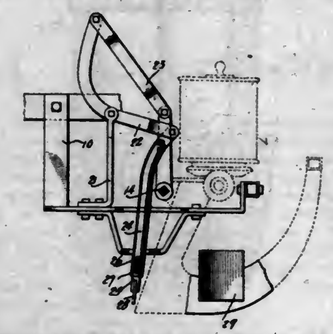


2. A door connecter for vehicles comprising a pair of arms extending up and down for connection to relatively movable door sections, and a body portion under torsional strain when the door is closed, said body having a threaded end directed toward the interior of the vehicle body and one of said arms having threaded engagement with said end whereby the distance of the arm from the body may be adjustably varied, substantially as set forth.

1,483,812. PISTON PACKING. EDWIN A. ISAKSON, McKeesport, Pa. Filed June 12, 1923. Serial No. 644,875. 7 Claims. (Cl. 74—109.)

3. A packing ring for pistons of hydraulic cylinders, comprising a non-elastic soft metal cup, and a hard fiber ring within said cup, said fiber ring being characterized by being expansible when moistened and being adapted when moistened to expand said cup.

1,483,813. ROCKING MEANS FOR BABY CARRIAGES. HARLIE SEREVA JACKSON, Philadelphia, Pa. Filed Aug. 12, 1922. Serial No. 581,550. 3 Claims. (Cl. 180—1.)

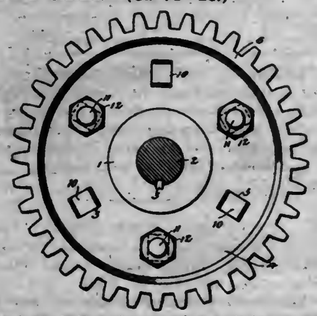


1. In a device of the class described, the combination of a baby carriage body, a running gear frame, a cross member secured thereto, a spring motor suspended from the underside of said carriage body, a disc geared to said motor, a crank pin disposed in said disc, a connecting rod pivotally mounted on said cross member, connecting with said crank pin, for movement of said carriage body upwardly and downwardly.

1,483,814. ELECTRIC CLOCK. MAXIMILIAN F JURUICK, Allentown, Pa. Filed Apr. 18, 1922. Serial No. 554,429. 1 Claim. (Cl. 58—30.)

In an electrically operated clock, a drive shaft, means operated by the drive shaft for operating the hands o the clock, a pendulum, a ratchet mechanism connectin the pendulum and drive shaft, an upwardly extending resilient arm carried by the pendulum, an arcuate-shaped armature carried at the upper end of the arm, a magnet included in circuit with a source of current, means controlled by the operation of the drive shaft for intermittently closing the circuit to energize the magnet and attract the armature and a dog also carried by the resilient arm and engaging the ratchet mechanism, whereby power will be intermittently applied to the drive shaft.

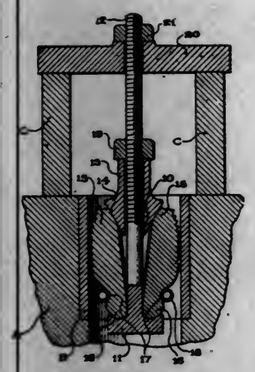
1,483,815. PLANTING AND MARKING MACHINE. OTTO HENRY KOHLHAAS, Calumet, Mich. Filed Dec. 17, 1921. Serial No. 523,007. 1 Claim. (Cl. 111—30.)



A planting and marking machine including a frame, a pivoted member supported by said frame, an oscillatory rod, interconnected links, one of which is secured to said rod and the other to said pivoted member at one end thereof, and actuated by said rod, and a marking appliance secured to the opposite end of said pivoted member.

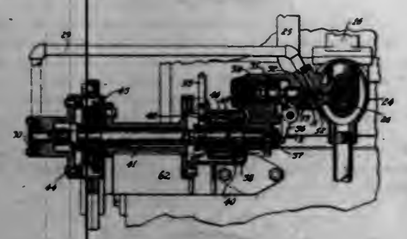
1,483,816. WASHTUB. MARIE KYLAR, Camden, N. J. Filed Oct. 7, 1922. Serial No. 593,048. 2 Claims. (Cl. 68—31.)

1. A device of the class described, comprising a metallic tub and a receptacle in said tub formed of a single piece of metal having its bottom and side edges attached in water-tight relation to the bottom and sides of the tub, and formed with slide-ways adapted to receive the side edges of a washboard.



1,483,817. GEAR WHEEL. ADOLPHUS HENRY LANDRY, Townsend, Mass. Filed Oct. 2, 1923. Serial No. 666,149. 2 Claims. (Cl. 74—28.)

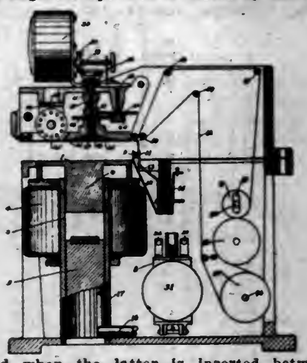
1. A device of the character described, comprising a hub and a gear, webs on said hub and gear located side by side, one of said webs having a plurality of openings



therein, lugs on the other of said webs adapted to be positioned in any of said openings, and means of clamping the webs together.

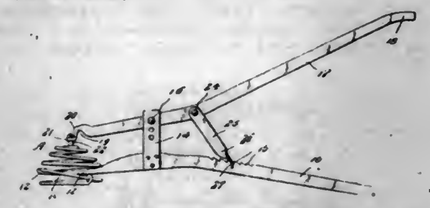
1,483,818. BUSHING EXTRACTOR. WILLIAM E. LLOYD, Lorain, Ohio. Filed Aug. 31, 1922. Serial No. 585,469. 5 Claims. (Cl. 29—88.2.)

1. A tool of the character described comprising an elongated shank terminating at one end in a head and threaded throughout its major portion, a plurality of jaws pivoted on said shank and having toothed outer faces, a sleeve slidable along the shank and terminating at one end in a conical head engaging between the free ends of the jaws, a nut threaded onto the shank and engaging said sleeve for effecting longitudinal movement thereof to expand the jaws, and screw means for moving the shank lengthwise.



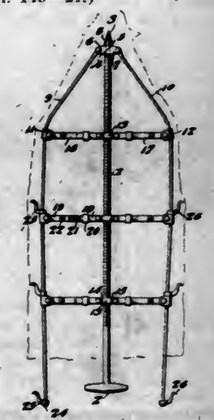
1,483,819. LIQUID-FUEL VAPORIZER FOR INTERNAL-COMBUSTION ENGINES. ROBERT F. LONABERGER and CHARLES F. SANDS, Reading, Pa., assignor to Lloyd A. Unger, trustee. Filed Apr. 13, 1922 Serial No. 552,414. 17 Claims. (Cl. 123—133.)

1. An attachment for internal combustion engines comprising a waterjacketed fuel vaporizer and mixing tube having an air control valve, a fuel pump and fuel control valve and operating means for intermittently actuating said fuel control valve in synchronism with the inlet and exhaust valves of said engine.



1,483,820. AUTOMATIC TIME CLOCK. HARRY G. LUNDGREN, Oakland, Calif., assignor to Automatic Electrical Machine Co., Inc., Oakland, Calif. Filed May 8, 1922. Serial No. 559,306. 6 Claims. (Cl. 234—53.5.)

6. An automatic stamping device of the character described comprising a downwardly facing stationary dial, an electromagnet mounted underneath the dial having a plunger associated therewith for forcing an object to be stamped against the dial and a switch controlling the electro-magnet adapted to be closed by the object to



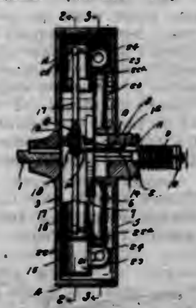
be stamped when the latter is inserted between the plunger and the dial.

1,483,821. SPRING REMOVING AND APPLYING TOOL. HUBBARD EARNEST MAPLES, Jackson, Tenn. Filed July 12, 1922. Serial No. 574,577. 3 Claims. (Cl. 29—87.1.)

1. A tool of the character described comprising an elongated lever having one end terminating in a nose formed with a lip, a second lever pivotally connected with said first named lever and terminating in a neck, a head swiveled on said neck and disposable within the smallest convolution of a tapered spiral spring, said nose being insertable between two of the larger convolutions, and a pawl and ratchet for locking said levers against movement.

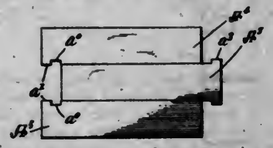
1,483,822. HIDE STRETCHER. ANDREW MARKER, Boise, Idaho. Filed Apr. 19, 1923. Serial No. 633,263. 2 Claims. (Cl. 149—21.)

2. A hide stretcher comprising a central rod having a handle at one end and provided with a bearing at the remaining end, said rod being screw-threaded throughout



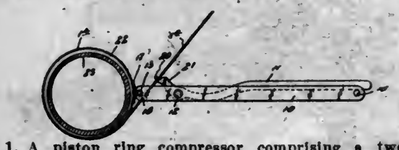
the greater portion of its length, a bearing yoke mounted and held upon the bearing end of the rod, side bows of resilient material connected pivotally with said bearing yoke, bearing clips mounted on said side bows at spaced intervals, threaded sleeves turned onto the central rod and spaced substantially to correspond with the spacing of the bearing clips, adjustable spreader bars connected from said bearing clips to the threaded sleeves, said central rod being sharpened at its bearing end to hold within the head portion of a pelt, and hooks mounted on the side bows to catch within the pelt at its edges to hold the pelt against slipping or rolling while being stretched.

1,483,823. COMBINED THIMBLE AND THREAD CUTTER. QUEENE ELEANOR MARRS, Killeen, Tex. Filed Aug. 23, 1922. Serial No. 583,749. 1 Claim. (Cl 223—56.)



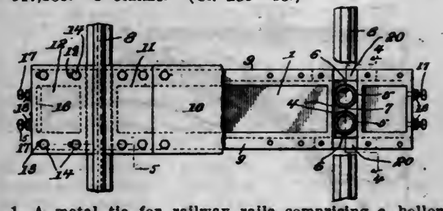
As a new article of manufacture, a thimble having depression in the end thereof forming a slot, the depression flaring toward the bottom thereby presenting a narrow entrance to the slot, and a cutter in said slot transverse to the latter.

1,483,824. FLUID TRANSMISSION. FRANK C. MARTIN, Plattsmouth, Nebr. Filed Aug. 3, 1921. Serial No. 489,525. 2 Claims. (Cl. 192—60.)



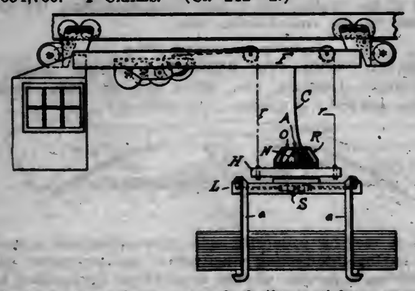
1. A fluid transmission including a driving means carrying cylinders, pistons operable in said cylinders, a driven shaft, a plate carried by said driven shaft, a shaft journaled in said plate having a crank connected with said pistons, a collar slidable relatively to said shafts, said collar having an opening receiving said second shaft, and a spiral groove and stud connection between said second shaft and collar.

1,483,825. SHEET PILING. ALBERT ALLEN MARTINEZ, New Orleans, La. Filed May 11, 1923. Serial No. 638,280. 3 Claims. (Cl. 61—58.).



3. A wall of sheet piling comprising three parallel layers of vertically disposed interlocking units, each outer unit being made of a single stick of timber provided with a guide groove on the inside near the edge thereof, and parallel to said edge and each central unit being also made of a single stick of timber provided with laterally projecting guide ribs integral therewith near one edge thereof, parallel to said edge and adapted to engage in said grooves in the outer units, substantially as described.

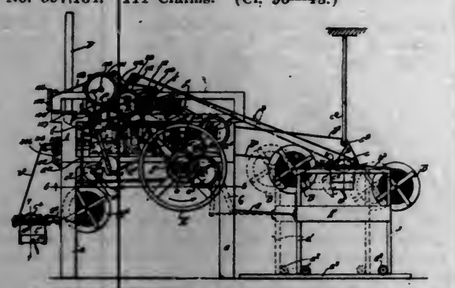
1,483,826. TOOL FOR COMPRESSING PISTON RINGS. CARL J. MATHISON, Belmont, Mont. Filed July 22, 1922. Serial No. 576,832. 2 Claims. (Cl. 29—86.4.)



1. A piston ring compressor comprising a two-part handle, the respective parts of said handle being pivotally connected together, a flexible strip detachably secured to the adjacent end of one part of the handle and adapted to be extended about the ring, said strip having a longitudinal series of openings, the adjacent extremity of the other part of the handle being curved, and a curved upwardly extending stud projecting from the curved extremity and adapted to be received by said openings to compress said ring when said strip is tightened about the latter as described.

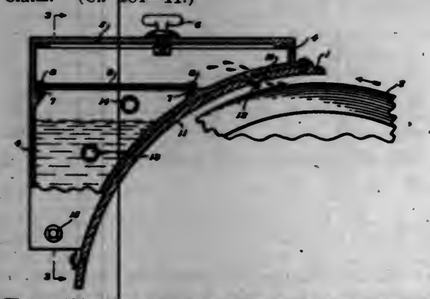
1,483,827. STEEL CROSSTIE. WILLIAM E. MILLER, Gormania, W. Va. Filed June 22, 1923. Serial No. 647,185. 4 Claims. (Cl. 235—48.)

1. A metal tie for railway rails comprising a hollow body having an open top, transverse partitions therein adjacent the ends thereof, each of which being formed with spaced compartments, cushioning springs in said compartments, said springs designed to have rails rest thereon to space the same out of contact with the tie body, plates closing the open top of the body, and certain of said plates engaging with the base and webs of the rails for sustaining the rails on the tie.



1,483,828. RETRIEVER FOR ROPES AND LIKE ARTICLES. WILL K. MONROE, Cleveland, Ohio, assignor to The Brown Hoisting Machinery Company, Cleveland, Ohio, a Corporation. Filed July 30, 1923. Serial No. 654,760. 4 Claims. (Cl. 242—1.)

1. A retriever for ropes and similar articles, comprising the combination of an upright receptacle that converges from its base to a central opening at the top,

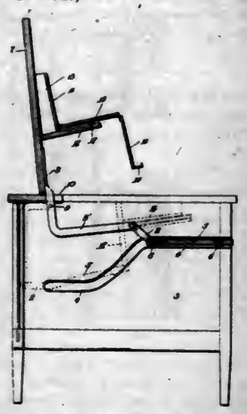


and an upright divisional member within and secured to the same, whose sides converge toward the center point of said opening, substantially as shown and described.

1,483,829. BOX-MAKING MACHINE. ARTHUR T. MOORE, Batavia, N. Y. Filed Oct. 26, 1922. Serial No. 597,134. 111 Claims. (Cl. 93—43.)

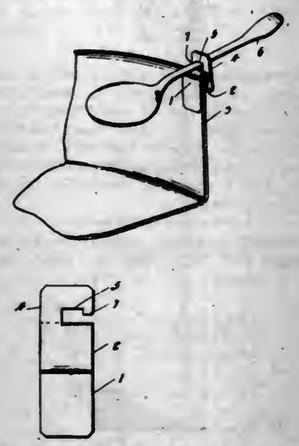
1. In a box making machine, the combination of means for making body portions and end portions having substantially cylindrical flanges, and means for assembling said body portions and said end portions by means of a telescopic engagement of said flanges with said body portions.

1,483,830. OIL FILTER. NORMAN Y. MOORE, Delanco, N. J. Filed July 17, 1922. Serial No. 575,696. 1 Claim. (Cl. 184—11.)



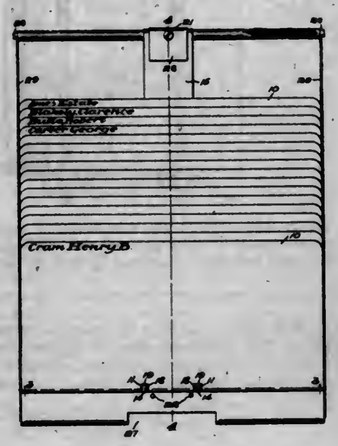
The combination with an automobile engine and transmission, of a container secured to the transmission casing adjacent to the top thereof, said transmission case having an opening, said casing also provided with an opening communicating with the last mentioned opening, a lip on the casing entering the case, said container having a partly open top and a closure therefor, a filtering screen supported on brackets below the lip, a normally closed outlet for the casing at the bottom thereof, a pipe connection in the container below the screen, and the front end of the engine, and a pipe connection from the container to the transmission case.

1,483,831. TOOL FOR REMOVING TIRES. JOHN J. O'BRIEN, Leesburg, Fla. Filed Nov. 13, 1920. Serial No. 423,880. 5 Claims. (Cl. 157—1.)



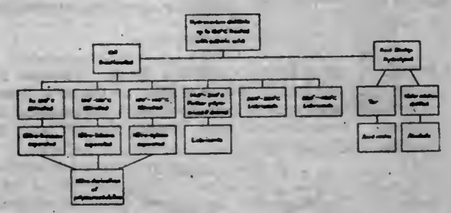
1. A tool for collapsing split rims comprising a member having intersecting longitudinal and transverse perforations, a portion of said longitudinal perforation being threaded, a shank threaded at its inner end for engagement with the said threaded portion of the longitudinal perforation and having its outer end formed with a notched portion for engagement with a rim, a second shank carried by the said member having its outer end formed similar to that of the first said shank and a handle adapted to be inserted in the transverse perforation, said handle adapted to serve as an abutment for the said second shank, substantially as set forth.

1,483,832. DESK. LAURENCE J. OSTDIEK, Ottumwa, Iowa. Filed Apr. 9, 1921. Serial No. 459,986. 1 Claim. (Cl. 45—52.)



The combination with a typewriter desk including a cover and a typewriter base board having means of connection with said cover so as to operate simultaneously therewith upon movement of said cover, of a board extending inwardly at an inclination from the inner side of the cover and being disposed in such a manner so as to engage the base board when the cover is in closed position, strips rising from the inclined board and being arranged with relation to the inner side of the cover so as to form pockets adapted to receive stationary, a strip hingedly secured to the pocket strips, a ledge traversing the cover board in advance of the pocket strip and being adapted to elevate the hinged strip from the cover board and a holder leaf hingedly secured to the hinged strip as and for the purpose specified.

1,483,833. SANITARY SPOON AND LADLE HOLDER. CHARLES W. POTTER, Rising Sun, Ind. Filed Feb. 8, 1923. Serial No. 617,729. 1 Claim. (Cl. 65—65.)

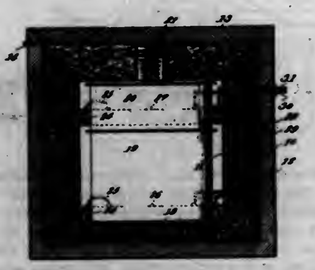


A holder of the class described in a single blank comprising a spring clip, a retainer returned from and disposed outwardly from and projecting above the clip, said retainer being provided with a lateral receiving slot open at a side edge thereof adjacent the top of the clip, and the retainer having a depending stop at the entrance of the slot to prevent lateral displacement of the implement when in engagement with the holder.

1,483,834. FILE. JOHN T. QUIGLEY, Boston, Mass., assignor to Costmeter Company, Boston, Mass., a Corporation of Massachusetts. Filed July 24, 1920. Serial No. 398,828. 4 Claims. (Cl. 129—16.)

1. In a file, the combination of a series of overlapping sheets provided with perforations, a series of sheet-carriers maintaining the minimum overlap of said sheets, each sheet-carrier comprising two parts, one extending through said perforations and secured to the other at two points, and a support for said sheet-carriers extending between the two parts of each intermediate said perforations.

1,483,835. PREPARING CHEMICAL PRODUCTS FROM OLEFINES AND OLEFINE-CONTAINING MIXTURES. ALEXANDER S. RAMAGE, Detroit, Mich., assignor to Bostaph Engineering Corporation, Detroit, Mich., a Corporation of New York. Filed Mar. 7, 1918. Serial No. 221,015. 4 Claims. (Cl. 260—170.)

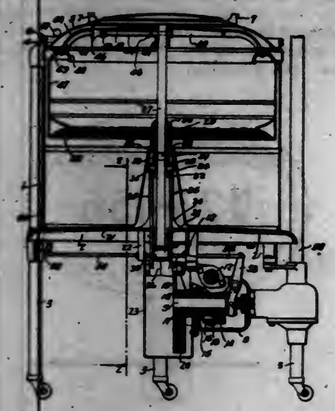


1. The process of treating hydrocarbon oils consisting essentially of olefine and aromatic hydrocarbons, consisting in reacting thereon with sulfuric acid in proportion sufficient to transform substantially all of the olefines, into polymerized products and hydrolyzable sulfuric acid derivatives separating the treated oil from the acid sludge, and fractionally distilling the aromatic hydrocarbons from the higher-boiling polymerized olefines.

1,483,836. ANTITHEFT AUTOMOBILE LICENSE AND OWNER'S TITLE. JOSEPH ODILON REMILLARD, Montreal, Quebec, Canada, assignor, by direct and mesne assignments, of twelve per cent to Alphonsus Gorman and fifty per cent to John Alexander Hugh Cameron, trustee, both of Montreal, Quebec, Canada. Filed May 6, 1922, Serial No. 559,092. Renewed June 16, 1923. 4 Claims. (Cl. 40—132.)

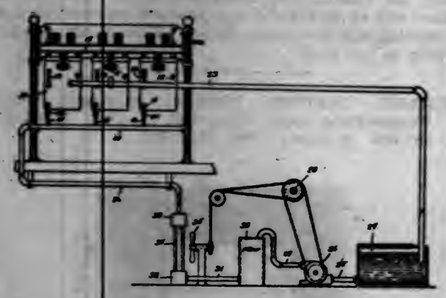
1. The combination, in the glass of an automobile lamp, of a rectangular-shaped substance, containing the official license number of an automobile, for use as a duplicate license and as an anti-theft automobile license and owner's title, with a bend at one end of said rectangular-shaped substance, for use in removing same from the glass of an automobile lamp, and a rectangular depression on the inside of said glass with a groove along both sides and one end for keeping said rectangular-shaped substance in place and an aperture at the other end for inserting and removing said rectangular-shaped substance, all substantially as set forth.

1,483,837. ELECTRIC COOKER. ELIZABETH SCOTT, Westmoreland, Kans. Filed Sept. 11, 1922. Serial No. 587,479. 3 Claims. (Cl. 219—35.)



1. An electric cooker comprising a double walled receptacle having a removable cover, a pair of ring like electric heating elements within the receptacle, and a container located within the confines of said heating elements, each of said heating elements consisting of a plurality of arcuate members of insulating material having a coil of resistance wire embedded therein, all the coils of the sections being connected by bonds.

1,483,838. WASHING MACHINE. PETER F. SCHNEIDER and RAYMOND J. SCHNEIDER, Detroit, Mich. Filed Apr. 23, 1921. Serial No. 464,031. 12 Claims. (Cl. 68—15.)

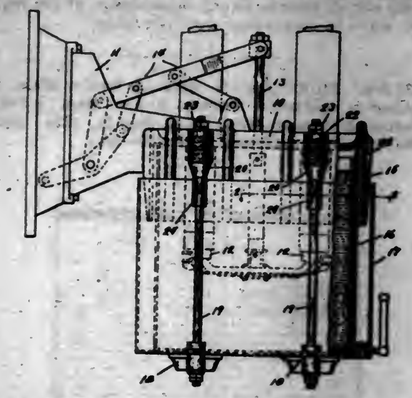


10. In a washing machine, a tub having a recess formed centrally of the bottom thereof extending upwardly into

the tub and closed thereto, a rod vertically reciprocable centrally of the recess, there being a bearing for the rod

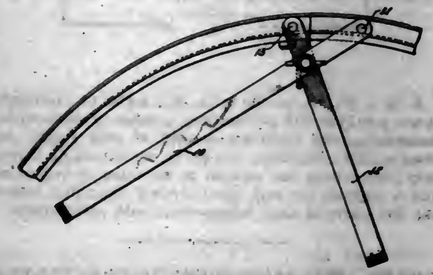
at the upper end of the wall of the recess, and a driving means for the rod, connection thereof with the rod playing in the recess.

1,483,839. ELECTRIC SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor to Sears B. Condit, Jr., Brookline, Mass. Filed May 29, 1919. Serial No. 300,557. 27 Claims. (Cl. 200—150.)



1. An electric switching apparatus comprising an electric switch having an oil receptacle adapted to contain oil in which switch components are immersed, and a circulatory and conditioning system for the oil including means to cool the oil, and means to forcibly circulate the oil through said cooling means and subsequently return it to the receptacle.

27. An electric switch comprising a switch frame, a receptacle disposed beneath said frame adapted to contain oil normally under atmospheric pressure, switch members immersed in the oil in said receptacle, said switch having a passage through which oil may escape from the receptacle, and means to add oil to the receptacle to keep constant the oil level therein.

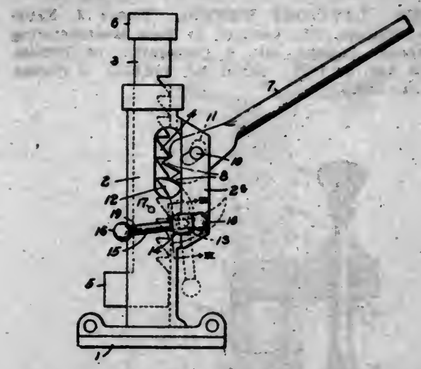


1,483,840. ELECTRIC SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor to Sears B. Condit, Brookline, Mass. Filed June 3, 1920. Serial No. 386,347. 3 Claims. (Cl. 200—150.)

1. An electric switch comprising a switch frame and an oil receptacle movably supported relative to said frame; said frame having a peripheral apron depending therefrom surrounding and peripherally spaced from the upper portion of said oil receptacle and having a plurality of supporting projections extended from its inner

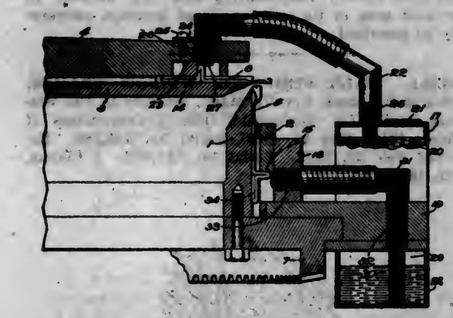
face to engage and support the side walls of said oil receptacle and provide a vent passage between said receptacle and frame in moved positions of the oil receptacle.

1,483,841. RIM TOOL. DALLAS C. CARROLL, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 21, 1917. Serial No. 192,490. 4 Claims. (Cl. 157—1.)



1. A rim contracting tool comprising a lever, means carried by said lever to engage both sides of a rim end, so as to move it in either direction endwise, a second lever, means carried by said second lever adapted to engage both sides of the other rim end, so as to move it in either direction endwise, and means passing through said levers intermediate their ends, forming a pivotal connection between them and providing operating extensions for each lever.

1,483,842. ARTIFICIAL CASTING BAIT. THOMAS J. CARTER, Indianapolis, Ind., assignor to Carter's Best-ever Bait Company, Indianapolis, Ind., a Corporation of Indiana. Filed Apr. 3, 1919. Serial No. 287,207. 6 Claims. (Cl. 43—46.)

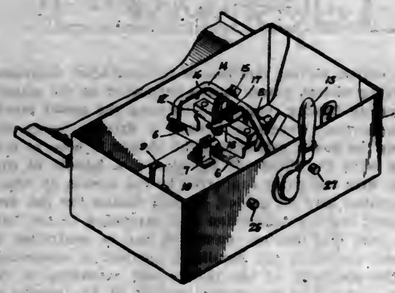


2. An artificial casting bait, comprising a body portion having a head formed with spaced upper and lower jaws separated at the sides, said lower jaw protruding forward beyond the upper jaw and being inclined forward and downward.

1,483,843. LIFTING JACK. WILLIAM J. COSTELLO, Penn Township, Allegheny County, Pa., assignor of one-half to Joseph E. Kats, Verona, Pa. Filed Sept. 9, 1922. Serial No. 587,062. 3 Claims. (Cl. 254—109.)

1. A lifting jack having in combination a base, a hollow standard having a slot in one side, a toothed lifting bar arranged in the standard, a lever having teeth and longitudinally movable on its pivotal support to effect the engagement and disengagement of the teeth on the lever with the teeth on the lifting bar, a holding pawl adapted to engage the lifting bar and a weighted member movable relative to the pawl and adapted when in one position to move the pawl in engagement with the lifting bar and in its other position to move the pawl out of engagement with the lifting bar.

1,483,844. MECHANISM FOR LUBRICATING THE NEEDLES AND NEEDLE CAM TRACKS OF KNITTING MACHINES. WILLIAM P. DRUMMELLER, Springfield, Mass., assignor to William Carter Company, Needham Heights, Mass., a Corporation of Massachusetts. Filed Nov. 18, 1922. Serial No. 600,589. 18 Claims. (Cl. 66—22.)



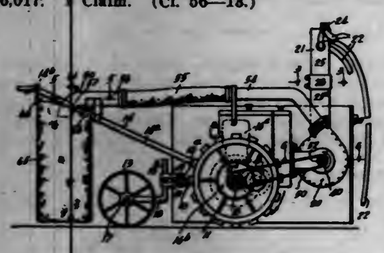
1. Knitting mechanism having independently movable needles provided with butts and means to supply lubricant to the said needle butts, said means including a lubricant-carrying member in contact with said butts.

1,483,845. ELECTRIC SWITCH. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Jan. 3, 1922. Serial No. 526,565. 10 Claims. (Cl. 200—74.)

1. In an electric switch, fixed and movable contacts, means for moving said movable contact, a pivoted latch bar coacting with said means, a spring at all times urging said latch bar in the same direction to hold the movable contact in closed circuit position until the opening movement of the movable contact is initiated, and to then move the movable contact to open circuit position with a snap action.

1,483,846. QUICK-BREAK SWITCH. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed May 19, 1923. Serial No. 640,093. 12 Claims. (Cl. 200—73.)

1. In a quick break switch, a double throw switch member, two movable arms carried thereby, abutments therefor, yielding means for holding said arms in the normal position of rest, and a crank adapted to engage either of said arms to operate said switch member.

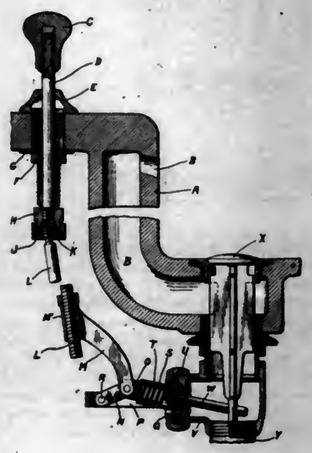


1,483,847. HAND GRIP FOR GOLF CLUBS, ETC. WILLIAM G. HALKETT, Philadelphia, Pa.; Elizabeth M. Halkett, Adelaide H. Kershaw, Walter A. Halkett, Jos. Spencer Halkett, and The Corn Exchange National Bank administrators of the said William G. Halkett, deceased. Filed Mar. 2, 1921. Serial No. 449,043. 2 Claims. (Cl. 46—4.)

1. In a handle, the combination of a helically wound cord encircling the handle and attached at each end

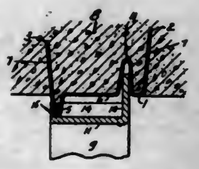
thereto; with a strip of leather helically wrapped around the handle and cord in a direction opposite to the winding of the cord, said leather strip being attached at each end to the handle.

1,483,848. COTTON PICKER. KEDILAN F. HAND and FRANK T. CAVIN, Los Angeles, Calif.; said Hand assignor to said Cavin. Filed Oct. 11, 1920. Serial No. 416,017. 1 Claim. (Cl. 56—13.)



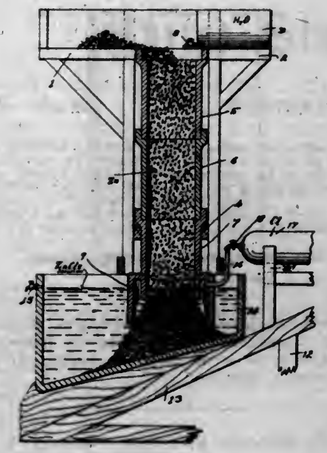
In a cotton picking machine of the character described, supporting wheels, power means supported by the wheels, a releasable driving connection between the power means and supporting wheels, a blower, a driving connection between the power means and the blower, a hose in connection with the intake of the blower, a handle in connection with the parts supported by the wheels by which the machine may be guided, control means for the first mentioned driving connection and extending to the handle so that said driving connection can be controlled by a person operating the handle, a conduit in connection with the discharge of the blower and extending to the handle, and a bag detachably carried at the handle to receive cotton from said conduit.

1,483,849. FASTENER. FRED HIRSH, New York, N. Y., assignor to The Adjusta Company, Inc., New York, N. Y., a Corporation of New York. Filed July 18, 1923. Serial No. 652,313. 12 Claims. (Cl. 24—227.)



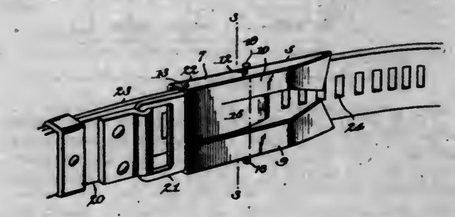
1. A one-piece metallic fastener comprising a slotted body or slide which is upset to provide longitudinal and transverse stiffening flanges and a hook which is integral with an inner bar of the body and is formed in part at least from the material of the bar.

1,483,850. LAVATORY FITTING. TOBIAS J. KAUFMAN, Chicago, Ill., assignor to Teck Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 4, 1921. Serial No. 489,918. 6 Claims. (Cl. 4—203.)



1. A fitting provided with a waste outlet, a plug adapted for movement to open and close said outlet, a toggle mounted adjacent the fitting casing and carrying a rod extending through the casing and operatively connected to said plug, and means for pivotally moving the toggle and thereby reciprocating said rod, whereby to move said plug to its open or closed position, substantially as described.

1,483,851. WALL STRIP FOR WINDOW FRAMES. EUGENE R. PERRY, Everett, Mass., assignor to The William Bayley Co., Springfield, Ohio, a Corporation of Ohio. Filed May 24, 1920, Serial No. 383,783. Renewed Feb. 23, 1922. Serial No. 538,696. 7 Claims. (Cl. 189—46.)

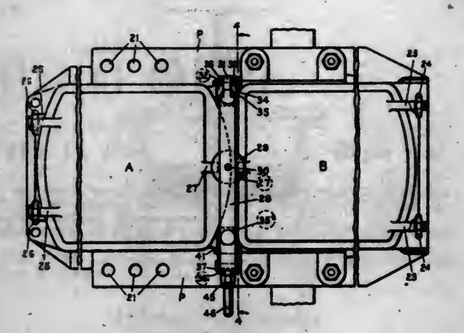


1. A wall-strip for holding window frames comprising a strip of metal transversely bent to form oppositely disposed, lateral wings, with an inwardly extended groove near one wing and an outwardly projected rib adjacent the other wing and with the face of the strip extending from the entrance to the groove to the base of the rib.

1,483,852. PROCESS OF MAKING ZINC CHLORIDE. LUDWIG ROSENSTEIN, San Francisco, Calif., assignor to Great Western Electro Chemical Company, a Corporation of California. Filed Jan. 31, 1921. Serial No. 442,833. 1 Claim. (Cl. 23—13.)

A process of producing zinc chloride which comprises maintaining a column of zinc particles in a receptacle open at the top and bottom, maintaining a supply of solution to cover the bottom of receptacle, feeding the chlorine to the material to be treated from the entire periphery of said column of material.

1,483,853. BUCKLE. FRANCIS J. SCHWEAD, New York, N. Y. Filed Feb. 23, 1923. Serial No. 620,775. 4 Claims. (Cl. 24—163.)

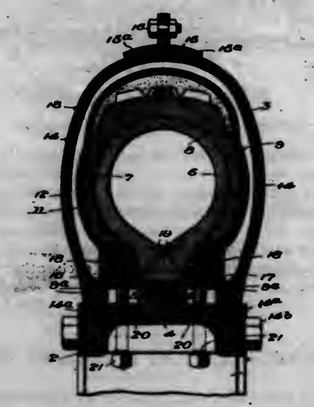


1. A buckle including a frame having a portion struck-up therefrom for yielding engagement with the free end of a belt and a part of the frame correlated to the struck-up portion to co-act therewith, and means for retracting said upstruck portion.

1,483,854. ABRASIVE STONE. JULES H. STEAN, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 26, 1919. Serial No. 279,225. 5 Claims. (Cl. 51—280.)

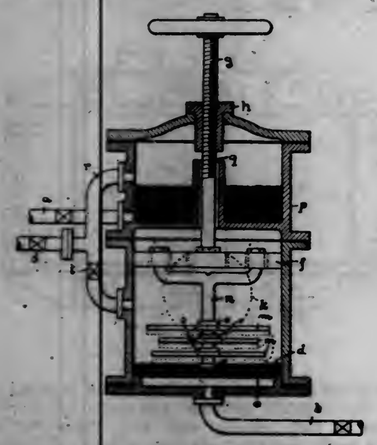
2. An abrasive stone for sharpening fine edges comprising fast cutting, abrasive grains, finely divided graphite intimately mixed therewith and a heat set resinous bond uniting the grains and graphite into a dense, self-lubricating mass.

1,483,855. HASP FASTENER. JAMES E. STEPHENSON, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed May 23, 1921. Serial No. 471,843. 8 Claims. (Cl. 292—281.)



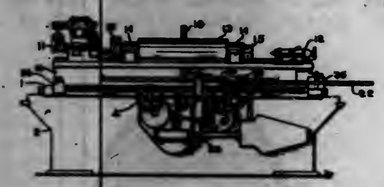
1. In a moisture-proof mechanism casing, a casing provided with adjacent openings, covers for the openings provided on their adjacent ends with alined lugs, and resilient means engaging said lugs to hold the covers to the casing.

1,483,856. METHOD OF MANUFACTURING RUBBERIZED FIBER COMPOSITION. PAUL BEEBE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 4, 1922. Serial No. 599,143. 11 Claims. (Cl. 18—50.)



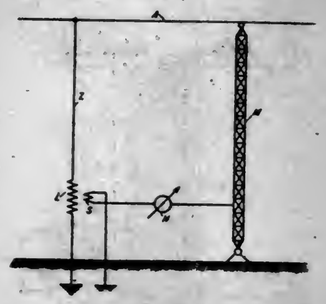
1. The method of making a rubberized fibrous material which consists in depositing a quantity of rubber on a quantity of fibers, permitting the resultant mass to jell, and treating it with means for causing shrinkage of the rubber.

1,483,857. MOLD. JAMES D. FITZHARRIS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 21, 1922. Serial No. 555,844. 10 Claims. (Cl. 18—78.)



1. A segmental mold having a cavity therein adapted to receive a portion of a tire casing comprising, a core arranged to form the inner wall of the cavity, an expansible jacket surrounding the core to form the outer wall of the cavity, and means adapted for adjustment between the walls of the cavity to compress a portion of the casing.

1,483,858. WATER FILTERING AND SOFTENING APPARATUS. GEORGE GRANT HEPBURN, Chorlton-cum-Hardy, England. Filed Aug. 20, 1923. Serial No. 658,420. 2 Claims. (Cl. 210—24.)



1. In a filtering apparatus, a casing, a perforated support in said casing, a mechanical filtering material disposed on said perforated support, a peaty mass upon said mechanical filtering material, a perforated plate arranged upon said peaty mass, a shank depending from the perforated plate, a plurality of independently movable agitating members carried by said shank, and means for limiting the movement of the respective agitating members with relation to said shank.

1,483,859. GRINDING MACHINE FOR FORMING ROLLS. CHARLES H. NORTON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 5, 1921. Serial No. 435,098. 8 Claims. (Cl. 51—100.)

1. A grinding machine comprising a base, a reciprocable table mounted thereon, means for reciprocating said table, a transversely movable table on said reciprocable table, and means including a follower on each of said tables and a forming bar held against longitudinal movement and extending between said followers to move the tables transversely relative to each other as they reciprocate.

1,483,860. ANTENNA ARRANGEMENT FOR WIRELESS TELEGRAPHY. OTTO VON BRONK, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed Sept. 3, 1921. Serial No. 498,425. 5 Claims. (Cl. 250—33.)

1. In radio signalling systems having an antenna supported by a conducting mast, means for impressing an electromotive force on the mast to substantially prevent induced currents therein.

1,483,861. FILLING MACHINE. SAMUEL M. HEULINGS, Haddonfield, N. J. Filed Mar. 19, 1920. Serial No. 367,224. 20 Claims. (Cl. 226—22.)

1. In a filling machine, the combination with means for feeding bottles through the machine in progressive succession, and open topped vessels for premeasuring charges for the bottles by overflow of excess filling and progressively introducing such charges into the bottles during their advance through the machine; of means for replenishing the premeasuring vessels independently of the aforesaid charge-introducing means, and means responsive to wiping contact with a bottle to be filled for controlling the action of the said charge-introducing means.

Patents Nos. 1,483,862 to 1,484,613.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 319—No. 3. TUESDAY, FEBRUARY 19, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Annual Index.

The annual index of patents and trade-marks for 1923 was published on February 4, 1924. For the first time this annual index includes an alphabetical list of trade-mark applications published for opposition, as well as a classified list of trade-mark titles published for opposition.

Amendment to Rules of the Court of Appeals of the District of Columbia.

The following communication received from the clerk of the Court of Appeals of the District of Columbia relative to an amendment to the rules of the court as revised December 4, 1920, is published for the information of those concerned:

Amend Rule VIII as follows:
Paragraph 3: Strike out "September 10" and insert in lieu thereof "September 1." Strike out "October 10" and insert in lieu thereof "October 1."
Paragraph 4: Strike out the words "until the first day of the October Term," and insert in lieu thereof the words "20 days after the first of September." Strike out the words "until the first Monday in November," and insert in lieu thereof the words "20 days after the first of October."

PER CURIAM.

Test:
HENRY W. HODGES,
Clerk.

Promulgated January 26, 1924.

Attorneys—Disbarment.

(ORDER No. 2,853.)

U. S. PATENT OFFICE, *Washington, Jan. 17, 1924.*

Acting under the provisions of section 487 of the Revised Statutes of the United States, as amended February 18, 1922, Mr. J. Reaney Kelly, whose registration number is 10,647, has this day been disbarred from practice before the United States Patent Office.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notice.

U. S. PATENT OFFICE, *Washington, Feb. 9, 1924.*

Hoffheimer Soap Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Theo. B. Robertson Products Company, 700–4 West Division Street, Chicago, Ill., for registration of a trade-mark and trade-marks registered February 13, 1906, and February 6, 1906, No. 49,655 and No. 49,376, respectively, to Hoffheimer Soap Co., 169 Jackson Boulevard, Chicago, Ill., and a notice of such declaration sent by registered mail to said Hoffheimer Soap Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Hoffheimer Soap Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

TRADE-MARKS CANCELED.

168,196. Ladies' hosiery. Marshall Field & Company, Chicago, Ill. Registered May 15, 1923. Canceled January 24, 1924.

168,619. Hammers. The Stanley Works, New Britain, Conn. Registered May 29, 1923. Canceled July 7, 1923.

172,415. Coated paper adapted especially for use for coated papers to be printed or lithographed. McLaurin-Jones Co., Brookfield, Mass. Registered August 28, 1923. Canceled January 24, 1924.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,393,522, C. L. Goodrum, Telephone-exchange system, decided January 11, 1924, claim 7.

Pat. 1,454,441, H. K. Hess, Tone regulator for phonographs, decided January 14, 1924, claims 1 and 2.

Condition of Applications Under Examination at Close of Business February 8, 1924.

Room	(Total number of applications awaiting action, excluding Trade-Mark Division, 63,936; Trade-Mark Division, 1,675. Oldest new case, May 9, 1923; oldest amended, May 10, 1923. The dates given are 1923, except where * indicates 1924.) Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
314	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plant Husbandry; Plows; Planting; Scattering Unloaders.	June 14	June 15	1,123
128	2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco.	May 21	June 13	1,167
175	3. RICH, WM. J., Electric Heating and Rheostats; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Aug. 24	Oct. 5	965
234	4. MERRITT, A. D., Conveyers, Chutes, Skids, Guides, and Ways; Conveyers, Fluid Current; Conveyers, Power Driven; Excavating; Handling—Hand and Hoist-Line Implements; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	June 11	June 22	1,233
167	5. MACNAB, J. F., Bookmaking; Books, Strips, and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	June 1	June 4	1,399
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemicals; Chemistry—Carbon Compounds; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	May 18	June 28	1,797

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

EX PARTE BELDEN.

Decided January 24, 1924.

1. APPEAL TO EXAMINERS IN CHIEF—MATTERS OF FORM.
   Matters of form affecting the claims appealed or finally rejected must be settled before a case can be appealed to the Examiners in Chief, but other matters of form can be maintained in abeyance until the appeal is settled.
2. SAME—SAME—POST-OFFICE ADDRESS.
   The requirement as to post-office address is not statutory and would not affect the hearing and determination of an appeal to the Examiners in Chief.
3. SAME—SAME—SAME—ABANDONMENT.
   Where on final rejection of his claims applicant was for the first time required to state his post-office address and a few days before the statutory period for appeal expired attention was again called to the requirement, whereupon the applicant filed an appeal without complying therewith, *Held* that applicant was entitled to petition from the requirement at any time within the year from the date of repetition thereof and that no question of abandonment was raised.

ON PETITION.

BRAKE-OPERATING MECHANISM.

Mr. Chester H. Braselton for the applicant.

KINNAN, *First Assistant Commissioner:*

Petition is taken that the Examiner be instructed to withdraw his holding of abandonment and to forward the appeal.

The record shows that on November 24, 1922, all claims were finally rejected, and it was stated in this action that applicant's complete post-office address, submitted over his own signature, should be filed. This was the first time this requirement was made.

An amendment was presented November 12, 1923, slightly changing the wording of the second and third claims, and entry of the amendment was requested for the purpose of placing the application in better condition for appeal.

On November 19, 1923, the Examiner informed the applicant that the said amendment had been entered, but that such entry did not relieve the application from the running of the abandonment period ending November 24, 1923. Attention was again called to the requirement as to applicant's post-office address.

On November 22, 1923, an appeal to the Examiners in Chief was filed.

On November 30th the Examiner held the case abandoned for failure to file the post-office address of the applicant.

The Examiner in his statement relies on the provisions of rule 33, requiring the post-office address in the petition, and states that to forward an appeal with the former criticism still standing would have been contrary to rule 134. While rule 134 states that—

> all preliminary and intermediate questions relating to matters not affecting the merits of the invention

must be settled before a case can be appealed, this does not mean that all matters of form in an application must be settled before an appeal can be taken.

[1] Matters of form affecting the claims appealed or finally rejected must be settled, as shown by such decisions as *ex parte Dodge*, 125 O. G., 665; *ex parte Phillips*, 135 O. G. 1801. But it has been held that other matters of form can be maintained in abeyance until the appeal is settled. See *ex parte Proctor*, 138 O. G. 258.

[2, 3] The requirement as to post-office address is not statutory and would not affect the hearing and determination of the appeal. This case is quite similar in some respects to the case of *ex parte Thomas*, 124 O. G. 623, and following the decision in that case it is held that applicant having filed his appeal within the year no question of abandonment is raised; furthermore, that as the Examiner repeated his requirement for the post-office address November 19, 1923, applicant was entitled to petition therefrom at any time within the year from that date.

The petition is granted.

LOTT *v.* TUCKER AND REEVES *v.* PEILER.

Decided December 10, 1923.

1. INTERFERENCE—MOTION UNDER RULE 157—INTRODUCTION OF TESTIMONY FROM ANOTHER INTERFERENCE.
   In order to justify granting a motion under rule 157, the testimony endeavored to be brought into the case must be pertinent, proper, and timely.
2. SAME—SAME—SAME—TO IMPEACH A WITNESS.
   In order to use depositions given in another interference to impeach a witness not a party to the litigation, the witness must be confronted with the alleged contradictory matter.
3. SAME—SAME—SAME—WITNESSES NOT CONFRONTED WITH CONTRADICTORY TESTIMONY.
   Where no effort was made in the present interference to confront the witnesses with the portions of the depositions included in the motion, *Held*, that the Examiner of Interferences was right in his denial of the motion with respect to the parts of the depositions of witnesses who were not parties to the interferences, and the accompanying exhibits from the other interference.
4. SAME—SAME—SAME—SAME.
   Notice in interference A that depositions will be relied on in interference B to contradict witnesses there is not such confronting of witnesses in interference B with contradicting statements as will justify introducing depositions from interference A into interference B under rule 157.

5. SAME—SAME—SAME—SAME—TESTIMONY OF PARTY TO THE INTERFERENCES.

The testimony given in another interference by a party to both interferences in order to be introduced in the present case must be directed to the same matter testified to here and must be inconsistent with the testimony here.

6. SAME—SAME—SAME—PRIMA FACIE CASE MUST BE MADE OUT.

The depositions from another case offered to contradict testimony given here need not be carefully examined and compared at the time they are admitted, but a prima facie case must be made out.

7. SAME—SAME—SAME—INTRODUCED PORTION FRAGMENTARY.

A party may introduce such portions of the record as he thinks pertinent, leaving the opposing party free to introduce such other portions as may be necessitated thereby.

8. SAME—SAME—SAME—NO REASON FOR DISCLOSING MATTER INVOLVED IN OTHER INTERFERENCE TO PARTIES WHO ARE NOT PARTIES THERETO.

The sole purpose of introducing the matter covered by the motion is to attack the case made out by P. As such it is a matter strictly between P. and T. and R., and there seems to be no reason for disclosing to L. the entire matter involved in interference No. 44,251.

9. SAME—SAME—SAME—ALL PARTIES NEED NOT BE THE SAME IN THE TWO INTERFERENCES.

It is not necessary for all the parties to be the same in two interferences in order to have matter brought in under rule 157.

10. SAME—SAME—SAME—TESTIMONY NOT YET TAKEN.

When witnesses in interference A are to testify subsequently in interference B, a motion under rule 157 cannot be granted to introduce into A testimony not yet taken in interference B.

On Request for Amplification, December 14, 1923.

11. SAME—SAME—SAME—DEPOSITION NEED NOT BE CERTIFIED.

Where portions of P.'s testimony were attached to T. and R.'s motion and no effort was made to show that they are not correct copies of the portions of the P. deposition in interference No. 44,251, there is no reason that they should be certified here.

12. SAME—SAME—SAME—GRANTING OF MOTION MAKES DEPOSITIONS A PART OF THE RECORD.

The granting of the motion by T. and R. to admit under rule 157 makes those portions of the testimony admitted a part of the record in this case as of the date of the motion. They will be printed by T. and R. as their record and will go to the court of appeals from this Office as printed record for T. and R.

ON APPEAL.

FEEDING MOLTEN GLASS.

Mr. John P. Rule and *Messrs. Milans & Milans* for Lott.

Mr. Edwin P. Corbett for Tucker and Reeves.

Mr. Wm. H. Honiss and *Messrs. Dorsey & Cole* for Peiler.

FENNING, *Assistant Commissioner:*

This is an appeal by Tucker and Reeves from the action of the Examiner of Interferences denying their motion under rule 157 to use testimony from another interference, No. 44,251, *Peiler* v. *Tucker and Reeves.*

In that interference Peiler testified and also produced as witnesses on his behalf Hunter and Lorenz. Peiler and Hunter began to testify in interference No. 44,251, but their depositions were interrupted to take their depositions in the present case, after which their depositions in No. 44,251 were proceeded with. Lorenz' testimony in the present case was taken before his testimony in No. 44,251.

The direct and cross examination in the present case of all three witnesses was concluded without bringing to their attention the testimony now offered. After the closing of Peiler's testimony and during the time set for taking testimony for Tucker and Reeves no witnesses were produced, but exhibits were put in evidence for Tucker and Reeves, and on the last day of their time a motion under rule 157 was made to use certain specific portions of the depositions in No. 44,251 of the three witnesses who had also testified in the present case. The motion also sought to bring into the present case exhibits from interference No. 44,251. The motion also set out that the testimony in interference No. 44,251 had not terminated and asked leave to bring into this case such portions of the subsequent testimony in that interference as might be desired. The sole purpose of bringing into the present case testimony from interference No. 44,251 is to discredit, weaken, lessen the weight of and nullify the testimony of the witnesses Peiler, Hunter, and Lorenz, given in this interference, by showing inconsistent statements made by such witnesses at different times in the different interferences.

The parties have referred to a number of cases interpreting and construing rule 157, including *Stone* v. *Hutin and Leblanc*, 1898 C. D. 191; 84 O. G. 1731; *Talbot* v. *Monell*, 1902 C. D. 216; 99 O. G. 2966; *Hall* v. *Weber*, 1904 C. D. 55; 108 O. G. 1054; *Kenny and Thordarson* v. *O'Connell* v. *Baird* v. *Schmidt*, 1905 C. D. 257; 117 O. G. 1163; *Struble* v. *Young*, 1905 C. D. 459; 119 O. G. 338; *Beall* v. *Lyon*, 1907 C. D. 116; 127 O. G. 3215; *Hewitt* v. *Weintraub*, 1908 C. D. 140; 134 O. G. 1561; *Moyer* v. *Anglada*, 1920 C. D. 86; 281 O. G. 789; *Olson* v. *Pospeshil*, 1921 C. D. 128; 238 O. G. 365; 50 App. D. C., 182.

[1] It will not be necessary to review these decisions here. They apparently establish the fact that rule 157 does not endeavor to wipe out all of the ordinary rules of evidence or procedure. It is clear that in order to justify granting a motion under rule 157, the testimony endeavored to be brought into the case must be pertinent, proper, and timely.

[2, 3] Hunter and Lorenz are not parties to the present interference or to interference No. 44,251. It is clear from Wigmore on Evidence, second edition, sections 1017 to 1046, that in order to use other depositions to impeach a witness, the witness must be confronted with the alleged contradictory matter. No effort in the present case was made to confront the witnesses with the portions of the depositions included in the motion. I must therefore conclude that the Examiner of Interferences was right in his denial of the motion under rule 157 with respect to the parts of the depositions of Hunter and Lorenz, and the accompanying exhibits from interference No. 44,251. This seems definitely settled by *Moyer* v. *Anglada, supra.*

Tucker and Reeves argue that since the witnesses Hunter and Lorenz had finished their testimony in the present case before they had given at least a part of what is proposed to be brought over from interference No. 44,251, they should be relieved of the requirement of confronting the witnesses with their contradictory statements, but there is no reason why the witnesses should not have been recalled in the present case and confronted with their testimony from interference No. 44,251. (See Wigmore, section 1036.) Indeed, I am unable to find authority for employing testimony from another case to contradict a witness when the contradictory testimony from the other case was given after the testimony to be contradicted. Every case that I have found relates to the use for contradictory purposes of testimony given before that which is to be contradicted.

[4] It seems that Tucker and Reeves gave some sort of a notice on the record in interference No. 44,251, that some of the testimony in that case might be used to contradict testimony in the present case, but that notice is not and cannot be relied upon here.

As pointed out in *Moyer* v. *Anglada*, the testimony of Peiler, a party to both this interference and interference No. 44,251, stands on a different footing. As stated in section 1051 of Wigmore:

> The rule requiring that the witness must have been warned when on the stand, and asked whether he had made the statement about to be offered as a self-contradiction has always been understood not to be applicable to the use of a party's admissions, i. e., they may be offered without a prior warning to the party.

In *Moyer* v. *Anglada*, the party Moyer had not testified. The fact that Peiler, a party, did testify in the present case does not make the holding in *Moyer* v. *Anglada* inapplicable here. (See footnote 1, Wigmore, section 1051.)

[5, 6] It is true, however, that the testimony of Peiler from interference No. 44,251, in order to be introduced under rule 157 in the present case, must be directed to the same matter testified to here and must be inconsistent with the testimony here. This does not mean that it is incumbent upon us at the present time to carefully examine the Peiler deposition here and compare it with the portions of the Peiler deposition to be brought over from interference No. 44,251. It does mean, however, that a prima facie case must be made out. The Examiner of Interferences found such prima facie case was not made out, apparently on the theory that the statements in the motion itself were not sufficient.

In support of the motion and attached thereto, the moving party set out that in interference No. 44,251 Peiler in support of his contention has directed his testimony to the same paddle feeders and the same plunger feeder as form the basis of his testimony in the present interference. In the brief here they point out that there are inconsistencies. Peiler in opposing the motion here apparently does not contend that the portion to be brought over from interference No. 44,251 is not pertinent, but rather that it is not brought over in a proper manner under rule 157.

The brief filed here for Peiler says:

> The Peiler extracts, however, may if they satisfy the "rule of completeness" be proper as being an admission of a party in interest.

I am satisfied then that the prima facie case referred to in section 1040 of Wigmore on Evidence has been made out.

[7] Peiler objects because the portion of the deposition attempted to be brought by the motion is fragmentary, but the general rule must be applied here that a party may introduce such portions of the record as he thinks pertinent, leaving the opposing party free to introduce such other portions as may be necessitated thereby. (Wigmore, section 1045.)

Neither Wadsworth nor Lott is a party to interference No. 44,251. Wadsworth took no part in the hearing here on this appeal, but Lott appeared and objected to any consideration of the motion on the ground that since he was not a party to interference No. 44,251, he had no opportunity to examine the record and the depositions there and, consequently, was unable to intelligently consider the portions of the deposition served on him with Tucker and Reeves's motion. Lott additionally objected because the exhibits referred to in the motion were not furnished him.

[8] The sole purpose of introducing the matter covered by the motion is to attack the case made out by Peiler. As such it is a matter strictly between Peiler and Tucker and Reeves, and there seems to be no reason for disclosing to Lott the entire matter involved in interference No. 44,251, although, of course, Tucker and Reeves are free to do so if they see fit.

Tucker and Reeves point out that Hunter and Lorenz are employees of the Hartford-Fairmont Company, and that they have contractual relations with them with respect to inventions. This company owns the present Peiler application, as well as the Peiler application involved in interference No. 44,251. Because of this it is argued that the Hartford-Fairmont Company is a party in interest in both interferences, and that Hunter and Lorenz are agents of the company, and that, consequently, the matter endeavored to be brought over from interference No. 44,251 is matter going not merely to discredit the witness, but matter going to testimonial impeachment of a party. The argument is naive, interesting, and enticing, but I am unable to believe that it should be followed in the absence of controlling authority and this has not been produced.

[9] The cases cited above seem clearly to indicate that it is not necessary for all the parties to be the same in two interferences in order to have matter brought in under rule 157.

[10] It seems clear that the motion to introduce from interference No. 44,251 testimony not yet taken should be denied, since this case can not be delayed thus indirectly by that case.

The motion is granted to the extent only that the testimony of Peiler in interference No. 44,251 and the accompanying exhibits included in the motion may be admitted under rule 157. The remainder of the motion is denied.

To the extent indicated the Examiner of Interferences is affirmed.

On Request for Amplification, December 14, 1923.

[11, 12] Peiler asks for amplification of my decision of December 10. It is the custom for this Office to refer to documents on file without having them specifically certified. Portions of the Peiler testimony were attached to Tucker and Reeves's motion and no effort has been made to show that

they are not correct copies of the portions of the Peiler deposition in interference No. 44,251. There is no reason that they should be certified here. Peiler took the testimony in interference No. 44,251, and he can readily ascertain whether the extracts attached to the motion are true copies. The granting of the motion to admit under rule 157 makes those portions of the testimony admitted a part of the record in this case as of the date of the motion. They will be printed by Tucker and Reeves as their record and will go to the court of appeals from this Office as printed record for Tucker and Reeves.

U. S. Circuit Court of Appeals—Sixth Circuit.

TOLEDO MACHINE & TOOL CO. *v.* E. W. BLISS CO.
E. W. BLISS CO. *v.* TOLEDO MACHINE & TOOL CO.

Decided March 9, 1923.

[287 Fed. Rep. 443.]

1. PATENTS—KLOCKE PATENT, 955,173, HELD INVALID AS TO CLAIMS 1, 2, AND 3, AND VALID AND INFRINGED AS TO CLAIMS 4, 5, 6, AND 7.

Klocke patent, No. 955,173, for a drawing or punch press for sheet metal, *Held* invalid as to claims 1, 2, and 3 and valid and infringed as to claims 4, 5, 6, and 7.

2. SAME—SUPERIORITY NOT NEGATIVE OF INFRINGEMENT.

Superiority does not necessarily negative infringement.

APPEAL and cross appeal from the District Court of the United States for the Northern District of Ohio; D. C. Westenhaver, judge.

Suit for infringement between the Toledo Machine & Tool Company and the E. W. Bliss Company. From a decree the former appeals, and the latter cross appeals. Affirmed.

Mr. A. J. Hudson (*Messrs. Thurston, Kwis & Hudson* on the brief) for Toledo Machine & Tool Co.

Mr. Arthur C. Fraser (*Mr. Gustave R. Thompson, Messrs. Fraser, Turk & Myers*, and *Mr. Charles S. Wachner* on the brief) for E. W. Bliss Co.

Before KNAPPEN, DENISON, and DONAHUE, Circuit Judges.

KNAPPEN, *Cir. J.*:

[1] Suit for infringement of United States Patent No. 955,173, April 19, 1910, to Klocke, for a drawing or punch press for sheet metal. The structure of the patent consists of a vertically-acting press, having at its lower end a stationary bed which carries the lower die, upon which the material is clamped and worked; also having a blank holder, which is guided upon side frames of the machine, and a plunger or press (carrying the upper die), which is guided within the blank holder. A primary rotary transverse shaft located at the upper end of the machine operates a large gear wheel at each end of the shaft, and on the outside of the machine frame. Each of these gear wheels is connected with one end of each of three other transverse shafts; one being a rotary crank shaft, geared at each end to the inner side of the gear wheel, the crank shaft operating the plunger through links connected at their upper ends to the cranks. The other two shafts are rockshafts, one on each side of and parallel to the crank shaft, and in a somewhat higher plane. Each end of these rockshafts is operated by the gear wheel through a pitman connected at its upper end by a crank pin to the outside of the gear wheel, and at its lower end to a reciprocating slide located between the large gear and the outside of the side frame of the machine upon which it is guided; the slide being in turn connected by a link mechanism carried up on the inside of the large gear to a connection with the end of the rockshaft, which in turn, by means of toggle links, communicates pressure to the blank holder. There being one link at each end of each of the two rockshafts, the pressure is thus exerted at each of the four corners of the blank holder. This distribution of power at each end of the machine, that is to say, from each end of the three shafts, is sometimes spoken of in the record as the "triple bilateral distribution" and sometimes as creating "bilateral symmetry." The connection between the gear wheel and the ends of the rockshafts, by which the mechanism is carried down the outside of the gear wheel and then up on the inside thereof to one end of the rockshaft, is called in the record the "straddle drive." We print in the margin the seven claims of the patent,[1] each of which is in issue. The defenses are invalidity for lack of invention and noninfringement. The district court held claims 1, 2, and 3 invalid, and claims 4, 5, 6, and 7 valid and infringed. Each party appeals.

The art in question was old and well developed previous to the application for the patent in suit. There was nothing new in using driving gears at each end of a crank shaft operating the plunger, nor in using two rockshafts for actuating the blank holder, nor in driving the same at both ends, nor in the use of a slide for transmitting motion to the rockshafts, nor in the use of toggle-actuated mechanism for transmitting motion from the rockshafts to the blank holder. But, while all these several uses were old, they were not all found in any one embodiment of the prior art. Invention may be found in the combining of these separately old elements in such a way as to produce a new result, or to produce the old result in a new and materially better way. Concededly, a drawing press with a crank shaft driven by gears at both ends, with two toggle-actuating rockshafts driven from that crank shaft equally at both ends, was new. Equally admittedly, the prior art did not disclose a drawing press with a crank shaft at the top of the press driven by twin gears on its ends[2] and two rockshafts located between such gears, and any means for taking motion from the outer sides of both gears and transmitting such motion around both gears to the ends of both rockshafts on the inner sides of the gears. Indeed, the so-called "straddle drive" seems a new element as applied to a drawing machine of this character. The device of the patent was thus not anticipated.

The question of validity is merely one of invention, in view of the prior art. That the structure of the patent had pronounced advantages over the prior art is apparent. The driving of both the crank shaft and the rockshafts from both ends relieves the torsional strain likely to result from the application of power to but one end, thus practically requiring the power from each end to operate only to the center of the shaft, causing a more even and regular movement, and permitting the use of smaller shafts[2], and, as applied to the rockshafts, makes the blank-holder pressure more uniform. None of the power which operates the blank holder is transmitted directly from the crank shaft, although supplied from the same source of power, but each carries only its own normal load. As pointed out by the district judge, the location of the driving wheels outside the frame of the machine gives more room between the side frames for the operating mechanism of both plunger and blank holder, and thus permits a greater width of work than was practicable under the prior art, and the device of the patent has increased quantity production of large size stampings, especially the stamping of large automobile and fender parts, which require machines of enormous size, sometimes weighing more than 100 tons. We have no difficulty in agreeing with the district judge that the structure of the Klocke patent in suit brings not only a better result than attainable in the old art, but produces that result in a materially better way, and that what Klocke accomplished amounted, broadly speaking, to invention, and not merely mechanical skill.

We also agree with the district judge that claims 1 and 2 do not involve invention. Neither contains the straddle drive. The plunger actuating shaft of claim 1 is not driven at both ends. While claim 2 contains such feature, it calls for no specific mechanism, and neither claim contains anything patentable over the prior art. Claim 4 clearly involves invention. It calls not only for complete bilateral symmetry, but it calls for driving gears located outside the machine frame, together with slides between the gears and the side frames and guided thereupon. We cannot agree with defendant that the specification fails sufficiently to describe the so-called straddle drive. We think the specification, in connection with the drawings, fairly shows that the power actuating the rockshafts is carried by means of the pitman and slide, from the outer side of the gear wheel, under the same, and then upwards on the inner side of the gear wheel to the rockshaft.

Claim 3 differs from claim 4 only in that it calls for a one-end drive for both crank shaft and rockshafts. It has the straddle drive, and there is force in the suggestion that this straddle drive alone is enough to create invention. But no machine of that character has been built, or seems likely to be built. Such a machine would not serve the substantial purposes of the patent in suit, in that it lacks bilateral symmetry and does not make possible a very substantial broadening of the machine, and so has little, if any, increased utility as compared with double-driven operation of both crank shaft and rockshafts. Nor have we the benefit of favorable reception by the public or acquiescence therein as affecting the question of useful invention. We are therefore inclined to regard the claim as invalid.

In our opinion, claim 5 involves invention. Both the crank shaft and rockshafts are double-driven. The gears are outside the frame of the machine and the claim calls for link transmission between the rockshafts and blank holder. Its validity thus falls directly within the first of the concessions of novelty before referred to. True, it differs from claim 2 only in calling (in effect) for gears outside the frame of the machine and link transmission from rockshafts to blank holder; but we think these differences enough to distinguish. We do not think it open to criticism as being merely an aggregation. We think both claims 6 and 7 involve invention. Each calls for bilateral symmetry, for gear wheel connection with the outer ends of the crank shaft, and means for transmitting the motion of the gear wheels to the rockshafts. Claim 7 in terms calls for toggle-actuating mechanism between rockshafts and blank holder. While claim 6 omits the link element, we are not impressed that this omission is sufficient to negative validity.

[2] Defendant's construction is practically identical with the structure of the Klocke patent, except in two particulars: First, defendant has cut away the central and comparatively nonessential portion of each of the two rockshafts, and, by the use of an additional gear at each end, making practically four rockshafts, instead of two; second, as the slide of defendant's press operates below the gear mechanism, additional linkage is provided between the lower end of the pitman and the rockshaft connection. But both in respect to the rockshafts themselves and the link connection defendant's machine operates in substantially the same way and produces the same result. We think defendant's mechanism in both the respects referred to is the mechanical equivalent of the mechanism of the patent in suit, although it is probably true that defendant's rockshaft construction is superior to Klocke's. The same may be true of the lower-plane location of defendant's slides; but it is commonplace that superiority does not necessarily negative infringement.

It results from the views we have stated that claims 1, 2, and 3 should be held invalid, and claims 4, 5, 6, and 7 held valid and infringed.

The decree of the district court is accordingly affirmed. The costs of this court will be divided.

[1] 1. A drawing press having a plunger and a blank holder, a rotary shaft actuating said plunger, a pair of rock shafts actuating said blank holder; and mechanism at each end of said plunger actuating shaft for transmitting the motion thereof to each end of said rock shafts.

2. A drawing press having a plunger and a blank holder, a rotary shaft actuating said plunger, a pair of rock shafts actuating said blank holder, and mechanism at each end of said plunger actuating shaft for transmitting the motion thereof to each end of said rock shafts, and gearing at each end of said plunger actuating shaft for driving it with equal pressure at each end.

3. A drawing press having a plunger actuating shaft, a driving gear at the end thereof, and a blank holder actuating slide driven from said gear, located between said gear and the side frame of the machine and guided upon the side frame of the machine.

4. A drawing press having a plunger actuating shaft and driving gears M M' at opposite ends thereof, and blank holder actuating slides A A' driven from said gears, located between said gears and the side frames of the machine, and guided upon the side frames of the machine.

5. A drawing press having a plunger, a shaft J, cranks H H' on said shaft, links F F' between said cranks and opposite portions of the plunger, end bearings for the shaft located closely adjacent to said cranks, gears M M' upon the opposite ends of said shaft, a shaft O carrying pinions N N' engaging the respective gears M M' whereby said shaft is driven with equal force at its opposite ends, and the strain is evenly distributed upon the plunger and at opposite parts of the shaft, a blank holder, a pair of rock shafts for actuating it, and links transmitting the motion of said rock shafts to opposite portions of the blank holder, said rock shafts also being driven with equal force at their opposite ends.

6. A drawing press having a plunger, a shaft J, cranks H H' on said shaft, links F F' between said cranks and opposite portions of the plunger, end bearings for the shaft located closely adjacent to said cranks, gears M M' upon the opposite ends of said shaft, and a shaft O carrying pinions N N' engaging the respective gears M M' whereby said shaft is driven with equal force at its opposite ends and the strain is evenly distributed upon the plunger and at opposite parts of the shaft, a blank holder, a pair of rock shafts *o o'* for actuating the same, and means for transmitting the motion of said gears M and M' to said rock shafts, said transmitting means being located at opposite sides of the machine so as to positively actuate the opposite ends of each of the shafts *o o'* from the gear at the corresponding side of the machine, so as to maintain a uniform load upon said gears and to exert a uniform strain upon said rock shafts.

7. A drawing press having a plunger, a shaft J, cranks H H' on said shaft, links F F' between said cranks and opposite portions of the plunger, bearings for the shaft located closely adjacent to said cranks, gears M M' upon the opposite ends of said shaft, and a shaft O carrying pinions N N' engaging the respective gears M M', whereby said shaft is driven with equal force at its opposite ends and the strain is evenly distributed upon the plunger and at opposite parts of the shaft, a blank holder A, a pair of rock shafts *o o'* for actuating it, links transmitting the motion of said rock shafts to opposite portions of the blank holder, and means for transmitting the motion of the gears M M' to both ends of each of said rock shafts so as to drive them with equal force at opposite ends.

[2] The reference to a drawing press with a crank shaft at the top of the press is possibly made to distinguish a machine with an immovable bed from one whose bed is movable, and the pressure thus upwards.

[2] Some of those in use are 10 to 12 inches in diameter.

ADJUDICATED PATENTS.

(C. C. A. Cal.) The Wallace patent, No. 959,976, for pavement, claim 2 *Held* not infringed. *Warren Bros. Co.* v. *Thompson*, 293 Fed. Rep. 745.

(D. C. Ill.) The Cassidy patent, No. 1,064,289, for folding stool, *Held* valid and infringed. *Cassidy* v. *Evan D. Reed Mfg. Co.*, 293 Fed. Rep. 797.

(D. C. Wash.) The Carson patents, Nos. 1,149,495 and 1,302,307, for metallurgical furnaces, *Held* void for anticipation. *Carson* v. *American Smelting & Refining Co.*, 293 Fed. Rep. 771.

(C. C. A. 8th.) The Gross patent, No. 1,380,058, for automobile parking light, claim 3 *Held* valid and infringed. *Gross* v. *Frank*, 293 Fed. Rep. 702.

PATENT SUITS.

[Notices under section 4921, Revised Statutes, as amended February 18, 1922.]

989,939, W. E. Allington, Dust collectors, suit filed Nov. 14, 1923, D. C., Del., Doc. E 532, *W. E. Allington et al.* v. *The Shevlin-Hixon Co.*

TRADE-MARKS

OFFICIAL GAZETTE, FEBRUARY 19, 1924.

[VOL. 319. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 130,850. (CLASS 32. FURNITURE AND UPHOLSTERY.) ROYAL METAL MANUFACTURING CO., Chicago, Ill. Filed Apr. 8, 1920.

"Royal-Chicago"
PRODUCTS

No claim is made to the words "Chicago" or "Products" apart from the mark shown in the drawing.

Particular description of goods.—Wire Furniture Consisting of Wire Chairs, Wire Stools and Wire Tables with Vitreous Tops of the Type Used in Restaurants and Ice-Cream Parlors; Washstands, Hatracks, Costumers, Mirrors Pivoted to Tables and the Like, and Metal-Framed Mirrors Pivoted on Metal Supports, Such as Shaving Mirrors and Those Other Than the Precious-Metal Type.

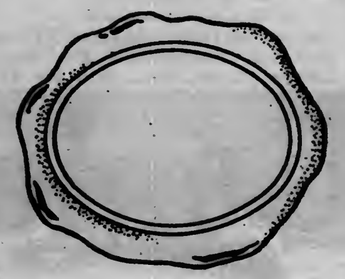
Claims use since Nov. 11, 1913.

Ser. No. 137,290. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE ROSELLA PRESERVING AND MANUFACTURING COMPANY LIMITED, Richmond, Victoria, Australia. Filed Sept. 17, 1920.

ROSELLA

Particular description of goods.—Deciduous Fruits, Honey, Tomato Sauce, Worcestershire Sauce, and Chutney Sauce.

Claims use since 1912.



Ser. No. 143,546. (CLASS 12. CONSTRUCTION MATERIALS.) ALFRED BOOTHE CALLAGHAN, New York, N. Y. Filed Feb. 14, 1921.

Caltex

Particular description of goods.—A Waterproofing and Protective Coating for Use on Construction Materials.

Claims use since May 6, 1920.

Ser. No. 151,064. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) THE RIESER COMPANY, New York, N. Y., assignor to The Rieser Company, Inc., New York, N. Y., a Corporation of New York. Filed July 28, 1921.

Particular description of goods.—Hair Nets.

Claims use since May 1, 1907.

Ser. No. 151,358. (CLASS 32. FURNITURE AND UPHOLSTERY.) WM. CAMERON & CO. INC., Waco, Tex. Filed Aug. 4, 1921.

IDEAL

Particular description of goods.—Built-In Furniture Comprising Sideboards, Window Seats, Mirrors, and Bathroom Cabinets.
Claims use since Oct. 1, 1920.

Ser. No. 156,278. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) EDGAR T. HORSEY, Cleveland, Ohio. Filed Dec. 5, 1921.

LENS-EYE

Particular description of goods.—Devices Adapted to be Applied to Headlight Lenses for Preventing Glare in Headlight Lenses.
Claims use since Sept. 1, 1921.

Ser. No. 156,819. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) ANDROSCOGGIN MILLS, Lewiston, Me. Filed Dec. 17, 1921.

COLONIAL

Particular description of goods.—Cotton Sheetings, Sheets, Pillowcases, and Quilts.
Claims use since February, 1889.

Ser. No. 159,184. (CLASS 39. CLOTHING.) SIGMUND EISNER COMPANY, Red Bank, N. J., and New York, N. Y. Filed Feb. 10, 1922.

EISNER-DUPONT

Particular description of goods.—Coats and Trousers.
Claims use since Mar. 1, 1921.

Ser. No. 164,701. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THE GENIE PRODUCTS COMPANY, Dayton, Ohio. Filed May 31, 1922.

The lines on the drawing are shading and do not indicate color.
Particular description of goods.—Powdered Cleaner with Incidental Water-Softening Properties.
Claims use since about Aug. 20, 1921.

Ser. No. 164,758. (CLASS 39. CLOTHING.) THE HIRSHMAN BROS. COMPANY, doing business as Polo Knitting Mills, Cleveland, Ohio. Filed June 1, 1922.

POLO

The lining on the drawing is for shading only.
Particular description of goods.—Hosiery; Men's, Women's, and Children's Underwear in Knitted and Textile Fabric, But Not in Silk Fabric.
Claims use since April, 1921.

Ser. No. 165,060. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) THE BARIO METAL CORPORATION, New York, N. Y. Filed June 6, 1922.

NILO

Particular description of goods.—High-Resistance Alloys and Metal Castings and Forgings.
Claims use since May 1, 1922.

Ser. No. 165,622. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CHESEBRO BROTHERS & ROBBINS, INC., New York, N. Y. Filed June 17, 1922.

No claim is made to the word "Brand" and the phrase "Warranted Top Quality" apart from the mark as shown.
Particular description of goods.—Fresh Fish.
Claims use since about May 24, 1922.

Ser. No. 166,403. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE OWL DRUG COMPANY, San Francisco, Calif. Filed July 1, 1922.

Particular description of goods.—Witch Hazel, Preparation for Destroying Insects and Vermin, Bronchial Troches, Coconut-Oil Shampoo, Headache Pellets, Saponaceous Antiseptic for Teeth, Medicinal Scalp Treatment, Cocoa Butter, Chemical Garden Spray for Insects, Liver Tablets, Solution of Citrate of Magnesia, Hair Tonic, Toilet Waters, Perfumery, Headache Powders, Sandalwood Oil, Formaldehyde, Grippe and Cold Tablets, Castor Oil, Cough Balsam, Corn Remedy, Complexion Cream, Willow Charcoal Powder for Medicinal Purposes, Chlorate of Potash Tablets, Laxative, Granular Effervescent Bromo, Hair Dressing and Bandoline, Hair Coloring, Dyspepsia Tablets, Elixir Glycerophosphates Compound, Sirup of Hypophosphites, Bay Rum, Dental Cream, Oxalic Acid, Muriatic Acid, Carbolic Acid, Coal-Tar Acid, Bisulphide of Carbon, Sugar of Lead, Iodoform, Sheep Dip, Ether, Copperas, Permanganate of Potash, Chloroform Liniment, Essence of Pepsin, Sea Salt, Vichy Salt, Benzoin Cream, Violet Ammonia, Arnicated Salve, Cod-Liver Oil, Soluble Elastic Capsules of Balsam of Copaiba, Sulphur and Cream-of-Tartar Lozenges, Alkaline Gargle; Condition Powders for Horses, Cattle, Hogs, and Poultry; Horse Liniment, Kissengen Salt, Citrated Magnesia, Nail Bleach, Soluble Phenyl, Skin Cream, Phosphate of Soda, Pile Suppository, Willow Charcoal Tablets, Borated Bay Rum, Carbolic Salve, Liquid Pile Ointment, Preparation for Healing Skin, Eucalyptus Ointment, Boric-Acid Crystals, Powdered Boric Acid, Carmine, Tannic Acid, Powdered Alum, Aniseed, Brown Mixture, Buchu Leaves with Stems, Cardamom Seeds, Artificial Carlsbad Salt, Cascara Bark; Flake White, an External Astringent; Camphorated Chalk, Soda Mint and Rhubarb, Precipitated Prepared Chalk, Chalk and Orris, Wintergreen Chalk, Camomile Flowers; Chinese Shavings, a Hair Dressing Preparation; Cold Cream, Collodion for Medicinal Use, Cream of Tartar, Epsom Salt, Bathing Epsom Salt, Essence of Peppermint for Medicinal Use, Tincture of Ginger for Medicinal Use, Fennel Seed, Flaxseed, Ground Flaxseed, Extract of Cascara Sagrada Aromatic, Extract Cascara Sagrada U. S. P., Glycerin, Glycerin and Rose Water, Benzoinated Glycerin and Rose Water, Carbolated Glycerin and Rose Water, Henna Leaves, Powdered Henna Leaves, Insect Powder, Juniper Berries, Compound Licorice Powder, Lime Water, Lycopodium, Magnesia Carbonate, Moth Wax for Fumigating Purposes, Mustard; Naphthalene Flake, an Insecticide; Oil of Sweet Almonds, Camphorated Oil, Oil of Bergamot, Coconut Oil for Medicinal Use, Oil of Eucalyptus, Lavender Oil, Oil of Wintergreen, Oil of Sassafras, Oil of Skunk, Sulphur Ointment for Medicinal Purposes, Zinc Ointment, Orris Root, Pure Oil of Rose, Chlorate Potash, Powdered Chlorate Potash, Hayden's Viburnum, Powdered Rhubarb, Pure Rochelle Salts, Powdered Asafetida, Gum Asafetida, Saffron, Rose Water, Saltpeter, Salt of Tartar, Sarsaparilla Root, Sassafras Bark, Senna Leaves, Aromatic Spirit of Ammonia, Sweet Spirits of Niter, Spirits of Camphor, Sulphur, Pure Oil of Turpentine for Medicinal Use, Venice Turpentine, Tincture of Arnica, Tincture of Benzoin Compound, Tincture of Chloride of Iron, Tincture of Green Soap, Tincture of Myrrh, Zinc Oxide, Niter Paper, Dobell's Solution, Sulphur and Cream-of-Tartar Lozenges, Granular Agar (Constipation Remedy), Paraffin Oil for Medicinal Use, Ant Poison, Bedbug Poison, Vermifuge and Worm Confections, Toothache Drops, Lithia Tablets, Glycerin Suppositories, Soda-Mint Tablets, Seidlitz Powders, Sanitary Fluid (Germ Destroyer), Mouth Wash, Denatured Alcohol, Chloroform, Aqua Ammonia, Concentrated Ammonia, Tincture of Iodine, Compound Cathartic Pills, Lanolin Hydros, Calomel and Soda Tablets, Japanese Menthol, Blue Ointment, Powdered Pepsin, Oil of Cedar, Oil of Cloves, Oil of Lavender Flowers, Goose Oil for Medicinal Purposes, Oil of Peppermint for Medicinal Purposes, Zinc Sulphate, Tincture of Larkspur N. F., Spanish Saffron for Medicinal Purposes, Preparation for Preserving Eggs, Quinine Capsules, Calomel, Foot Powder, Elixir of Colchicum and Salicylates, Sirup White Pine Compound, Antiseptic Vaginal Wash, Poison-Oak Solution, Solution of Iron of Magnesia Peptonate, Talcum Powder, Preparation for Treatment of Asthma, Wine of Beef and Iron (Tonic); Borotans, an Antiseptic Astringent; Vaginal Suppositories, Aromatic Cascara Laxative, Eucalyptus Menthol and Honey, Catarrh Remedy, Aromatic Castor Oil, Corn Paint, Chilblain Remedy, Borated Antiseptic Solution Thymolated, Elixir Gentian Glycerinated, Cod-Liver Oil with Hypophosphites; Elixir Iron Phosphate, Quinine, and Strychnine; Chest Oil Used for Relief of Soreness and Congestion, Elixir Glycerophosphates, Tonic Hypophosphite Sirup, Flea Poison, Hat Dye, Hat Bleach, Sirup Trifolium Compound, Kidney and Liver Tea, Penetrating Liniment, Insect Powder, Calcined Magnesia; Buchu, Juniper, Uva Ursi Compound; Mentholyptine, Blood Sirup, Kidney and Liver Medicine, Soda Bicarbonate, Antiseptic Powder, Capsules of Olive Oil for Medicinal Use; Liquid Tooth Wash, and Aspirin Tablets.
Claims use since Jan. 16, 1900.

Ser. No. 166,431. (CLASS 12. CONSTRUCTION MATERIALS.) BIRMINGHAM CLAY PRODUCTS CO., Birmingham and Sibleyville, Ala. Filed July 3, 1922.

RADIO MATT BRICK

No claim is made to the words "Matt Brick" apart from the mark as shown.
Particular description of goods.—Face Brick.
Claims use since May 22, 1922.

Ser. No. 167,173. (CLASS 32. FURNITURE AND UPHOLSTERY.) GOLD FURNITURE COMPANY, Chicago, Ill. Filed July 21, 1922.

No claim made to the words "Sanitized," "Upholstered Furniture," and "Lasts Longer" apart from the mark shown. The applicant reserves all common-law rights to the mark as used.
Particular description of goods.—Living-Room Furniture—to wit, Rocking-Chairs, Armchairs, and Wing or Fireside Chairs.
Claims use since June 15, 1922.

Ser. No. 167,305. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LIBBY, MCNEILL & LIBBY, Chicago, Ill. Filed July 24, 1922.

Rose-Dale

Particular description of goods.—Dried Beef.
Claims use since August, 1913.

Ser. No. 167,548. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) AYER & MCKINNEY, a co-partnership, Philadelphia, Pa. Filed July 29, 1922.

MERIDALE

Particular description of goods.—Powdered Milk.
Claims use since March, 1918.

Ser. No. 167,706. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BEMENT-REA CO., INC., Terre Haute, Ind. Filed Aug. 2, 1922.

KEYSTONE

Particular description of goods.—Canned Tomatoes, Canned Cherries, Roasted Coffee, Canned Pumpkin, Canned Pineapple, Canned Pitted Red Cherries, Canned Red Salmon, Canned Evaporated Milk, Canned Kidney Beans, Canned Spinach, Canned Oysters, Canned Kraut, Canned Corn, Canned Hominy, Canned Peaches.
Claims use since Jan. 1, 1883.

Ser. No. 167,727. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOSEPH F. MALATESTA, Boston, Mass. Filed Aug. 2, 1922.

Particular description of goods.—Olive Oil.
Claims use since 1907.

Ser. No. 167,806. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EXCELLO HEALTH BREAD CO., Los Angeles, Calif. Filed Aug. 4, 1922.

Ex-cell-O

Particular description of goods.—Bread and Biscuits.
Claims use since Apr. 1, 1921.

Ser. No. 168,876. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) EDUCATIONAL FILM EXCHANGES, INC., New York, N. Y. Filed Aug. 30, 1922.

CameO
CLEAN CUT COMEDIES

Applicant without waiving any common-law rights, and for the purposes of this registration only, hereby disclaims the exclusive right to the use of the word "Comedies" except as used in connection with the other features of the mark shown by the drawing.
Particular description of goods.—Motion-Picture Films and Films Used For Stereopticon Projections.
Claims use since June 11, 1921.

Ser. No. 169,202. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) CRESCENT BELT FASTENER COMPANY, New York, N. Y. Filed Sept. 8, 1922.

Crescent

Particular description of goods.—Belt-Fastening Plates, Metallic Lacing, Wire, Coupling, Links, Studs, Hooks, Clips, Clamps, Buttons, Nuts, Staples, Bolts, and Hinges.
Claims use since September, 1897.

Ser. No. 169,484. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) HYDROGRAVURE COMPANY, now by change of name Aquatone Corporation, New York, N. Y. Filed Sept. 15, 1922.

AQUATONE

Particular description of goods.—Printing Plates Finished and Partly Finished.
Claims use since Sept. 7, 1922.

Ser. No. 169,591. (CLASS 39. CLOTHING.) GREENEBAUM, WEIL & MICHELS, San Francisco, Calif. Filed Sept. 18, 1922.

CROWN

"Crown."

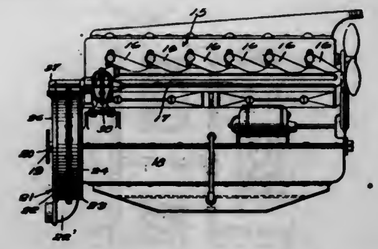
REISSUES

FEBRUARY 19, 1924.



15,767.—[WITHDRAWN.]

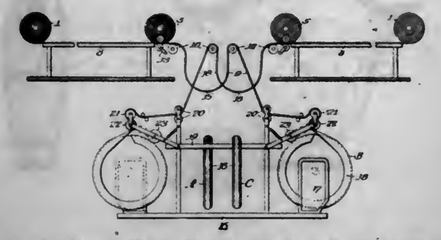
15,768. MACHINE FOR DISTRIBUTING CONCRETE. ERICH H. LICHTENBERG, Milwaukee, Wis., assignor, by mesne assignments, to Koehring Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 17, 1923. Serial No. 675,390. Original No. 1,411,217, dated Mar. 28, 1922, Serial No. 397,431, filed July 19, 1920. 26 Claims. (Cl. 94—44.)

1. In a concrete distributing machine of the boom and bucket type, a distributing element, a horizontally swinging elevated support to carry this element in spaced relation to the ground, means for controlling delivery of plastic concrete by said element in a layer of measured thickness, and power operating means common to the distributing element and delivery controlling means for actuating the same whilst the elevated support is stationary.

15,769. INTERNAL-COMBUSTION ENGINE. WILLIAM W. MCELRATH, Jr., East Radford, Va., assignor to Turbo Motor Company, Trenton N. J., a Corporation of New Jersey. Filed Dec. 14, 1920. Serial No. 430,752. Original No. 1,319,100, dated Oct. 21, 1919, Serial No. 190,224, filed Sept. 7, 1917. 8 Claims. (Cl. 60—13.)

7. An internal combustion engine of the character described having power cylinders, means for scavenging the exhaust gases from said power cylinders comprising a blower rotated at a speed proportional to the speed of the engine, and a fluid pressure turbine arranged to operate on said exhaust gases to increase the efficiency and power output of said engine.

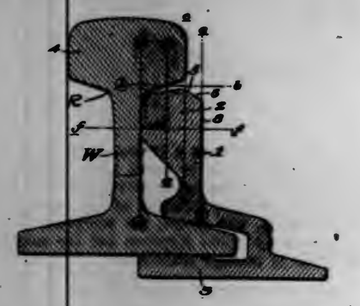
15,770. THROTTLING VALVE. EDWARD E. RICHARDSON, Toledo, Ohio, assignor, by direct and mesne assignments, to The R. & S. Valve Company, Elyria, Ohio, a Corporation of Ohio. Filed Jan. 31, 1920. Serial No. 355,365. Original No. 1,270,327, dated June 25, 1918, Serial No. 101,959, filed June 6, 1916. 19 Claims. (Cl. 277—1.)



1. A valve comprising a casing, a plurality of shutter members therein, one or more other shutter members therein, said members being located in approximately a straight line, and the members of the two groups occurring alternately, and means for operating the members of the one group in one direction and the members of the other group in another direction.

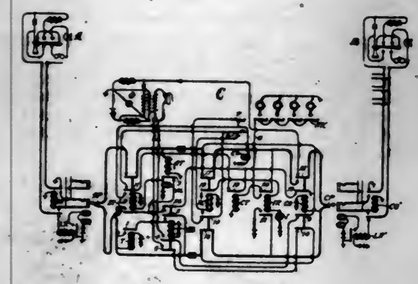
15,771. METHOD OF PRODUCING VISUAL EFFECTS IN THE AIR AND APPARATUS THEREFOR. JOHN C. SAVAGE, Ryde, Isle of Wight, England, assignor to The Skywriting Corporation of America, a Corporation of Delaware. Filed Apr. 19, 1923. Serial No. 633,222. Original No. 1,426,413, dated Aug. 22, 1922, Serial No. 432,237, filed Dec. 21, 1920. 8 Claims. (Cl. 244—1.)

1. The method of producing advertising signs comprising alphabetical letters, words, and designs, suspended in the air, which consists in the production or storing in an aeroplane of a smoke-like material of persistent visibility and manœuvering said plane in paths corresponding with the form of the desired sign, whilst emitting a trail of said smoke-like material at such height and in such volume that an advertisement is formed readable with the naked eye by persons distant on the earth.



15,772. METHOD AND APPARATUS FOR MANUFACTURING TIRES. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 11, 1923. Serial No. 644,813. Original No. 1,398,749, dated Nov. 29, 1921, Serial No. 257,638, filed Oct. 10, 1918. Renewed Apr. 23, 1921, Serial No. 463,904. 19 Claims. (Cl. 154—10.)

1. In the process of manufacturing tires, the steps of cutting fabric into a plurality of strips, building a con-



tinuous length from said strips, leading said length directly from said forming point to a core, and applying the fabric to the core.

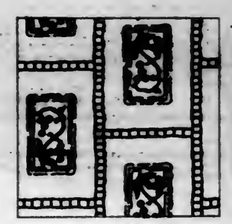
15,773. CONSTRUCTION FOR RAIL JOINTS. WILLIAM P. THOMSON, New York, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Sept. 29, 1923. Serial No. 665,695. Original No. 1,374,782, dated Apr. 12, 1921, Serial No. 437,898, filed Jan. 17, 1921. 12 Claims. (Cl. 238—188.)

1. A rail joint, including the rail, clamping bolts, a spice bar having head clearance from the under side of the rail head and a loading engagement at the head fillet of the rail.

15,774. TELEPHONE SYSTEM WITH AUTOMATIC RINGING DISCONNECT. FRED SCHORNWOLF, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1920. Serial No. 362,537. Original No. 1,273,189, dated July 23, 1918, Serial No. 874,163, filed Nov. 27, 1914. 24 Claims. (Cl. 179—58.)

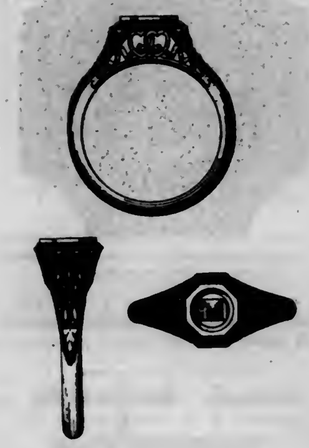
1. A telephone system comprising telephone lines terminating in multiple jacks, an operator's link circuit provided with plugs for interconnecting said lines via said multiple jacks, operator-controlled means for applying ringing current and continuing such application to the called line, means for interrupting such application of ringing current by a control exercised at both the calling and called substations, and means included in said last means and controlled solely by the calling subscriber, while said link circuit is interconnecting said lines, for freeing the calling subscriber's line from said link circuit

DESIGNS



FEBRUARY 19, 1924.

63,991. LADY'S BAG. HENRI BARON, Montreal, Quebec, Canada. Filed Sept. 15, 1923. Serial No. 7,214. Term of patent 3½ years.

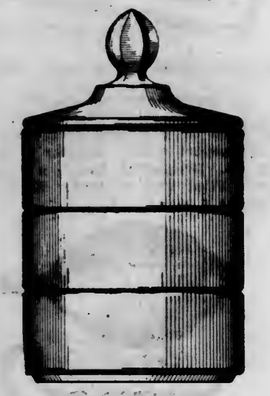


The ornamental design for lady's bag, as shown.

63,992. TEXTILE FABRIC. MATILEE IRENE BIXBY, New York, N. Y., assignor to M. Lowenstein & Sons, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 7, 1923. Serial No. 6,969. Term of patent 3½ years.

The ornamental design for a textile fabric, substantially as shown.

63,993. FINGER RING. BYARD F. BROGAN, Philadelphia, Pa. Filed Oct. 16, 1923. Serial No. 7,514. Term of patent 14 years.



The ornamental design for a finger ring, as shown.

63,994. FINGER RING. ERNEST E. BROSS, Detroit, Mich. Filed Jan. 5, 1924. Serial No. 8,254. Term of patent 14 years.

The ornamental design for a finger ring, as shown.

63,995. SECTIONAL JAR. IRA M. CLARKE, New Martinsville, W. Va., assignor to The New Martinsville Glass Mfg. Co., New Martinsville, W. Va., a Corporation of West Virginia. Filed July 16, 1923. Serial No. 6,787. Term of patent 7 years.

An ornamental design for a sectional jar as shown.

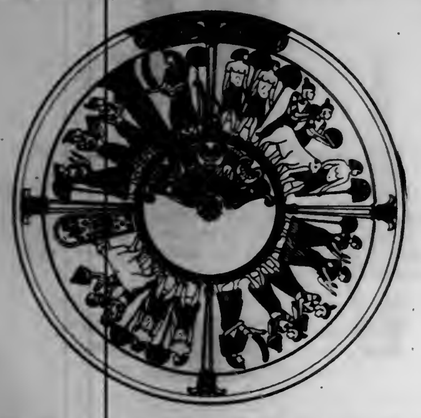
63,996. COFFEEPOT. GEORGE E. CURTISS, New Britain, Conn., assignor to Landers, Frary and Clark, New Britain, Conn., a Corporation of Connecticut. Filed Apr. 21, 1923. Serial No. 5,885. Term of patent 14 years.

The ornamental design for a coffeepot as shown.

63,997. PLATE FOR A WRISTBAND OR SIMILAR ARTICLE. ALBERT N. DAVIS, Providence, R. I. Filed Oct. 6, 1923. Serial No. 7,419. Term of patent 14 years.

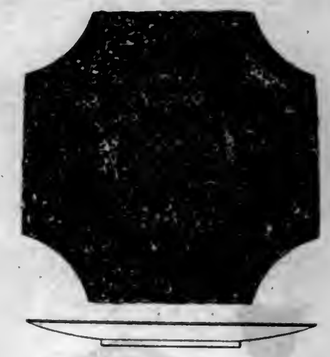
The ornamental design for a plate for a wrist band or a similar article, as shown.

63,998. WATER-CLOSET BOWL. ARVID EK, Portland, Me. Filed Oct. 27, 1921. Serial No. 510,978. Term of patent 14 years.



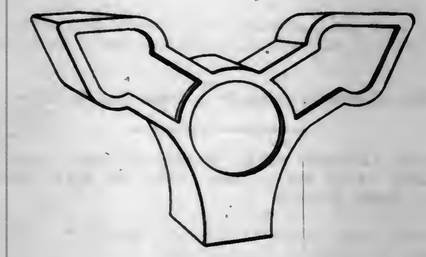
The ornamental design for a water closet bowl, as shown.

63,999. PITCHER OR SIMILAR ARTICLE. ALFRED J. FLAUDER, Bridgeport, Conn., assignor to The Weidlich Bros. Mfg. Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 7, 1923. Serial No. 5,100. Term of patent 7 years.



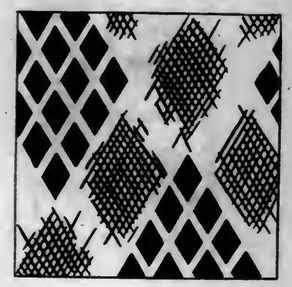
The ornamental design for pitcher or similar article substantially as shown.

64,000. TABLE MAT OR SIMILAR ARTICLE. WILLIAM GEIB, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Apr. 4, 1923. Serial No. 5,697. Term of patent 3½ years.



The ornamental design for a table mat or similar article substantially as shown.

64,001. PLATE OR SIMILAR ARTICLE. WILLIAM GEIB, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Aug. 29, 1923. Serial No. 7,119. Term of patent 7 years.

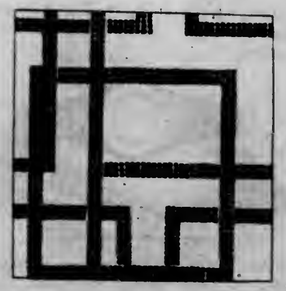


The ornamental design for a plate or similar article substantially as shown.

64,002. AUTOMOBILE SIGNAL. EDWARD TINKHAM GIBSON, Brooklyn, N. Y. Filed Nov. 3, 1922. Serial No. 4,212. Term of patent 7 years.

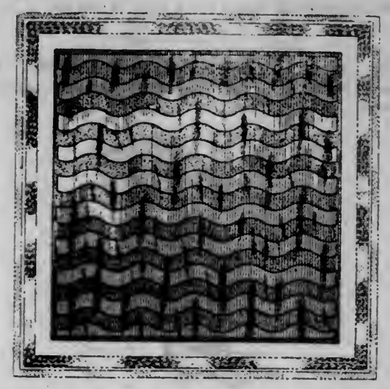
The ornamental design for an automobile signal as shown.

64,003. TEXTILE FABRIC OR SIMILAR ARTICLE. EDWIN I. GOLDING, New York, N. Y. Filed Oct. 10, 1923. Serial No. 7,453. Term of patent 3½ years.



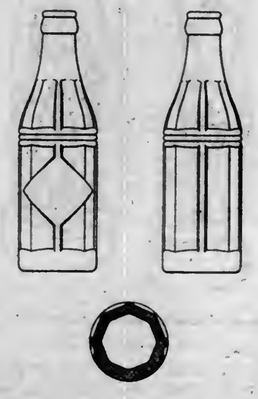
The ornamental design for a textile fabric or similar article as shown.

64,004. TEXTILE FABRIC OR SIMILAR ARTICLE. EDWIN I. GOLDING, New York, N. Y. Filed Oct. 10, 1923. Serial No. 7,455. Term of patent 3½ years.



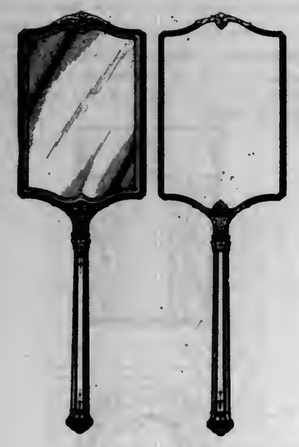
The ornamental design for a textile fabric or similar article as shown.

64,005. TEXTILE FABRIC OR SIMILAR ARTICLE. EDWIN I. GOLDING, New York, N. Y. Filed Oct. 10, 1923. Serial No. 7,456. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article as shown.

64,006. TABLE COVER OR ARTICLE OF SIMILAR NATURE. JAMES G. HARDY, New York, N. Y. Filed Mar. 14, 1923. Serial No. 5,475. Term of patent 14 years.

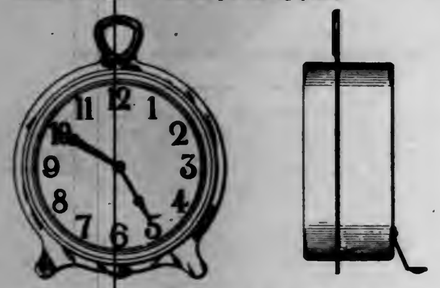


The ornamental design for a table cover or article of similar nature, substantially as shown.

64,007. BOTTLE. IRA B. HARKEY, New Orleans, La. Filed Nov. 5, 1923. Serial No. 7,681. Term of patent 7 years.

The ornamental design for a bottle, as shown.

64,008. HAND MIRROR OR SIMILAR ARTICLE. JOHN H. HARMSTONE, Attleboro, Mass., assignor to James E. Blake Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Dec. 1, 1923. Serial No. 7,935. Term of patent 7 years.

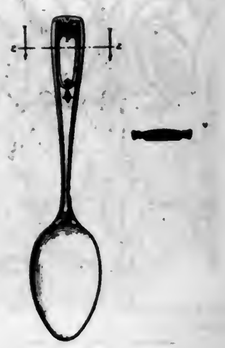


The ornamental design for a hand mirror or similar article.

64,009. STATUETTE. JAMES B. HARRINGTON, Norfolk, Va. Filed Mar. 20, 1923. Serial No. 5,547. Term of patent 3½ years.

The ornamental design for a statuette as shown.

64,010. CLOCK CASE. JOHN S. HARTLEY, Lynn, Mass., assignor to Hartley Clock Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 2, 1922. Serial No. 9[illegible]3. Term of patent 3½ years.



The ornamental design for a clock case as shown.

64,011. TUMBLER. EDGAR WILSON HEISEY, Newark, Ohio, assignor to A. H. Heisey & Company, Newark, Ohio. Filed Nov. 15, 1923. Serial No. 7,767. Term of patent 14 years.

The ornamental design for a tumbler as shown.

64,012. SPOON OR SIMILAR ARTICLE. GEORGE P. ITTIG, Bridgeport, Conn., assignor to Albert Pick & Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 8, 1923. Serial No. 6,442. Term of patent 3½ years.

The ornamental design for a spoon or similar article, as shown.

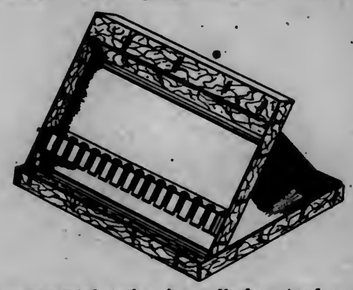
64,013. RING. RANDALL H. JONES, Indianapolis, Ind. Filed Sept. 27, 1923. Serial No. 7,347. Term of patent 3½ years.

The ornamental design for a ring, as shown.

64,014. RING. RANDALL H. JONES, Indianapolis, Ind. Filed Sept. 27, 1923. Serial No. 7,349. Term of patent 3½ years.

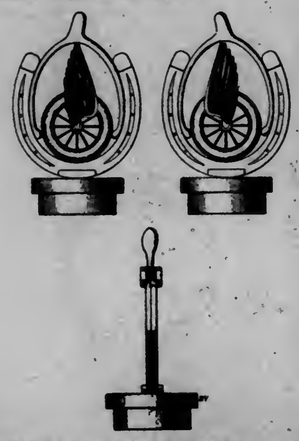
The ornamental design for a ring, as shown.

64,015. SPAT. DAVID KARGER, Milwaukee, Wis. Filed Sept. 4, 1923. Serial No. 7,146. Term of patent 14 years.



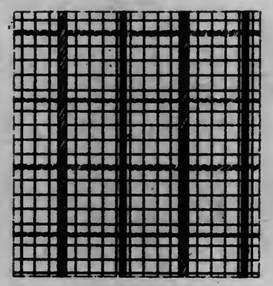
The ornamental design for a spat as shown.

64,016. RADIATOR. HOSFORD D. KELLOGG, Haverford, Pa. Filed July 20, 1922. Serial No. 3,139. Term of patent 3½ years.



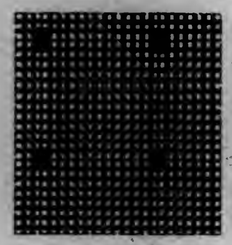
The ornamental design for a radiator substantially as shown.

64,017. DISPLAY STAND OR SIMILAR ARTICLE. DAVID KLEIN, New York, N. Y., assignor to Marx Finstone, Brooklyn, N. Y. Filed July 30, 1923. Serial No. 6,899. Term of patent 7 years.



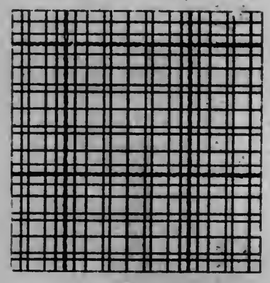
The ornamental design for a display stand or similar article, as shown.

64,018. RADIATOR-CAP ORNAMENT. CHARLES G. KOCH, Newark, N. J. Filed May 31, 1923. Serial No. 6,866. Term of patent 3½ years.



The ornamental design for a radiator cap ornament, as shown.

64,019. TEXTILE FABRIC. CHARLES E. LORD, Tarrytown, N. Y. Filed May 31, 1923. Serial No. 6,384. Term of patent 3½ years.



An ornamental design for textile fabric substantially as shown and described.

64,020. TEXTILE FABRIC. CHARLES E. LORD, Tarrytown, N. Y. Filed May 31, 1923. Serial No. 6,385. Term of patent 3½ years.

An ornamental design for textile fabric substantially as shown and described.

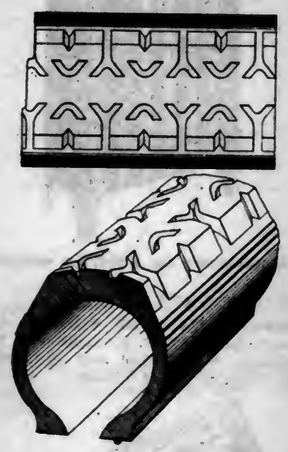
64,021. TEXTILE FABRIC. CHARLES E. LORD, Tarrytown, N. Y. Filed May 31, 1923. Serial No. 6,351. Term of patent 3½ years.

An ornamental design for textile fabric substantially as shown and described.

64,022. BOTTLE. GEORGE N. MAS, Lynchburg, Va. Filed July 28, 1923. Serial No. 6,889. Term of patent 14 years.

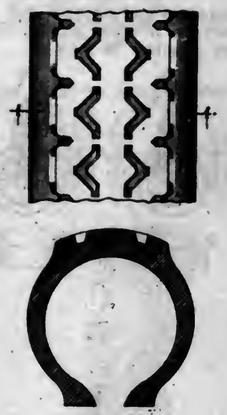
The ornamental design for a bottle, as shown.

64,023. SHOE SOLE. WARD MELVILLE, New York, N. Y. Filed May 9, 1923. Serial No. 6,117. Term of patent 14 years.



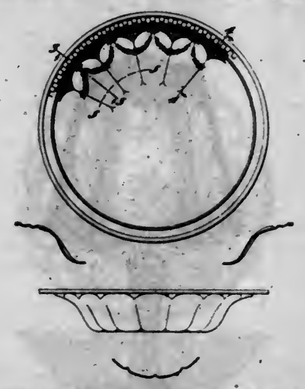
The ornamental design for a shoe sole, as shown.

64,024. LIGHTING-FIXTURE TASSEL. JOSEPH MILLER, New York, N. Y. Filed Oct. 25, 1923. Serial No. 7,597. Term of patent 3½ years.



The ornamental design for a lighting fixture tassel, as shown.

64,025. TIRE TREAD. HAROLD D. MITCHELL, Brooklyn, N. Y., assignor to C. Kenyon Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 18, 1923. Serial No. 8,073. Term of patent 14 years.



The ornamental design for a tire tread substantially as shown.

64,026. AUTOMOBILE TIRE. EDWARD D. NEWMAN, New York, N. Y. Filed June 29, 1922. Serial No. 2,893. Term of patent 7 years.

The ornamental design for an automobile tire as shown and described.

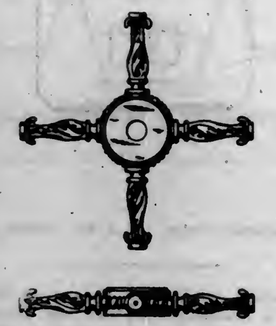
64,027. BONBON DISH OR ANALOGOUS ARTICLE. HAROLD E. NOCK, Newburyport, Mass., assignor to Towle Manufacturing Company, Newburyport, Mass., a Corporation of Massachusetts. Filed Oct. 20, 1921. Serial No. 509,180. Term of patent 3½ years.

The ornamental design for a bonbon dish or analogous article, substantially as shown.

64,028. PINCUSHION. BENJAMIN F. PIERCE, Pine Bluff, N. C. Filed Feb. 3, 1923. Serial No. 5,071. Term of patent 3½ years.

The ornamental design for a pincushion as shown.

64,029. BOTTLE. SMITH DAVENPORT PICKETT, Atlanta, Ga. Filed Oct. 6, 1923. Serial No. 7,416. Term of patent 14 years.



The ornamental design for a bottle, substantially as shown.

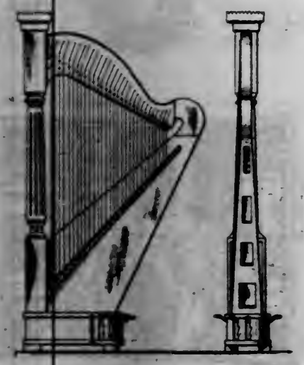
64,030. OUTDOOR SIGN. JAMES F. QUINN, Lowell, Mass., assignor to The Kimball System, Inc., Lowell, Mass., a Corporation of Massachusetts. Filed Nov. 16, 1923. Serial No. 7,786. Term of patent 14 years.

The ornamental design for an outdoor sign as shown and described.

64,031. SHADE SUPPORT. EDWARD C. RUTTENBERG, Chicago, Ill. Filed Feb. 3, 1923. Serial No. 5,070. Term of patent 3½ years.

The ornamental design for a shade support as shown.

64,032. FOLDABLE BOX OR CONTAINER. VASILIOS SAKELAROPOULOS, New York, N. Y. Filed Dec. 30, 1922. Serial No. 4,769. Term of patent 7 years.



The ornamental design for a foldable box or container, as shown.

64,033. BELT-BUCKLE FRAME. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Oct. 7, 1921. Serial No. 506,208. Term of patent 3½ years.

The ornamental design for a belt buckle frame, as shown.

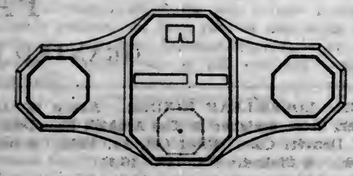
64,034. HARP. WILLIAM B. STOUGHTON, Dubois, Pa., assignor to Stoughton Harp Company, Dubois, Pa., a Corporation of Delaware. Filed June 19, 1923. Serial No. 6,531. Term of patent 7 years.

The ornamental design for a harp, as shown.

64,035. COMBINED LAMP SHADE AND STAND. RAY WALTER THOMPSON, New York, N. Y. Filed Mar. 9, 1922. Serial No. 1,099. Term of patent 7 years.

The ornamental design for a combined lamp shade and stand substantially as shown.

64,036. ARM FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to The G. & G. Fixture Co., Newark, N. J., a Copartnership composed of William Goldberg and Abe Goldberg. Filed Nov. 6, 1923. Serial No. 7,695. Term of patent 7 years.



The ornamental design for an arm for lighting fixtures, as shown.

64,037. PLATE FOR LIGHTING FIXTURES. LESTER R. WELLMAN, Chicago, Ill., assignor to Friedley Voshardt Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 14, 1923. Serial No. 7,205. Term of patent 7 years.

The ornamental design for a plate for lighting fixtures, as shown.

64,038. INSTRUMENT DIAL PLATE. FREDERIK G. WHITTINGTON, Evanston, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Mar. 20, 1922. Serial No. 1,283. Term of patent 14 years.

The ornamental design for an instrument dial plate as shown.

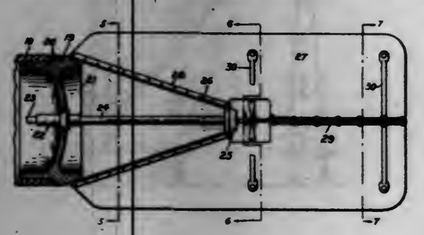
64,039. INSTRUMENT DIAL PLATE. FREDERIK G. WHITTINGTON, Evanston, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Mar. 20, 1922. Serial No. 1,280. Term of patent 7 years.

The ornamental design for an instrument dial plate as shown.

PATENTS

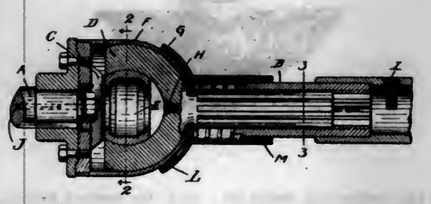
GRANTED FEBRUARY 19, 1924.

1,483,862. LOOSE-LEAF BINDER. EARLE G. ALDEN, Denver, Colo., assignor to The Archlok Looseleaf Company, Denver, Colo. Filed Oct. 16, 1922. Serial No. 594,900. 4 Claims. (Cl. 129—10.)



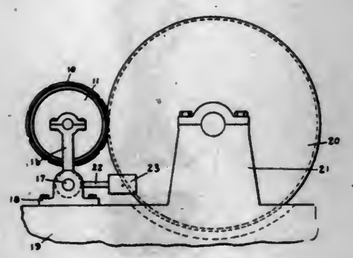
4. A lose leaf binder comprising a base board; a series of vertical standards fixed in said board and adapted to engage the sheets to be bound and a similar series of loop-shaped standards pivoted in said board and adapted to engage said first-mentioned standards, said standards being jointed to allow the addition of sections.

1,483,863. WHEEL HUB. CHARLES S. ASH, Detroit, Mich. Filed Aug. 10, 1918, Serial No. 249,274. Renewed June 8, 1923. 3 Claims. (Cl. 301—9.)



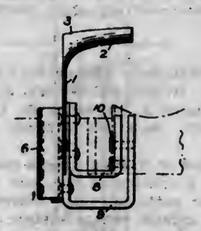
3. In a wheel, in combination, a hub provided with circumferentially spaced substantially rectangular apertures, the metal at two opposite sides of said apertures being turned outward to provide flat bearing surfaces, and a member to receive said hub having complementary driving lugs to enter said apertures, said driving lugs being of a dimension to fit snugly between the outturned side walls of said apertures and to clear the sides of said apertures radial of said hub.

1,483,864. BOMB BODY. WILLIAM A. BORDEN and CLAUDIUS H. M. ROBERTS, U. S. Army. Filed June 27, 1922. Serial No. 571,223. 5 Claims. (Cl. 102—2.) (Filed under the act of Mar. 3, 1883. 22 Stat L., 625.)



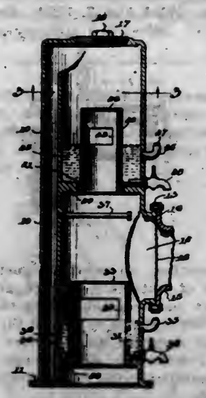
1. A bomb, including a body portion provided with a tapered nose, apertured to receive an adapter, a base plug secured in the rear end of the body, said plug formed with a rearwardly extending tapered annular flange, a tubular rod connected to the base plug, a base cap seated on the flange, fins secured to the base cap and means engaging the rod for securing the base cap in place.

1,483,865. MEANS FOR LUBRICATING INCASED UNIVERSAL JOINTS. ADNA GUERNSEY BOWEN, Medina, N. Y. Filed Apr. 21, 1919. Serial No. 291,660. 7 Claims. (Cl. 64—91.)



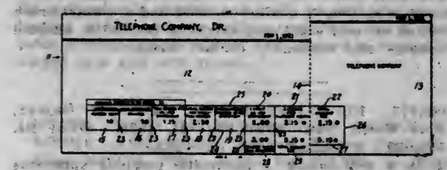
2. In an incased universal joint, one member of which has a reciprocating movement, of openings and valves so disposed in said mechanism as will tend to create a vacuum within the casing of such universal joint, and thereby to draw lubricant into the casing from a source of supply, substantially as described.

1,483,866. PROCESS OF MAKING TORIC LENSES. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to One-piece Bifocal Lens Company, Indianapolis, Ind., a Corporation. Filed Feb. 10, 1919. Serial No. 276,190. 5 Claims. (Cl. 51—278.)



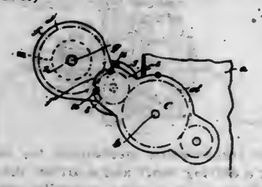
4. In the process of making toric lenses, forming the surface of one side of each of a series of lens blanks with a certain curvature, mounting the lens blanks on a lens blank holder with a plurality of blank holding surfaces each accurately shaped to substantially the same curvature as the inner surfaces of the lens blanks, forcibly pressing said lens blanks against the metal blank holder until their edges directly engage the metal surface thereof, grinding the other surfaces of said blanks while they are held on said lens blank holding means, and then polishing said blanks.

1,483,867. GUIDE. WILLIAM R. BULL, Springfield, Mass. Filed Oct. 31, 1922. Serial No. 598,204. 4 Claims. (Cl. 89—33.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



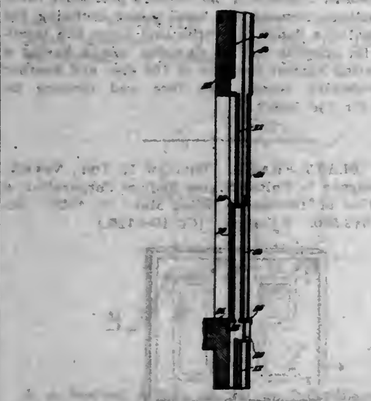
4. A cartridge belt guide, embodying a clamp for clamping to a gun mount and a guide plate carried by the clamp for guiding a cartridge belt over a gun, whereby the belt may be fed into the opposite side of the gun.

1,483,868. VENT FOR LIQUID CONTAINERS. VICTOR CLIFFORD, Tulsa, Okla., assignor to Petroleum Safety Appliance Company, Tulsa, Okla., a Corporation. Filed Aug. 25, 1922. Serial No. 584,373. 11 Claims. (Cl. 137—68.)



1. A device of the character described comprising an upright casing designed to be mounted upon a container and provided in one side with an opening, a pair of partitions within said casing above and below said opening, tubular members extending through said partitions and formed with openings and inverted cup-shaped valves extending over said tubular members and having their open ends sealed in a body of liquid on the partitions.

1,483,869. INVOICE SHEET. DE WITT N. CONKLIN, East Orange, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of New York. Filed Sept. 9, 1921. Serial No. 499,528. 16 Claims. (Cl. 283—60.)



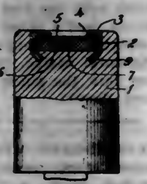
1. A telephone-bill-blank, for use in typewriting machines, comprising a body portion and a detachable side portion, the lower part of the blank being provided with short columns arranged in alignment so that entries may be typed therein without shifting the blank with reference to the printing line, said columns having respectively the headings "Number sent", "Charge", "Toll service etc. as per statement", "Local service and facilities charge", "Miscellaneous charges as per statement", "Credit as per statement", "Charges for current month" and "Total amount due", the last column being on the detachable portion, the body portion also being provided beneath the last two columns thereon with columns designated "Balance due on bill rendered" and "Total amount due."

1,483,870. OPERATING MECHANISM FOR THE COMMUTATORS OF AUTOMOBILE ENGINES. HORACE GEORGE CRITTENDEN, Joslin, South Australia, Australia. Filed July 28, 1921. Serial No. 488,255. 1 Claim. (Cl. 123—195.)

In operating mechanism for the commutator of an automobile engine, the combination with a self starting device having a toothed wheel in mesh with a toothed wheel on the cam shaft and an opening cut in the extended portion of a casting which is adapted to enclose the wheel and the said self starting arrangement, of a supplemental casing mounted on the said casting so as to embrace the walls of the said opening in the casting, a spindle rotatably journaled at one end in said supplemental casing and having its opposite end projecting through a flanged opening in the casing, a toothed wheel carried by the spindle and disposed in said casing and adapted to mesh with the first named toothed wheel of the starting device, and a timer casing having an open end adapted to embrace the flange inscribing the opening in the supplemental casing, the said spindle being adapted to project into the timer casing to rotate the mechanism enclosed therein.

1,483,871. ELEVATOR-GATE MECHANISM. WILLIAM A. DAVIS, Malden, Mass., assignor to Babcock-Davis Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 11, 1919. Serial No. 330,114. 5 Claims. (Cl. 20—19.)

1. An elevator gate mechanism comprising a two-part vertically sliding door at one side of the elevator well, the lower part being adapted to have the top edge flush with the floor level when the door is open, and two sup-



porting members for the lower part of the door positioned upon opposite sides of the door and extending throughout the width of the door opening, the supporting members having inclined faces which are adapted to receive and rigidly support correspondingly inclined faces formed upon the upper portion of the lower door section to rigidly support the section in a predetermined position with the upper edge flush with the tops of the supporting members.

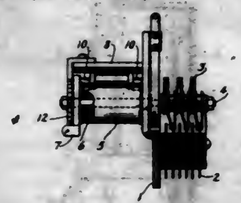
1,483,872. POWER-TRANSMISSION MECHANISM. ALBERT A. DENSMORE, Brookline, Mass. Filed Oct. 11, 1922. Serial No. 593,844. 11 Claims. (Cl. 74—7.)

1. Power transmission mechanism for engine starting comprising a driving shaft and a driven shaft, a gear fast on said driven shaft, a gear normally eccentrically disposed on said driving shaft out of mesh with said first gear and capable of being centered on its shaft in which position it is in mesh with said first gear, and means associated with said driving shaft for centering the gear thereon to produce a driving connection between said shafts.

1,483,873. LUMINOUS DEVICE. WILLIAM H. DEY, Newark, N. J., assignor to United States Radium Corporation, a Corporation of Delaware. Filed Oct. 20, 1921. Serial No. 508,971. 4 Claims. (Cl. 240—1.)

1. A unitary luminous insert for the button or handle of a switch, comprising a disc provided with a recess, a luminous element disposed in the recess, a protective cover for the luminous element and bezel means enclosing the disc and having a flange to overlie said cover and terminating at its opposite end in clamping means having a portion bearing against the face of the disc and another portion projecting beyond this face and forming an anchorage for the insert.

1,483,874. PLATE FRAME. WILLIAM H. DEY, Newark, N. J., assignor to United States Radium Corporation, a Corporation of Delaware. Filed Mar. 10, 1922. Serial No. 542,580. 3 Claims. (Cl. 40—125.)



2. A frame having a pair of apertures therein defined by side and end walls and by an intermediate bar, the side walls of the frame being rearwardly and inwardly bent to form a slot, a pair of plates insertable in the slot and having their abutting edges concealed by the intermediate bar, and flanges extending from each end wall and bearing against the ends of the plates to hold said plates with their abutting edges concealed.

1,483,875. METHOD OF TREATING GYPSUM-CEMENT SURFACES. HUGO GALLINOWSKY, St. Louis, Mo., assignor to Eugene A. Heitkamp, St. Louis, Mo. Filed Apr. 14, 1923. Serial No. 632,163. 3 Claims. (Cl. 91—68.)

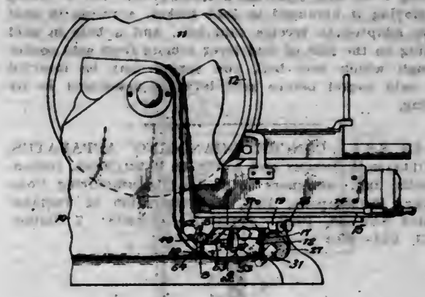
2. In a method of treating gypsum cement surfaces the application of a solution of one part of thiosulfate of sodium to four parts of water immediately after the setting of the gypsum cement surface and subsequently washing the surface with water.

3. A method of treating gypsum cement surfaces which consists in washing the surface with a solution of thiosulfate of sodium and later washing the surface with water.

1,483,876. ELECTROMAGNETIC STEP-BY-STEP SWITCH WITH MAGNETIC BRAKE. HAROLD W. GOFF, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 7, 1920. Serial No. 402,002. 4 Claims. (Cl. 200—105.)

1. In combination, an electromagnetic switch, comprising a bank of stationary contact members, rotatably movable contact members cooperating therewith, an electromagnetic brake operable to retard the rotation of said movable contact members, and a device operable to positively prevent overthrow of said movable contact members when said cooperation with the stationary contact members is effected.

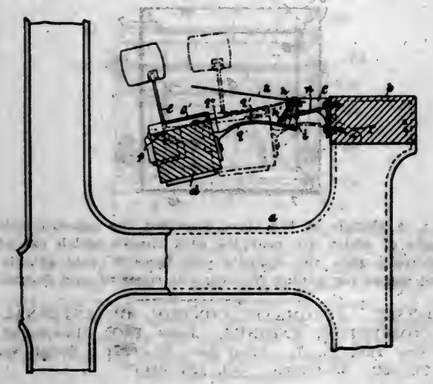
4. An electromagnetic step-by-step switch, comprising an electromagnet, a core of nonmagnetic material for said electromagnet, a supporting plate of magnetic material forming a part of the magnetic circuit of said electromagnet and situated at one end thereof, a pole piece for the other end of said electromagnet, a rotatable shaft of magnetic material extending through said supporting plate, core and pole piece, an armature for said electromagnet, a stepping ratchet mounted on said shaft and rotatable therewith, a stepping pawl carried by said armature, operable to move said stepping ratchet one step upon each release movement of said armature, a stopping ratchet mounted on said shaft in close propinquity to said pole piece and adapted to be drawn into frictional engagement therewith upon energization of said electromagnet, a stationary contact member and a contact brush mounted on said shaft and rotatable therewith, adapted to engage said stationary contact member.



1,483,877. FLUID-LIFT PUMP. HARVEY H. GRACEY, Fort Worth, Tex. Filed Oct. 21, 1922. Serial No. 596,069. 3 Claims. (Cl. 103—233.)

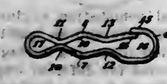
1. In a well casing, a pneumatic pumping apparatus comprising an air chamber provided with an integral cap, a starting pipe suspended in said chamber and projecting through said cap and welded thereto, a discharge pipe connected to said starting pipe, said chamber being extended downwardly to form a sand screen, a perforated partition dividing said sand screen from said air chamber, a nipple projecting through said partition into said sand screen chamber and centrally into said starting pipe and

spaced therefrom, a tube projected through said partition and down into said sand screen for agitating the sand with compressed air and means for admitting compressed air into said air chamber.



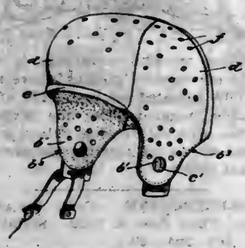
1,483,878. SLICING MACHINE. ERNEST A. HAND, Hornell, N. Y., assignor to A. J. Deer Company, Incorporated, Hornell, N. Y., a Corporation of New York. Filed July 10, 1920. Serial No. 395,184. 18 Claims. (Cl. 146—102.)

1. A slicing machine comprising a rotary cutter disk, holding means for supporting the article to be sliced in position to be operated upon by said disk, a tray movable toward and from its slice receiving position relatively to said disk and holding means, a carrier which supports said tray and having a stop, a bracket upon which said carrier is pivoted to turn about a vertical axis and which is provided with a stop adapted to be engaged by said stop on the carrier, and a curved face which is concentric with the axis of said carrier and leads to said stop on the bracket and a recess in said curved face, and a spring catch arranged on the carrier and adapted to engage said curved face and said recess.



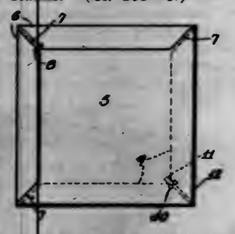
1,483,879. WEFT TENSION-HOLDING DEVICE FOR LOOMS. ALEXANDER G. HANNAH, Warren Point, N. J. Filed May 23, 1922. Serial No. 562,992. 4 Claims. (Cl. 139—194).

1. In combination, the fixed structure of a loom, a batten including structure arranged to move back and forth therein, means to pass filling back and forth across the batten-including structure, coacting instrumentalities to grip the filling arranged on the respective structures, the one of said instrumentalities which is on the fixed



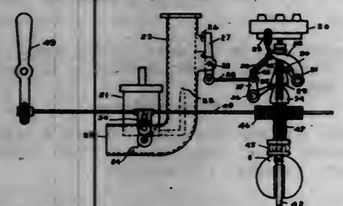
structure being an up and down movable member, and a cam to actuate said member arranged on the batten-including structure.

1,483,880. BUTTON TOGGLE. LINCOLN S. HAPEMAN, Waterbury, Conn. Filed Apr. 4, 1923. Serial No. 629,832. 6 Claims. (Cl. 24—100.5.)



1. In a button fastener, a base having a flexible tongue connected therewith at one end, and a catch for said tongue upon the other end of said base, said tongue and base being convoluted to enclose a plurality of loops, said loops being adapted to interchangeably receive the eye of a button, said tongue and catch being formed from an integral strip of grooved metal whereby said tongue will be detachably locked in said catch in curved contact therewith.

1,483,881. FOOTBALL HELMET. HENRY RIDGEWAY HART, Montclair, N. J. Filed Jan. 11, 1922. Serial No. 528,482. 2 Claims. (Cl. 2—192.)



1. A football helmet having an inflexible reenforcing shell of fiber of one piece shaped to conform to the head of the wearer, protective layers of felt on the inner and outer sides of the shell and means to secure the felt in place against displacement.

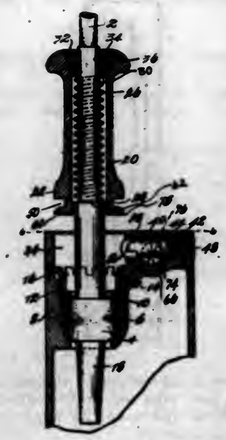
1,483,882. SHINGLE. WILLIAM F. HARVEY, East Patchogue, N. Y. Filed June 29, 1922. Serial No. 571,664. 8 Claims. (Cl. 108—8.)

1. A shingle of the class described the opposite side edges of which are provided with flanges which extend inwardly upon the opposite side faces of said shingle, and means for joining the adjacent edges of said flanges.

1,483,883. AUTOMATIC CONTROL OF INTERNAL-COMBUSTION ENGINES. JOHN T. E. HILLHOUSE, New York, N. Y. Filed Nov. 30, 1921. Serial No. 518,822. 33 Claims. (Cl. 123—99.)

17. In an internal combustion engine provided with an auxiliary air inlet valve and an ignition timer, a cam controlling the ignition timer and having active contours based on ignition curves for different engine loads under different speed conditions, a cam operably connected with the air relief valve and having contours based on air relief curves for different engine loads under different speed conditions, engine load and speed governed means for positioning said cams, said cams being connected together to move as a unit for existing load and engine speeds.

1,483,884. SMOOTHING MACHINE FOR GLASSWARE. FORREST L. HITCHCOCK, Indianapolis, Ind., assignor to The Marietta Manufacturing Company, Indianapolis, Ind., a Corporation. Filed Jan. 30, 1923. Serial No. 615,825. 3 Claims. (Cl. 51—83.)

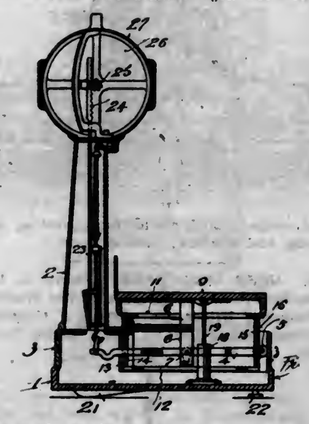


1. A smoothing machine comprising a central frame having a pair of tension pulleys thereon, smoothing wheels rotatably mounted on each side of said frame, smoothing bands mounted about the periphery of said wheels and the adjacent tension pulley, a shaft keyed to each of said wheels for rotating the same, and means for driving said shafts.

1,483,885. ELECTROLYTE. CARL OSCAR HOEN, St. Paul, Minn. Filed June 8, 1922. Serial No. 566,868. 2 Claims. (Cl. 204—29.)

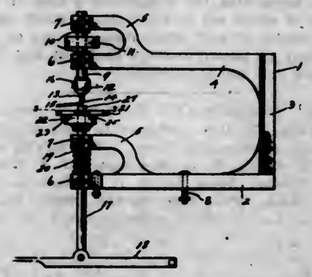
2. An electrolyte comprising a solution consisting of ingredients mixed in about the following proportions: distilled water, seven gallons; sulphuric acid, eleven and one-half gallons; sulphate of magnesium, eighteen pounds and a solution of alum prepared by dissolving one pound alum in two gallons of water, diluted with an equal amount by volume of water.

1,483,886. TRANSMISSION LOCK. RUSSELL HUFF, Detroit, Mich., assignor to Dodge Brothers, Detroit, Mich., a Corporation of Michigan. Filed July 19, 1921. Serial No. 485,891. 3 Claims. (Cl. 70—128.)



1. In a transmission lock, the combination with the gear shifting lever, its universal bearing and a housing for said bearing extending above said bearing and having an opening in which said lever swings, of a sleeve slidable on said lever into and out of position in said opening and fitting said opening to hold said lever in neutral position, a socket extending laterally into said housing from said opening, a locking bolt and a spring for moving it arranged in said socket, a recess in said sleeve adapted to receive said bolt, and a hole in said housing on the side of said lever remote from said socket through which said bolt and spring may be inserted into said socket before said lever is assembled in its bearing.

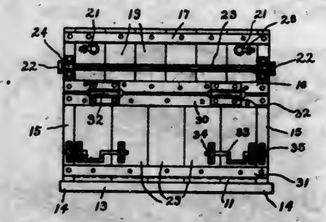
1,483,887. CONCRETE-HANDLING APPARATUS. WILLIAM H. INSLEY and ALVIN C. RASMUSSEN, Indianapolis, Ind., assignors to Insley Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Nov. 20, 1922. Serial No. 602,048. 7 Claims. (Cl. 214—95.)



1. An apparatus for handling building material comprising a mast, a chute hopper carried by said mast on the front thereof and projecting beyond the vertical plane of said front, an elevator bucket carried by said mast on the same side as said chute hopper, and a delivery chute carried on the rear of said mast and arranged to receive material from said chute hopper.

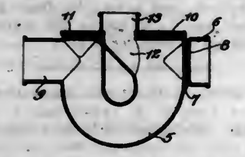
1,483,888. WEIGHING MECHANISM. LEONARD T. JOHNSON, Jersey City, N. J. Filed June 3, 1922. Serial No. 565,610. 16 Claims. (Cl. 265—69.)

1. In a scale mechanism, the combination with a weight actuated lever, of a check rod formed in two parts, one above the lever and the other below it, a pivotal support for one end of said lever, a platter rest, and means for pivotally supporting said platter rest upon said lever both parts of said check rods being in substantial vertical alignment with said platter rest.



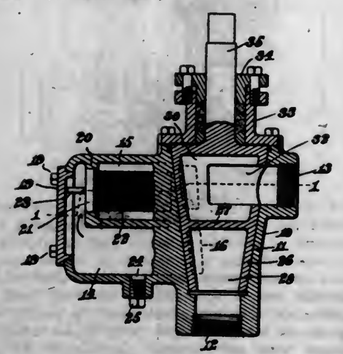
1,483,889. INLAYING MACHINE. ALBERT H. KARR, Kansas City, Mo. Filed Aug. 31, 1923. Serial No. 660,289. 1 Claim. (Cl. 144—136.)

In an inlaying machine, the combination, of a frame, a shaft revolubly mounted in said frame, a channelling tool actuated by said shaft, a plunger rod slidably mounted on said frame and aligned with said shaft, a pivoted lever pivotally connected to one end of said rod, a table adjustably connected to the other end of said rod, yielding means mounted on said rod to normally hold said table in elevated position, and a guide slidably and adjustably mounted on said table, said guide having an eccentric face constantly presented to said tool.



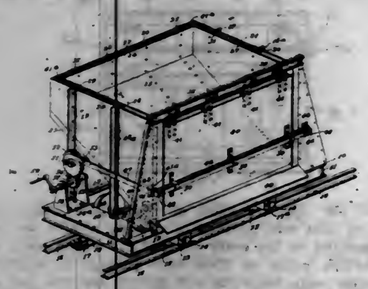
1,483,890. END GATE FOR DUMPING WAGONS. OSCAR A. KELLEY, Omaha, Nebr. Filed Apr. 18, 1922. Serial No. 555,340. 1 Claim. (Cl. 296—51.)

The combination with a wagon body, an end gate for said wagon body and comprising a frame adapted to swing up and down upon the rear end of the wagon body and being open at its lower end, a door mounted in the open lower end of the body, hinges at the outer edge of the door connecting the same to the upper closed portion of the end gate, sliding bolts mounted upon the lower portion of the door, keepers on the side portions of said frame adapted to receive the projecting ends of said bolts therein for locking the door in closed position in the frame to form a closed end gate, hinged rods mounted upon the end gate frame near the outer end thereof and arranged to extend in overlapping relation



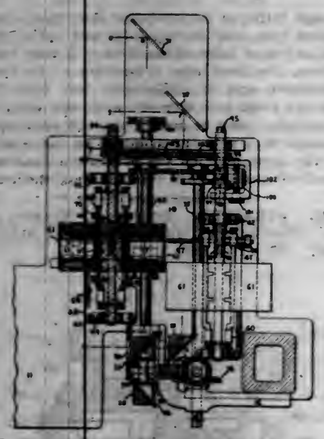
against the opposite sides of the wagon body, guide ways for said rods adapted to slidably receive the same and mounted on the outer sides of the wagon body, said rods having hooks on their ends adapted to engage in said guide ways when the end gate is lowered, and said rods are drawn through the guides, and independent means for locking the upper end of the frame to the wagon body for closing the rear end thereof.

1,483,891. PIPE FITTING. EDWARD KENNEDY, New York, N. Y. Filed June 5, 1922. Serial No. 566,106. 5 Claims. (Cl. 182—18.)



1. A pipe fitting of the character described, comprising a U-shaped trap body having inlet and outlet pipe connections and hand holes adjacent to said inlet and outlet connections, the inlet pipe connection at its inner end being threaded and of appreciably less diameter than the adjacent hand hole whereby a closure plug for said inlet connection may be passed through said hand hole and engaged with said threads, and an air pipe connection at the upper side of the trap body communicating by an inclined passage with the passage therethrough.

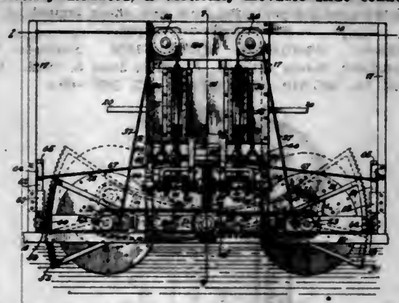
1,483,892. STRAINER. JUSTUS R. KINNEY, Allston, Mass. Filed Jan. 18, 1923. Serial No. 613,336. 12 Claims. (Cl. 210—168.)



1. In a device of the class described, a casing having a vertical valve chamber communicating with two sets of passages, each set consisting of a horizontal chamber and a compartment above and communicating with said chamber; a strainer basket horizontally disposed in each compartment; and a valve in the valve chamber adapted to close the ports communicating with either set of passages.

1,483,893. COKE-HANDLING CAR. LEONARD KIPP, Waterbury, Conn., assignor to Waterbury Iron Works, Inc., Waterbury, Conn., a Corporation of Connecticut. Filed May 11, 1922. Serial No. 560,040. 14 Claims. (Cl. 105—254.)

1. In a coke-quenching conveyor-car for use in gas houses, a base frame adapted to be supported upon a track by means of which the car may be drawn up to and away from a coke-retort, a coke receptacle mounted upon said base and adapted to receive a charge of red-hot coke from said coke-retort, said receptacle having an inclined bottom, and having its front portion closed by a swinging door, and means for water-cooling the sides and bottom of said receptacle.

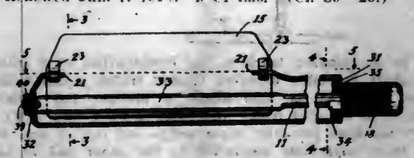


1,483,894. MOTION-PICTURE MACHINE. CHARLES KIWUL, New York, N. Y. Filed July 3, 1919. Serial No. 308,642. 28 Claims. (Cl. 88—16.8.)

28. In a motion picture machine, the combination of mechanism for advancing the film continuously through the machine, a movable reflector, and an objective lens construction including a plurality of lenses operatively connected to said mechanism to move continuously in one direction over a substantially elliptical path, means for guiding the lens along said path, a portion of said guiding means being straight, said lenses when in an engagement with said straight portion of the guiding means travelling with the light reflected from said movable reflector.

1,483,895. WATER-POWER MOTOR. JOHN V. KRANEBEEL, Buffalo, N. Y. Filed Oct. 30, 1920. Serial No. 420,623. 14 Claims. (Cl. 170—107.)

1. A water power motor comprising a wheel adapted to be immersed in a flowing stream of water, a vertically swinging support on one end of which said wheel is pivotally mounted, a vertically movable slide connected

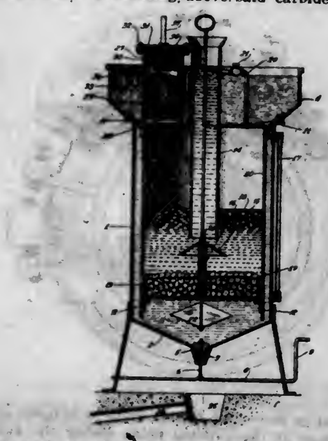


with said support, and means for operating said slide and raising and lowering said support.

1,483,896. HOSE SUPPORTER. FRANK L. LANGHAMMER, Bridgeport, Conn., assignor to The Warner Brothers Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 30, 1922. Serial No. 609,810. 1 Claim. (Cl. 24—245.)

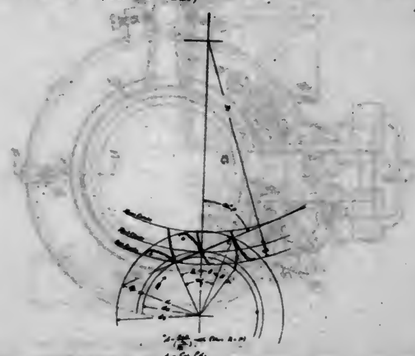
A device of the character described, comprising a metal loop member provided with a transverse slot, and a button supporting tab comprising a loop of tape, the two ends of which are inverted and clamped together by a metal clamp of such dimensions relative to said slot that it may be passed through said slot and thereafter will retain said tab in position.

1,483,897. RAZOR-BLADE HOLDER. LEWIS E. LARSON, Fargo, N. Dak., assignor to Sure Edge Stropper Company, Minneapolis, Minn., a Partnership consisting of A. E. Smith, W. G. Manchester, J. F. Irwin, J. F. Owen, Herbert Johns, and E. G. Hanson, all of Minneapolis, Minn. Filed Mar. 28, 1921. Serial No. 456,294. Renewed Jan. 7, 1924. 9 Claims. (Cl. 30—25.)



1. A razor blade holder comprising a handle having a slot along the same, a pair of clamping members positioned partly within the handle and extending through said slot, notches formed in said handle near the ends of the slot thereof, and means co-operating with said notches for holding the clamping members pivotally attached to the handle.

1,483,898. ACETYLENE GENERATOR. RAYMOND R. LIGOT, Brussels, Belgium, assignor of one-half to James Puleo, New York, N. Y. Filed Nov. 5, 1920. Serial No. 421,836. 4 Claims. (Cl. 48—22.)



1. In a gas generator of the ebb-and-flow type, a container, a member depending thereinto and open at its lower end, said member spaced from the wall of the container, means for supporting carbide within the lower portion of said member, the space below said

supporting means communicating with the space between the walls of said member and container, means open at top and bottom and depending within said member with its lower end terminating above said carbide supporting

means, and an oil seal, within said member, for said open lower end and serving to automatically control contact of water with the carbide to regulate the generation of gas.

1,483,899. INTERMESHING GEAR AND PINION, AND ART OR METHOD OF GENERATING THE SAME. CHARLES H. LOGUE, Syracuse, N. Y., assignor to Brown-Lipe-Chapin Co., Syracuse, N. Y., a Corporation of New York. Filed Sept. 30, 1919. Serial No. 327,379. 2 Claims. (Cl. 74—41.)

1. The art or method of determining the tooth parts of intermeshing gears consisting in generating the teeth of the gear in accordance with the following formula,

$$d \sec E \sin^2 p \frac{P_s}{p} = \text{gear addendum}$$

and in generating the teeth of the pinion in accordance with the following formula

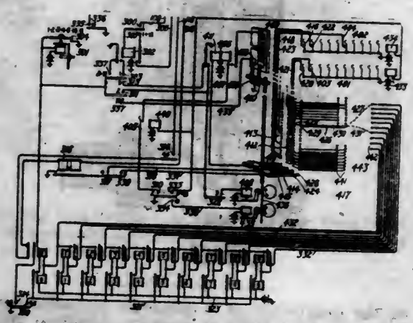
$$\frac{d\left(\frac{\cos p}{\cos (p+\Omega)}-1\right)}{\sec^2 E} = \text{pinion addendum}$$

in both of which formulas

Tan p=tan of normal obliquity×secant spiral angle

Cot E=$\sqrt{\text{ratio of reduction for spur gears}}$

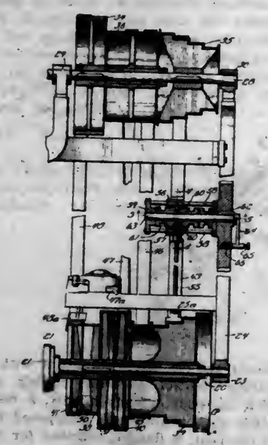
Cot E=ratio of reduction for bevel gears



Sine $P_s=\frac{\tan p}{\sec \Omega}$

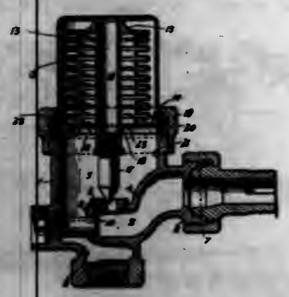
d=pitch radius of spur or virtual radius of bevel pinion.

P_s cannot exceed value of P.



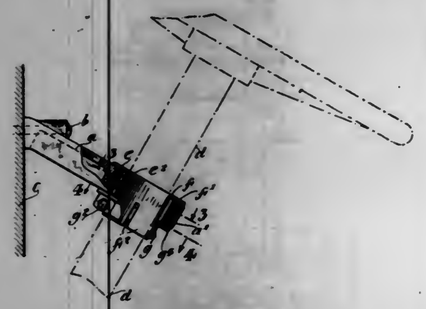
Ω=assumed within known limits.

1,483,900. TELEPHONE-EXCHANGE SYSTEM. ALBEN E. LUNDELL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 23, 1919. Serial No. 319,309. 15 Claims. (Cl. 179—27.)



1. In a telephone exchange system, a selector switch, a control relay therefor, a branched circuit for said relay extending to movable contacts of said switch, a plurality of normally closed extensions of each branch of said circuit extending from stationary contacts of said switch, and means for selectively opening any one of the circuit extensions of each branch to jointly direct the movement of said switch under the control of said relay.

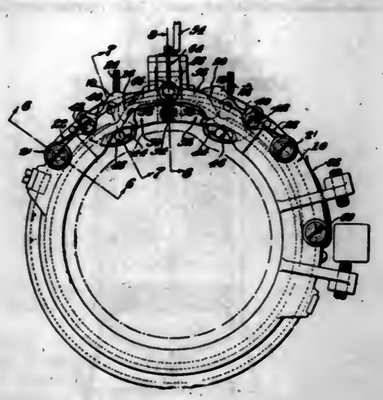
1,483,901. VARIABLE-SPEED DRIVE. ALFRED R. McCANN, Hamilton, Ohio, assignor to The Liberty Machine Tool Co., Hamilton, Ohio, a Corporation of Ohio. Filed Apr. 20, 1921. Serial No. 462,988. 3 Claims. (Cl. 74—21.)



1. In mechanism of the class described, the combination of a driving shaft, a driven shaft, two driving pulleys respectively fixed and loose on the driving shaft, two driven pulleys of different diameters fixed on the driven shaft, a belt engaging the fixed driving pulley and adapted to be shifted onto the driven pulley of smaller diameter, a belt engaging the loose driving pulley and adapted to be shifted onto the driven pulley of larger diameter, one of the belts being open and the other belt crossed, reversely stepped pulleys respectively fixed on the driving shaft and loose on the driven shaft, a belt engaging the stepped pulley on the driven shaft and the loose driving pulley, a belt engaging the two stepped pulleys, and means for shifting the last-named belt.

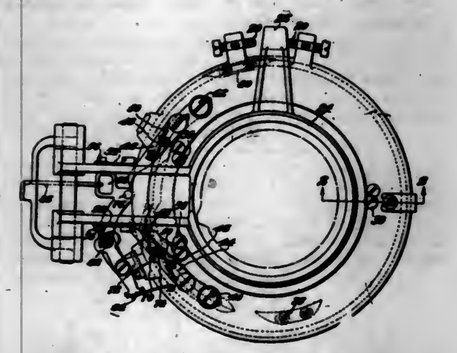
1,483,902. THERMOSTATIC VALVE. HARRY C. MALLORY, Bellport, N. Y. Filed June 7, 1916. Serial No. 102,115. 7 Claims. (Cl. 236—58.)

6. The combination of a collapsible extensible corrugated sheet metal vessel of generally cylindrical shape, the corrugations therein extending circumferentially having a stationary end wall provided with openings and an opposite rigid movable end wall, a rigid exterior wall exposed to the atmosphere and confining a volatile liquid exterior to said vessel, a valve stem fast to said movable wall and working through said stationary end wall, a valve on said stem, and a steam port for admitting steam to the interior of said vessel and controlled by the said valve.



1,483,903. MOUNTING FOR STEERING POSTS AND THE LIKE. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 21, 1921. Serial No. 516,567. 5 Claims. (Cl. 280—87.)

4. In a motor vehicle, in combination with a steering post, a bearing bracket therefor having an opening through which the post extends loosely, a resilient bearing ring within the opening and interposed between the bracket and the post, a flanged retainer for the ring extending therethrough and adapted to embrace the post, and a flanged clamping ring for securing the retainer between the flanges in operative relation to all of the parts.

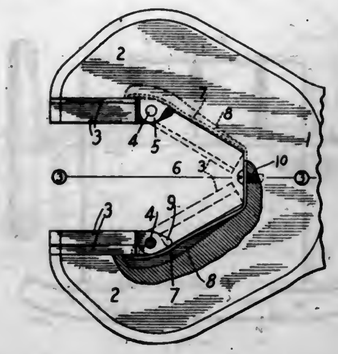


1,483,904. KNITTING MACHINE. MAX C. MILLER, Cumberland Hill, R. I., assignor to Jenckes Knitting Machine Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed Aug. 17, 1918. Serial No. 250,361. 14 Claims. (Cl. 66—26.)

3. A knitting machine having, in combination, a needle cylinder, radially movable web holders, means acting automatically to retain all the web holders in advance position and permit them to yield radially at the knitting point during the knitting of the initial course or

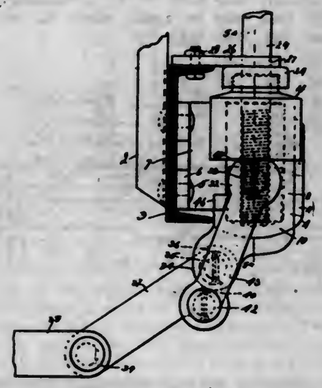
courses and to thereafter retract them in advance of and advance them at the knitting point during the knitting of the remainder of a web.

1,483,905. WEB-HOLDER MECHANISM. MAX C. MILLER, Cumberland Hill, R. I., assignor to Jenckes Knitting Machine Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed Aug. 17, 1918. Serial No. 250,362. 20 Claims. (Cl. 66—26.)



1. A knitting machine having, in combination, a needle cylinder, a web holder dial secured thereto, web holders in the dial, a web holder cam ring having a limited movement with relation to the knitting cams during reciprocatory knitting, two web holder advancing cams on the cam ring, and means rendered active by said relative movement to alternately move the web holder advancing cams forward.

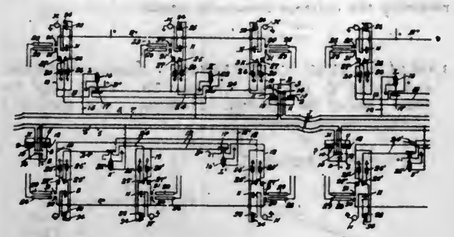
1,483,906. WRENCH. WALTER F. MILLER, Dayton, Ohio. Filed Oct. 3, 1921. Serial No. 504,831. 4 Claims. (Cl. 81—185.)



1. A wrench comprising cooperating jaws having their gripping faces spaced apart a fixed distance, a face plate pivotally mounted near the inner end of the gripping face of one of said jaws, on an axis parallel with said gripping face, for movement into and out of contact with said gripping face, said wrench having a cavity ar-

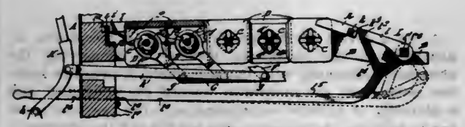
ranged beyond the inner end of the gripping face and in line with the space between said jaws, to receive said face plate when it is moved to its inoperative posi-

tion, and a spring arranged in said cavity and acting on said face plate to hold it in either its operative or its inoperative position.



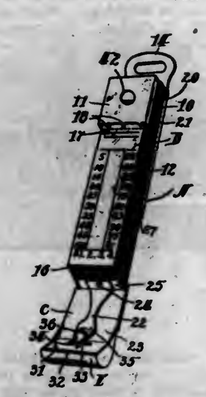
1,483,907. CAR BRAKE. RUSSELL H. MINICH, Philadelphia, Pa., assignor to Minich Railway Appliance Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 16, 1923. Serial No. 612,937. 6 Claims. (Cl. 74—120.)

1. A car brake comprising a cage having slots therein and provided with hangers at the bottom thereof, a rotatable staff projecting into said cage, a wing nut threaded on said staff within the cage, trunnions carried by said nut and projecting through the slots in said cage, an operating lever journalled between the hangers and adapted to be connected with a brake rigging, and links pivoted to the trunnions of the nut and to the operating lever intermediate its ends to one side of its longitudinal center.



1,483,908. TRAIN-DOOR SYSTEM. GEORGE E. OAKLEY, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Feb. 28, 1920. Serial No. 362,168. 2 Claims. (Cl. 105—341.)

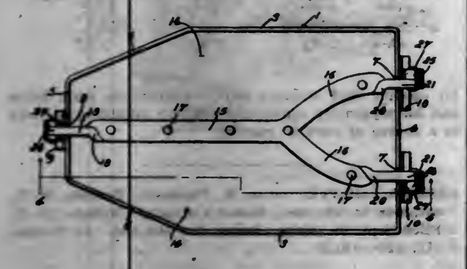
2. The combination with door-operating circuits on two or more cars of a train, of a continuous train-line simultaneously controlling said circuits and divisible into sections, normally closed circuit breakers bridging between said sections during train movement, and means



for opening said bridging switches when the train stops and for separately connecting the two adjoining sections to a source of electric current.

1,483,909. GRATE. OLAF W. PETERSEN, Buffalo, N. Y., assignor to Petersen Stoker Company, Buffalo, N. Y. Filed Sept. 28, 1921. Serial No. 503,880. 18 Claims. (Cl. 126—181.)

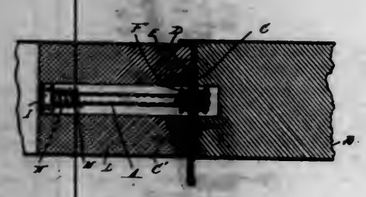
1. In a grate, the combination of a plurality of rotary grate-bars each including a shaft and plates arranged thereon, the plates of one grate-bar entering into spaces between plates of an adjacent grate-bar, and collars on said plates extending into the spaces between said plates for spacing said plates relatively to each other, said collars extending into proximity to the peripheries of the plates of an adjacent grate-bar to prevent large particles of fuel from falling through the spaces between the plates.



1,483,910. CHECK HOLDER AND CUTTER. CHARLES T. RASCHICK, St. Paul, Minn. Filed Feb. 2, 1920. Serial No. 355,572. 16 Claims. (Cl. 164—119.)

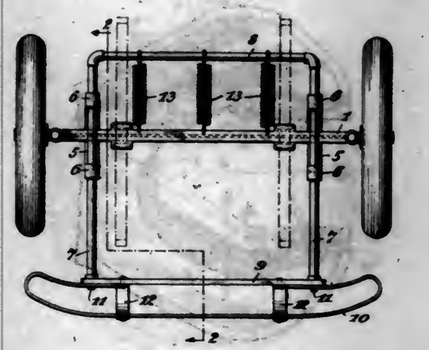
1. A punch comprising a body member having an inclined wall positioned at the end thereof with an aperture therein, a tongue mounted on said body member extending

along said body member having a portion adapted to engage the aperture in said inclined wall and a pocket beneath said inclined wall, free of said body member, for retaining the cuttings from said punch.



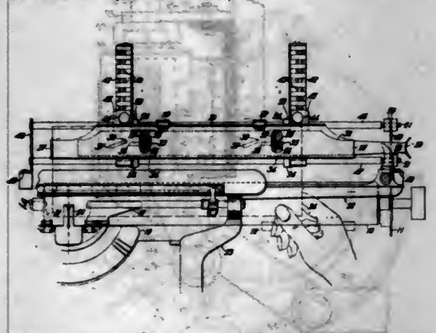
1,483,911. MEAT COMPRESSOR. ALEXANDER RISPEL and LOUIS C. LIEDTKE, Chicago, Ill. Filed June 10, 1921. Serial No. 476,590. 2 Claims. (Cl. 100—57.)

1. In a device of the class described, a receptacle, an abutment in the receptacle, means for connecting the abutment releasably with the receptacle, a pressure member movable in the receptacle toward the abutment, and a plurality of springs cooperating with the pressure member to advance the pressure member toward the abutment, the bottom of the receptacle having a socket wherein one of the springs is received.



2. In a device of the class described, a receptacle, an abutment in the receptacle, means for connecting the abutment releasably with the receptacle, a pressure member movable in the receptacle toward the abutment, and a plurality of springs cooperating with the pressure member to move the pressure member toward the abutment, one of said springs embodying an intermediate portion provided at its ends with diverging arms, certain of the arms bearing against the bottom of the receptacle and others of the arms bearing against the pressure member.

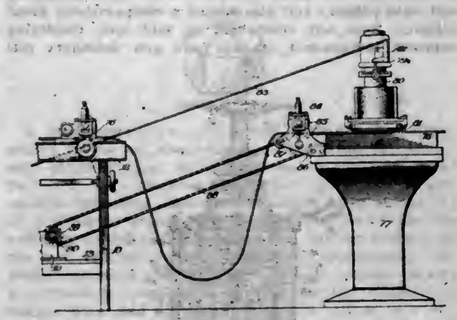
1,483,912. DOOR CHECK. PAUL RISSMAN, Detroit, Mich., assignor to Detroit Insulated Wire Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 29, 1922. Serial No. 557,295. 5 Claims. (Cl. 16—82.)



5. A door check comprising anchor plates secured respectively to the posts of the door and door frame, a cable passing through apertures in said plates and through an aperture in one of said posts, collars surrounding the opposite end of the cable, one of said collars being integral with one of said plates, and means for securing the ends of the cable to said collars.

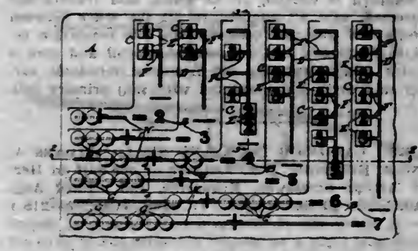
1,483,913. AUTO BUMPER. MAX SCHWARTZ, New York, N. Y. Filed Aug. 23, 1923. Serial No. 658,852. 5 Claims. (Cl. 293—55.)

5. An auto bumper in combination with an axle, a bracket mounted upon said axle and provided with bearing sleeves, a frame having side bars slidingly mounted in said sleeves and provided with a cross bar, and tension springs connecting the ends of said cross bar with said bracket.



1,483,914. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 18, 1920. Serial No. 382,229. 26 Claims. (Cl. 197—127.)

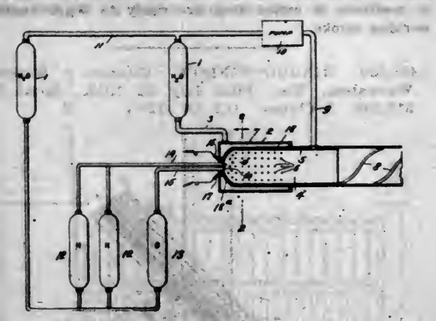
1. In a typewriting machine, the combination with a carriage having a carriage-return finger-piece thereon and a platen mounted therein, of a gage-plate upon the carriage, a clip upon the plate to hold a work-sheet thereon, and a finger-piece to line-space the plate and sheet thereon, the line-spacing finger-piece being located adjacent the carriage-return finger-piece, so that they may be grasped at the same time and the line-spacing finger-piece pressed towards the carriage return finger-piece to line-space the gage-plate as the carriage is being returned to the right by the carriage-return finger-piece.



1,483,915. TIRE-BOOT-BUILDING MACHINE. CHARLES W. STEELE, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 15, 1919. Serial No. 271,294. 4 Claims. (Cl. 154—1.)

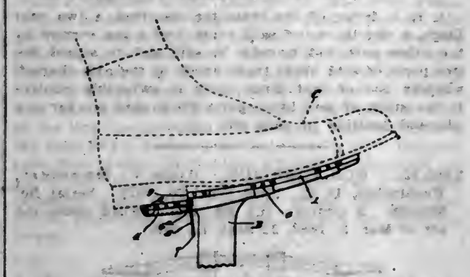
1. In a machine of the character described, the combination of means for forming continuously a strip of laminated material an intermittently actuated die press for cutting articles from said strip, feeding means located between the forming means and the die press, an adjustable driving connection from said forming mechanism

to said die press and feeding means, and an independent adjusting device for governing the action of said feeding means.



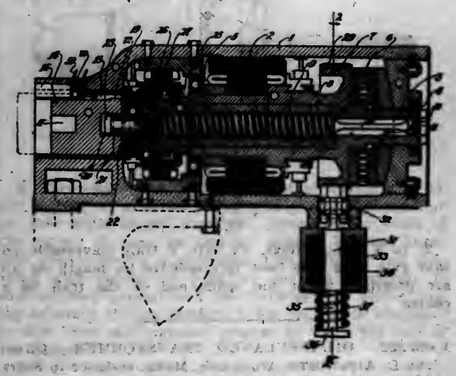
1,483,916. EDUCATIONAL APPLIANCE. NELLIE YORK TROIDL, Niagara Falls, N. Y. Filed Oct. 25, 1922. Serial No. 596,866. 6 Claims. (Cl. 35—2.)

1. In an educational appliance, the combination of a support having a series of numerals displayed thereon, a plurality of sets of numeral-displaying members movable on said support to and from positions adjacent the numerals of said series, the sets of members being arranged to cooperate with different series numerals, each of the members of a set having a similar appearance to another member of the same set, whereby members of similar appearance in a set may be readily grouped adjacent the series numeral for that set, said series numerals representing numbers bearing a predetermined arithmetical relation to the numbers represented on similarly appearing members of the sets with which they cooperate, and a plurality of objects movably mounted to cooperate with said series numerals and adapted to be arranged to bear a predetermined numerical relation to the numbers represented by said sets and said series numerals.



1,483,917. OXYHYDROGEN STEAM GENERATOR. ERNEST E. TUCKER, New York, N. Y. Filed Apr. 17, 1922. Serial No. 553,828. 16 Claims. (Cl. 158—73.)

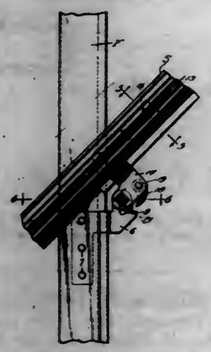
4. In an apparatus for the generation of motive fluid by injecting a combustible fluid and a combustion supporting medium into contact with a liquid to be vaporized, a shell having perforations through which the liquid to be vaporized enters the combustion space, a liquid chamber surrounding said shell, an oxyhydrogen blowpipe in one end of the shell, all arranged so that the finely divided



particles of liquid passing through the perforations in the shell may be brought into contact with the oxyhydrogen flame.

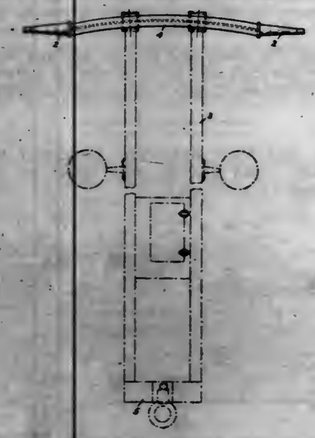
1,483,918. TREAD-REST FOOT GRIP. ALFONSO C. VAN NUIS, Cleveland, Ohio. Filed Jan. 9, 1922. Serial No. 527,901. 11 Claims. (Cl. 15—265.)

6. A foot grip comprising cushion sole and heel parts adjustably connected together to provide for footwear having heels of different height, substantially as described.



1,483,919. ELECTRIC RIVETER. CHARLES J. WALKER, Gary, Ind. Filed Mar. 31, 1922. Serial No. 548,293. 25 Claims. (Cl. 78—48.)

1. In an electric riveting machine, a riveting member, a rotatable electric motor element, mechanism between said element and said member for driving the latter through a working stroke with the total kinetic energy available in the rotating motor element, in bringing the



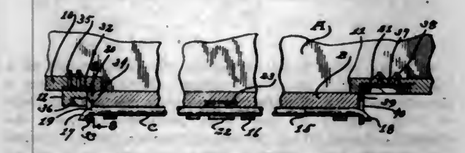
latter to rest from a condition of motion, and additional means for restoring said member and said mechanism to positions in which they are ready to begin another working stroke.

1,483,920. HINGED WINDOW. CHARLES J. WAMSER, Wauwatosa, Wis. Filed July 21, 1919. Serial No. 312,298. 9 Claims. (Cl. 16—128.)

1. In a device of the character described, a two part hinge, a slot in one of said parts, and a pin carried by the other part and movable in said slot to adjust the two parts of said hinge transversely of the axis thereof, whereby one of said hinge parts is swingable relative to the other of said hinge parts about said pin for any adjusted position of said pin.

1,483,921. GUN CARRIAGE. HARRY C. ZIMMERMAN, Washington, D. C. Filed Sept. 20, 1923. Serial No. 663,908. 2 Claims. (Cl. 89—40.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

2. In a gun carriage, an axle, a trail traversable on said axle, said axle bent intermediate its length on an arc described about the spade end of the trail as a center.

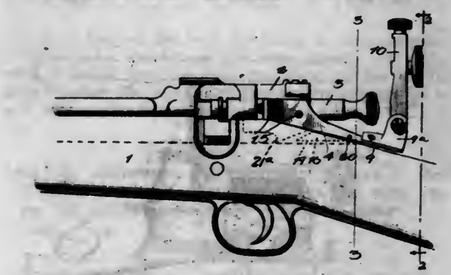


1,483,922. OIL-INSULATED TRANSFORMER. CHESTER D. AINSWORTH, Wollaston, Mass., assignor to Sears B. Condit, jr., Brookline, Mass. Filed Mar. 17, 1919, Serial No. 283,091. Renewed Jan. 3, 1924. 16 Claims. (Cl. 175—361.)

1. A transformer comprising a core forming a closed magnetic circuit, a secondary coil wound thereon, a primary coil arranged concentric with said secondary coil, the inner diameter of said primary coil adapted to be comparatively great as regards the outer diameter of the secondary coil whereby said primary coil is spaced a comparatively great distance from said secondary coil, said primary coil also spaced a comparatively great distance from any component of said core, insulating supports independent of said core and secondary coil

arranged to hold said primary coil in position, a receptacle adapted to contain oil in which said transformer is immersed, said oil adapted to fill the space between said coils and core and comprise the sole insulation between said primary coil and secondary coil and core a cover for said receptacle, and insulated terminals carried by said cover and connected with said primary coil.

1,483,923. CAR-DOOR LOCK AND SEAL. CHARLES A. ARNOLD, Evansville, Ind., assignor of one-half to Herbert Arthur Strassweg, Evansville, Ind. Filed Aug. 8, 1922. Serial No. 580,458. 1 Claim. (Cl. 292—218.)

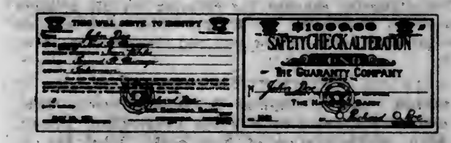


The combination with a structure including a wall having a door opening therein and a door for closing said opening, of a locking device for the door including a rotatable bolt extending the full width of the door, hooks formed on the terminals of the bolt, a rigid keeper at one side of the door frame having an elongated opening therein to permit passage of one of the entire hooked ends of the bolt therethrough, and a hinged keeper at the opposite side of the door frame from the rigid keeper, said hinged keeper including a base plate countersunk in the side wall, and an arm hinged to the base plate adapted to swing outwardly and into engagement with said base plate, thereby lying flush with the outer face of the side wall when in an inoperative position, said arm having an elongated opening therein to permit passage of the entire other hooked end of the bolt therethrough, the outer surfaces of said hooked ends being curved for facilitating the insertion of the hooked ends in said keepers and for engaging the ends of the openings in said keepers to force the door into tight contact with the door frame upon rotation of said bolt.

1,483,924. NUT LOCK. FREDERICK L. BIXBY, THOMAS R. GIBSON, and EVERETT W. CHENEY, Reno, Nev. Filed Oct. 5, 1922. Serial No. 592,625. 2 Claims. (Cl. 151—29.)

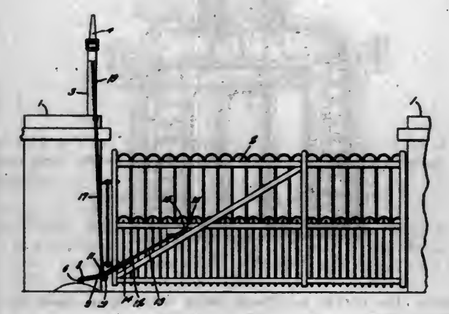
1. The combination with a bolt having a diametrical groove in the end thereof and a castellated nut adjustably mounted upon the end portion of the bolt, a cap having a body adapted to fit over the nut, a locking member extending diametrically of the body of the cap in position to engage with aligned grooves of the nut and bolt to releasably hold the nut against turning on the bolt, said nut having a continuous depression in the peripheral walls thereof and said body portion having a continuous inwardly extending portion adapted to engage with said depression when the cap is in a certain position on the nut to releasably hold the cap against displacement from the nut and to prevent escape of a lubricant from the space between said cap and said nut.

1,483,925. SIGHT BASE FOR FIREARMS. LOUIS CHARLES BOOTH, Sheridan, Wyo. Filed Dec. 30, 1922. Serial No. 609,981. 18 Claims. (Cl. 42.)



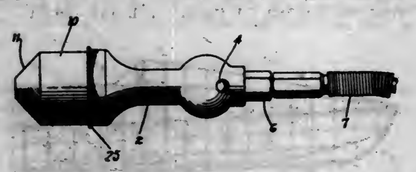
1. The combination with a rifle having a sliding bolt breech mechanism and a groove in the stock in which the tang of the firing pin travels, of a sight base mounted on the bolt and movable therewith, and a tongue carried by the base and designed to engage the said groove when the breech is closed.

7. A sight base for fire arms comprising a bifurcated body, a depending tongue carried by the body, and a plurality of stops adjacent to said tongue.



12. A gun sight comprising a base having one extremity upset above the plane of the base, a foot plate fixedly secured to the opposite end, and an upright member pivotally mounted on said foot plate.

1,483,926. CHECK-GUARANTY CERTIFICATE. CLARENCE B. CHADWICK and JAMES R. MACPHERSON, Chicago, Ill., assignors to The Bankers Supply Co., Chicago, Ill., a Corporation of Colorado. Filed June 4, 1921. Serial No. 474,955. 5 Claims. (Cl. 283—7.)

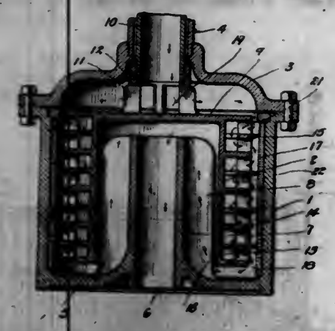


1. In an instrument of the kind described, the combination of a section constituting a contract of guaranty against check alteration, and a section constituting a sample of said check paper, substantially as described.

1,483,927. GATE-OPERATING MECHANISM. JAMES R. CLARK, Lexington, Ky. Filed Oct. 9, 1922. Serial No. 593,307. 1 Claim. (Cl. 39—59.)

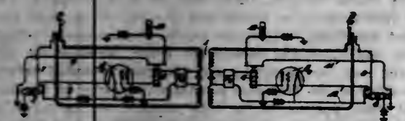
The combination with a hinged gate and operating levers supported beyond opposite sides thereof, of a bracket anchored in the path of the gate when swung to open position, an elongated loop having its open end pivotally connected to the bracket, the sides of the loop being coiled between their ends to provide spaced eyes, the intermediate or closed end portion of the loop being offset upwardly, transverse reinforcing members integral with and extending across the space between the sides of the loop, an operating rod pivotally mounted between the sides of the loop and pivotally connected to the gate, said offset portion of the loop adapted to rest upon the rod to hold it in one position, a lifting rod, a laterally extending finger thereon secured within the eyes, and flexible connections between said rod and the respective levers.

1,483,928. ACETYLENE BURNER. CLAUD J. CLEFTON, Owatonna, Minn., assignor, by direct and mesne assignments, to Ruth P. Clefton, St. Paul, Minn. Filed Mar. 5, 1921. Serial No. 449,972. 3 Claims. (Cl. 158—118.)



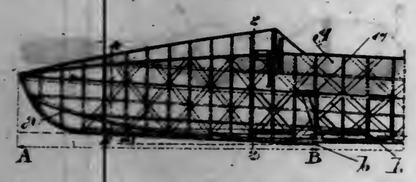
2. The combination, with a gas burner having a chamber therein, of a sleeve fitting within said chamber and its side walls spaced from the corresponding walls of the burner to form an annular passage between them, said sleeve having a cone-shaped imperforate end provided with means for deflecting the gas outwardly to said annular passage and the walls of said sleeve having openings therein through which the gas is compelled to flow from said annular passage to reach the exit of the burner.

1,483,929. CENTRIFUGAL MACHINE. WILLIAM C. COLEMAN, Wichita, Kans. Filed June 9, 1923. Serial No. 644,346. 6 Claims. (Cl. 83—67.)



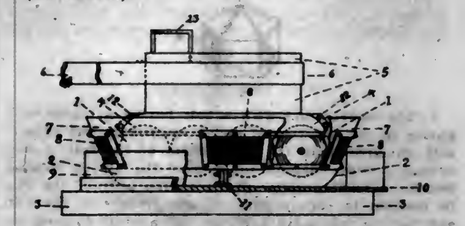
1. A separator comprising a hollow rotor, and a distributor within it, the distributor having a circumfer-

ential wall provided with a plurality of ring-shaped partitions, the alternate ring-shaped partitions having



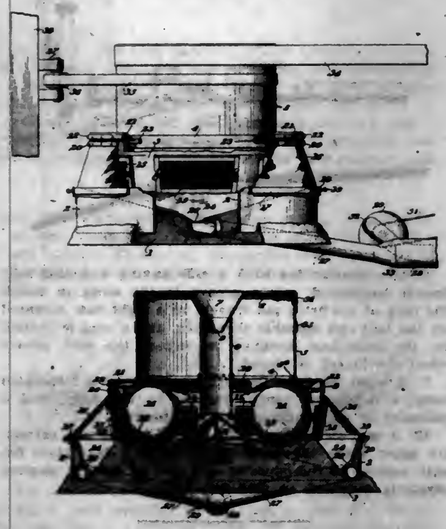
ports, the portal partitions being wider than those between them.

1,483,930. TRANSMISSION-EQUALIZATION ARRANGEMENT. LEO H. DARROW, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 23, 1920. Serial No. 432,835. 2 Claims. (Cl. 178—44.)



1. A link circuit adapted for establishing connections with lines of differing electrical characteristics, a current supply circuit included in said link circuit, and a vacuum tube dynatron connected in series in said current supply circuit and possessing the characteristic of negative electrical resistance whereby transmission over said lines may be maintained subetantially constant.

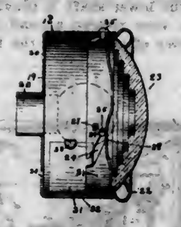
1,483,931. HYDROGLIDER. FRANCISQUE DUMOND and CLÉMENT GALVIN, Lyon, France. Filed Oct. 5, 1921. Serial No. 505,522. 1 Claim. (Cl. 114—66.5.)



In a hydro-glider, a hull having a front part forming the bow thereof and a rear part of rectangular shape in plan and of a length considerably greater than said front part the base of said front part being upwardly inclined towards the bow from two to five degrees with respect to the horizontal and the base of the rear part being upwardly inclined towards the stern of said hull to a lesser degree than the base of said front part, a single transverse set back of slight depth extending along the line of intersection of said front and rear parts, said line of intersection being in front of the centre of gravity of the hull, two hydro-planing surfaces one on each side of said front part, conduits the upper ends of which are in communication with the atmosphere and the lower outlets are immediately behind said set back and an aerial propeller for driving the hydroglider.

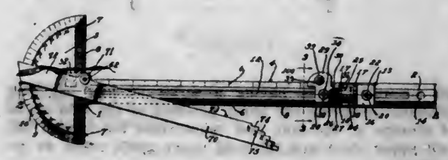
1,483,932. ROCK AND ORE CRUSHING MILL. OSCAR ANDREW ELLIS, San Francisco, Calif., assignor to Axel E. Ellis, Boston, Mass. Filed Oct. 9, 1917, Serial No. 195,628. Renewed July 14, 1923. 12 Claims. (Cl. 83—45.)

1. A crushing mill comprising an annular trough or runway, a series of balls rolling in said runway, the inner portion of said runway having a surface substantially tangential to that of the balls, and a saddle resting on said balls and held in position wholly thereby, said saddle being entirely free to move laterally in substantially all directions.



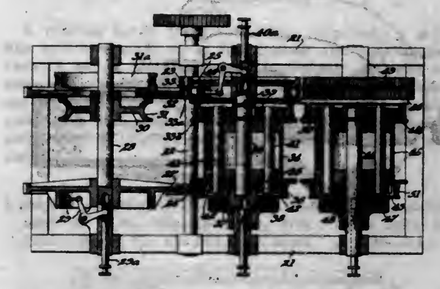
1,483,933. DRY-CRUSHING MILL. OSCAR ANDREW ELLIS, San Francisco, Calif. Filed May 31, 1918, Serial No. 237,462. Renewed July 14, 1923. 9 Claims. (Cl. 83—45.)

1. In a crushing mill, the combination with a circular grinding device, of a closed annular chamber surrounding said device and extending below the same, means for feeding material to be ground into the center of the grinding device, and means connected with the bottom of said annular chamber for reducing the air pressure therein so as to cause the dry pulverized material from the grinding device to flow into and through such chamber.



1,483,934. LAMP. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Feb. 5, 1921. Serial No. 442,639. 4 Claims. (Cl. 240—41.)

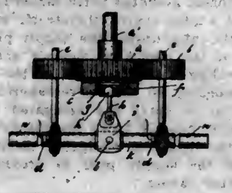
1. In a lamp, the combination of a cylindrical body, a lens holder fitting one end of the body and secured thereto by pins and bayonet joints, a lens within the holder and a circular spring ring of thin sheet metal contacting with the body and with the lens directly at



a plurality of points to cause pressure between the lens and the lens ring and between the lens ring and the body.

1,483,935. DRAFTING INSTRUMENT. CHARLES FREMONT GOLDEN, Denver, Ind. Filed Dec. 20, 1921. Serial No. 523,731. 6 Claims. (Cl. 33—75.)

1. In a tool of the class described, a main member; a center point carried by the main member; a stylus holder; means for mounting the stylus holder on the main member and means for micrometric adjustment of said holder with respect to the center point.

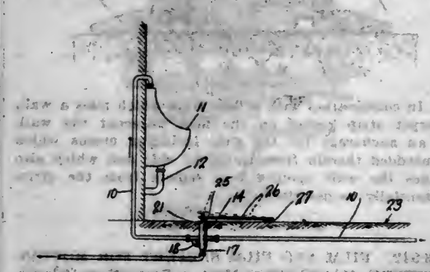


1,483,936. HOISTING MECHANISM: NORMAN T. HARRINGTON, Cleveland, Ohio. Filed Nov. 14, 1921. Serial No. 515,089. 7 Claims. (Cl. 254—178.)

1. In hoisting mechanism, the combination of two drums disposed laterally of each other and means operable at will to rotate the drums at substantially the same speed or to selectively vary the speed of either one of the drums to increase or decrease its speed relatively to the other drum, said means including separate differential motion mechanism for each of the drums and separately controllable motor means for actuating one of the driving members of each of the drums.

1,483,937. AUTOMATIC BOBBIN-WINDING MACHINE. LUDWIG HAUSSELER, Plauen, Germany, assignor to Robert Reiner Incorporated, Weehawken, N. J. Filed Jan. 13, 1922. Serial No. 528,981. 4 Claims. (Cl. 242—43.)

1. In an automatic bobbin-winding machine, the combination with a thread guide spindle and a driven gear, of a member pivotally connected at one end to said spindle and fixed to the face of said gear by a universal joint, so that during the rotation of said gear, one end



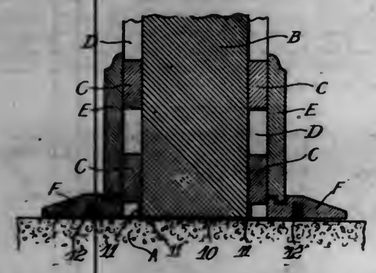
of said member will swing in a circle around the axis of said gear and cause the other end to oscillate said guide spindle.

1,483,938. MEASURING ICE-CREAM DISHER. GEORGE E. HOLMES and FRANK W. GRANT, Dover, N. H. Filed Nov. 13, 1922. Serial No. 600,641. 6 Claims. (Cl. 107—48.)

1. A measuring ice-cream disher comprising, in combination, a bowl having a handle, a sickle-shaped cleaver blade, conforming to the top edge of the bowl, and provided with a shank pivoted to the handle, a scraper journaled to turn within the bowl, and conforming to the internal surface of the latter, a single manually movable operating lever, fulcrumed on the handle, blade-operating and releasing trigger means, carried by the blade shank and the lever, and adapted to alternately operate and release the blade, torque-transmitting connections between the lever and the scraper, a controlling spring acting directly on the blade to normally hold the blade in its starting position, and another controlling spring, acting directly on the lever, to normally hold the lever in its starting position, the lever acting through said trigger means, to operatively move the blade across the bowl, and the lever spring acting indirectly on the scraper through said connections, to hold the scraper in its starting position, the arrangement being such that the initial movement of the lever from its starting position, first operates, and then releases the blade, and the final movement of the lever from said position, operates the scraper after the operation and release of the blade.

1,483,939. URINAL FLUSH. ANTHONY C. JAEGER, St. Louis, Mo. Filed Jan. 11, 1921. Serial No. 436,470. 1 Claim. (Cl. 4—108.)

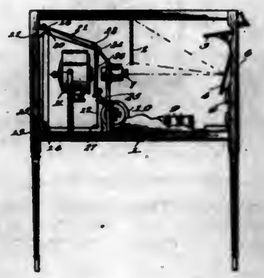
In a flush system, the combination with a supply pipe, a valve casing in communication with and extending transversely of the supply pipe upon opposite sides thereof, a discharge port at the outer end of the valve casing, a by-pass having one end in communication with



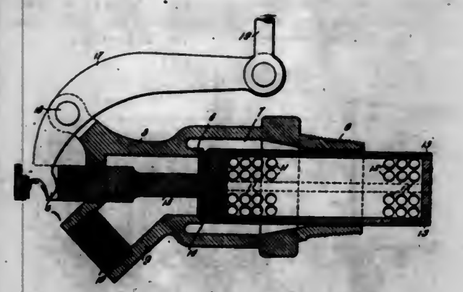
the valve casing between the supply pipe and discharge port and its opposite end in communication with said supply pipe, a spring actuated valve including an elongated member and a disk spaced therefrom, said elongated member normally interrupting the supply pipe while the opposed faces of the elongated member and disk define a passage providing a continuation of the supply pipe, and means connected to the valve whereby the latter may be operated to move the elongated member into position to simultaneously close the discharge port and by-pass, with the disk and elongated member upon opposite sides of the supply pipe to provide a passage through the valve casing.

1,483,940. ANTIRATTLER FOR AUTOMOBILE HOODS. HANS G. JORGENSEN, Erie, Pa. Filed Nov. 14, 1921. Serial No. 514,865. 9 Claims. (Cl. 292—114.)

1. An anti-rattler formed of a block of resilient rubber with a face adapted to engage the side of a hood and having an opening therethrough adapted to receive and grip a fastener, the opening being slitted to permit the walls of the opening to be sprung over the fastener, the block extending forward from the opening a sufficient distance to permit the opening of the slit by pressure on the projecting portion of the block.



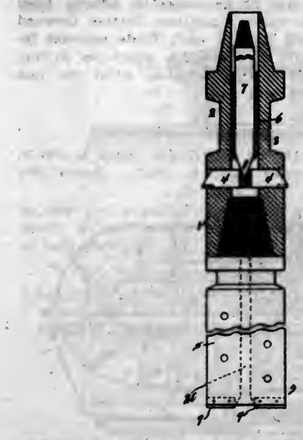
1,483,941. CARPET-STRIP ANCHORAGE. MAHLON O. KASSON, Chicago, Ill. Filed Oct. 30, 1922. Serial No. 597,700. 9 Claims. (Cl. 20—74.)



1. In combination with a floor from which rises a wall, a carpet strip rested on the floor adjacent the wall, and an anchorage for the strip including means which is embedded therein from its under side and which also engages the wall upon a face remote from the strip, substantially as described.

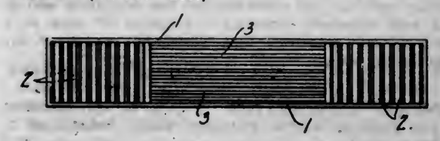
1,483,942. FILM AND FILM SUPPORT FOR MOTION-PICTURE MACHINES. MORRIS KEIL, New Orleans, La. Filed Jan. 28, 1920. Serial No. 354,609. 1 Claim. (Cl. 88—18.7.)

In a motion picture exhibiting apparatus employing an endless film, vertically spaced film guide rollers for a single strand of the film, a projector across which the strand of film passes between said guide rollers, vertically spaced horizontal shafts at the rear of the projector of which the lower shaft is provided with a series of flanged plain face rollers around which the lower portions of a series of strands of the film pass, the upper of said shafts having a series of film engaging sprockets receiving the upper portions of the said series of strands of the film, and connections for driving the said upper shaft and the said upper guide roller as described.



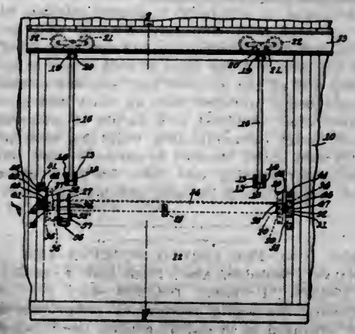
1,483,943. BLOW-OUT VALVE. GEORGE WILLIAM KELLER, Portsmouth, Ohio. Filed May 4, 1923. Serial No. 636,604. 2 Claims. (Cl. 251—159.)

1. In a valve, a body portion having a threaded extension and having a valve seat formed within the body portion at a point in spaced relation with the threaded extension, a movable valve member operating within the body portion, said valve member being cylindrical in formation and having a beveled inner end adapted to cooperate with the valve seat to cut off the passage of fluid through the body, and said valve member having openings formed in the wall thereof and arranged adjacent to its ends.



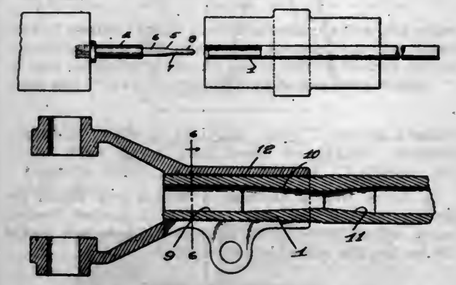
1,483,944. UNDERREAMER. JAMES M. KELLERMAN, Los Angeles, Calif. Filed Feb. 18, 1922. Serial No. 537,635. 4 Claims. (Cl. 255—74.)

1. An underreamer comprising a carrier to be connected to a drill stem and having an opening therethrough and radial slots leading from said opening outwardly, cutting blades slidably mounted in said slots, an expander movable vertically in said opening and adapted to actuate said blades to throw the same in



operative position, and a pipe surrounding said expander for holding said blades in operative position after said expander is removed.

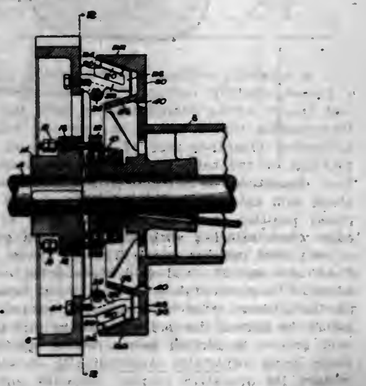
1,483,945. RUNNING BOARD FOR AUTOMOBILES. OTTO CHRISTIAN BERNHARDT KOEHN, Williamsburg, Iowa. Filed Mar. 26, 1923. Serial No. 627,882. 1 Claim. (Cl. 280—169.)



A running board for automobiles, comprising a grill-like structure made up of longitudinal and parallel side bars; a set of slats mounted transversely between the side bars at each end thereof, the slats of each set being spaced apart and the two sets of slats being slanted away from each other at their upper edges; and a set of slats mounted longitudinally between the two sets of end slats.

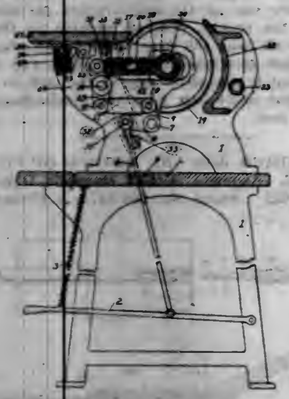
1,483,946. SLIDING DOOR. HERMAN N. MAY and ERNEST M. MAY, Mineral Point, Wis. Filed July 28, 1923. Serial No. 654,502. 4 Claims. (Cl. 20—24.)

2. A sliding door adapted to be shifted laterally into a door opening in a wall, a track supported near the door opening and extending longitudinally thereof, rollers traveling upon the track, means supporting the door upon the rollers to permit the door to be shifted laterally into the door opening, an angle bar pivotally mounted upon the inner side of the door, means to turn the angle bar upon its longitudinal axis, cranks connected with the angle bar to be turned thereby and projecting upon the outer side of the door, rollers pivotally connected with the cranks, brackets secured to the outer side of the wall near the door opening and adapted to receive the last mentioned rollers therein, and a guide bracket secured to the outer side of the wall to receive one web of the angle bar, upon the longitudinal movement of the door.



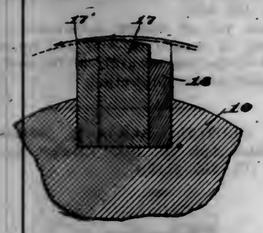
1,483,947. REACH ROD AND METHOD OF FORMING THE SAME. ALONZO C. MORSE, Mansfield, Ohio. Filed Dec. 11, 1922. Serial No. 606,127. 2 Claims. (Cl. 78—81.)

1. The method of forming the end of a steering reach rod, consisting in confining the tube against external expansion, and inserting within the tube a former shaped to accurately fit and maintain the normal interior diameter for a determinate distance from the end of the tube, with the former remote from the tube end of less than the tube diameter, and exerting endwise pressure on the tube.



2. A reach rod of hollow construction, the end of the rod being of normal exterior and interior diameter, the interior of the rod inwardly of the end having a tapering annular inward projection.

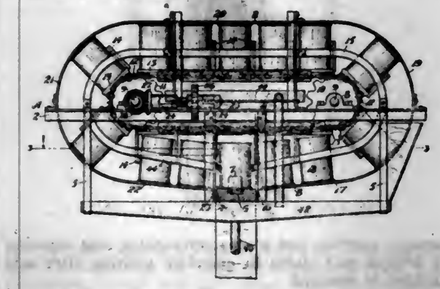
1,483,948. CLUTCH. ALMON E. NORRIS, Brookline, Mass. Filed Apr. 29, 1921. Serial No. 465,378. 3 Claims. (Cl. 192—113.)



1. In a clutch, the combination of two cooperating clutch members having parts provided with concentric engaging faces, said members presenting supports providing for corresponding radial expansion and contraction of said parts, one of said members having a generally U-shaped cross-section, one of said parts constituting one leg of the U.

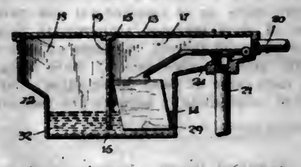
1,483,949. IRONING MACHINE. JAMES F. PATTON and JOHN E. MCALLISTER, Cleveland, Ohio, assignors to The Patton Company, a Corporation of Ohio. Filed Nov. 24, 1919. Serial No. 340,115. 12 Claims. (Cl. 68—9.)

11. In an ironing machine, a shoe, a roll, means for locking the roll and shoe together, a pivoted feeding board, which, when tilted, releases the lock, and means for forcing the roll and shoe together.



1,483,950. ROTARY CUTTING TOOL. VICTOR H. PETERSON, Belmont, Mass., assignor to Moback Tool & Machine Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 25, 1921, Serial No. 517,579. Renewed Dec. 14, 1923. 19 Claims. (Cl. 77—72.)

1. A rotatable cutting tool comprising a part having a groove, slightly inclined from the axis and a blade and spacer fitting simultaneously into the groove and transposable therein so as to vary the relation to the peripheral clearance face of said blade to the axis of rotation of the tool, whereby in one position the said face constitutes a section of a surface of revolution about said axis of rotation of the tool, and in its transposed position retreats from the path of its leading edge when rotating with the tool; said groove having a peripheral opening equal in width to the thickness of blade and spacer; and said blade being set with both edges of its peripheral face standing out beyond the walls of the groove, whereby it can be ground peripherally about the axis of the tool without the said part in which said groove is formed being thereby ground; and the blade being adjustable longitudinally on said incline to restore its operative cutting diameter notwithstanding the removal of material from it by said peripheral grinding.

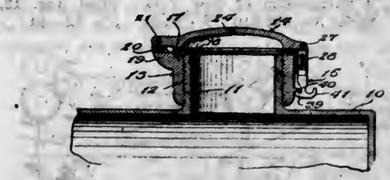


7. The art of providing clearance for blades of a rotary cutting tool comprising the positioning of the blades in grooves on the tool, with their cutting edges forward and projecting out of the grooves and free from contact with the body of the tool; rotating the tool forward in cutting direction and grinding their peripheral faces circular to the axis of the tool while so positioned; then shifting the blades, each in its respective groove, from their said positions to cutting positions further forward wherein the peripheral face of each blade retreats inward from that surface of revolution which its cutting edge generates, in its cutting position, when the tool is rotated on its same said axis.

1,483,951. CAN-DRAINING MACHINE. EARL L. PRICE, Oakland, Calif. Filed Nov. 9, 1921. Serial No. 513,920. 3 Claims. (Cl. 226—22.)

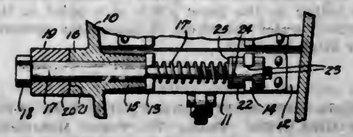
1. In a draining machine of the character described, a can conveyor, an endless conveyor disposed at right angles to the first conveyor and including a relatively long upper substantially horizontal stretch, said second conveyor being adapted to remove the cans from the first conveyor and redeliver the cans to the first conveyor, and during removal and redelivery of the cans from and to the first conveyor, inverting a plurality of cans at a time on said relatively long horizontal stretch of the endless conveyor.

1,483,952. ACCELERATOR. FRANK B. QUACKENBOSS and JOHN A. NEALE, Nashville, Tenn. Filed June 7, 1921. Serial No. 475,780. 3 Claims. (Cl. 169—17.)



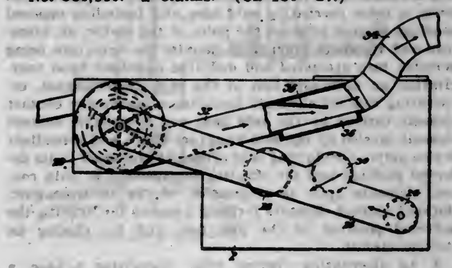
1. An accelerator of the class described comprising in combination, a closed tank, a division wall for dividing said tank into two compartments, said division wall being arranged to terminate in spaced relation with the bottom of said tank, and said division wall having a restricted orifice adjacent its upper end, a body of liquid within the tank and the level of said liquid being above the lower end of the division wall and one of said compartments being provided with an inlet and an outlet, said inlet being connected to a supply of compressed air and said outlet communicating with the atmosphere, a valve for said outlet adapted to normally close the same, and means for opening said valve when air pressure in the two compartments becomes unbalanced.

1,483,953. CAP FOR LIQUID RECEPTACLES. LILIUS H. RAINEY, Gadsden, Ala. Filed Nov. 1, 1922. Serial No. 598,377. 1 Claim. (Cl. 220—32.)



A closure for liquid receptacles comprising a body member arranged to fit tightly around the filling opening of a receptacle, a lid hinged to said body member, a lug on said lid, a yieldable latch member pivoted in said lug, means on said body member adapted to firmly engage said latch member, said latch member including a sleeve

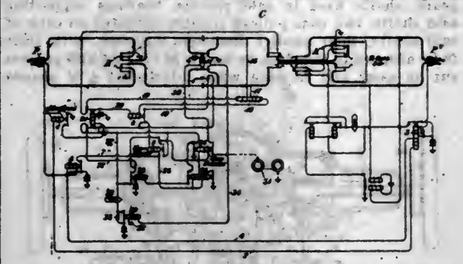
connected with said lug, a hook slidably engaged in said sleeve, a spindle on said hook, a spring coiled around said spindle, a nut threaded at the free end of the



spindle and engaging one end of said spring, and abutments on said sleeve adapted to engage the other end of said spring.

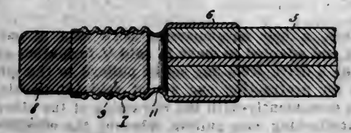
1,483,954. TRANSMISSION-BAND ADJUSTER. OSCAR E. SCHNOEBELEN, Leetonia, Ohio. Filed July 6, 1922. Serial No. 573,077. 4 Claims. (Cl. 188—196.)

3. The combination with the bifurcated end of a transmission band and the pedal shaft, of a nut disposed within the bifurcated band and held against rotation thereby, said nut receiving the end of the pedal shaft therethrough, the inner end face of the nut having grooves, and a washer on the shaft having projections engaged in said grooves and held in such engagement by the spring of the pedal shaft.



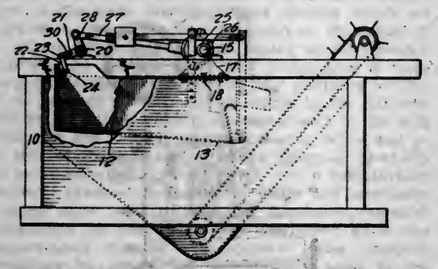
1,483,955. ATTACHMENT FOR THRASHING MACHINES AND CLOVER HULLERS. WILLIAM E. TOLER, Pawnee, Okla. Filed May 29, 1922. Serial No. 564,446. 2 Claims. (Cl. 130—27.)

1. In an apparatus of the class described, a thrashing cylinder, a blower mounted on the shaft thereof, a series of riddles adapted to receive air from said blower, a tailings elevator, in communication with said riddles, a suction fan for said tailings elevator, on said thrashing cylinder shaft, a straw and chaff elevator tube, a suction fan for said tube on the thrashing cylinder shaft and a straw stacker tube in communication with said last named suction fan said fan being adapted to deliver straw to said stacker tube.



1,483,956. TELEPHONE SYSTEM. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 8, 1921. Serial No. 513,701. 6 Claims. (Cl. 179—44.)

1. In a telephone system, a subscriber's line terminating in a line jack at a central office, a link circuit, a trunk circuit for interconnecting the subscriber's line and link circuit, a source of ringing current associated with the trunk circuit adapted to be impressed upon said subscriber's line, signaling means associated with said link circuit operable in a characteristic manner by the aplica-

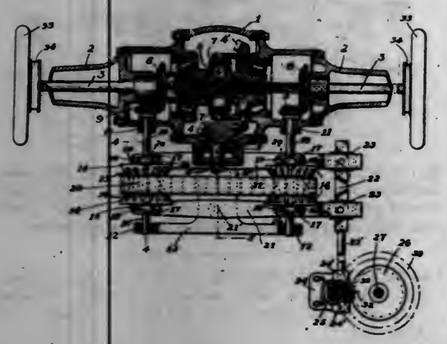


tion of ringing current to said subscriber's line, and means associated with said link circuit responsive to the closure of said subscriber's line for disconnecting ringing current from said line and extinguishing said signaling means.

1,483,957. PENCIL ERASER. NILS T. TRYGGE, Chicago, Ill. Filed May 4, 1920, Serial No. 378,935. Renewed July 26, 1923. Serial No. 557,733. 1 Claim. (Cl. 120—38.)

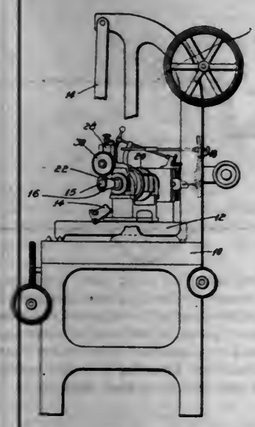
An eraser tip for lead pencils comprising a ferrule adapted to be fitted over the butt end of the pencil to project therefrom, and an eraser rubber held in the projecting portion of the ferrule and projecting therefrom, that portion of the rubber which seats in the ferrule being of a material different from and inferior to that of the projecting portion thereof.

1,483,958. COAL JIGGER. EARL J. WAGNER, Tamaqua, Pa. Filed June 7, 1923. Serial No. 643,966. 4 Claims. (Cl. 83—80.)



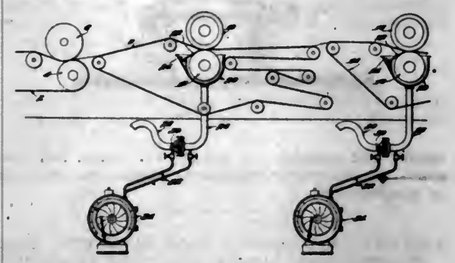
1. The combination of a jig pan, a continuously rotating member, means connecting such member with the pan at one point of its length to impart continuous rotation to the pan at such point, a bell crank lever, means flexibly connecting the pan at another point in its length with such lever, such connection allowing a rotary motion of the pan at such point and means to rock said lever.

1,483,959. VARIABLE-SPEED COMPENSATING DEVICE FOR THE CONTROL OF DIFFERENTIAL AND BRAKE MECHANISMS. LEWIS C. WELCH, Portland, Me. Filed Sept. 17, 1923. Serial No. 663,184. 4 Claims. (Cl. 74—100.)



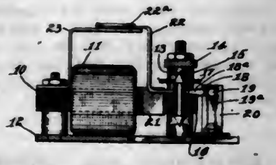
1. In a variable speed compensating device for the control of differential gear mechanisms, the combination,

with a differential, consisting of a planetary set of gears interposed between the driving axles of a motor vehicle and driven by a master gear and pinion, of a gear fixed on each of the axles of said differential, pinions engaging said gears, shafts fixed in said pinions, bearings supporting said shafts, two cone pulleys slidably mounted on each of said shafts, their smaller diameters adjacent, with their faces adapted to interlock by means of tongues and grooves cut on same and forming when interlocked a V shaped



periphery, a belt encompassing both sets of said cone pulleys and adapted to move in said V formation and constituting a drive from one set of pulleys to the other set, means for protracting one set of said interlocking cone pulleys coincidently with the retracting of the other set of said interlocking cone pulleys, whereby the effective working diameters of said cone pulleys may be either decreased or increased respectively and means for actuating said cone pulleys by direct connection with the steering wheel post of a motor vehicle.

1,483,960. PATTERN-COPYING MACHINE. LELAND B. WHIPPLE, Rochester, N. Y., assignor to Fits-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed Aug. 11, 1919. Serial No. 316,804. 2 Claims. (Cl. 142—15.)

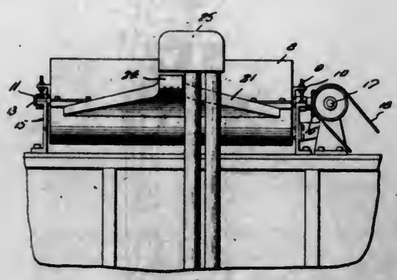


1. In a pattern-copying machine, a model wheel, width grading mechanism, a cutter head having blades adjustable toward and from the axis, and a gage mounted on the machine in fixed relation to the cutter head, and adjustable for setting the blades to any desired diameter.

1,483,961. PAPER-MAKING MACHINE. EZEKIEL J. WILSON, East Greenbush, and EDWIN A. REES, Albany, N. Y., assignors to F. C. Huyck & Sons, Rensselaer, N. Y., a Corporation of New York. Filed Apr. 12, 1923. Serial No. 631,516. 8 Claims. (Cl. 92—49.)

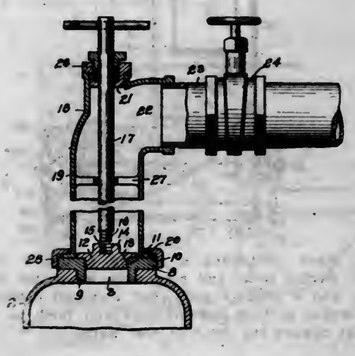
1. In a paper making machine the combination with devices acting on the paper stock at a point in its travel to remove water therefrom of means for measuring the water being removed.

1,483,962. MEANS FOR INDICATING THE INTEGRITY OF CIRCUITS. FRANK W. WOOD, Montclair, N. J. Filed Feb. 27, 1919. Serial No. 379,640. 3 Claims. (Cl. 200—91.)



1. An alternating current relay comprising a base, a stator carried by said base and including an electromagnet and a laminated core terminating in oppositely positioned poles, a rotor carried by said base and including opposed bearings located between the poles of the stator, an armature and its shaft journalled therein, the armature being movable into attracted and deflected positions upon energization an deenergization of the said electromagnet, cooperating contact elements including a stationary contact element carried by the said base and a movable contact element carried by the said armature shaft, and a resilient device active for shifting said armature and shaft to its deflected position and for effecting engagement of said contact elements upon deenergization of the electromagnet, the said contact elements forming a means for limiting the deflected position of the armature and for closing an electric circuit.

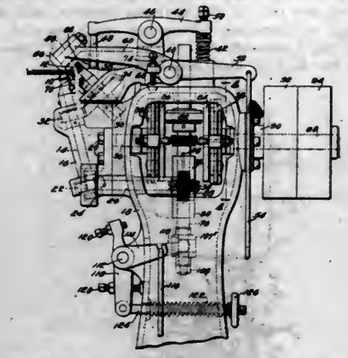
3. An alternating current relay comprising a base, a stator carried by said base and including an electromagnet and a laminated core terminating in oppositely positioned poles, a rotor carried by said base and including opposed bearings located between the poles of the stator, an armature and its shaft journalled therein, the armature being movable into attracted and deflected positions upon energization and deenergization of the said electromagnet, cooperating contact elements including a stationary contact element carried by the said base and a movable contact element carried by the said armature shaft, and a resilient device active for shifting said armature and shaft to its deflected position.



1,483,963. SEED-HULLING DEVICE. ORION YOUNGBLOOD, Boonville, Ind. Filed July 31, 1923. Serial No. 654,806. 4 Claims. (Cl. 83—36.)

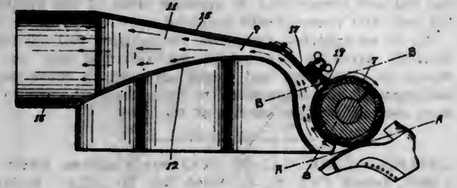
1. A hulling attachment for a separating machine, or the like, comprising a casing of substantial cross shape in plan with the central portion thereof of cylindrical form, a toothed concave member mounted upon the lower part of said central cylindrical portion, a toothed drum mounted within said cylindrical portion and cooperating with said concave member for hulling seed, a rotary conveyor in one end of the casing to receive the material from the hulling drum and to convey it to one side of the separator, and means to rotate said drum and said con-

veyor, the other end of said casing being in the form of a flared inclined chute adapted to receive material from the discharge end of a weigher of the wheat separating machine, and diverging partitions within said chute for distributing the material evenly along the entire length of the drum.



1,483,964. TAP FOR FLUID CONTAINERS. HYMAN LOUIS ABRAMOVITZ, Pittsburgh, Pa. Filed Feb. 25, 1919. Serial No. 279,120. 7 Claims. (Cl. 137—21.)

1. A device for removing plugs from the exterior of containers which have fluid under pressure therein, which consists in a discharge member of greater diameter than the plug adapted to be secured about the plug in such manner as to prevent the escape of fluid, and means extending through the discharge member for removing and holding the plug after the discharge member has been secured in place.

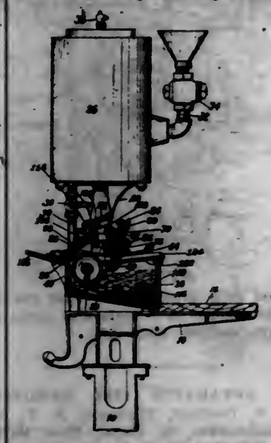


1,483,965. SOLE-MOLDING MACHINE. FREDERIC E. BERTRAND, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 26, 1918. Serial No. 224,705. 12 Claims. (Cl. 12—22.)

12. A sole molding machine having, in combination, a feed roll engaging the flesh side of the feather, a supporting roll engaging the grain side of the feather, the said rolls being arranged to rotate upon intersecting non-parallel axes and having their biting surfaces arranged substantially upon cones of revolution constructed upon the said axes, and a presser roll engaging the body of the sole for bending the sole over the support-

ing roll, said rolls arranged to cause the body of the sole to be positioned in a horizontal plane at the completion of the molding operation.

1,483,966. APPARATUS FOR REMOVING DUST. RICHARD C. COLLINS, Elmhurst, N. Y., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 27, 1917. Serial No. 157,853. 1 Claim. (Cl. 51—273.)



A machine of the class described having, in combination, a frame, a rotary buffing roll mounted on said frame with its under side unobstructed to allow presentation of the work thereto, a hood through which air is drawn to remove the dust generated by the action of the roll on the work, said hood having an inlet section comprising an inclined upper wall terminating in close proximity to the upper part of the periphery of the roll to intercept the dust carried around by the roll, side walls having curved edges in close proximity to the ends of the roll and a lower wall terminating below and at the rear of the roll and extending obliquely upwardly and backwardly in a reverse curve, and a substantially horizontal chamber decreasing in width and increasing in depth from front to rear and forming a rearward continuation for said upper, side and lower walls, the cross-sectional area of said chamber being constant throughout its extent and substantially equal to the cross-sectional area of the opening between the roll and the adjacent curved wall of the hood to conserve the draft.

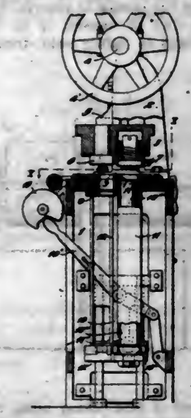
1,483,967. APPLYING APPARATUS. JOHN W. COSGROVE, Medford, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 4, 1920. Serial No. 363,297. 26 Claims. (Cl. 91—51.)

4. In an applying apparatus, means for advancing the work, an applying member movable in contact with the work in a direction opposite to its advance, and means extending about and corresponding in contour to the applying member for forcing the work into engagement with said applying member.

7. In an applying apparatus, an applying member arranged to operate simultaneously upon a plurality of separate objects throughout its length, and plural means situated on one side of the applying member, each means comprising co-operating advancing surfaces and each means acting independently of the associated means for effecting the feed of such separate objects.

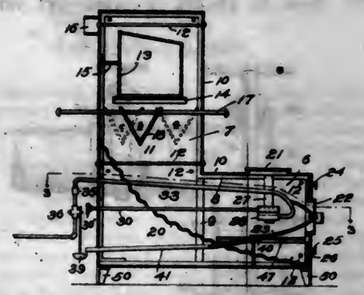
18. In an applying apparatus, a tank, an applying roll rotatable therein, a rod extending across the tank above the applying roll, arms pivotally mounted upon the rod and terminating at opposite sides of the applying roll, and pressure-rolls mounted upon the arms.

25. In an applying apparatus, an applying roll having helically arranged depressions for retaining the substance to be applied, and means arranged to cause the substance in the depressions to be rubbed in a continuous coating over the surface of the work.



1,483,968. TANK GAUGE. CLAYTON CHESTER FERGUSON, Jersey City, N. J. Filed Oct. 20, 1919. Serial No. 331,896. 9 Claims. (Cl. 73—82.)

1. In a tank fluid measuring gauge the combination of a column, a flexible medium at one end of the column, to adapt the column to be locked with the opposed walls of the tank, a measuring rod slidably supported on the column, a float for the rod and means to attach it thereto.

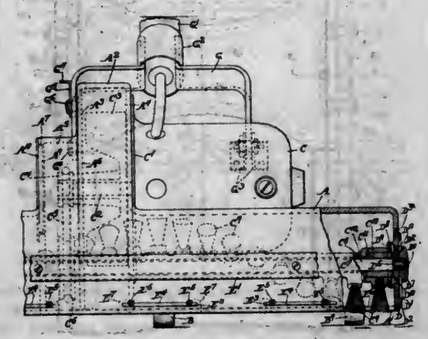


1,483,969. APPARATUS FOR CUTTING AND HANDLING CAN-END LINERS. CHARLES W. GRAHAM, Allendale, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Original application filed July 18, 1916, Serial No. 109,948. Patent No. 1,355,040, dated Oct. 5, 1920. Divided and this application filed Aug. 28, 1920. Serial No. 406,670. 16 Claims. (Cl. 164—22.)

1. In a machine for cutting and handling ring liners, the combination of means for feeding a continuous web of liner material, a reciprocable punching head arranged to operate near the path of said web, a core punch fixed in said head, an annular liner punch fixed in said head and arranged to cut a liner while said core punch is cutting a core, web-stripping means for said punches, die elements arranged at the other side of the web and co-

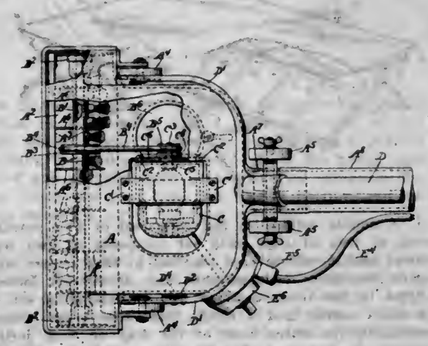
operating with said punches, a liner stack holder arranged to receive the cut liners, and a pilot carried by said head and adapted to engage with the end of the liner stack holder.

1,483,970. HEATING DEVICE. RANDEL GRAVES, Pittsburgh, Pa. Filed Feb. 1, 1921. Serial No. 441,568. 6 Claims. (Cl. 126—44.)



1. A stove comprising a heating means, a vertical portion having front and rear walls above the heating means, and a slidably supported V-shaped deflector in said vertical portion movable back and forth to deflect the heat toward the front or rear walls.

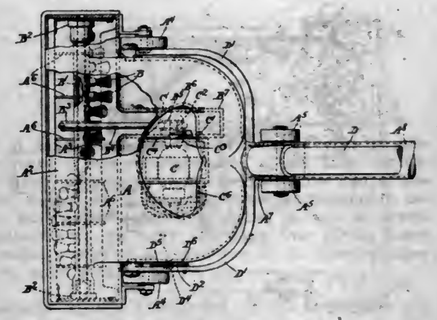
1,483,971. BRAKING MECHANISM FOR ROLLER CONVEYERS. JOSEPH GROSSMAN, Wallington, N. J. Filed Sept. 20, 1922. Serial No. 589,424. 15 Claims. (Cl. 198—35.)



1. In combination with a roller conveyer having fixed rollers, of a braking device mounted for movement into frictional engagement with said rollers, operating against the under sides thereof while the load is free to operate on their upper sides.

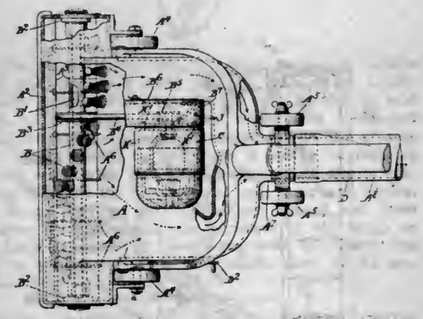
1,483,972. SUCTION CLEANER. HOWARD EARL HOOVER, Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed June 10, 1918. Serial No. 239,090. 12 Claims. (Cl. 15—8.)

5. In a suction sweeper a hood, a brush mounted for rotation therein, the end of the hood being apertured, in combination with an integral member comprising a combined closure, brush adjuster and brush thread guard.



1,483,973. SUCTION SWEEPER. HOWARD EARL HOOVER, Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Sept. 8, 1919. Serial No. 322,307. 4 Claims. (Cl. 15—8.)

1. A suction cleaner head comprising a casing having an inlet slot, and formed with a chamber connected with said slot, a conduit extending from the chamber in a direction substantially parallel to the floor, means for movably supporting the head on the floor, a motor driven agitator in said chamber and an electric motor to drive the agitator mounted on the head in substantially the same horizontal plane as the chamber and conduit.

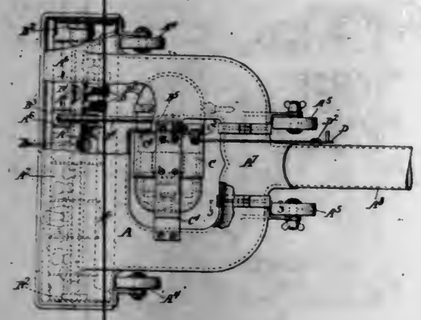


1,483,974. SUCTION SWEEPER. HOWARD EARL HOOVER, Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Sept. 29, 1919. Serial No. 327,246. 1 Claim. (Cl. 15—8.)

In a suction sweeper the combination of a casing having an inlet, a brush chamber, a conduit leading from the brush chamber, and a downwardly depending belt housing secured to the conduit with an electric motor and casing secured to the housing, the motor shaft projecting through the wall thereof said housing having

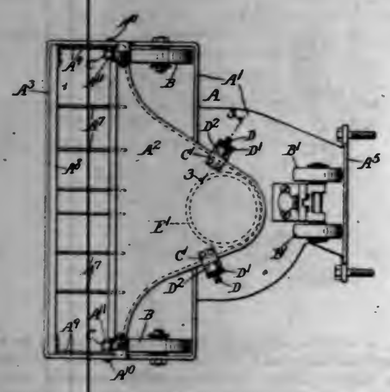
an opening near the motor shaft to permit air to be drawn therethrough and thence through the belt housing into the foul air conduit.

1,483,975. SUCTION SWEEPER. HOWARD EARL HOOVER, Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Oct. 20, 1919. Serial No. 331,906. 2 Claims. (Cl. 15—8.)



1. A suction sweeper comprising a casing having a nozzle provided with an inlet and a conduit in combination with a carpet agitating device mounted near the inlet, a motor supported on the conduit, a driving connection from the motor to the carpet agitating device and a housing to receive a portion of such driving device, said housing forming a part of the motor support, said conduit downwardly depressed between the nozzle and the outer end to make room for the motor.

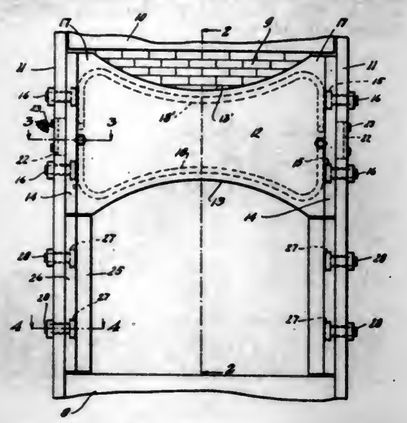
1,483,976. SUCTION SWEEPER. HOWARD EARL HOOVER, Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Nov. 3, 1919. Serial No. 335,343. 1 Claim. (Cl. 15—8.)



A suction sweeper comprising a casing having a nozzle provided with means whereby it is adapted to be supported above the surface to be cleaned and an inlet in combination with a combined handle and conduit pivotally connected with the casing, a carpet agitating device mounted near the inlet a drive housing extending

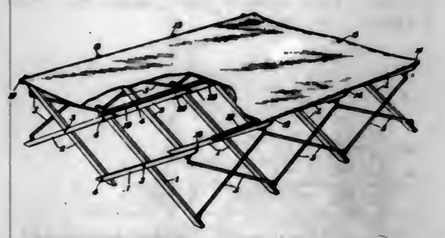
rearwardly from the casing, a motor on said housing and a driving connection between the motor and a

carpet agitating device within said housing, said motor and said drive housing being in rear of the pivotal connection of the combined handle and conduit to the casing.



1,483,977. SUCTION SWEEPER. HOWARD EARL HOOVER, Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Jan. 2, 1920. Serial No. 348,746. 8 Claims. (Cl. 15—9.)

1. A suction cleaner casing having a fan chamber, a suction chamber, and an inlet chamber having a mouth, in combination with a removable plate which when in position forms a wall of such suction chamber and a lip of said mouth, the fan chamber having an inlet opening adapted to receive a converter which extends into the suction chamber and connects with said inlet opening when the plate is removed.

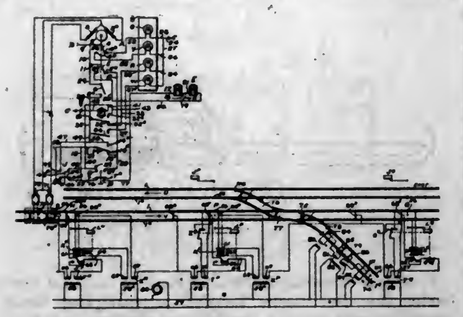


1,483,978. FURNACE-DOOR FRAME. PATRICK JOSEPH KEENAN, Chicago, Ill. Filed June 7, 1923. Serial No. 643,900. 9 Claims. (Cl. 110—173.)

9. A furnace door frame comprising a reversible arch member having similarly curved upper and lower portions, separate cheek plates beneath said arch member, said members and plates comprising side flanges and attached lateral strips all of equal length, and means for

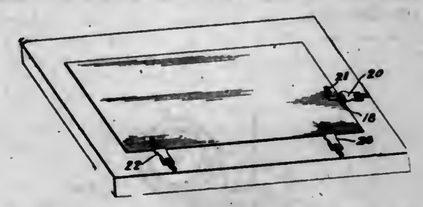
interchangeably fastening the flanges of said arch member in the upper position of said frame or in the lower position in place of said cheek plates.

1,483,979. COLLAPSIBLE COT BED. MICHAEL LUERY, New York, N. Y. Filed July 29, 1920. Serial No. 399,871. 4 Claims. (Cl. 5—115.)



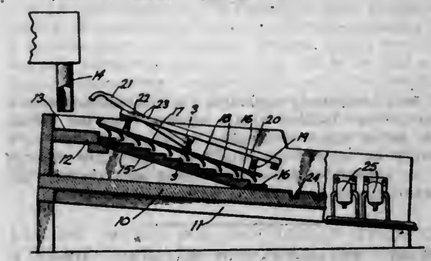
1. A double collapsible bed composed of two parallel series of sets of legs, each set composed of two legs crossed and loosely pivoted together at their centre, and having the inner ends of both legs of the set loosely pivoted to the inner ends of the corresponding set of the other series, and a toggle joint side brace loosely secured to the outer ends of the legs of each series, whereby the bed may be fully extended or may be collapsed longitudinally and laterally into a compact package, and a top detachably securable to the collapsible frame along each side, and a dowel secured to the top along its longitudinal centre and adapted when the bed is extended to lie in the crotch formed by the upper inner crossed ends of the legs.

1,483,980. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 11, 1923. Serial No. 656,874. 7 Claims. (Cl. 246—38.)



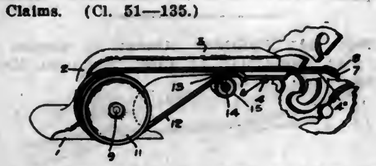
1. Railway traffic controlling apparatus comprising positive control territory equipped with means for supplying track circuit and line energy to vehicles and non-positive control territory not so equipped, said means being arranged to supply track circut and line energy of one instantaneous relative polarity or the other according to proceed or caution traffic conditions, two short

sections of track adjacent the junction of said territories, means associated with the section nearer to the positive control territory for supplying track circuit and line energy of caution relative polarity to vehicles moving



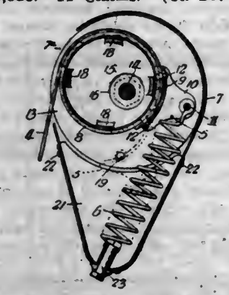
toward the positive control territory, and means associated with the other short section for supplying track circuit and line energy of proceed relative polarity to vehicles moving away from the positive control territory.

1,483,981. PRINTING PRESS GAUGE. EDWARD L. MEGILL, New York, N. Y.; Alfred V. Hart executor of said Edward L. Megill, deceased. Filed Mar. 18, 1920. Serial No. 366,769. 11 Claims. (Cl. 101—415.)



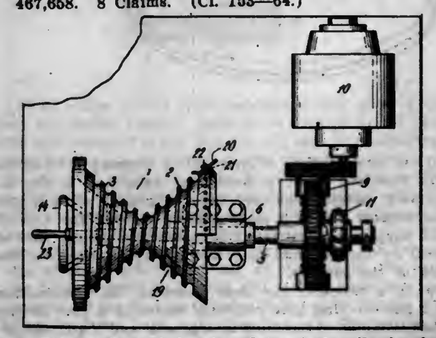
10. In combination, a tympan, a gauge having a head vertical to the tympan and a member carried by the gauge wholly above the tympan and having a portion extending forwardly of the head above the lower edge thereof and provided with a sheet-guiding extension disposed transversely of the first named portion and inclined upwardly away from the tympan.

1,483,982. AMALGAMATOR. CHARLES MEYER and HENRY B. MEADE, Los Angeles, Calif., assignors to Frank A. Gillespie, Los Angeles, Calif. Original application filed June 2, 1921, Serial No. 474,344. Divided and this application filed Oct. 20, 1921. Serial No. 509,034. 6 Claims. (Cl. 83—67.)



1. An amalgamator comprising a series of stepped riffles having amalgamating surfaces, and a series of baffle plates above the riffles, each of said plates being of concave form and associated with the respective riffle to effect a vertical whirling motion of pulp traversing the riffles.

1,483,983. SANDING DEVICE FOR SCROLL AND FRETWORK. JOHN CLEGHORN MUNDELL, Elora, Ontario, Canada. Filed June 12, 1922. Serial No. 567,868. 3 Claims. (Cl. 51—135.)



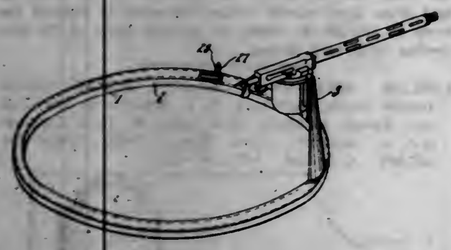
1. A sanding machine for scroll work and the like comprising a supporting structure, a thin finger extending therefrom adapted to be inserted in the kerf of the scroll work, and means adapted to simultaneously engage the parallel opposing edges of the kerf to travel parallelly over the upper and lower face of the finger in contact therewith and crosswise of the opposing edges of the scroll work kerf.

1,483,984. SHOCK ABSORBER. JAMES C. NICHOLS and ELMER RYDER, Chicago, Ill. Filed June 26, 1922. Serial No. 570,826. 11 Claims. (Cl. 267—10.)

1. The combination with a spring supported vehicle frame and axle, of a shock absorber, comprising a non-rotatable drum and a fixed member both carried by said frame, a strap partially looped about said drum and having frictional engagement therewith, one end of said strap being secured to said axle, a spring having one end connected with said fixed member, and means connecting together the free ends of said strap and spring, said means moving with said strap toward and from the drum and increasing the purchase of the strap on said drum when moved toward the same by causing the strap to engage the drum on opposite sides of its connection with said spring.

1,483,985. METHOD OF MAKING SPIRAL COILS. JOSEPH PRICE, New York, N. Y., assignor to The Griscom Russell Company, New York, N. Y., a Corporation of Delaware. Filed May 7, 1921. Serial No. 467,658. 8 Claims. (Cl. 153—64.)

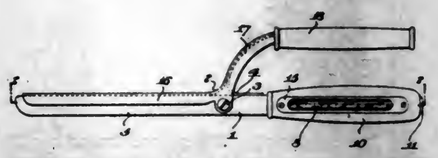
1. The method of forming flat spiral coils for heat exchanging apparatus comprising winding the material



of the coil into a conical spiral and subsequently compressing the turns of said spiral into substantially the same plane.

1,483,986. HAY PUSHER. ANDREW A. RISSER, Wisner, Nebr. Filed Mar. 12, 1923. Serial No. 624,340. 1 Claim. (Cl. 56—397.)

A pusher attachment for a sweep including a rectangular frame member, diagonal members connecting opposite sides of said frame members, means for detachably pivoting said frame members to the prongs of the sweep, the said sweep having a frame extending rearwardly of the prongs thereof carrying an operator's seat, a shaft rotatably mounted on said frame adjacent the operator's seat and provided with a handle extending in proximity to said seat, laterally projecting arms on said shaft, laterally projecting arms on said rectangular frame, and links connecting the arms on said frame to the arms on said shaft, whereby the operator of the sweep may manually operate and control the movement of the pusher through the medium of the handle on said shaft and the links connecting the said laterally projecting arms.



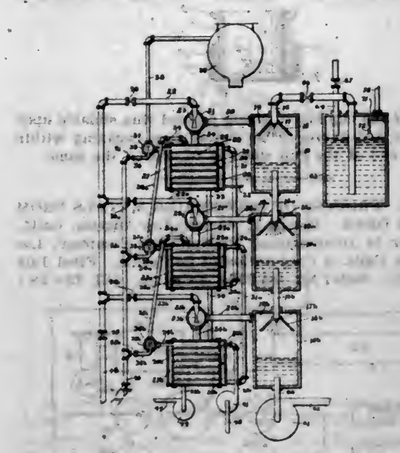
1,483,987. TURRET MOUNT FOR AUTOMATIC GUNS. HUGH M. ROCKWELL, New Haven, Conn., assignor, by mesne assignments, to The Marlin Firearms Corporation, New Haven, Conn., a Corporation of Delaware. Filed Dec. 16, 1918. Serial No. 266,897. 14 Claims. (Cl. 89—40.)

1. In combination, a standard, a support pivoted on said standard about a horizontal axis, and a gun so mounted thereon that the center of gravity of said gun and support lies in a plane passing through the axis of said support approximately perpendicular to the line of recoil of the gun and said line of recoil intersects the axis of the support.

9. In a device of the class described, the combination of a gun-carrying head rotatably seated in a ring having offset trunnions journalled in supports, and a gun mounted on the head so that its center of gravity is in the same plane as the axis of the trunnions.

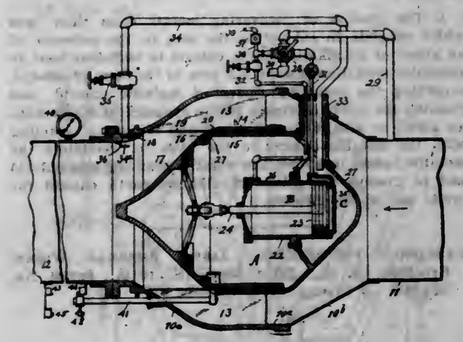
1,483,988. HAIR-DRESSING DEVICE. WALTER H. SAMMONS, Philadelphia, Pa. Filed Dec. 2, 1921. Serial No. 519,348. 8 Claims. (Cl. 132—37.)

1. A hair dressing device comprising a recessed shaft having jaw and handle sections, a fenestrated handle sleeved on said shaft, a thermometer disposed in said recess and visible through the fenestration of said handle and a plug engaged in an end of said shaft, said plug having a flange engaging and positioning said handle.



1,483,989. EJECTOR CONDENSING APPARATUS. ARTHUR EDWIN LEIGH SCANES, Ashton-on-Mersey, England, assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 24, 1920. Serial No. 426,252. 7 Claims. (Cl. 230—13.)

1. In a condensing apparatus the combination with a device of the Leblanc rotary ejector type the broken water jet of which is supplied to a central cone, of a plurality of nozzles the jets from which are directed into an annular chamber surrounding said central cone substantially as and for the purpose specified.



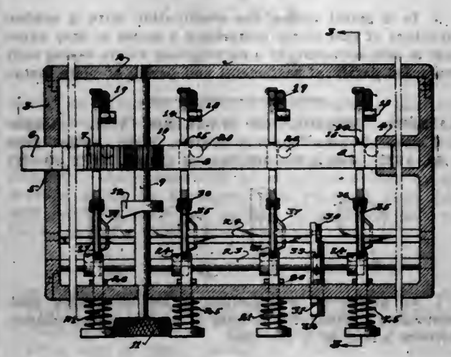
1,483,990. REFRIGERATING MACHINE. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 2, ...1. Serial No. 466,060. 10 Claims. (Cl. 62—178.)

1. The method of refrigeration involving the evaporation of a portion of a refrigerant for the purpose of lowering the temperature thereof, which comprises subjecting the refrigerant to zones of progressively lower

pressures, removing vapors from the refrigerant in the several zones, and condensing the vapors from each zone separately.

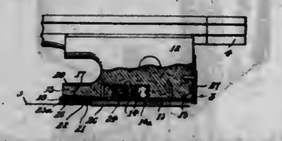
1,483,991. VALVE. DONALD W. SLATTERY, East Cleveland, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 1, 1920. Serial No. 385,684. 8 Claims. (Cl. 137—139.)

8. In combination with a conduit, a valve therein comprising an outer casing and an inner hollow member with a movable part constituting a plunger, means for actuating said plunger to open and close the valve, and a stationary passageway communicating with the interior of the valve and with the water-way and serving to maintain within the hollow member substantially the same pressure as exists on the nose of the plunger regardless of the position of the latter or its direction of movement, and a valve for opening and closing said passageway.



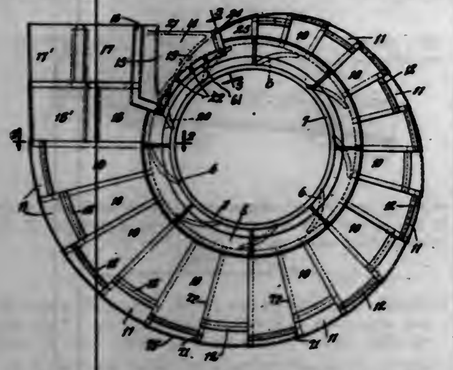
1,483,992. MEANS FOR SPINNING UP GYROSCOPES ON AIRCRAFT. ELMER A. SPERRY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 21, 1920. Serial No. 360,319. 32 Claims. (Cl. 244—2.)

1. In combination, an aircraft provided with a gyroscope, a launching track for said aircraft, means exterior to said aircraft for spinning up said gyroscope, means on said aircraft for sustaining the spin of said gyroscope, and means for automatically disconnecting said gyroscope



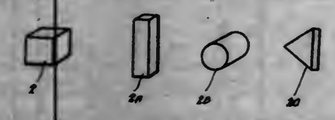
from the first named means and connecting the gyroscope to the second named means during the launching of the aircraft from said track.

1,483,993. PERMUTATION LOCK. FRANK W. SPROWLES and WILLIAM C. FAUNCE, Philadelphia, Pa. Filed July 31, 1922. Serial No. 578,554. 13 Claims. (Cl. 70—54.)



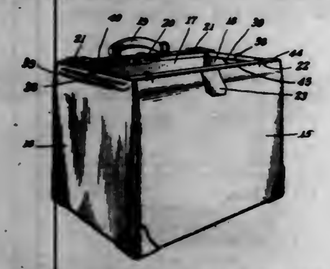
1. In a permutation lock; a casing; a bolt slidable therein; means for actuating the bolt, and means automatically movable into the path of the bolt for holding the bolt in locked and unlocked positions.

1,483,994. VIOLIN BOW. JOHN STADNICZEK, Elizabeth, N. J. Filed Jan. 6, 1923. Serial No. 611,079. 4 Claims. (Cl. 84—282.)



3. In a bow of the type described, a bow stick, a frog and tip carried thereby, horse hairs knotted at the opposite ends received in the frog and tip, said frog including a block having spaced sockets in the lower edge thereof for the selective reception of the knot, a face plate secured to the edge of the block and having apertures registering with the sockets, guide flanges at the side edges of the face plate, an outwardly directed shoulder at the forward edge of the face plate, a ferrule inclosing the forward edge of the block and having an opening in the upper side thereof defining a cross rod, and a clamping plate mounted on the face plate beneath the guide flanges overlying the horse hairs and extending into the ferrule for gripping the horse hairs between the forward edge thereof and said ferrule cross rad.

1,483,995. COMPOSITE SPIRAL CASING. HARVEY BIRCHARD TAYLOR, Philadelphia, Pa. Filed Apr. 24, 1922. Serial No. 556,143. 19 Claims. (Cl. 253—120.)



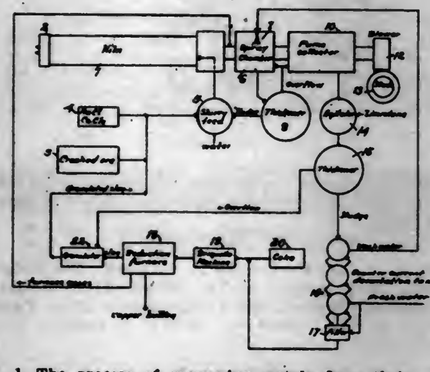
1. In a spiral casing the combination with a central structure of cast metal comprising a series of stay vanes cast in said structure, of a surrounding volute casing body composed partly of cast metal and partly of plate metal.

1,483,996. METHOD OF MARKING COAL. GORDON WALTER ROBERT TONGUE, Seattle, Wash. Filed June 14, 1922. Serial No. 568,264. 3 Claims. (Cl. 40—2.)

1. An article of manufacture, a self-identifying coal, comprising inflammable articles of predetermined characteristics mixed with the coal.

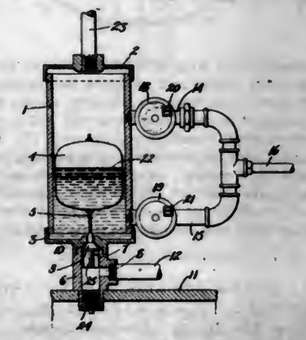
1,483,997. BAG FRAME. HUGO TUECKMANTEL, Newark, N. J. Filed Dec. 14, 1922. Serial No. 606,785. 3 Claims. (Cl. 190—49.)

1. A hand bag comprising the combination with a flexible bag body capable of being fully opened at the top, and a folding frame wholly contained within the bag body near the edges of the side and end walls adjacent the top, said frame consisting of toggle elements at the ends thereof, and side members each constructed of two elements placed at an angle with each other, said last mentioned elements being spaced from and attached to each other, the flexible bag body being secured adjacent said space.



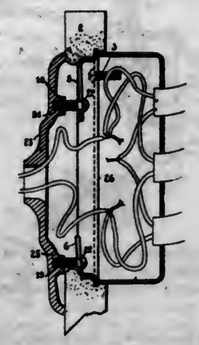
1,483,998. CUP FOR WORKING VALVES. WILLIAM J. WALKER, Bradford, Pa., assignor of one-sixth to Arden Kewley, Bradford, Pa. Filed Nov. 22, 1922. Serial No. 602,562. 3 Claims. (Cl. 74—109.)

1. In a cup structure for working valves including a piston, a cup arranged upon the piston formed of soft metal reinforced with a harder metallic wire and adapted to be expanded, a sleeve on the piston engaging the bottom



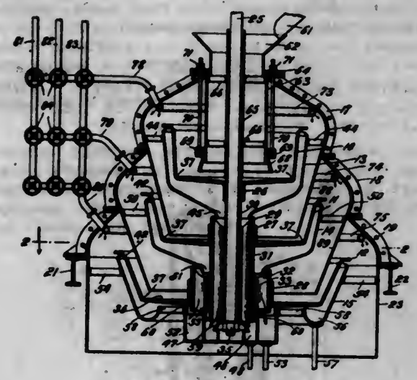
portion of the cup and a spring pressed ring slidable upon the sleeve and having a beveled surface engaging within the open end of the cup whereby to expand the same.

1,483,999. PROCESS OF RECOVERING METALS FROM THEIR ORES. HARRY V. WELCH, Los Angeles, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed July 19, 1921. Serial No. 485,920. 8 Claims. (Cl. 75—18.)



1. The process of recovering metals from their ores which consists in subjecting the ores in the presence of an alkali or an alkaline earth chlorid to sufficient heat to volatilize metallic values of the ores in the form of chlorid, collecting the resulting fumes of metallic chlorid, and treating the collected fumes in the presence of water with an alkali or alkaline earth compound capable of reacting with the metallic chlorid in the fume to precipitate the metallic values in a form less volatile than the said chlorid and to produce an alkali or alkaline earth chlorid for cyclic use in the process.

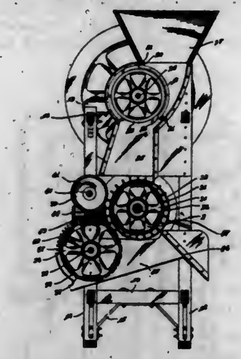
1,484,000. VAPORIZER. JARVIS SHERMAN WIGHT, Brooklyn, N. Y. Filed Sept. 18, 1919. Serial No. 324,899. 9 Claims. (Cl. 123—25.)



1. The combination with a vaporizer having a vapor chamber, of a supply passageway for an internal combustion engine connected therewith, air and water intakes to said chamber, and separate water and vapor outlets from the chamber to the supply passageway.

1,484,001. FIXTURE-HANGING DEVICE. GEORGE R. AINSWORTH, Great Neck, N. Y. Filed Jan. 2, 1922. Serial No. 526,450. 1 Claim. (Cl. 240—85.)

In a fixture hanging device the combination with a fixture to be supported of an apertured plate having a plurality of extensions, slots in said extensions said slots being in substantial alinement, said extensions being inclined at an angle to the plate and parallel to each other, and a back plate provided with headed screws to register with their respective slots, the heads of said screws engaging the inner wall of said extensions adjacent the slots.

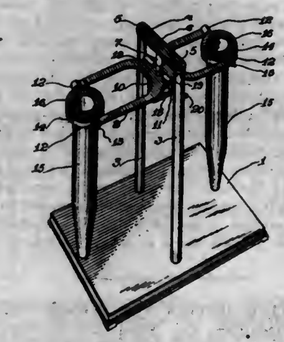


1,484,002. APPARATUS FOR SEPARATING LIQUIDS FROM SOLIDS. JOSEPH AVRUTIK, Yonkers, N. Y. Filed Nov. 26, 1920. Serial No. 426,667. 11 Claims. (Cl. 210—66.)

3. An apparatus for separating liquids from solids, comprising a series of receptacles, means for actuating the receptacles, a casing for enclosing the receptacles, a perforated pipe located above each receptacle, and means for forcing fluid through the perforations in the pipe, said perforations being directed toward the point of discharge from the receptacle.

1,484,003. CIDER MILL. GEORGE BENNETT, Port Hope, Ontario, Canada. Filed Apr. 7, 1921. Serial No. 459,418. 6 Claims. (Cl. 100—47.)

1. A device of the character described comprising in combination a frame composed of upright members, members connecting the said upright members, a hopper member disposed on the upper extremity of the said frame, a reservoir hopper disposed for reception of cut apples, spaced side wheels having outwardly extending hollow sleeves positioned centrally on their outer sides, a primary drum mounted on a transverse shaft, the ends of last shaft being eccentrically journaled in said sleeves, a plurality of wheels mounted on the said transverse



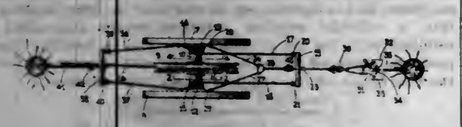
shaft, an annular casing circumferentially disposed about the said drum having slots therein, the said annular casing being mounted on the said spaced side wheels which rotate on the eccentric ends of the said transverse shaft, imparting an eccentric motion to the annular casing in alinement with the said drum, the said eccentric movement serving to gradually increase the compression on the ground apples.

1,484,004. PROCESS FOR THE PRODUCTION OF PRODUCTS CONTAINING CELLULOSE AND ALKYLCELLULOSE. ERNST BEEL, Darmstadt, Germany. Filed Oct. 6, 1922. Serial No. 592,841. 5 Claims. (Cl. 18—54.)

1. Process for the production of products containing cellulose and alkylcellulose consisting in transforming into a colloidal solution cellulose esters and alkylcellulose with the aid of dissolvants, and in treating the products produced from the mixture with substances for the conversion of the cellulose esters into cellulose.

1,484,005. WEIGHING BALANCE. JULIUS BOEKEL, Philadelphia, Pa. Filed Dec. 20, 1922. Serial No. 607,952. 6 Claims. (Cl. 265—54.)

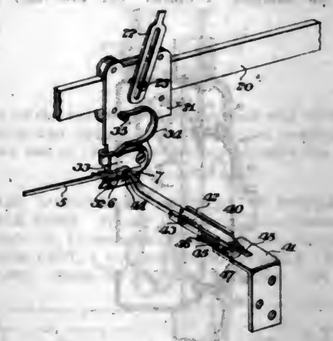
1. In a weighing balance, a beam having a bifurcated portion, the arms of said bifurcation having thin end portions, said end portions being provided with register-



ing bearings, in combination with a suspending ring adapted to receive a third element and having stud-shafts received in, and supported by, the respective bearings.

1,484,006. COMBINED CONTAINER AND MATCH CARRIER. VICTOR A. BRET, Minneapolis, Minn. Filed May 15, 1922. Serial No. 560,965. 1 Claim. (Cl. 206—38.)

A combined container for a standard carton of cigarettes and a standard box of matches, comprising an elongated substantially rectangular casing formed from a single blank of material having an open end and a partition extending thereacross adjacent its other end, said casing having its sides open beyond said partition and having a slot formed in its other end, whereby a passage open at both ends is formed beyond said partition, the sides of which are movable toward each other and adapted frictionally to engage a standard box of matches disposed therein.

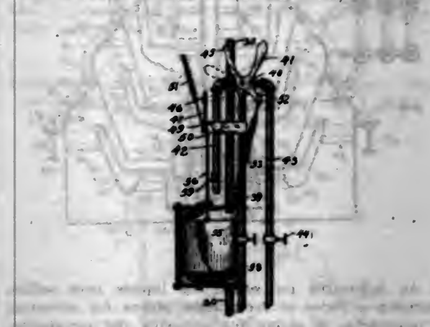


1,484,007. STUMP-PULLING APPARATUS. HAROLD C. BRUNS, Lacombe, Alberta, Canada. Filed May 16, 1922. Serial No. 561,489. 1 Claim. (Cl. 254—166.)

In a stump pulling apparatus, a pair of wheels, an axle loosely mounted thereon, a main pulley wheel fast on said axle, secondary pulleys on opposite sides of said main pulley and fast on the axle, ratchets on the secondary pulleys, pawls engaging said ratchets, members loosely mounted on said axle and carrying said pawls, a cable wound around and connected to the main pulley wheel, cables wound upon and connected to the secondary pulleys, a bar to which said last-named cables are attached, a yoke adapted to be connected to the stump to be pulled, a pulley rotatably mounted in said yoke, a cable reeved around the pulley and having one end connected to said bar and the other end connected to the members carrying said pawls, a cable adapted to be connected to an anchor, a bar to which it is connected, and rods connected to said bar and to the members carrying said pawls.

1,484,008. WIRE MOTION FOR LOOMS. GEORGE H. CHALK, Philadelphia, Pa. Filed May 27, 1921. Serial No. 473,039. 7 Claims. (Cl. 139—40.)

1. In a pile fabric loom, the combination with the pile forming wires having enlarged eye portions and a reciprocating holder adapted to engage and grip said eye portions and to insert the wires into the shed, of means adapted to positively engage the eye portion of the wire

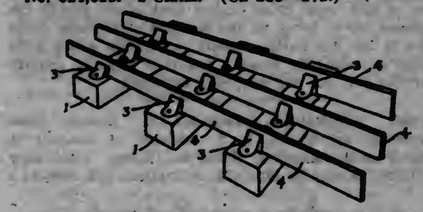


and retain the same against retraction by the holder in the event that the same is not normally withdrawn therefrom.

1,484,009. HINGE. HENRY W. CORNING, Cleveland, Ohio. Filed Dec. 27, 1919. Serial No. 347,759. 3 Claims. (Cl. 16—149.)

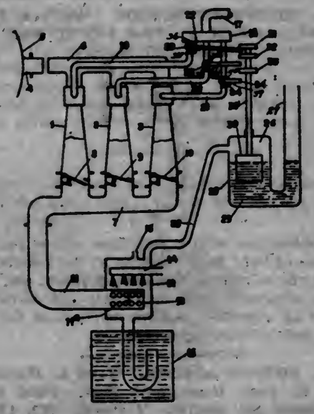
1. In combination, a table having in one edge thereof a vertical groove and a concealed intersecting horizontal groove, a hinge supporting member seated within said vertical groove and having a lateral extension projecting into the horizontal groove, and a hinge member pivotally connected with said supporting member.

1,484,010. LIQUID-DISPENSING SYSTEM. EMORY CROUSE, Wichita, Kans. Filed Jan. 16, 1922. Serial No. 529,773. 3 Claims. (Cl. 221—74.)



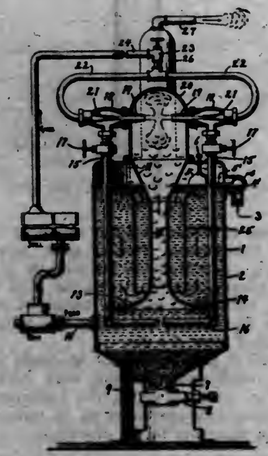
1. In dispensing apparatus of the class described, the combination of a supply tank, a container, a fill pipe extending from said tank to said container, an overflow pipe extending upwardly in said container, an air control valve, a vent pipe connected with the tank and with said valve, an air supply pipe connected with the valve, said valve having an exhaust port and also having means whereby it will connect the air supply pipe to the vent pipe, close either the air pipe or the exhaust and for connecting the vent pipe to the exhaust while the air supply pipe is closed, means whereby said air control valve is held in the position in which the air supply is connected to the vent pipe, and means operated by liquid flowing through the overflow pipe for automatically closing said air supply pipe and connecting said vent pipe with said exhaust when the liquid in the container overflows into the overflow pipe.

1,484,011. ROADWAY, PAVEMENT, STAIRWAY, OR THE LIKE AND MATERIALS FOR THE CONSTRUCTION THEREOF. MORLAND MICHOLL DESSAU, London, England. Filed Oct. 29, 1923. Serial No. 671,560. 5 Claims. (Cl. 94—5.)



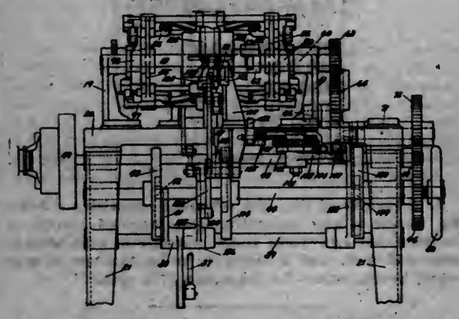
1. A wearing surface of the character described, consisting of self-contained units of rubber in relatively small pieces embedded in a plastic binding agent before the latter sets; the several units each having a cross sectional area greater at the top and bottom thereof than at an intermediate point, whereby said units are permanently and immovably secured in spaced relation in the body of the binding agent when the latter sets.

1,484,012. TOY RAILWAY TRACK. MILTON S. DUNKELBERGER, Dayton, Ohio. Filed Mar. 12, 1923. Serial No. 624,618. 1 Claim. (Cl. 238—272.)



A toy railway track comprising a series of ties, rails therefor comprising bars of spring metal, and clamping pieces secured to said track, each clamping piece being crimped to form two hump portions with a groove between them to receive a rail.

1,484,013. EJECTOR APPARATUS. RAYMOND N. EHRHART, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Aug. 21, 1918. Serial No. 250,899. 10 Claims. (Cl. 230—13.)



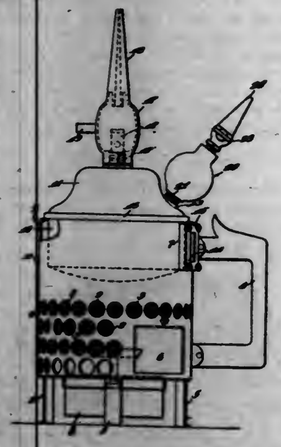
1. The combination with a plurality of separately controlled fluid operated ejectors for extracting fluids from a receptacle to which they are connected, of a vented water heater for receiving the exhaust motive fluid and extracted fluid from the ejectors, and means responsive to pressure within the water heater for controlling the admission of motive fluid to the ejectors.

1,484,014. PROCESS FOR CONVERSION OF HYDROCARBON OILS AND SIMILAR SUBSTANCES. VICTOR LEE EMERSON, Philadelphia, Pa. Filed Nov. 3, 1919. Serial No. 335,563. 2 Claims. (Cl. 196—25.)

2. The process of conversion of hydrocarbon oils which consists in imparting sufficient kinetic energy to a mass of the same to cause dissociation on impact, subjecting said energized mass to impact by the mutual impingement of jets of the same, subjecting the resultant products to impact, imparting kinetic energy to a separate mass of hydrocarbon oil by mixing the same with said first mentioned energized mass, subjecting the mixture to impact, subjecting the products of impact thus formed to intimate contact with a fresh mass of hydrocarbon oil and separating out the resultant products.

1,484,015. WRAPPING MACHINE. MILFORD B. FERGUSON, Brooklyn, N. Y., assignor of one-half to Edward Haas, Brooklyn, N. Y. Filed July 1, 1922. Serial No. 572,148. 17 Claims. (Cl. 93—5.)

1. A wrapping machine having in combination a flexible tape, arc-shaped means for supporting the tape, means for feeding a wrapper and an article to the tape, and means moving in one direction only for looping the tape about the article and wrapper and for causing the loop to travel on the tape support and thereby roll the wrapper about the article.

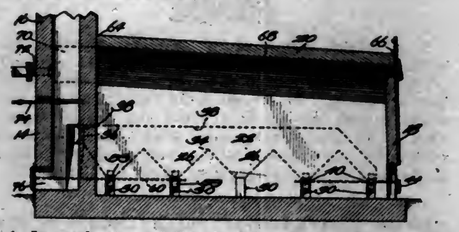


1,484,016. CONFECTIONERY. ALEXANDER D. FISHER, Toronto, Ontario, Canada. Filed May 3, 1922. Serial No. 558,210. 4 Claims. (Cl. 107—1.)

3. A process of forming tubular chocolate tubes which consists in continuously forcing solid bulk chocolate through a die, controlling the temperature of the chocolate during compression by circulating fluid around the die so as to maintain a suitable degree of plasticity in the chocolate, and cutting the tubing into suitable lengths as it is expelled from the die.

4. A process of forming tubular chocolate tubes which consists in continuously forcing solid bulk chocolate through a die, and controlling the temperature of the chocolate during compression so as to maintain a suitable degree of plasticity in the chocolate.

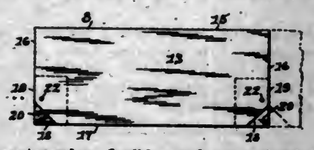
1,484,017. SPRAYER. EDITHE FLUESO, Allentown, Pa. Filed Oct. 12, 1922. Serial No. 594,074. 3 Claims. (Cl. 299—95.)



1. A sprayer of the class described comprising a housing having a heat generating unit mounted therein, a closed steam generating vessel mounted in said housing over said unit, and a safety valve in the top of said vessel having means for connection of a nozzle.

1,484,018. OBTAINING PRODUCTS FROM CHLORINATED HYDROCARBONS. HENRY A. GARDNER, Washington, D. C. Filed June 30, 1920. Serial No. 393,091. 5 Claims. (Cl. 260—170.)

chloric acid from chlorin derivatives of hydrocarbons, comprising mixing a high-boiling chlorinated hydrocarbon with a nonchlorinated material of higher boiling point which is liquid at the temperature employed, and subjecting the mixture to a sufficient temperature below its boiling point to eliminate the combined chlorin as hydrochloric acid, and collecting the hydrochloric acid thereby evolved.



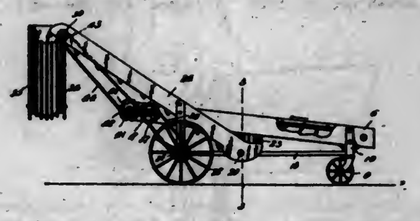
4. In a process of preparing unsaturated products from chlorinated hydrocarbons, the step which consists in distilling the unsaturated hydrocarbon from a liquid bath containing an added higher boiling component.

1,484,019. FURNACE. AUBREY J. GRINDLE, Chicago, Ill., assignor to Grindle Fuel Equipment Company, Harvey, Ill., a Corporation of Illinois. Filed Feb. 4, 1922, Serial No. 534,239. Renewed Dec. 12, 1923. 4 Claims. (Cl. 263—43.)

1. In mechanism of the class described, a flue for the passage of gas to a stack or the like provided with a bottom of saw tooth cross section over which gas in the flue passes, there being, in the bottoms of the saw tooth notches in the flue bottom, openings through which solid particles deposited by passing gas may slide by gravity out of the flue, for the purposes set forth.

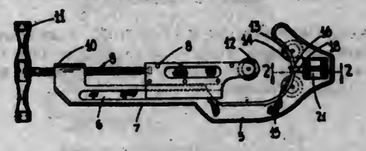
1,484,020. FLEXIBLE UNDEREAVE. ALBERT ABEL GRISWOLD, Providence, R. I., assignor of one-half to John Francis Chevalier, Brookline, Mass. Filed July 27, 1923. Serial No. 654,172. 5 Claims. (Cl. 108—8.)

1. A rectangular flexible undereave having parallel top and bottom edges, parallel side edges, angular lower corner edges and underturned side flaps, for the purpose as described.



1,484,021. REAR-VIEW MIRROR. WILLIAM P. HAMMOND, Maplewood, N. J. Filed July 31, 1922. Serial No. 578,616. 7 Claims. (Cl. 88—1.)

3. In combination with a rear view mirror for reflecting the rays of light from the rear of the vehicle, means to support the mirror in operative position, and absorbing means, associated with the mirror and movable into and out of an operative position in front of the mirror to absorb part of said light rays.

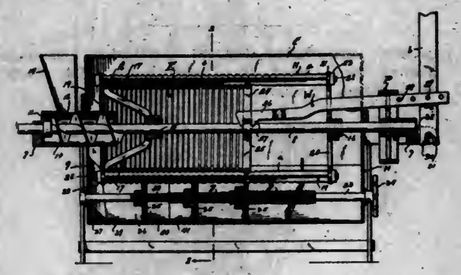


1,484,022. POTATO LOADER. HANS L. HANSEN and ALBERT H. VOSS, Hemingford, Nebr. Filed Jan. 10, 1923. Serial No. 611,740. 1 Claim. (Cl. 180—82.)

A potato loader and sorter comprising a wheel mounted frame, spaced bars mounted upon the forward portion of the frame and being upwardly and rearwardly inclined, some of the said bars terminating at their rear ends at a line between the ends of the frame and other intervening bars extending rearwardly beyond the ends of the first mentioned bars, conveying means mounted for movement over all of the said bars, spaced bars located under the rear end portions of the longer first mentioned bars, the last mentioned bars being disposed transversely of the line of movement of the loader and being inclined downwardly beyond one side of the frame, an upwardly and rearwardly disposed trough communicating with the delivery end of the transversely disposed

bars, a series of spaced rods located in advance of the forward end of the trough and disposed parallel with the line of movement of the loader, an elevator mounted for movement along the trough and a hopper disposed under the upper rear end of the trough and composed of spaced bars which are downwardly inclined from the delivery end of the trough, the bars of the hopper being disposed transversely of the line of movement of the loader and the delivery end of the hopper being disposed beyond the side and the outer surfaces of the supporting wheels of the frame.

1,484,023. PIPE-CUTTER. WILLIS HAWTER, Carbonear, Newfoundland, assignor of one-half to Albert Edward Penney, Carbonear, Newfoundland. Filed May 16, 1922. Serial No. 561,492. 2 Claims. (Cl. 81—189.)



1. In combination with a pipe cutting tool, burring mechanism adapted for removing the burr caused by the cutters of the said cutting tool during the cutting operation; said burring mechanism constituting a burring head disposed intermediate the cutters of the said cutting tool and means movably mounted on the shank of said head whereby the said burring head may be adjusted to compensate for variations in the nominal sizes of pipe, said adjusting means being disposed within the confines of the support of the burring head.

1,484,024. DOOR. CARL HEDMAN, Spokane, Wash. Filed Feb. 25, 1922. Serial No. 539,091. 1 Claim. (Cl. 20—85.)

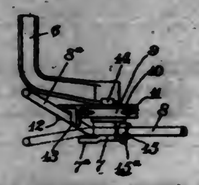
The combination with a door, of a hanging style circular in cross section and having a longitudinal mortise receiving an edge of the door, top and bottom circular bearing plates attached to said style and integral arms on said plates attached to the door, and a door casing having a molding strip formed with a concave face for engaging said style.

1,484,025. GRADING MACHINE. MICHAEL HOFER, Dean Lake, Minn. Filed Nov. 18, 1922. Serial No. 600,605. 9 Claims. (Cl. 130—16.)

6. A grading machine comprising a shaft, means for rotating the same, a pair of members surrounding the shaft and spaced apart longitudinally thereof, means for connecting each of said members to the shaft for rotation therewith, a member slidably mounted upon the shaft between the two first named members, a coiled member surrounding the shaft and terminally connected to one of the first named members and to the sliding member, movement of the last named member lengthwise of the shaft increasing or decreasing the spaces between the convolutions of the coiled member, elongated members interposed between and rotatably supported by the first named members, said elongated members being provided with outstanding notched flanges, said elongated members when in one position being free of the coiled member, the convolutions of the coiled member being engaged within the notches of the flanges of the elongated members when said elongated members are in a second position whereby the coiled member is locked against expansion or contraction.

1,484,026. FOUNTAIN BRUSH. MILTON JACOBS, Poplar Bluff, Mo. Filed May 3, 1922. Serial No. 558,261. 1 Claim. (Cl. 15—128.)

In a fountain brush, a casing having an open bottom, angular stops on the inside of the top of the casing, a brush head fitting within the open bottom of the casing and bearing against said stops, a plurality of tubes extending through the brush head, the top of the casing being formed with holes, and a water conducting pipe member secured upon the top of the casing and provided with holes registering with said first named holes.



1,484,027. SPIRAL FOUNTAIN BRUSH. MILTON JACOBS, Poplar Bluff, Mo. Filed May 3, 1922. Serial No. 558,262. 1 Claim. (Cl. 15—128.)

A fountain brush comprising a conical conduit constituting a nozzle and having a threaded stem extending axially from its apex, a clamping nut for said stem, the nozzle being provided with a plurality of rows of per-

forations, the large end of the nozzle being provided with a threaded stud and cooperating nut, the outer face of the tapering nozzle being smooth, a narrow flexible brush clampingly engaged at one end to the large end of the nozzle by means of the nut and stud, and extending spirally around the nozzle and having its other end clampingly engaged with the stem at the apex of the nozzle by means of the nut thereon, the brush overlying certain of the openings.

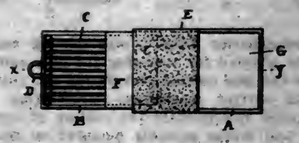
1,484,028. CONCRETE-MIXING MACHINE. GERHARD JACOBS, Poplar Bluff, Mo. Filed May 3, 1922. Serial No. 557,296. 5 Claims. (Cl. 83—73.)

1. In a mixing machine, the combination of a supporting frame, a mixing drum, a supporting yoke for the drum having a trunnion turning in said frame, a pair of arms connected with the trunnion for swinging the drum, one of said arms mounted to swing toward and from the frame, and a stop with which said arm may be engaged to arrest the same.

1,484,029. MULTIPLE-STEP PROCESS OF PHOTOGRAPHIC REPRODUCTION. ROBERT JOHN, New York, N. Y., assignor to Daylight Film Corporation, a Corporation of New York. Filed Oct. 7, 1919. Serial No. 329,078. 4 Claims. (Cl. 95—5.6.)

1. The process of forming a photographic record of lights and shades capable of use as a transfer printing plate, which comprises developing an exposed photographic emulsion with a partial-emulsion-hardening solution and then hardening portions of emulsion adjacent the light affected sensitive content of the emulsion with an agent adapted to harden said emulsion by reaction with the light affected sensitive content of the emulsion, and with a neutralizing agent for said hardening agent, the relative proportions of said hardening and neutralizing agents being such as to control selectively the effective area of influence of the hardening agent but to an extent less than the complete neutralization of said hardening agent.

1,484,030. MEANS FOR CONTROLLING MOTION IN FLUID-PRESSURE APPARATUS. JOHN GEORGE AULSEBROOK KITCHEN, Lancaster, England. Filed Jan. 30, 1923. Serial No. 615,958. 4 Claims. (Cl. 121—41.)

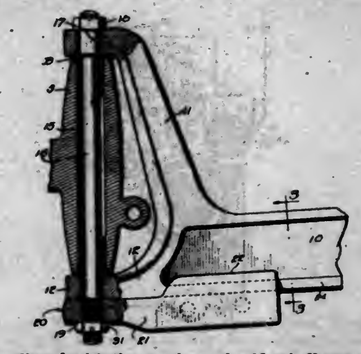


1. A fluid pressure motor or engine comprising in combination, a piston with recesses at its opposite sides, a cylinder for said piston, with means for applying pressure to the opposite sides of said piston, an exhaust connection, and a valve controlling communication between the opposite sides of the said piston and the exhaust connection, the said valve comprising three elements, one having a movable discharge area therein, a second element having a fixed discharge area, one of said two last named elements being the cylinder aforesaid, one of said discharge areas consisting of a row of closely spaced ports extending the full length of the cylinder, and the third element consisting of the piston aforesaid, which automatically regulates the size of the discharge area available at its opposite sides when equilibrium is established, the recesses in said piston lying contiguous to and being adapted to bridge over the spaces between the spaced ports.

1,484,031. OPERATING MEANS FOR AUTOMOBILE-DOOR LATCHES. FREDERICK KLEINSMITH, Indianapolis, Ind. Filed Dec. 31, 1921, Serial No. 526,188. Renewed Oct. 19, 1923. 5 Claims. (Cl. 296—48.)

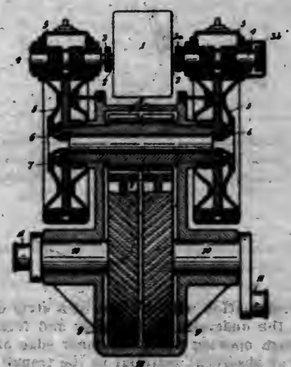
2. The combination with an automobile door having a sliding panel therein, of a latch on said door at one side of the path of said panel, a handle positioned at the opposite side of the path of said panel, a flexible member connecting said latch and handle and removed from the path of the panel, and means for removing slack from said flexible member.

1,484,032. WINDPROOF MATCH BOX. ALEXIS KONSHIN, Yokohama, Japan, assignor of one-half to John Gadsby, Tokyo, Japan. Filed Jan. 6, 1922. Serial No. 527,473. 1 Claim. (Cl. 206—36.)



A wind-proof match box including an outer casing of the usual parallelopiped type having one of its ends entirely closed by an end wall and its top partially removed, an abrasive substance arranged on the outer surface of the remaining portion of the top, and an inner receptacle for matches having its top partially covered so as to furnish a cover corresponding in position to the uncovered portion of the outer casing, when the inner receptacle is placed in the usual way within the outer casing, the match box being adapted to provide a space inside the outer casing when the inner receptacle is partially withdrawn to receive the lighted end of an ignited match.

1,484,033. SPINDLE-BODY BOLT AND MOUNTING THEREFOR. DEWEY S. KROHN, Chicago, Ill. Filed Apr. 16, 1923. Serial No. 632,504. 3 Claims. (Cl. 280—96.1.)

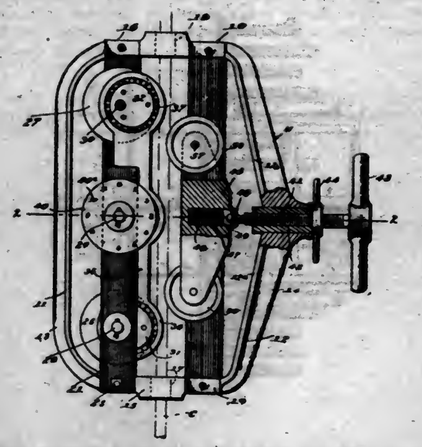


1. In combination with an axle provided at its end with vertically spaced spindle bolt receiving arms having vertically aligned openings formed therein, a spindle bolt

mounted in said openings and fitting the opening of the upper arm, and a plate secured to the axle and extending beneath the lower arm having a threaded opening formed

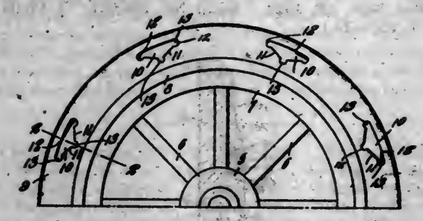
therein aligned with the openings of said spindle arms, the lower end of said bolt being threaded and being engaged in the opening of the plate.

1,484,034. TURBINE PLANT PROVIDED WITH TOOTHED GEARING. FREDRIK LJUNGSTRÖM, Brevik, Sweden, assignor to Aktiebolaget Ljungströms Ångturbin, Stockholm, Sweden, a Corporation. Filed Jan. 16, 1922. Serial No. 529,666. 4 Claims. (Cl. 74—7.)



1. In combination, a turbine, gear casings arranged at opposite sides of said turbine and each containing movably adjustable gearings driven by the turbine, and an intermediate gearing arranged between said casings and driven by the movably adjustable gearings, said gear casings being movably and adjustably mounted.

1,484,035. AUTOMOBILE BUMPER. WILLIAM R. McGOWEN, Chicago, Ill., assignor to American Bumper Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 2, 1922. Serial No. 579,106. 7 Claims. (Cl. 293—55.)

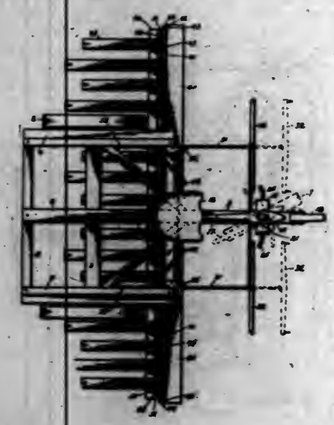


3. An automobile bumper comprising a resilient bar bent to form U-shaped end portions, an intermediate rear portion and forwardly disposed free end portions terminating adjacent the central portion of said rear portion, and a flexible impact member connecting said free end portions, said rear portion being initially bent to introduce a forward curvature therein.

1,484,036. WELL-MEASURING APPARATUS. RICHARD COLBERT MASON, Tulsa, Okla. Filed Apr. 14, 1922. Serial No. 552,719. 4 Claims. (Cl. 33—184.)

1. In a well measuring apparatus, a frame, a plurality of axles rotatably mounted in the frame, driving wheels mounted on the axles, disks fixed to said driving wheels eccentrically thereof, and an eccentric strap coacting with the disks.

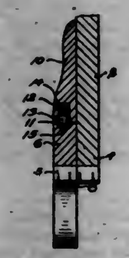
1,484,037. CUSHION TIRE. ALEXANDER HOPE BATTERSBY, Charlotte, N. C. Filed June 15, 1923. Serial No. 645,635. 2 Claims. (Cl. 152—1.)



2. A solid tire construction having openings extending therethrough, the openings including relatively straight walls, reentrant curved walls connecting the relatively straight walls, and said reentrant curved walls adapted to receive wear directed to the openings when the tire is being flexed.

1,484,038. PRODUCT AND PROCESS FOR THE RECOVERY OF BACTERIAL ANTIBODIES. JOHN RAICHEL, Philadelphia, and FRANK M. HUNTOON, Swarthmore, Pa., assignors to H. K. Mulford Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 1, 1923. Serial No. 616,373. 11 Claims. (Cl. 167—7.)

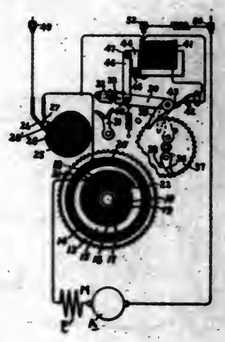
4. As a new article of production, a substance consisting of bacterial antibodies isolated from antibacterial serums and practically free from serum proteins.



10. The herein described process of isolating or separating bacterial antibodies practically free from serum proteins from antibacterial serums, comprising the steps of mixing together an antibacterial serum and a specific bacteria, separating from the mixture of sensitized bacteria, and recovering from the sensitized bacteria the bacterial antibodies.

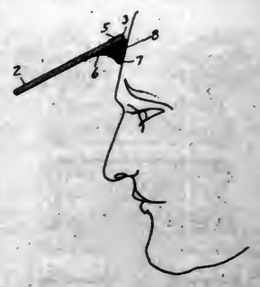
1,484,039. CULTIVATOR. MARTIN SAND, Tuabridge N. Dak. Filed July 16, 1921. Serial No. 485,281. 3 Claims. (Cl. 280—92.)

1. A cultivator comprising a frame, a steering device swiveled to the frame, a vertically swinging lever pivoted to the upper portion of the steering device, a draft appliance swiveled to the upper portion of the steering device, and cooperative means carried by the lever and draft appliance whereby the said lever may be interlocked with the draft appliance or free thereof to permit steering through the draft appliance or manually.



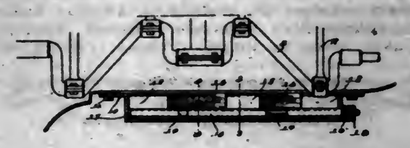
1,484,040. FOOTSTOOL. RAY SANSOM, Cusick, Wash., assignor of one-half to William B. Kirk, Usk, Wash. Filed Sept. 23, 1922. Serial No. 590,031. 1 Claim. (Cl. 155—73.)

The combination with a stool leg having an arched foot providing spaced bases and a complementary shoulde thereabove, of a rocker hinged at the spaced bases of said arched foot, a spring pressed stud projecting below the under face of said shoulder, and a complementary socket member in the rocking face of the rocker, whereby the latter may be retained in inverted position.



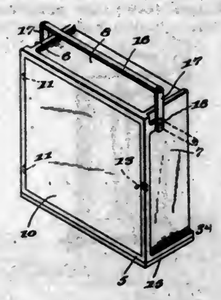
1,484,041. ELECTRIC CLOCK-SETTING MEANS. FRANK J. SMOLT, Schenectady, N. Y., assignor of one-fourth to Edward F. Pickford, Washington, D. C.; one-fourth to Mable H. Hall and one thirty-second to Charles D. Knight, both of Schenectady, N. Y. Filed Mar. 22, 1919, Serial No. 85,776. Renewed May 11, 1921. Serial No. 468,725. 15 Claims. (Cl. 58—34.)

1. The combination with a clock mechanism of means for setting the same comprising a setting member normally in a predetermined position and biased thereto, means for moving the same against the bias to a position in which it will not interfere with the clock hands when



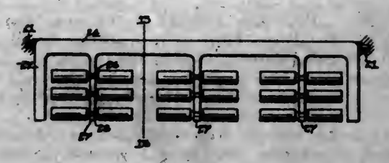
the latter reach a predetermined position, and means whereby the setting is accomplished by the member upon its release as it returns to its normal position.

1,484,042. EYE GUARD. ROBERT H. SMILIE, Oakland, Calif. Filed Aug. 24, 1922. Serial No. 583,998. 7 Claims. (Cl. 2—149.)



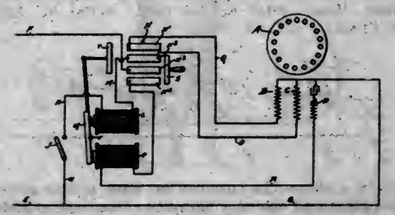
6. The combination with a visor, of a strip of material secured to the underside of the visor and forming therewith a trough opening along the inner edge of the visor and a pad of absorbent material in the trough projecting inwardly beyond the inner edge of the visor to hold the inner edge of the visor from the forehead.

1,484,043. CRANK CASE FOR INTERNAL-COMBUSTION ENGINES. JAMES M. TAPLEY, Charleswood, Manitoba, Canada. Filed Nov. 18, 1922. Serial No. 601,927. 5 Claims. (Cl. 184—13.)



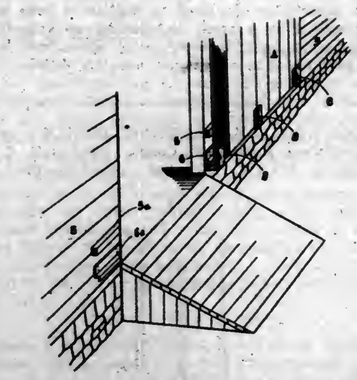
1. In combination with an engine, a crank-case having compartments extending transversely thereof and communicating through different passages, said passages being in longitudinal alignment, a rod extending through said passages and having washer means for closing the passages between said compartments.

1,484,044. COIN HOLDER. ALFRED G. TOBORG, Chicago, Ill. Filed Feb. 23, 1922. Serial No. 538,667. 5 Claims. (Cl. 217—5.)



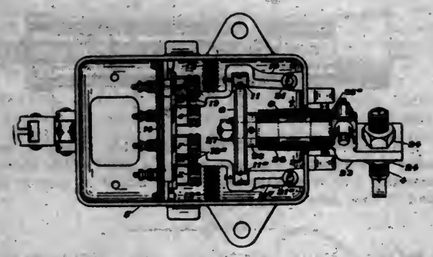
1. A coin-holder comprising a rectangular receptacle which is open in front and has on the inside top and bottom grooves running from the front to the rear, certain ones of said grooves being intermediate the sides of the receptacle and others being adjacent to said sides, and strips adapted to be mounted in the first-mentioned grooves to form partitions dividing the interior of the receptacle into compartments, said strips being removable for insertion into the second-mentioned grooves to form fillers reducing the effective width of the receptacle interior.

1,484,045. TOP ROLL FOR SPINNING FRAMES. WILLIAM EMORY WARDWELL, Worcester, Mass. Filed Oct. 17, 1921. Serial No. 508,208. 3 Claims. (Cl. 19—142.)



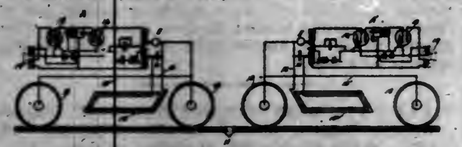
1. In a top roll mechanism, the combination with a cap bar provided with spaced arms, of a top roll unit comprising a pair of rolls rotatably mounted on an arbor which is non-rotatably supported between said rolls by an arm of said cap bar.

1,484,046. STARTING SWITCH. CHARLES H. WELLINGTON, Ventura, Calif., assignor to Casey Manufacturing Company, Oxnard, Calif., a Partnership composed of Charles H. Wellington, Ventura, Calif., and Charles L. Hirt, Oxnard, Calif. Filed Apr. 5, 1923. Serial No. 629,990. 11 Claims. (Cl. 172—279.)



1. The combination with an induction motor having a plurality of running windings and a starting winding of a switch structure comprising a starting set of contacts connected thereto whereby when said set is closed less than all of said running windings will be connected in parallel and said starting winding will be connected in circuit, the remaining running winding being in open circuit, means to manually operate said set of starting contacts as a unit, a running set of contacts whereby to connect all of said running windings in parallel and to place said starting winding in open circuit, and a time delayed means for automatically closing said running contacts as a unit.

1,484,047. BARN-DOOR CONSTRUCTION. GEORGE WILKES, Calgary, Alberta, Canada. Filed Mar. 16, 1922. Serial No. 544,336. 1 Claim. (Cl. 20—19.)



A slidably-mounted door, brackets secured to the door with upturned lower ends at the rear of and spaced from the door, a guide strip secured to the adjacent wall of a building upon one side of the door opening, a Z-shaped bar secured to said wall beneath said guide strip and cooperating with said brackets to guide the door in its movements, a guide block on said wall on the other side of said opening and having a tapered inner end, and a Z-shaped bar on said wall below the last-named guide strip and engaging one of said brackets when the door is closed.

1,484,048. CIRCUIT CONTROLLER. WILLIAM ZABEL, deceased, late of Swissvale, Pa., by Bertha Zabel, executrix, assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 3, 1920. Serial No. 356,112. 9 Claims. (Cl. 246—253.)

1. In combination, a railway switch, a circuit controller comprising a cam having fixed stroke, two contacts controlled by said cam and actuated at the two ends of the stroke of the cam, respectively, and a crank of adjustable length connecting said cam and said switch whereby the fixed stroke of the cam may be secured with switches of different throws.

1,484,049. ELECTRIC HIGH-FREQUENCY SIGNALING APPARATUS. VLADIMIR K. ZWORYKIN, Kansas City, Mo. Filed Aug. 28, 1922. Serial No. 584,716. 3 Claims. (Cl. 246—63.)

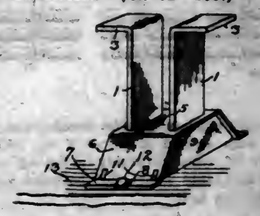
3. Electric train signaling means comprising, in combination with the track rails, a heterodyne oscillatory circuit electrically connected to said track rails adapted to be carried by a train and having an antenna loop emitting continuous high frequency waves and adapted to be maintained in continuous inductive relation to said rails.

1,484,050. NIPPLE-ATTACHING DEVICE. ARTHUR ZIMMERMAN, Waterbury, Conn. Filed Apr. 6, 1920. Serial No. 371,688. 5 Claims. (Cl. 215—100.)

1. A nipple attaching device comprising a wire base, fingers bent upwardly from the portions of the wire forming said base, and a clip for holding the portions of wire comprising said fingers together.

1,484,051. INSULATOR. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Apr. 10, 1919. Serial No. 289,092. 13 Claims. (Cl. 173—366.)

1. In combination, a tubular insulator arranged normally to support a load and having a safety core therein normally free from said load but arranged to receive the load in case said insulator is broken.

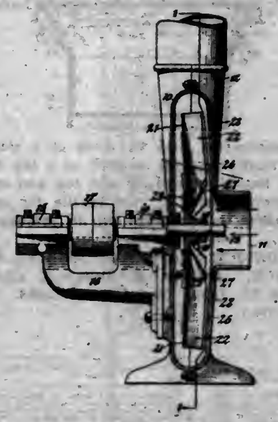


1,484,052. FARE REGISTER AND DETACHABLE FARE BOX. HUGO J BAUR, Chicago, Ill., assignor to Johnson Fare Box Company, a Corporation of New York. Filed Oct. 10, 1919. Serial No. 329,718. 27 Claims. (Cl. 232—16.)

1. The combination with a fare register of a detachable fare box and interlocking mechanism therebetween, a door for closing the outlet from the fare box, a door for closing the inlet to the fare register, means mounted upon the fare register for operating its door, means mounted upon the fare box for operating its door, slidable locking cylinders for co-action with each of said means to lock and unlock the same according to the adjustment of the cylinders and a cam member on both

the fare box and the fare register for co-action with the respective cylinders, to operate the same into locked and unlocked position whereby the doors actuated into closed position are locked when the fare box is detached and are unlocked for operation into open position when the fare box is attached to the fare register.

1,484,053. HANGER INSERT. WILLIAM BAYLEY, Springfield, Ohio. Filed July 3, 1916. Serial No. 107,460. 15 Claims. (Cl. 72—105.)

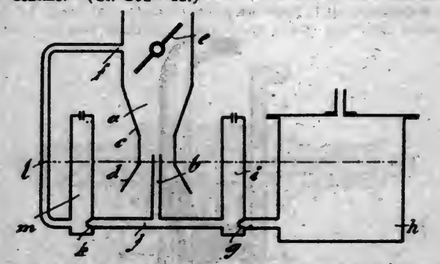


5. A pair of spaced hanger arms having inturned ends, to be embedded in a body of concrete or the like and a removable core form adapted to produce in the body of concrete or the like a recess into which the inturned ends of the hanger arms will project.

1,484,054. SKATE. HAROLD S. BEALS, Springfield, Mass., assignor of one-half to William H. Shepherd, Springfield, Mass. Filed Apr. 5, 1922. Serial No. 549,761. 5 Claims. (Cl. 46—50.)

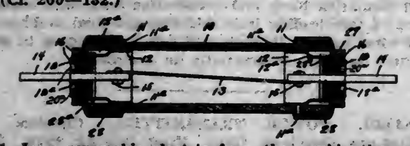
1. In a skate, the combination with a heel plate and a toe plate and one of a plurality of runners of different types adapted to be interchangeably assembled with the heel and toe plates, of a girder connecting and integral with the heel and toe plates and having a longitudinal channel to receive the upper edge of the runner, and separate means for detachably securing the runner to the heel plate and to the toe plate.

1,484,055. FAN. EDWIN F. BEUGLER, Buffalo, N. Y., assignor to E & B Holmes Machinery Co., Buffalo, N. Y., a Corporation of New York. Filed Feb. 3, 1922. Serial No. 533,982. 2 Claims. (Cl. 230—11.)



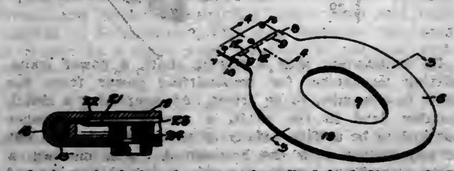
1. A fan comprising a casing having an axial inlet and a peripheral outlet, and a rotary impeller arranged in said casing and having a plurality of radial blades each of which comprises a supporting plate arranged parallel with the direction of rotation and a pressure plate projecting laterally from the rear edge of the supporting plate and arranged transversely to the direction of rotation, said supporting plate being of greatest width adjacent to its inner end and having its inner front edge portion inclining from said widest part to the inner end of this plate at a distance from its rear edge and having the outer part of its front edge portion inclining from said widest part to the outer end of its rear edge, the rear edge of said supporting plate and the inner part of its front edge converging inwardly.

1,484,056. HOT-WATER-TANK COVER OR JACKET. FRED W. BIRTCH, Laporte, Ind., assignor to Bastian-Morley Co., Laporte, Ind., a Corporation of Indiana. Filed Apr. 27, 1923. Serial No. 635,177. 14 Claims. (Cl. 154—44.)



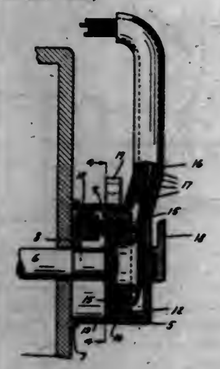
1. A cover or jacket of the character described, comprising flexible heat insulating material and means for securing the ends of said material together, said means including means arranged adjacent the edges of said material whereby said edges are separably secured together, and a member providing a cap for the end of said first mentioned material and means for securing said cap and material together.

1,484,057. CARBURETOR FOR INTERNAL-COMBUSTION ENGINES. CLEMENT BROWN, Birmingham, England. Filed Aug. 29, 1916. Serial No. 117,506. 2 Claims. (Cl. 261—41.)



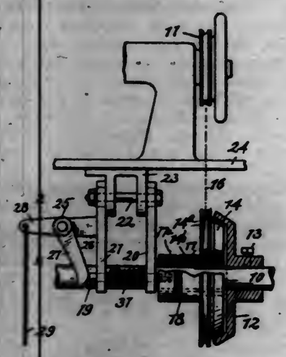
1. In a carburetor for an internal combustion engine, a jet disposed below the normal liquid level in the supply, an air inlet insufficient to neutralize the effect of the engine suction upon said jet communicating with the space above said jet, a second jet, a conduit establishing a series communication with the space above said first jet and the space below said second jet, a separate and independent air inlet communicating with the space above said second jet, and a conduit adapted to receive air and deliver to the main air passage of the carburetor in conjunction with said air the whole of the fuel received by the carburetor which is not delivered by said second jet.

1,484,058. RENEWABLE FUSE. LEONARD B. BUCHANAN, Woburn, Mass., assignor to The Chase-Shawmut Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 7, 1920. Serial No. 408,448. 16 Claims. (Cl. 200—132.)



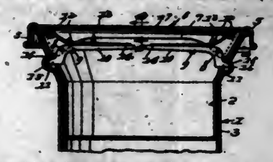
1. In a renewable electric fuse, the combination of a tubular enclosing casing, an exteriorly-threaded ferrule received on its end, said casing having integral guides in an end thereof, an end-cap removably received on said ferrule having an end-wall inwardly extended beyond the wall of the casing and an opening in its end-wall, a contact blade having a flanged portion with guide ways therein for the guides of the casing and engageable with the end-wall of the end-cap also having an externally threaded portion extended through the opening in the end-wall of the end-cap, and an internally threaded locking-nut received on the threaded portion of said contact blade to draw and hold the flanged portion thereof firmly against the end-wall of said end-cap and thereby lock said contact blade to said end-cap.

1,484,059. TOILET SEAT. WILLIAM D. BURK, Philadelphia, Pa., assignor of one-half to John Sass, Philadelphia, Pa. Filed June 1, 1920. Serial No. 385,420. 8 Claims. (Cl. 4—237.)



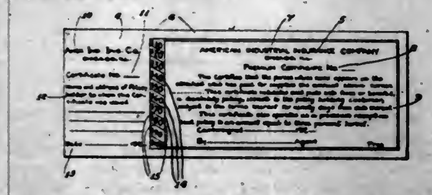
1. A seat of the character described including a body portion; a plurality of resilient members extending inwardly from the outer edge of said body portion; and cushioning members carried by said resilient members; substantially as described.

1,484,060. GAS-ENGINE TIMER. JOHN M. CALLAHAN, Chicago, Ill., assignor of one-third to Paul P. Donovan and one-third to James L. Donovan, both of Chicago, Ill. Filed Oct. 10, 1921. Serial No. 506,821. 4 Claims. (Cl. 200—24.)



1. The combination with a timer shaft, of a timer arm secured to the end thereof; a spring pressed contact piece on said timer arm; a metallic casing fitting over the end of said timer shaft said casing being cylindrical in form but flattened in the outer portion thereof, there being a shoulder between the cylindrical and flattened portions of said casing; an insulating block fitting into said casing and provided with a retaining flange engaging against said shoulder, the end of said block being flattened to fit the flattened portion of said casing; electric contacts imbedded in and extending entirely through said insulating block and cooperating with said contact piece; a tube leading from said casing behind said block; and wires passing through said tube and secured to said electric contacts, substantially as described.

1,484,061. POWER TRANSMITTER. CHESTER C. CLELAND, Cleveland, Ohio. Filed July 11, 1918. Serial No. 244,255. 1 Claim. (Cl. 192—110.)



In combination with a driving shaft, a power transmitting mechanism for transmitting power from the shaft to a member to be driven and comprising a clutch member fixed to the shaft, a second clutch member adapted to be shifted axially of the shaft into and out of engagement with the first-named clutch member, a supporting sleeve surrounding the shaft and free thereof and supported independently of the shaft, said second clutch member being rotatably supported by said sleeve, and means for shifting said sleeve and the second clutch member to move the latter axially of the shaft.

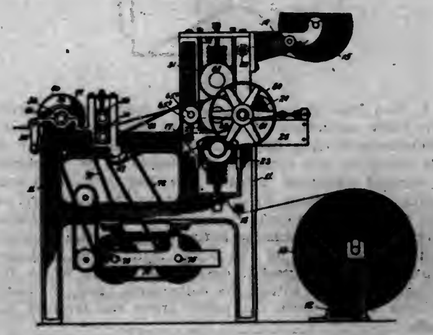
1,484,062. HANDLE AND FASTENER FOR CAN TOPS. PALMER A. CONNER, Glendo, Wyo. Filed July 15, 1922. Serial No. 575,876. 9 Claims. (Cl. 220—55.)

1. The combination with the neck of a can provided with diametrically opposite sockets, of a top telescoping the neck, a handle carried by the top and spring tensioned members carried by the handle for engagement with the sockets to retain the top in position.

1,484,063. DEVICE FOR USE IN ISSUING PREMIUM INSURANCE. GEORGE E. DICKSON, Chicago, Ill. Filed June 21, 1920. Serial No. 390,613. 2 Claims. (Cl. 283—54.)

1. The device herein described embodying an insurance policy device which is substantially valueless until its value is fixed by a policy valuation supplement and having an inscription thereon which is but partly definitive of the risk to be assumed by the insurance company and the benefits to be extended to the insured in that it does not fix the amount of the indemnity payable, and a policy valuation supplement device having a statement inscribed thereon which supplements the inscription on the insurance policy device, the said statement completing the partial statement of the risk assumed by the insurance company and the benefits extended to the insured that is partly stated on the insurance policy device, one of said devices bearing an inscription indicating that the insurance policy is validated and put into force when the policy valuation supplement is issued by the consent of the insurance company to the policy holding customer.

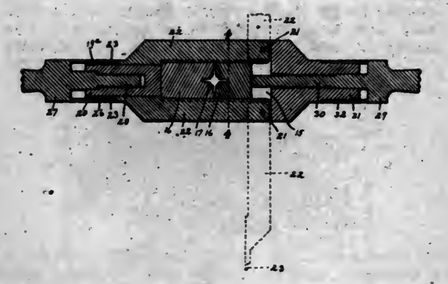
1,484,064. TEE PLATE FOR GOLF COURSES. CHARLEY ERICKSON and ROBERT TAYLOR, Minneapolis, Minn. Filed Oct. 21, 1922. Serial No. 596,028. 4 Claims. (Cl. 46—4.)



1. A tee plate having a depending anchoring means and a projecting lug, the latter indicating the teeing-off line, the said tee plate also having at front and rear portions sights for indicating the line to the hole beyond the teeing-off point.

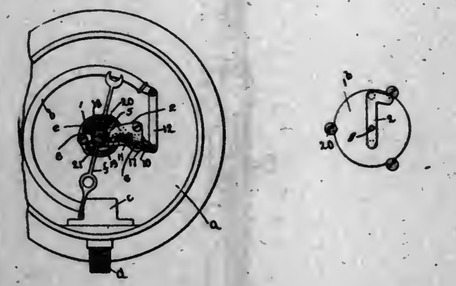
1,484,065. AUTOMATIC DEPTH-DRILLING MACHINE. EDWIN J. GOULD, Oakland, Calif., assignor of one-half to Charles T. Henry, J. Brooks Millard, and Joseph T. Henry, all of York, Pa. Filed Mar. 23, 1921. Serial No. 454,806. 5 Claims. (Cl. 255—4.)

1. In an apparatus of the character described, means for rotating a boring member, a pneumatic clutch member slidably and nonrotatably attached to the said means operating the said drilling member, and means for feeding said boring member.



1,484,066. MACHINE FOR MAKING LAMP WRAPPERS AND THE LIKE. BERG HEINRICHS, Chicago, Ill., assignor to Mid-West Box Company, Anderson, Ind., a Corporation of Indiana. Filed Feb. 3, 1922. Serial No. 533,807. 6 Claims. (Cl. 93—1.)

1. In a machine for making wrappers, the combination of mechanism for corrugating a web and for applying a printed web to the corrugated web, a cutter for the web, mechanism for synchronously driving the applying and forming rolls and the cutter, and adjustable means for timing the cutter relatively to the printed web without disconnecting it from the driving mechanism.

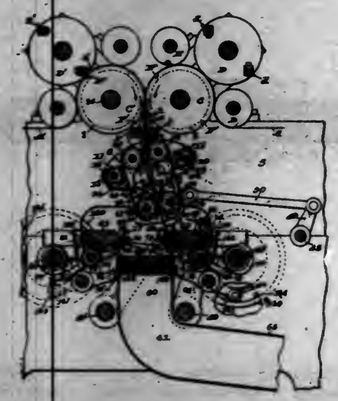


1,484,067. TAP WRENCH AND DIESTOCK. JAMES HIRST, Melrose, Mass. Filed Apr. 17, 1922. Serial No. 554,241. 3 Claims. (Cl. 10—116.)

2. A stock or holder of the character stated, comprising a body composed of side and end portions bounding an opening formed to receive a pair of jaws, the side portions being provided with slots communicating with said opening, and having extensions formed in one of the end portions, a pair of die-engaging tongues pivoted to the side portions at one end of the body, and having ears at their free ends, formed to occupy the slot extensions, one end portion of the body being provided with

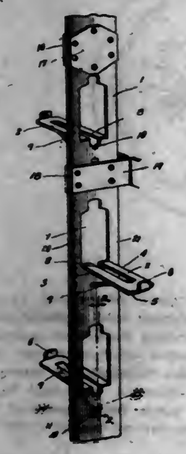
a boss containing portions of said slot extensions, a handle having a screw-threaded shank engaged with a tapped orifice in said boss, and a keeper movable by rotation of the handle to engage and release the tongue ears, the tongues being adapted to be swung outward from the holder when said ears are released.

1,484,068. PRESSURE GAUGE. FRANK H. HOPKINS, Somerville, Mass., assignor, by mesne assignments, to American Schaeffer & Budenberg Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 3, 1921. Serial No. 504,836. 8 Claims. (Cl. 73—109.)



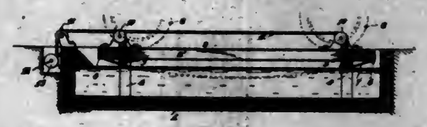
1. A pressure gauge comprising, in combination with a case and a Bourdon tube mounted operatively in said case, a self-contained indicating movement including a frame, an indicator staff rotatably mounted in said frame, and motion transmitting means from said staff adapted to be connected with said Bourdon tube, said movement as a whole being mounted in the case with provision for angular movement about the axis of said staff.

1,484,069. INTERFOLDING MACHINE. DAVID W. HUDSON, Green Bay, Wis. Filed Oct. 11, 1920, Serial No. 416,201. Renewed Jan. 2, 1924. 28 Claims. (Cl. 270—39.)



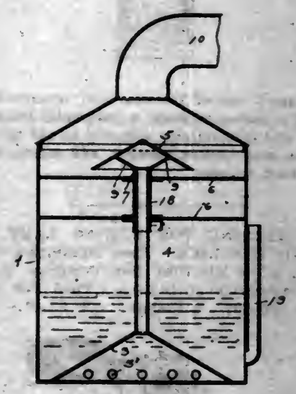
25. The combination with means for supplying a duplex series of overlapped sheets, of an oscillatory guiding device arranged to discharge the sheets from the oscillatory

end thereof, opposed sets of clamping jaws arranged to receive sheets discharged by the oscillatory guiding device, tucking blades adapted to cooperate with said guid-



ing device in delivering material to the clamping jaws, and means for causing said tucking blades to move alternately in arcuate paths about axes located beyond said jaws in the line of sheet travel.

1,484,070. METAL STRUCTURAL MEMBER. WILLIAM E. MAST, Kansas City, Mo. Filed May 9, 1923. Serial No. 637,709. 5 Claims. (Cl. 228—46.)

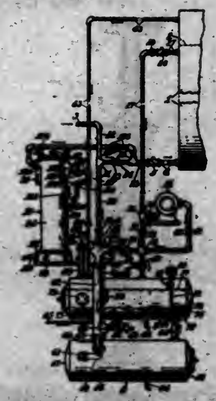


1. A metal structural member consisting of a sheet of metal having an outstanding step member struck therefrom, the outstanding step member having a diagonal brace struck from it, provided on its end with a means for fastening it to the sheet.

1,484,071. APPARATUS FOR USE IN WASHING AUTOMOBILES. SONIS J. MEMMEN, Manito, Ill. Filed Apr. 17, 1922. Serial No. 554,275. 6 Claims. (Cl. 141—1.)

2. The combination of a tank for containing water, a platform suspended therein, an endless belt mounted on the platform adapted to travel, and means operatively connected to the platform for raising and lowering the same and extending outside said tank.

1,484,072. FUME GENERATOR FOR BATHS. ARLINGTON H. MOORE, Dayton, Ohio. Filed Aug. 16, 1920. Serial No. 403,939. 21 Claims. (Cl. 167—3.)



1. In a fume generator, a boiler, a compartment within the boiler submerged in the liquid contents having an intercommunicating passage with the main chamber of the boiler for the circulation of liquid to be vaporized, a vertical discharge conduit extending from said submerged compartment to a point above the fluid level of the boiler, a foraminous baffle located within the boiler intermediate the discharge outlet of the vertical conduit and the fluid level of the boiler thru which fluid discharged from the conduit descends and thru which the vapors generated within the boiler arise, and an outlet conduit leading from the boiler above the level of the baffle.

16. The herein described method of producing medicinal vapors and the like, consisting in circulating a body of steam in intimate relation with a body of impregnating material whereby such material will become entrained with the steam and subsequently extracting a part of the moisture from the impregnated steam to relatively increase the strength of the vapors.

21. In a vapor generator, the combination with a steam supply means, and means for charging the steam with impregnating media, of a jacketed chamber divided vertically into two compartments intercommunicating at the bottom of the chamber, and inlet passage for the impregnated steam to one compartment and an outlet passage for the steam from the other compartment, cooling media being circulated through the jacket of said chamber.

1,484,073. BOILER-FEED-WATER PURIFIER. BUDD L. MORRISON, Indianapolis, Ind. Filed June 17, 1920. Serial No. 389,560. 11 Claims. (Cl. 122—398.)

1. A feed-water purifier including a settling-tank having an inlet connection, an outlet conduit connected to the settling-tank, a precipitating-tube connected with the inlet connection and having a combiner chamber connected therewith, the combiner chamber having an inlet neck, a controller tube extending into the combined chamber and nearly to the interior of the precipitating-tube, a feed-pipe connected with the controller tube, and means for variably controlling a stream flowing from the controller tube.

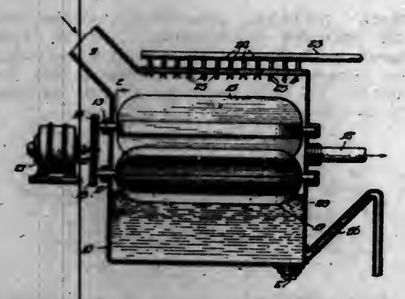
1,484,074. HOOD CLAMP. EDMUND NOLAN, Detroit, Mich. Filed July 24, 1922. Serial No. 577,211. 5 Claims. (Cl. 292—114.)

5. A hood clamp comprising a hollow casing formed of complementary segments integrally connected at one end, a handle projecting laterally from each of the segments of said hollow casing, and a ring or ferrule sleeved upon said casing and retaining the segments thereof together, said ring having a catch projecting laterally therefrom.

1,484,075. BOAT. JOHN J. OTTO, Chicago, Ill. Filed May 28, 1919. Serial No. 300,387. 5 Claims. (Cl. 115—11.)

1. In a boat, the combination of a hull, longitudinally and transversely extending stringers secured to the outer face thereof to form a checker-work over the bottom of said hull, pipes equipped with nozzles arranged between said stringers, and a series of removalbe plates fitted over said nozzles to protect the same and detachably secured to said stringers, said plates being provided with openings through which said nozzles discharge.

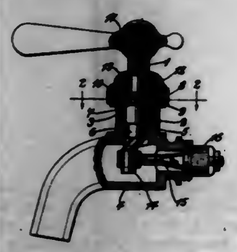
1,484,076. INVERTED HORIZONTAL INGOT MOLD AND PROCESS OF CASTING. JOHN E. PERRY, Sharon, Pa., assignor to Valley Mould & Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Oct. 26, 1920. Serial No. 419,706. 22 Claims. (Cl. 22—143.)



1. As an article of manufacture an inverted mold for casting horizontal steel ingots, said mold comprising a body portion having a matrix therein of substantially the configuration of the ingot to be cast, with the edges of said mold extending along the long side thereof and being substantially co-planer to permit said mold to be set on a suitable stool, said mold being provided with a runner opening leading to the matrix and with the opening extending through the top wall of the body of the mold.

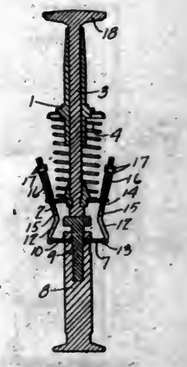
1,484,077. LEAD PENCIL. EARL F. PIERCE, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 17, 1920. Serial No. 410,813. 4 Claims. (Cl. 120—18.)

1. A pencil comprising a barrel having its walls swaged inwardly intermediate the ends thereof to form an annular groove, the bottom of said groove being provided with a slot extending longitudinally of said barrel, means at one end of said barrel for receiving and guiding a lead, a feed bar slidably mounted in said barrel, one edge of said feed bar being screw-threaded and extending between the edges of said slot, an internally threaded sleeve rotatably mounted in said groove and having screw-threaded engagement with the threaded edge of said feed bar, said sleeve being formed with a plurality of sections having interlocking engagement with each other and held against longitudinal displacement relative to each other by the end walls of said groove, and means at one end of said feed bar for expelling a lead from said lead receiving and guiding means.



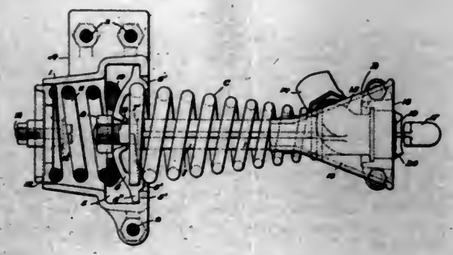
1,484,078. GAS-CLEANING APPARATUS. GEORGE P. PILLING, Philadelphia, Pa., assignor to Freyn, Brassert & Company, Chicago, Ill., a Corporation of Maine. Filed Sept. 3, 1920. Serial No. 408,110. 2 Claims. (Cl. 261—92.)

1. A washer for blast furnace gas, comprising a chamber, a pair of horizontal and superposed rotary gas beaters mounted in the chamber, means above the beaters for spraying water downwardly thereon, a gas inlet conduit leading into the chamber above the beaters and near one end of the upper beater, a gas outlet conduit leading from the chamber opposite the gas inlet and at a level between the axes of the beaters, and an overflow device for maintaining a water level below the gas outlet and above the bottom of the lower beater.



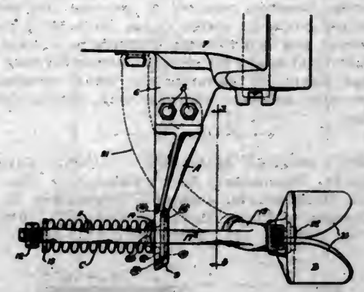
2. A washer for blast furnace gas, comprising a chamber having a pair of horizontal and superposed rotary gas beaters mounted in the chamber, each gas beater having a plurality of radial blades extending longitudinally of the beater, the beaters being disposed so that the blades of each beater pass between the blades of the other beater during rotation of the beaters, a gas inlet conduit leading into the chamber above the beaters and near one end of the upper beater, a gas outlet leading from the chamber opposite the gas inlet and at a level between the axes of the beaters, means above the beaters for spraying water downwardly thereon, and an overflow device for maintaining a water level below the gas outlet and above the bottom of the lower beater.

1,484,079. FAUCET. JOHN F. REARDON, St. Louis, Mo. Filed Jan. 12, 1922. Serial No. 528,718. 4 Claims. (Cl. 251—40.)



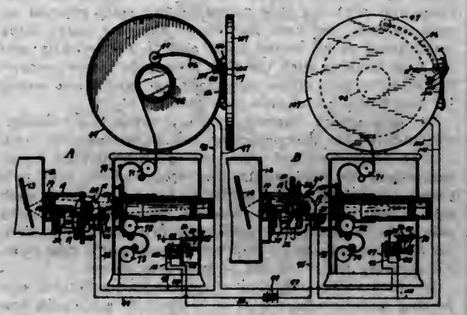
4. In a faucet, a gland chamber opening into the faucet, a shoulder at the bottom of the gland chamber around the opening into the faucet, a metallic valve stem extending through the gland chamber into the faucet, a relatively long cylindrical body portion integral with the valve stem fitting within the gland chamber and seating on said shoulder, and being of sufficient length to hold the valve stem from lateral vibration, packing compressed in the gland chamber above said body portion, and means interlocked and turning with the valve stem compressing the packing in position.

1,484,080. SILENCER FOR VALVE MECHANISM. FRED JOHN REVOR, Lyon Mountain, N. Y. Filed May 11, 1923. Serial No. 638,237. 1 Claim. (Cl. 123—90.)



A device of the kind described comprising in combination with the valve mechanism of an internal combustion engine, a spring retainer disc at the lower end of the valve stem, same having a plurality of adjustment-pin-holes, around its edge with relatively narrow slots opening outwardly; an anchor disc at the upper end of the valve lifter, same having hook holes aligned with the adjustment-pin-holes of the spring retainer disc; adjustment pins having hooks to engage the hook holes of the anchor disc and threaded stems to pass through the adjustment-pin-holes of the spring retainer disc, and having also flat neck portions intermediate of its ends adapted to pass through the slots of the spring retainer disc; coil springs on the upper threaded ends of the adjustment pins above the spring retainer disc; and adjustment nuts on the outer ends of the threaded stems of the adjustment pins.

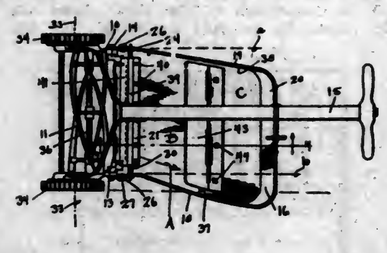
1,484,081. TRAIN-PIPE COUPLING. JOSEPH V. ROBINSON, Santa Monica, Calif. Filed Oct. 31, 1919, Serial No. 334,830. Renewed May 15, 1923. 11 Claims. (Cl. 285—58.)



1. In an automatic train pipe coupling, a coupling member comprising a base having a hollow chamber therein, a movable disk in the forward part of said chamber, a stationary inwardly extending seat for said disk at the forward end of said chamber, a spring in said chamber so mounted and connected thereto as to tend to force said disk to its seat, a coupling stem so connected to said disk as to permit slight relative movement and carrying a coupling head at its outer end, and a coiled spring around said stem between said disk and head normally holding said stem and coupling head extended in a fixed position, the connection being such as to permit the necessary lateral movement of said head and the outer end of the stem in coupling under the yielding action of said coil spring surrounding the stem while said disk remains in close contact with its seat.

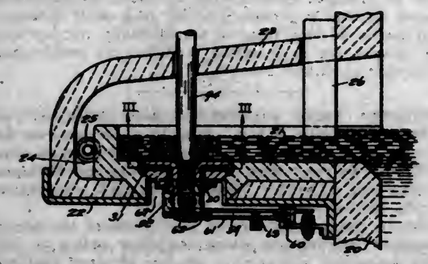
1,484,082. AUTOMATIC TRAIN-PIPE CONNECTER. JOSEPH V. ROBINSON, New Haven, Conn. Filed Dec. 6, 1919, Serial No. 343,101. Renewed May 15, 1923. 5 Claims. (Cl. 285—58.)

1. In an automatic train pipe connecter, a coupling head, a hollow base, a flange mounted in said base and rigidly connected to said head, a yoke rigidly connected to the base and extending rearwardly thereof and comprising spaced arms, a thrust member positioned at the rear of said flange and relative to which said flange has universal movement, a spring arranged in said yoke for holding said thrust member against said flange, said flange and thrust member being slidably and non-rotatably associated with said yoke, and means on said base for limiting the forward movement of said flange.



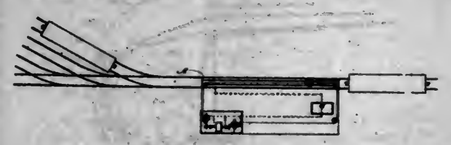
1,484,083. MOTION-PICTURE APPARATUS. ALVAH C. ROEBUCK, Chicago, Ill. Filed Feb. 23, 1921. Serial No. 447,010. 25 Claims. (Cl. 88—17.)

1. Motion picture apparatus comprising a shutter pivotally mounted; a reciprocatory member connected with the shutter for rotating the latter; a spring connected with the reciprocatory member adapted to move the latter; means for shifting the spring and causing the latter to act on the reciprocatory member alternately in opposite directions; and a lock for holding the shutter against the influence of said spring.



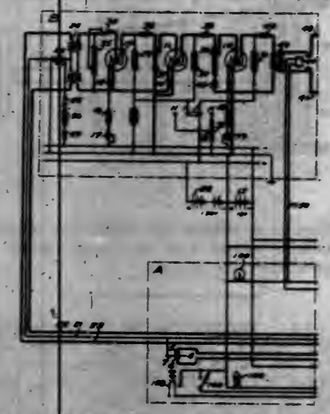
1,484,084. GRASS CATCHER FOR LAWN MOWERS. FRANKLIN L. ROHRBACH, Spokane, Wash. Filed Sept. 3, 1921. Serial No. 498,274. 2 Claims. (Cl. 56—199.)

1. A grass catcher for a lawn mower wherein the stream of cut grass flows at a lateral angle to the medial line of the mower, comprising a catcher body having a forward edge adapted for attachment to the mower in substantially parallel relation with the transverse axis of the latter, said body extending laterally of the medial line of the mower from the front to the rear end of said



body sufficiently to dispose the medial line of said body substantially coincident with the medial line of flow of the cut grass from the mower.

1,484,085. PRODUCING FORMED CHARGES OF MOLTEN GLASS. JOHN F. RULE, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 13, 1920. Serial No. 430,129. 23 Claims. (Cl. 49—55.)

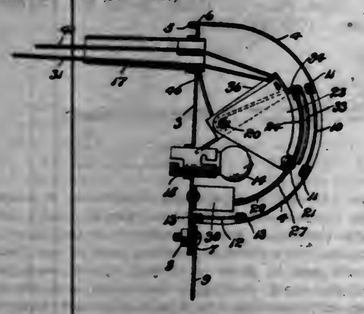


13. The combination of a receptacle to contain molten glass, means for causing a regulated flow of glass from the receptacle comprising a pair of segments mounted to rock about horizontal axes and having abutting faces in rolling contact, said faces provided with vertically disposed recesses which together form a channel through which the glass issues, automatic means for periodically rocking said segments up and down, and means to periodically sever the glass beneath said segments, said recesses being upwardly and outwardly flared whereby the diameter of the channel is increased by the downward movement of the segments and decreased by their upward movement.

1,484,086. SWITCHING APPARATUS FOR RAILWAY-SWITCH YARDS. FRANK H. RUTHERFORD, Chicago, Ill. Filed June 24, 1922. Serial No. 570,638. 11 Claims. (Cl. 104—176.)

1. In a freight car drifting apparatus, a section of railway track, a truck reciprocal longitudinally between the rails thereof, a lever on said truck oscillatory from a horizontal to a vertical position, and in the latter position adapted to move a railway car by engaging an axle of the truck thereof, a brake for said truck, and traction cables corelated with said lever and brake whereby one is thrown into operation and the other out.

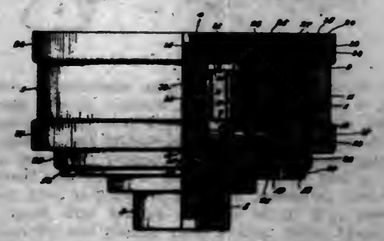
1,484,087. RADIO BROADCASTING EQUIPMENT. FRANCIS M. RYAN, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1922. Serial No. 581,613. 14 Claims. (Cl. 250—6.)



9. In a broadcasting station, a studio, a radio room, means whereby a person in either room may broadcast, and means in each room to automatically indicate that the circuits are in operating condition for broadcasting from that particular room.

1,484,088. LEAD COMPOUND AND PROCESS OF FORMING THE SAME. JOHN W. SCHUMACHER, Detroit, Mich., assignor to Acme White Lead and Color Works, Detroit, Mich., a Corporation of Michigan. Filed Oct. 18, 1920. Serial No. 417,666. 23 Claims. (Cl. 134—67.)

20. In the manufacture of lead products the herein-described improvement which comprises adding to litharge suspended in water, an amount of nitric acid representing much less than the amount of nitric acid capable of producing solution of the entire amount of litharge, and adding sulphuric acid in such amount that the quantity of nitric acid plus the quantity of sulphuric acid is sufficient to convert the entire amount of litharge into a basic lead salt, agitating and heating until the reaction is substantially complete.

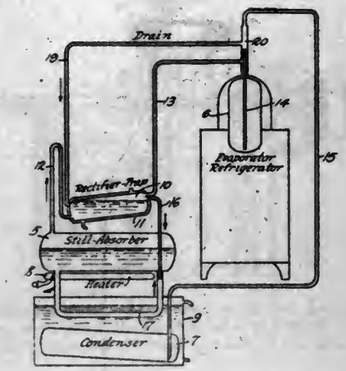


22. A process of producing precipitated lead compounds which comprises the step of reacting upon a slow-settling exfoliated, highly reactive basic lead sulfate, with a soluble chromic acid compound, whereby the lead precipitate is produced in a highly amorphous and finely divided state.

1,484,089. VEHICLE SIGNAL. SOLOMON B. SHAW, Los Angeles, Calif. Filed Oct. 3, 1921. Serial No. 505,032. 6 Claims. (Cl. 116—42.)

1. A signal, comprising an enclosing casing having an opening in its rear side, a signal member mounted to turn on a horizontal axis within the casing, said signal member having an opening filled with a red glass near its upper edge and two arrow-shaped extensions, one at each end of the first opening therein, and at its lower portion having stop signal characters cut therethrough, a covering member pivotally mounted to pass one over each arrow-shaped extension, spring means for holding the signal member and said covering members in a lower position, individual means for elevating either covering member, and means for elevating the signal member and both covering members simultaneously, substantially as described.

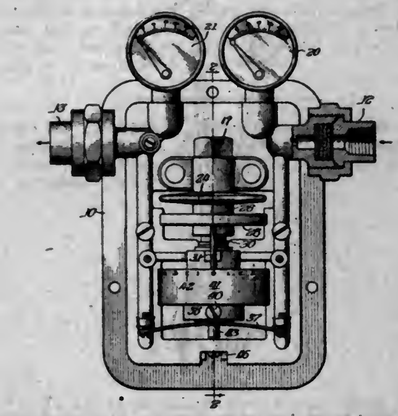
1,484,090. ROTARY MAGNETIC CHUCK. FRANK L. SIMMONS, Woonsocket, R. I., assignor to The Taft-Peirce Manufacturing Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed Apr. 11, 1918. Serial No. 227,898. 37 Claims. (Cl. 175—367.)



1. In a rotary magnetic chuck the combination of a hollow housing having a cylindrical side wall and a back portion integral with the side wall, a core piece member provided with a plurality of pole pieces thereon, said member being mounted within and spaced apart from the walls of said housing, a face plate comprising face plate pole pieces separated one from another by non-magnetic material, said face plate being provided with parallel surfaces and with its pole pieces having sides exposed on each surface, the back surface of the face plate being constructed to be seated upon and to hermetically seal the said housing with the face plate pole pieces contacting with the ends of the core piece pole pieces, and means for energizing all of said pole pieces.

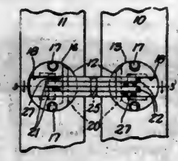
14. In a rotary magnetic chuck a supporting chamber, electro-magnetic energising devices, in combination with a face plate provided with pole pieces adapted to be magnetized by said electro-magnetic devices, said pole pieces comprising body portions, extensions from each side of said body portions whereby the work face of said pole piece is substantially tree-like in form, a hub member securing one end of said pole pieces, and a ring member securing the other end of said pole pieces.

36. In a rotary magnetic chuck a non-magnetised supporting member adapted to be secured to a suitable machine tool, in combination with electro-magnetic means symmetrically arranged around the axis of rotation of said chuck, said electro-magnetic means providing a plurality of individual magnetic circuits arranged adjacent one to another, a common base core forming a part of each magnetic circuit, and adjacent magnetic circuits each having a common pole path with a portion of each magnetic circuit extending over the face plate of the chuck.



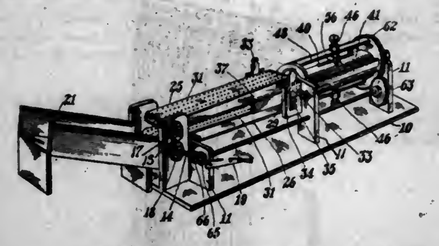
1,484,091. REFRIGERATION APPARATUS. BENJAMIN C. SMITH, Bayonne, N. J., assignor to Eugene A. Biotte, Douglaston, N. Y. Filed Nov. 22, 1919. Serial No. 339,912. 14 Claims. (Cl. 62—118.)

1. In a refrigeration system, the combination of a vessel for containing a refrigerant liquid, an evaporator-refrigerator, a condenser, a conduit connecting the condenser with the bottom of the evaporator-refrigerator, a gas outlet conduit leading from the gas chamber in the upper part of the vessel to the upper part of the refrigerator evaporator, and piping including part of the gas outlet conduit connecting a portion of said first named conduit above the level of the evaporator-refrigerator to the bottom of said vessel, whereby water collecting in the



bottom of said evaporator-refrigerator may be forced from the same and allowed to drain back into said vessel during the gas generating period.

1,484,092. GRADUATED-MOVEMENT REGULATOR. MORTON O. SNEDIKER, Chicago, Ill., assignor to The Powers Regulator Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 7, 1922. Serial No. 527,617. 4 Claims. (Cl. 236—86.)



1. In a regulating device, the combination of a casing providing a conduit for air under pressure, an air control valve dividing said conduit into inlet and outlet passages, a bellows one wall of which is anchored to the casing, a plunger within said bellows and bearing at one end upon the movable wall of said bellows, the other end of said plunger being adapted to contact said valve, a second bellows adapted to be connected to a thermostatic element and so located that its movable wall may contact the movable wall of said first bellows, and means for bodily moving the relatively fixed wall of said thermostatic bellows whereby to regulate the operation of the device.

1,484,093. HINGE. JOSEPH SOSS, New York, N. Y. Filed Nov. 21, 1921. Serial No. 516,593. 10 Claims. (Cl. 16—164.)

1. An invisible hinge of the class described the butts of which are cylindrical in form to facilitate their mounting in a stationary support and swinging member.

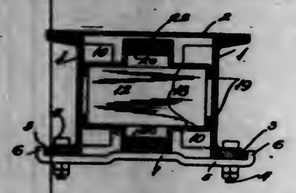
1,484,094. POTATO-PEELING MACHINE. JOSEPH SZAFRANSKI, Danielson, Conn. Filed July 6, 1923. Serial No. 649,862. 7 Claims. (Cl. 146—49.)

1. A peeling machine comprising a pair of traveling belts, a pair of fixed alined tubular members adapted to receive the article to be peeled from the said belts, and a cutting implement arranged between the adjacent ends of the said tubular members.

1,484,095. CURTAIN FOR AUTOMOBILES. HORACE T. THOMAS, Lansing, Mich. Filed Nov. 4, 1921. Serial No. 512,718. 1 Claim. (Cl. 296—139.)

In an apparatus of the kind described, the combination of a door, a plate m^4 along the upper edge thereof having an aperture therethrough, a curtain-supporting rod passing through said aperture so as to permit of its taking various angular positions therein, a socket in said door, the lower end of said rod engaging in said socket, said socket being provided with a slot, and a bolt passing through the frame of said door and said slot, and adapted thereby to clamp said socket in various positions, substantially as shown and described.

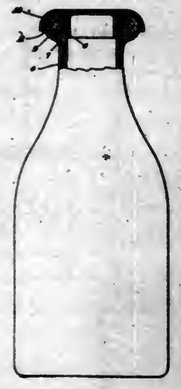
1,484,096. DRUMSTICK. BLAINE VAN HORN, Philadelphia, Pa. Filed Apr. 1, 1922. Serial No. 548,598. 5 Claims. (Cl. 84—422.)



1. A tapered drum stick having a separable tip resiliently mounted thereon; a resilient neck between the tip and stick; and means extending through said tip and neck for anchoring them to the stick.

1,484,097. METHOD OF COUNTING HOSIERY. MYER L. VICTORIUS, New York, N. Y. Filed June 28, 1922. Serial No. 571,563. 4 Claims. (Cl. 235—1.)

1. The method of counting stockings comprising the steps of hanging stockings in a prearranged order and when such order has been completed bundling the stockings, and thereby insuring bundles having the prearranged number of stockings without counting.



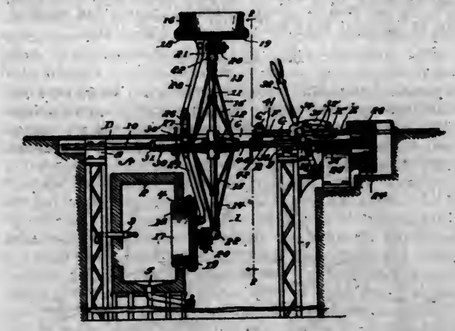
1,484,098. DRAFT-GEAR FRICTION-PLATE HOLDER. JAMES M. WATSON, Chicago, Ill. Filed Mar. 19, 1923. Serial No. 626,011. 2 Claims. (Cl. 213—30.)

1. The combination with a pair of spaced railway car draft sills, of spaced stops secured thereon, a drawbar, a yoke thereon, a carry iron secured to said sills having a raised middle portion on which said yoke is supported, a flanged holder in said yoke, and shock absorbing elements in said holder separated from the draft sills by the flanges of said holder.

1,484,099. BOTTLE CAP. GEORGE P. WEIGEL, Cleveland, Ohio. Filed Feb. 23, 1923. Serial No. 620,756. 1 Claim. (Cl. 215—38.)

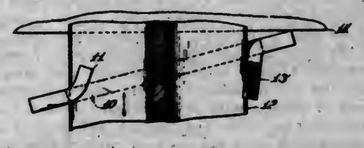
A combined bottle cap and stopper, made of glass, and adapted for interchangeable use on milk bottles or the like, said cap having a smooth unbroken upper surface and having on its under side a downwardly extending central stopper section provided with a shoulder to rest on a shoulder in the bottle neck, the rim of the cap projecting outwardly and being curved downwardly to fit against the outer side of the top of the bottle neck, said

rim terminating at substantially the line of greatest diameter of said top and spaced laterally therefrom, whereby said cap is capable of removal without distortion and is interchangeable from one bottle to another.



1,484,100. CINDER TONGS. JAMES C. WERTZ, Kansas City, Mo. Filed Nov. 1, 1920. Serial No. 420,949. 1 Claim. (Cl. 254—119.)

In cinder tongs, two arms pivoted to each other, each arm having spaced apart inwardly curved claws, two handles respectively pivoted to said arms and pivoted to each other, one of the handles on its inner side having a transverse groove, and a U-shaped spring having one of its arms tightly fitted in said groove and having its other arm bearing against the inner side of the other handle.



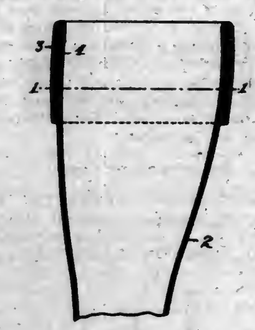
1,484,101. GLASS-DRAWING DEVICE. WILLIAM WESTBURY, Caney, Kans. Filed Dec. 29, 1922. Serial No. 609,630. 15 Claims. (Cl. 49—53.)

6. The combination of a heating kiln having an opening in a vertical wall thereof, a carrier rotatable on a horizontal axis, means for rotating said carrier, pots tiltably mounted on the carrier, eccentric mechanism operative on the rotation of the carrier for reversely tilting

the pots between vertical and horizontal positions, and means for sliding the carrier back and forth to move a vertically disposed pot into and out of the kiln opening.

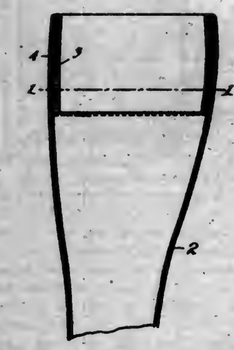
1,484,102. RAIL ANCHOR. CHARLES F. YARDLEY, Larchmont, N. Y. Filed Mar. 1, 1923. Serial No. 622,041. 56 Claims. (Cl. 238—330.)

1. A one piece rail anchor consisting only of a substantially straight bar having one rail gripping jaw at each end, so formed that when applied to a rail with one end abutting a tie, the body of the device will extend at an angle away from the tie.



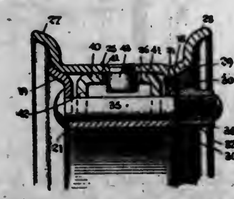
1,484,103. HOSIERY. DANIEL YOUNG, Brooklyn, N. Y., assignor to Young Inventions, Inc., a Corporation of New York. Filed Aug. 19, 1922. Serial No. 582,925. 4 Claims. (Cl. 66—4.)

1. An article of manufacture, a hose having a body portion and an upper cuff portion, said cuff portion at a plurality of adjacent points thruout its length being of greater thickness and strength than said body portion thereby offering increased resistance to expansion of the cuff portion, the inside diameter of said cuff portion being less than the inside diameter of the adjacent part of said body portion.



1,484,104. HOSIERY. DANIEL YOUNG, Brooklyn, N. Y. assignor to Young Inventions, Inc., a Corporation of New York. Filed Aug. 23, 1922. Serial No. 583,891. 3 Claims. (Cl. 66—4.)

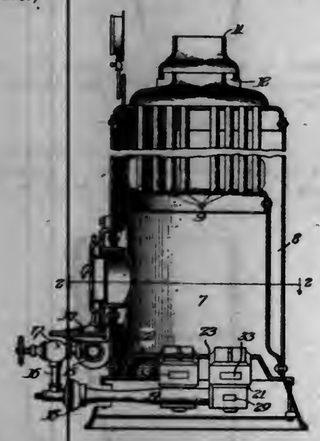
1. An article of manufacture comprising a hose having a body portion and a cuff portion of a plurality of fabric plies, one of said plies at a plurality of adjacent points throuout its length being of greater thickness and strength thereby offering increased resistance to expansion than the other portion of said cuff portion, the in-



side diameter of one of said plies being of greater diameter than the inside diameter of the other portion of said cuff portion.

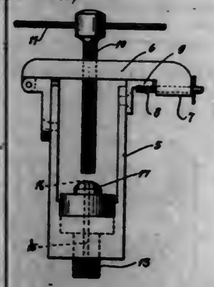
1,484,105. HOSIERY. DANIEL YOUNG, Brooklyn, N. Y., assignor to Young Inventions, Inc., a Corporation of New York. Filed Aug. 23, 1922. Serial No. 583,892. 2 Claims. (Cl. 66—4.)

1. An article of manufacture comprising a hose having a body portion and a cuff portion of a plurality of overlying fabric plies, the inner ply of said cuff portion at a plurality of adjacent points thruout its length being of greater thickness and strength than the other portion of said cuff portion, thereby offering increased resistance to expansion in said inner ply, the inside diameter of said inner portion being less than the other portion of said cuff portion.



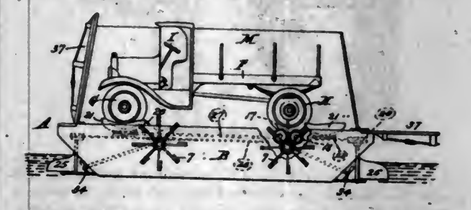
1,484,106. WHEEL. JOHN RUTHERFORD YOUNG, Akron, Ohio. Filed Feb. 14, 1922. Serial No. 535,593. 2 Claims. (Cl. 301—20.)

2. In a wheel of the character described, a fixed rim of channel form including side flanges, the outer side flange having a plurality of circumferentially spaced and arcuate notches, the side flanges having a set of bolt



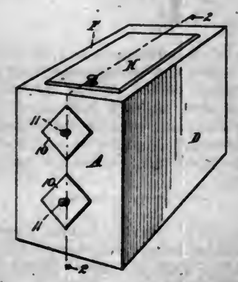
holes adjacent each of said notches, a demountable rim seated on said fixed rim, clamps cooperable with the notches of the fixed rim and engageable with the demountable rim, bolts extending through said bolt holes, nuts threaded on said bolts and engaging said clamps, and driving connections between the fixed rim and the demountable rim including a driving saddle having bifurcated legs embracing one of said bolts, and an apertured body portion engaging said demountable rim and a lug fixed to the demountable rim and received in the aperture of said driving saddle.

1,484,107. GAS-BURNING APPARATUS. JOHN ZANDA, Chicago, Ill., assignor to Geo. D. Roper Corporation, Rockford, Ill., a Corporation of Illinois. Filed Oct. 17, 1921. Serial No. 508,271. 2 Claims. (Cl. 158—105.)



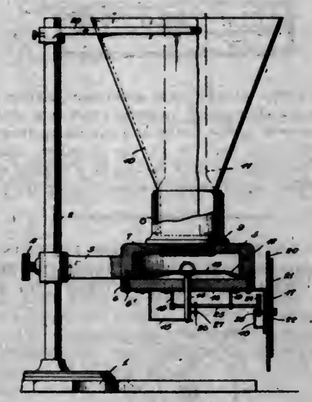
1. In a gas burning apparatus, the combination of a combustion chamber provided with a floor, a burner casing projecting through said floor, the upper portion of said casing being of less cross sectional area than the floor opening, a plurality of lugs projecting from said burner over the margin of the floor opening, whereby said burner is suspended from the floor, and a plurality of fins projecting laterally from said burner for maintaining said burner in position in said opening.

1,484,108. CAP LOCK. ANTONI ZÖLTOWSKI, Newark, N. J. Filed June 18, 1921. Serial No. 478,770. 1 Claim. (Cl. 285—108.)



A tank connector comprising a pair of opposed uprights extending from a base, a stud containing an axial passage passing through the base, its screw threaded portion engaging the tank to hold the base rigidly thereon, a cap hinged to one of said uprights, a lug extending outwardly from the other upright, said lug having a recess in its under side, a slide carried by said cap engageable with the recess in said lug, a convex head on said stud communicating with the tank, and a screw in said cap adapted to force a tubular connecting element into engagement with the opening in said head.

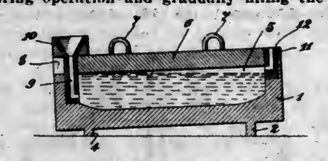
1,484,109. WATER TRANSPORT OR FERRY FOR AUTOMOBILES AND OTHER SELF-PROPELLED VEHICLES. WILLIAM F. BEATTY, Cincinnati, Ohio. Filed July 7, 1921. Serial No. 483,068. 2 Claims. (Cl. 115—0.5.)



1. In an auto-driven water-craft for transporting and ferrying automobiles and other self-driven vehicles, the combination of a barge, float, or ferry having a deck or platform adapted to directly receive the said self-driven vehicle from either end thereof and that is to be transported, or moved on running or on still water on the way to its destination, embarking and debarking means on said platform at opposite ends thereof, propeller-wheels on said water-craft, pairs of rollers mounted beneath the level of said platform for each of said propeller-wheels at both ends of the craft and adapted to support the driving-wheels of the said self-driven vehicle out of contact with said platform when the vehicle has entered from either end thereof, independent sets of gears connecting said sub-surfaced rollers wtih the said propeller-wheels at opposite ends of the craft, engine-means on said self-driven vehicle adapted to drive said propeller-wheels in either direction, swivel or turntable shoe-supports mounted on said platform adjacent each pair of driving-wheel sub-surfaced supports and adapted to accommodate the fore-wheels of said vehicle in either direction, steering-means on the said vehicle adapted to actuate the said swivel shoe-supports in steering the said craft, rudders at both ends of said craft, and cable-and-pulley devices or means interposed between the said swivel shoe-supports and the said rudders for guiding the craft, in either direction, through the medium of the said steering-means on said vehicle, substantially as shown and described.

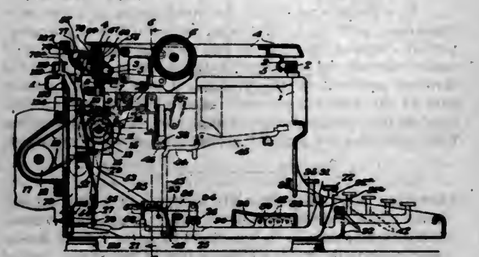
1,484,110. CABINET FOR BRICK OR CAKE ICE CREAM. WILLIAM F. BEATTY, Cincinnati, Ohio. Filed Oct. 10, 1921. Serial No. 506,682. 1 Claim. (Cl. 62—68.)

A brick ice-cream cabinet comprising a main rectangular or box-like hollow structure having insulated top, bottom and vertical walls and adapted to contain within its entire interior a supply of refrigerating-medium, a lid-closed orifice in the top of the structure for access thereto in the filling therein of the said refrigerating-medium and in cleaning its said interior, a multiple of square-section horizontal tubes having corrugated bottoms and supported within said hollow structure to provide tunnels or tubular-compartments that extend across the interior of the structure and with each tube open at one of its ends to the outside of the cabinet but sealed or closed otherwise against leakage from the surrounding refrigerating-midium within the structure, and an elongated tray or drawer removably-inserted in each of said tunnels or tubular-compartments and having a square-shaped head that is adapted to close the mouth of the tunnel or tubular-compartment when said drawer is in using-position within the cabinet and with the bottom or body-portion proper of the drawer in a V-shaped cross-section and adapted to contain the brick ice-cream commodity for ready apportioned-service from the cabinet, and the said square-section tunnels or tubular-compartments being arranged within the structure so that their four flat-faced walls shall lie at oblique planes to the sides of the cabinet and so that the angles or corners thereof may present ready-drip faces and edges for the said refrigerating-medium, especially when it is composed of broken or chopped ice, within the cabinet, substantially as herein shown and described.



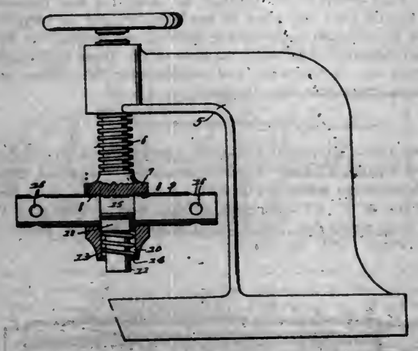
1,484,111. PRESSURE-DEMONSTRATING APPARATUS. HUGH EVERETT BROWN, Chicago, Ill., assignor to W. M. Welch Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 4, 1920. Serial No. 356,315. 3 Claims. (Cl. 73—110.)

1. In a pressure indicating device, a hollow supporting base having an opening in its upper wall adapted to receive a liquid-containing vessel, the lower end of the base being open, a flexible diaphragm secured to said base, a cover plate secured to said base below said diaphragm indicating means actuated by movement of said diaphragm, and means for supporting said actuating means on said cover plate.



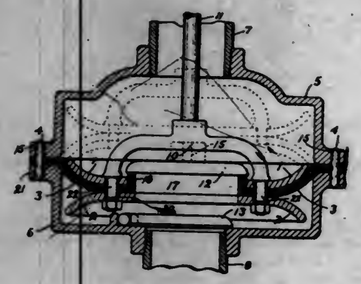
1,484,112. MOLD AND METHOD OF CASTING STEEL INGOTS. RAY G. COATES, Pasadena, Calif., assignor to Valley Mould and Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Oct. 18, 1920. Serial No. 417,543. 7 Claims. (Cl. 22—200.)

1. The method of casting steel ingots in horisontal cover chill molds which comprises arranging the upper surface of the matrix of the mold at a slight incline to the horizontal maintaining said incline constant during the pouring operation and gradually filling the mold at



the low end thereof in such manner as to expel mold gases from the highest portion of the mold cavity at the end opposite to the introduction of the molten steel.

1,484,113. TYPEWRITING MACHINE. MANSFIELD C. CRAWLEY, Groton, N. Y., assignor to Addograph Company, Los Angeles, Calif., a Corporation of California. Filed Sept. 30, 1922. Serial No. 591,582. 30 Claims. (Cl. 197—177.)



1. In a writing machine, the combination of a machine frame, a paper carriage mounted thereon to travel transversely of the frame, power means for giving the carriage a running movement in either direction of its travel, a denominational selector mounted to travel with the carriage having decimal-order abutments, and a series of stops on the frame spaced transversely of the frame and the opposite side faces of which are adapted to be engaged by opposite sides of the decimal-order abutments to effect stoppage of the carriage.

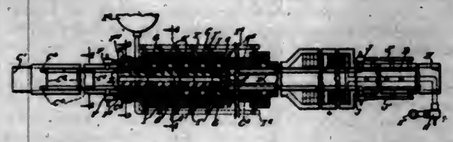
1,484,114. PUNCH. WILLIAM T. DEE, Mecca, Ind. Filed Feb. 27, 1923. Serial No. 621,627. 3 Claims. (Cl. 164—96.)

1. In a punch, a frame, a punch head having a recess in its ends and a transversely disposed aperture intersecting the recess, means for moving the head, a shaft rotatably mounted in the transversely disposed aperture, a cam on the shaft at the intersection of the recess, and a punching tool in the said recess bearing against the cam for receiving motion from the cam when the shaft is rotated.

1,484,115. DIAPHRAGM PUMP. ALBERT F. ELLIS, Rochester, N. Y. Filed Oct. 25, 1922. Serial No. 596,780. 7 Claims. (Cl. 103—151.)

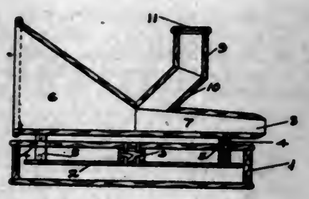
1. In a diaphragm pump, the combination of a two part diaphragm housing, a diaphragm having its outer marginal portion clamped between the two parts of the housing, and means carried by one part of the housing and extended through openings in the diaphragm and in the opposed part of the housing, one part of the housing having pins rigid in the marginal edge thereof and means cooperating with said pins for augular adjustment of the diaphragm.

1,484,116. METHOD OF AND APPARATUS FOR GLAZING AND DECORATING. CONRAD DRESSLER, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed May 17, 1920, Serial No. 382,001. Renewed July 17, 1923. 7 Claims. (Cl. 25—142.)



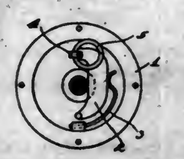
1. In the method of firing and glazing ceramic ware of such character that gases and vapors are distilled therefrom during an initial stage of the glaze firing operation which detrimentally affect the glazing operation, if allowed to contact with the ware in a subsequent stage of the glazing operation, the improvement which consists in passing the ware continuously through an elongated kiln chamber so heated that the ware is gradually raised in temperature to the final temperature desired, restricting the flow longitudinally of the kiln chamber of the gases and vapors driven out of the ware and withdrawing said gases and vapors from the kiln chamber.

1,484,117. METHOD OF AND APPARATUS FOR BLUING PORCELAIN. CONRAD DRESSLER, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed May 17, 1920, Serial No. 382,004. Renewed July 17, 1923. 4 Claims. (Cl. 25—142.)



1. In a muffle heated continuous kiln the combination with a kiln chamber and the muffle heating means therefor, of means for injecting fluid into a localized portion of the kiln chamber to make the atmosphere in that portion of the chamber either oxidizing or reducing as desired.

1,484,118. CONTINUOUS TUNNEL KILN. CONRAD DRESSLER, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Original application filed Feb. 21, 1920, Serial No. 360,505. Divided and this application filed Aug. 31, 1920, Serial No. 407,116. Renewed Nov. 14, 1923. 4 Claims. (Cl. 25—142.)

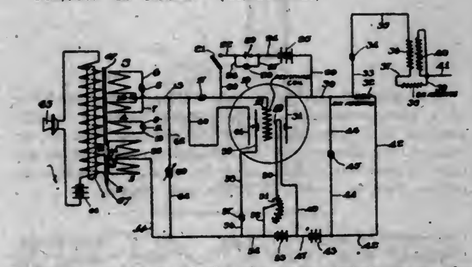


1. In a continuous tunnel kiln, the combination with a kiln chamber having side walls formed with burner chambers therein, of provisions for supplying air and fuel to said burner chambers, and nozzle members formed of carborundum and connecting said burner chambers to the interior of the kiln chamber.

1,484,119. SOUND RESONATOR. WILLIAM O. EBBS, Everett, Wash. Filed Feb. 7, 1923. Serial No. 617,528. 4 Claims. (Cl. 181—27.)

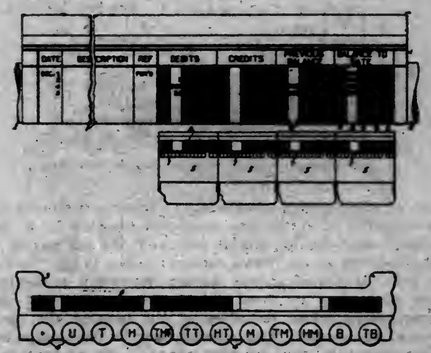
4. In a device of the class described having a sound chamber, a sounding board mounted therein, a plurality of supports secured to the board and extending through and spaced away from the top of the chamber, adapted to provide, in co-operation with the board, a flexible mounting for an amplifier, and an amplifier mounted on the supports.

1,484,120. LOCKING DEVICE FOR POCKETS. CARL B. ERICKSON and CARL J. WITT, Chicago, Ill. Filed July 3, 1922. Serial No. 572,413. 1 Claim. (Cl. 2—151.)



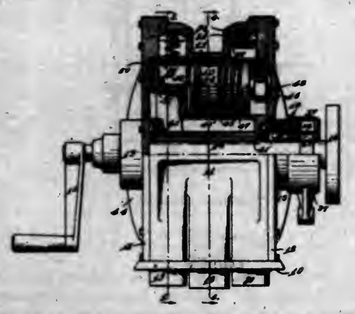
In combination, a garment having a rear pocket, a hollow member secured to the inner side of said pocket, said member comprising a cup-shaped base, a cover for the cup portion thereof, and a spring-impelled latch pivoted in the chamber formed between said base and cover and formed with a lug at its free end extending through a slot in said cover, said latch normally intersecting a portion of the coincident central apertures in said base and cover, a cord attached to the free end of said lug and disposed in a sheath formed in said garment and extending to the front thereof, and a second element attached to the other side of said pocket and comprising a base and a grooved shank, the latter adapted to be inserted into the central apertures in said first member to be engaged and locked therein by said latch, said cord affording means for retracting said latch to unlock said members.

1,484,121. WATCH CARRIER. ABRAM EZEKIEL, SAMUEL LUBIN, JOE WARSHNER, and WALTER S. NEIL, San Francisco, Calif. Filed Apr. 5, 1922. Serial No. 549,937. 4 Claims. (Cl. 224—4.)



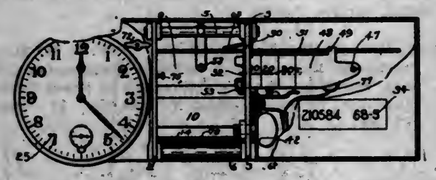
4. A watch carrier including an angle plate having a horizontal member and a vertical member, a plurality of prongs adapted to keep the angle plate from turning and located near the end of the vertical member, said vertical member having an aperture near its lower end, an insignia having a screw attached to its inner face, said insignia being adapted to rest on the outer part of the band of a hat, said screw being adapted to be inserted through the aperture, a nut engaging said screw whereby the hat band is held between the insignia and the vertical member, a split circular watch holding frame secured to the vertical member immediately below the horizontal member and a pad interposed between the horizontal member and the watch.

1,484,122. TELEPHONE SYSTEM. HILBERT L. FALK, New Orleans, La. Filed Sept. 23, 1921. Serial No. 502,760. 25 Claims. (Cl. 179—1.)



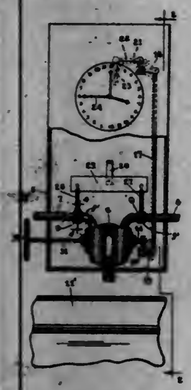
21. In a system of the character stated, means for transmitting and receiving intelligence through a single ungrounded metallic conductor, and means for excluding all appreciable electric oscillations and current from said conductor.

1,484,123. CALCULATING AND RECORDING MACHINE AND RECORD SHEET. STEPHEN H. FARNHAM, Brooklyn, N. Y., and ARTHUR F. POOLE, Kenilworth, Ill., assignors to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 15, 1921. Serial No. 522,602. 7 Claims. (Cl. 235—59.)



1. Equipment for handling numbers, comprising a calculating machine and a record sheet, said record sheet having a group of vertical bands in different colors, each band being of a width to receive a period of three figures; and the reading line of said calculating machine having the decimal orders marked in periods with colors corresponding with those of said record sheet.

1,484,124. ROTARY INTERNAL-COMBUSTION ENGINE. HENRY B. FOSTER and JOSEPH G. FURSTENBERG, Omaha, Nebr. Filed Feb. 8, 1922. Serial No. 534,941. 4 Claims. (Cl. 123—15.)

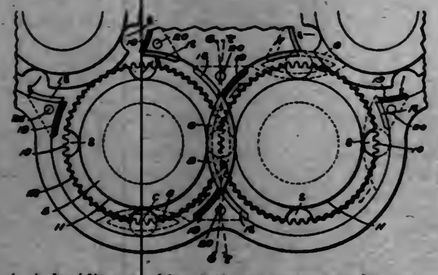


4. In an engine of the class described, the combination of a stationary cylindrical outer casing having two intake ports on one side and two exhaust ports on the other side, and two abutment chambers between the intake and the exhaust ports, a spring actuated abutment therein, a rotary cylindrical member within the stationary casing having on each side a series of explosion chambers formed in its periphery, a series of cylindrical compression chambers formed in the interior of the rotary engine member and extending transversely thereof, those on one side being in communication with the explosion chambers on the same side and those on the other side being in communication with the explosion chambers, a cam on each end of the stationary engine member to operate the pistons on one side and corresponding cams on the other ends to operate the pistons on the other side, the interior of the rotary engine member being formed hollow and there being in the stationary engine casing an air inlet port on one side and air discharge port in the opposite side for providing for a forced draft of cool air around all of the compression chambers and adjacent to the explosion chambers, for the purposes stated.

1,484,125. AUTOMATIC MOTION RECORDER FOR AUTOMOBILES. GEORGE B. FRAZER, Wellington, Wash. Filed June 28, 1922. Serial No. 571,440. 3 Claims. (Cl. 234—31.)

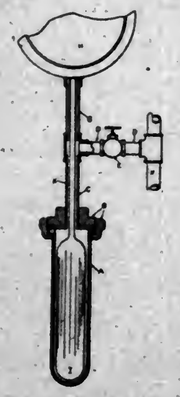
2. A device of the type described embodying a frame having springs in one end and a governor in the other; suitable means for connecting the governor to a vehicle in which the device is mounted so that it will rotate with the vehicle; paper with graduations and spaces mounted in the frame with a strip of carbon paper under it and connected to the spring in such a manner that it will travel at a regular speed; suitable means for transferring the motion of the governor to the paper; a pointer supported on a shaft which is connected to the steering wheel in such a manner that the pointer will mark the direction the vehicle is turned on the paper; and a small roller suitably mounted in the frame so that as the lights are turned on it will bear against the paper.

1,484,126. VALVE ACTUATOR. RENÉ H. GASPARD, Chicago, Ill. Filed Jan. 15, 1921. Serial No. 437,391. 2 Claims. (Cl. 137—144.)



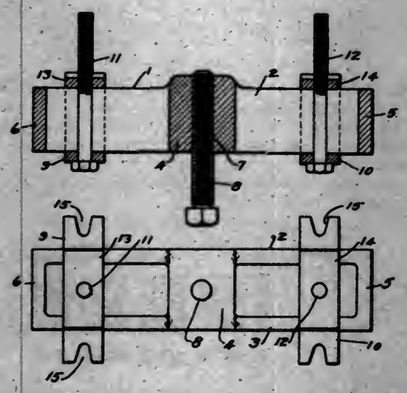
2. In combination with a water mixing chamber; a valve for closing said chamber; oppositely disposed pipes communicating with said chamber; spigots transversely disposed and rotatably mounted in said pipes having apertures therein communicating with said pipes; angular extensions on said spigots; an operative connection having means slidably engaging said extensions; and an indicator secured to said connection adapted to slide in a horizontal slot for indicating the relative position of said apertures.

1,484,127. VEHICLE SPRING MOUNT. LOUIS J. GENNETT, Marquette, Mich., assignor of one-half to John M. Longyear, jr., Marquette, Mich. Filed July 12, 1920. Serial No. 395,441. 13 Claims. (Cl. 267—28.)



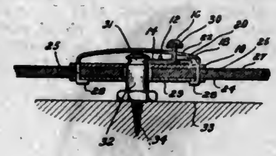
1. In combination with a vehicle body and an axle, a leaf spring secured intermediate its ends to one of said parts and having a smoothly rounded end affording a convex bearing surface adapted to react transversely of the length of the spring, and a pocket secured to the other part, affording a cooperating bearing surface and being adapted to hold a lubricating packing therein, the opening of said pocket extending transversely of the bearing surface therein.

1,484,128. BRAIDING MACHINE. JOSHUA B. HALE, Providence, R. I., assignor to Textile Engineering Company, Providence, R. I., a Corporation of Rhode Island. Filed Apr. 25, 1923. Serial No. 634,473. 17 Claims. (Cl. 96—8.)



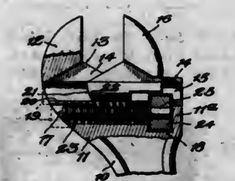
4. A braiding machine body structure having a raceway of uniform character, said raceway presenting a sinuous path with angles arranged in pairs spaced apart substantially the length of the carriers and fixed guiding or directing means at said angles.

1,484,129. HYGROMETER. ALBERT HERMANN, Madison, Wis., and CARL A. MENZEL, Chicago, Ill., dedicated, by mesne assignments, to the People of the United States of America. Filed Mar. 17, 1923. Serial No. 625,870. 2 Claims. (Cl. 73—24.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



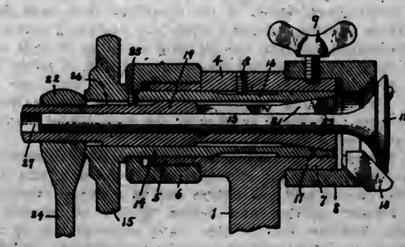
2. A wet-bulb extension tube thermometer consisting of a receptacle having porous rigid walls, a conduit adapted to supply liquid to said receptacle, and an extension tube thermometer whose temperature-sensitive element is mounted in said porous receptacle and whose extension tube is contained within said conduit.

1,484,130. WHEEL PULLER. CARL R. HOLMSTROM, Seattle, Wash. Filed Nov. 23, 1922. Serial No. 602,749. 2 Claims. (Cl. 29—85.)



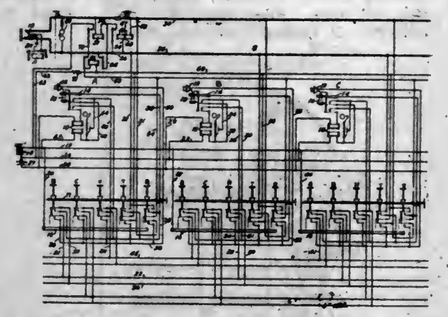
1. A wheel puller comprising a frame constructed of two parallel bars that are connected together by a lug in the center and by bars at each end, the lug having a threaded hole in the center thereof; a bolt in the threaded hole; U shapel clamps having outwardly projecting ends with slots in them slidably mounted around the bars; plates across the sides of the bars at the open ends of the clamps, bolts passing through the clamps between the bars and threaded through the plates; and suitable means for attaching the device to a wheel, or gear.

1,484,131. SNAP FASTENER. WILLIAM H. HOLT, Providence, R. I. Filed Dec. 27, 1921. Serial No. 525,095. 4 Claims. (Cl. 24—211.)



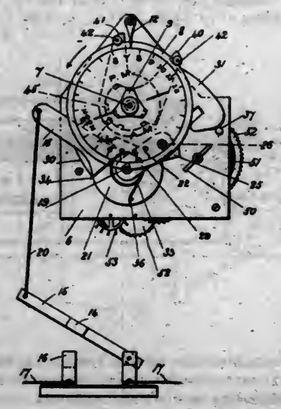
1. A snap fastener comprising a circular casing, a gripping jaw in said casing bodily slidable radially to and from operating position, an operating handle extending through a guide slot in the top wall of said casing, integral guide lugs raised from the stock of said casing arranged to cooperate with said handle in its guide slot for guiding the movement of said jaw and limiting the extent of its inward stroke, and a spring acting to return the jaw after it has been withdrawn from engaging position.

1,484,132. WRENCH. CLAYTON M. JONES, Jamestown, N. Y. Original application filed May 20, 1922, Serial No. 562,352. Divided and this application filed Mar. 30, 1923. Serial No. 628,812. 2 Claims. (Cl. 81—165.)



1. In a wrench, a handle having a head formed with a fixed jaw and upper and lower communicating barrels and also having a transverse opening intersecting the lower barrel and spaced from the rear end of the head to provide an integral wall, a movable jaw having a rack fitted in the upper barrel and having its teeth extending into the lower barrel, a perforated knurled nut in the opening, and a screw in the lower barrel having a shank rigidly secured in said perforation of the nut and spaced from said wall of the head, said wall extending completely over the outer end of the screw shank so as to conceal same.

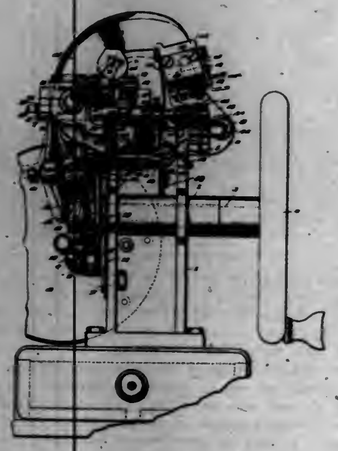
1,484,133. VALVE-TRUING MACHINE. ALBERT PROCTOR KAHL, Detroit, Mich. Filed Nov. 14, 1921. Serial No. 514,939. 5 Claims. (Cl. 82—1.)



1. In a machine for truing valves, the combination of a body having a cylindrical bore, a cylindrical sleeve rotatable therein, a collet slidable in the sleeve and adapted to receive a valve stem, a cutting tool mounted at one end of the body to engage the valve, means to rotate the collet and valve, and a collar threaded on the body to move the collet and valve endwise to press the valve against the cutting tool.

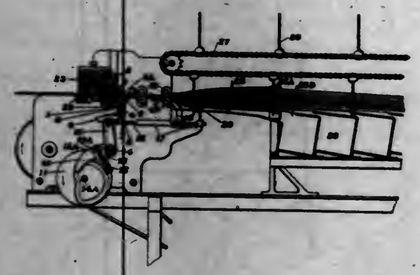
1,484,134. TELEPHONE SYSTEM. CHARLES W. KECKLER, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 27, 1918. Serial No. 224,925. 20 Claims. (Cl. 179—40.)

1. In a telephone system in combination, a plurality of subscribers' stations, a telephone set at each of said stations, a source of talking current, an electromagnetic signal individual to each of said sets operated by direct current and having two windings, each interposed between a different pole of the source of talking current and a telephone set to serve as impedance means for talking current on establishment of a talking circuit between telephone sets of said system, and means to establish a talking circuit between telephone sets of said system including the two windings of the signal individual to one of the telephone sets connected by said talking circuit in said circuit as an impedance means for talking current supplied to said connected sets.



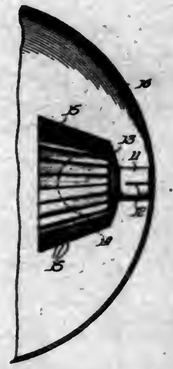
1,484,135. ELECTRIC TIME SWITCH. LAWRENCE P. KLEUSER, Greenville, Tex. Filed Nov. 28, 1921. Serial No. 518,163. 7 Claims. (Cl. 200—39.)

1. An electric time switch, a clock-driven operating shaft, a dial plate revolved by the said shaft, a pivoted spring-actuated lever for closing the switch, a detent engaging with the said lever and normally holding the



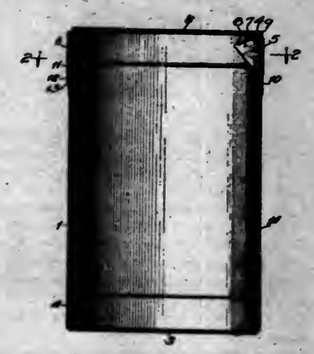
switch open, a tappet which revolves with the dial plate and retracts the detent at a predetermined time, an opening lever which normally holds the closing lever stationary so that the detent can be retracted and replaced without the switch being closed, and means for moving the opening lever automatically out of engagement with the closing lever while the said detent is in its normal position.

1,484,136. TAG-MARKING MACHINE. FREDERICK KOHNLE, Dayton, Ohio, assignor to The Monarch Marking System Company, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 27, 1922. Serial No. 590,796. 21 Claims. (Cl. 101—288.)



1. In a device of the class described, relatively right angularly disposed co-planar strip confining guides, a platen at the intersection of said guides aligned therewith, and means for feeding strip material from said guides to said platen.

1,484,137. SORTING MACHINE. EUGENE M. LA BOITEAUX, Washington, D. C. Filed Feb. 3, 1923. Serial No. 616,784. 17 Claims. (Cl. 83—92.)



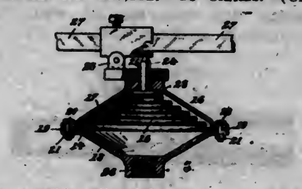
1. An apparatus for sorting records having a plurality of compartments provided with guideways leading thereto, record-feeding mechanism including a record engaging finger to actuate a trigger, compartment-selective mechanism controlled by the cooperative action of said finger and trigger of the feeding mechanism for directing a record to a predetermined compartment, and conveying means for the selected and directed records.

1,484,138. LIGHT DIFFUSER. ALBERT E. LEAVER, Chicago, Ill. Filed Oct. 17, 1921. Serial No. 508,188. 2 Claims. (Cl. 240—48.6.)

1. A dimmer for headlights composed of a section of metal providing means for attachment to a bulb socket, and vanes, said vanes being in the form of planes arranged in overlapping relation, both the inner and outer surfaces of said vanes being polished for the reflection of light.

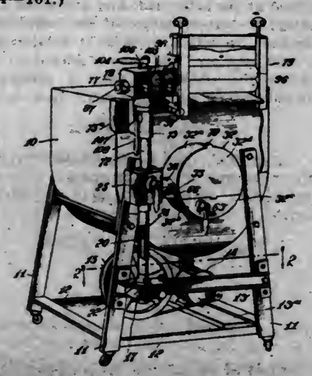
1,484,139. SALT BOX OR THE LIKE. BEVIS LONGSTRETH, Kansas City, Mo. Filed Aug. 21, 1922. Serial No. 583,250. 6 Claims. (Cl. 229—7.)

4. A box for packaging salt and the like, comprising a holding chamber having a discharge opening and a pouring device therefor, said chamber having, also, a second discharge opening independent of said first opening and positioned substantially on the opposite side of the longitudinal center of the container from said first discharge opening, whereby when the contained material is discharged through one of said openings it will not tend to gravitate toward the other opening, a sifter device in the second discharge opening, at least one of said devices being adapted to discharge the material upon mere tilting and shaking of the box without manual operation of a closure therefor.



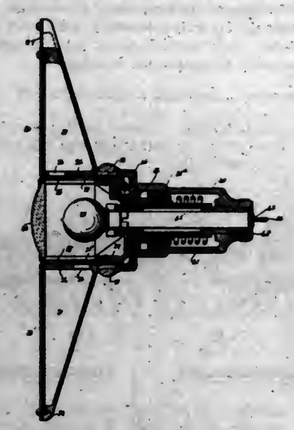
5. A box for packaging salt and the like, comprising a container made of a tubular body portion and end covers, one of said end covers having a flange overlying the tubular portion and sealed thereto to provide a double thickness for the side walls adjacent one of the ends of the container, said container having an opening through said double thickness of material, and a sifter screen comprising a dish-shaped portion inserted through said opening at the double thickness of material and having a flange overlying the wall of the container around said opening.

1,484,140. EXPANSIBLE COLLAPSIBLE ELEMENT. HARRY C. MALLORY, Bellport, N. Y., assignor, by mesne assignments, to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Original application filed Apr. 22, 1914, Serial No. 833,593. Renewed Dec. 5, 1919, Serial No. 342,802. Divided and this application filed Aug. 31, 1920. Serial No. 407,209. 14 Claims. (Cl. 297—8.)



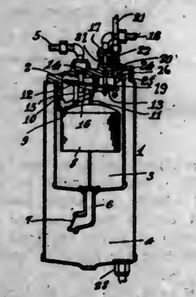
1. A device of the character described comprising an annular support, and an expansible-collapsible element provided with an open end disposed within said support, and said open end secured by pressure into engagement with said support, substantially as specified.

1,484,141. EXPANSIBLE COLLAPSIBLE ELEMENT. HARRY C. MALLORY, Bellport, N. Y., assignor, by mesne assignments, to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Original application filed Apr. 22, 1914, Serial No. 833,593. Renewed Dec. 5, 1919. Divided and this application filed Aug. 31, 1920. Serial No. 407,212. 16 Claims. (Cl. 297—8.)



1. An expansible-collapsible element comprising a portion having circumferential corrugations therein whose inner and outer bends are united by alternately narrow and wide annular connecting members, substantially as specified.

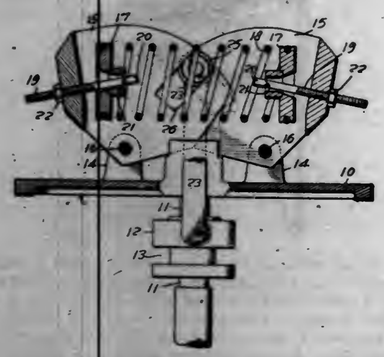
1,484,142. DRIVING MECHANISM FOR LAUNDRY MACHINES. LAWRENCE W. MAMMEN, Chicago, Ill., assignor, by mesne assignments, to Altorfer Bros. Company, East Peoria, Ill., a Corporation of Illinois. Filed Mar. 17, 1923. Serial No. 625,799. 25 Claims. (Cl. 74—101.)



7. The combination with a support and a housing mounted for rotary movement thereupon, of transmission gearing within said housing, a clutch associated with said transmission gearing, means for locking the housing to the support and manually operable means for simultaneously actuating said clutch and said locking means.

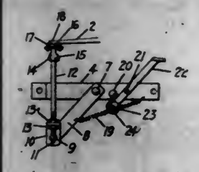
1,484,143. SIGNALING DEVICE. ERNEST LEONARD MARLEY, Brighton, England. Filed Jan. 6, 1921. Serial No. 435,392. 3 Claims. (Cl. 116—51.)

1. In an indicator for the purpose specified, a supporting sleeve having a chamber in its outer end and openings at predetermined spaced points in its sides; a light in said chamber; a second sleeve rotatably mounted on the first sleeve, and surrounding the said chamber, said second sleeve having openings adapted to register with the openings in the first sleeve at predetermined rotatably displaced positions of the second sleeve upon the first sleeve; an arm connected to said rotatable sleeve and projecting on diametrically opposite sides thereof, said arm having a chamber at each side of the sleeve each chamber having a transparent closure in its front side, said chambers being illuminated only when the openings in the rotatable sleeve register with the proper openings in the first sleeve; and means for holding the rotatable sleeve and arm normally in such position that the chambers are not illuminated; and means for rotatably displacing the arm and movable sleeve on the fixed sleeve to certain predetermined positions wherein the openings in the sleeves register so that the chambers in the arm are illuminated.



1,484,144. FUEL-CONSUMPTION INDICATOR AND CYLINDER PRIMER. GEORGE W. MARSH, Oakland, Calif. Filed June 1, 1920. Serial No. 385,698. 2 Claims. (Cl. 116—110.)

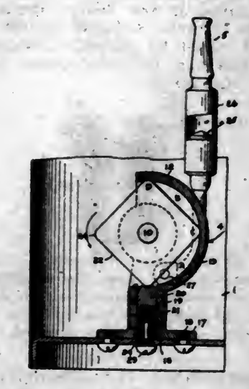
2. In a vacuum fuel feed system comprising a tank, an air intake, a suction intake, and a fuel intake, a whistle in said air intake, adapted to blow when the tank is substantially full, a passage between the air intake and the suction intake, a valve controlling said passage, a valve controlling said suction intake, a filling chamber in said tank, said chamber having an air intake port therein, a valve controlling said port, a float in said chamber,



a system of spring controlled levers joining said float and said air intake valve and said suction intake valve whereby said valves are alternately opened and closed by the float, and operative means joining said air intake valve and said first mentioned valve whereby said first mentioned valve is opened upon the raising of said air intake valve, thus momentarily actuating the whistle.

1,484,145. GOVERNOR. FRANK L. MASSEY, Watertown, N. Y. Filed Feb. 4, 1921. Serial No. 442,412. 2 Claims. (Cl. 264—15.)

1. In a governor, the combination with a driven shaft of a turntable mounted upon the shaft and provided with spaced openings upon opposite sides of the shaft, weights pivoted upon the turntable adapted to expand under centrifugal force and provided with angularly disposed slots, a sleeve mounted to slide upon the shaft, arms rigid with said sleeve carried and extending upwardly through the openings in the turntable, offsets carried by the arms engaging in the slots of the weights, said arms and offsets forming direct connection between the weights and sleeve and holding said sleeve against rotation relative to the shaft and a spring tending to resist expansion of the weights.



1,484,146. CLUTCH-PEDAL LOCK FOR TRACTORS. ERNEST R. MILLER, near Centerville, Ohio. Filed Aug. 8, 1921. Serial No. 490,446. 6 Claims. (Cl. 74—81.)

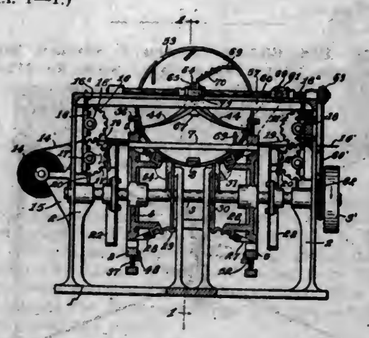
1. In a self-propelled vehicle of the type described, the combination with a clutch pedal, of an arm pivotally secured to said vehicle, an angle piece secured to the free end of said arm, a rod connected at its upper end to the clutch pedal, a lower threaded end on said rod projecting downwardly through the horizontal portion of said angle piece, and two nuts on the threaded end of said rod, one on each side of the horizontal portion of said angle piece, for the purpose specified.

1,484,147. HIGH-VACUUM PUMP. GEORGE F. NELSON, Berkeley, Calif. Filed Aug. 22, 1921. Serial No. 494,051. 4 Claims. (Cl. 230—30.)

1. A high vacuum pump comprising a pump chamber adapted to be submerged in oil or mercury, having one side open and another side provided with an intake port and a rotor of angular outline mounted in said chamber

and in part extending thru said open side, opposite sides and corners of said rotor having a working fit with the chamber.

1,484,148. MUSICAL INSTRUMENT. PHILIP S. OLT, South Pekin, Ill. Filed May 31, 1921. Serial No. 473,866. 1 Claim. (Cl. 46—46.)

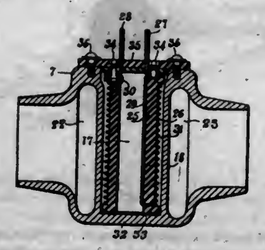


A musical instrument to be held in and operated by one hand comprising in its construction a tubular member including a tongue extending from one end thereof, a reed secured in the member overlying the tongue, said tongue being curved longitudinally on the surface thereof on which the reed lies, curving away from the latter, a tubular body into one end of which the member is adapted to fit, a ribbon-like part extending between the member and said body and slidable relative thereto and slidably engaging at its inner extremity the said reed, the same being recurved at its other end, and extending back upon and overlying the outer surface of the body terminating in an extension by which to shift it relatively to said body and said member, and means affixed to the body through which the ribbon-like part is slidable and by which it is guided and slidably secured upon said body.

1,484,149. METHOD OF ASSEMBLING THE PARTS OF KNITTING-MACHINE NEEDLES. CORYDON O. ORNE, Springfield, Mass. Filed Mar. 15, 1921. Serial No. 452,515. 4 Claims. (Cl. 163—3.)

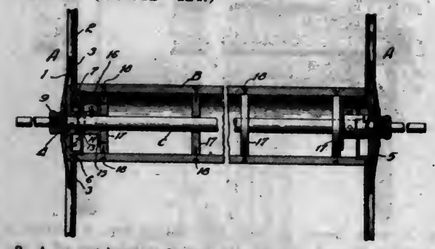
1. The method of assembling the component parts of a knitting machine needle which comprises forming tapped openings in the walls of the latch slot of such a needle, forming a threaded latch-pivot element with a reaming end, and fitting the said element through said openings and the latch, said end first, whereby to destroy any burr present at the openings.

1,484,150. MACHINE FOR NAILING METAL STRAPS TO WOODEN SLATS. GLEN PARKS, Seattle, Wash., assignor of one-half to Hobart Flynn, Seattle, Wash. Filed July 29, 1922. Serial No. 578,413. 17 Claims. (Cl. 1—1.)



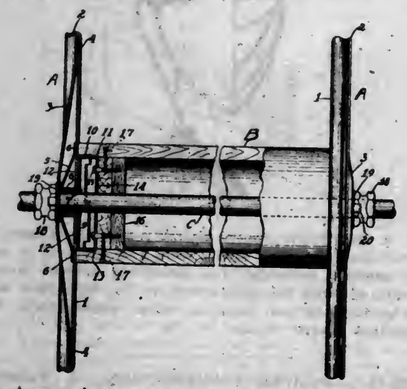
1. In combination, a shaft, a pair of disks affixed thereto, jaws on the periphery of said disks, said disks and jaws constituting carriers for slats, means for feeding slats to said carriers, and means carried by said disk for nailing straps fed to the slats.

1,484,151. HOOK MECHANISM FOR LOCK-STITCH SEWING MACHINES. WILLIAM N. PARKES, Brooklyn, N. Y. Filed July 30, 1920, Serial No. 400,237. Renewed Jan. 8, 1924. 16 Claims. (Cl. 112—228.)



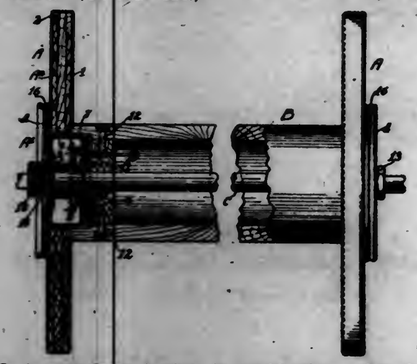
1. A stitch forming mechanism comprising a primary hook provided with a beak, a bobbin case provided with an auxiliary hook, means separable from the primary hook for bringing the loop of the needle thread into engagement with the auxiliary hook, and the said auxiliary hook so constructed and arranged that it assists in causing the loop of needle thread to move rapidly down the beak of the primary hook.

1,484,152. HEATER. ROBERT CORWIN PAULY, Dayton, and GROVER F. ILGEN, Springfield, Ohio. Filed June 19, 1922. Serial No. 569,404. 3 Claims. (Cl. 219—38.)



1. In a heating unit, a casing containing a water compartment and a heating compartment over which the water in the water compartment will pass, said heating compartment having its upper end open to afford access thereto from the exterior of the casing, a heating element in said heating compartment closely adjacent the wall thereof but spaced therefrom, a plate at the upper end of the heating compartment closing said end removably, a hollow heating deflecting and insulating member supported from said plate and supporting said heating element closely adjacent to said wall, said hollow member being adapted to insulate and deflect heat outwardly to said wall, and means of supplying current to said heating element extending through the hollow insulating member.

1,484,153. WARP BEAM. BURT A. PETERSON, Rockford, Ill., assignor to Edgar S. Nethercut, Evanston, Ill. Filed Mar. 21, 1921. Serial No. 453,899. 8 Claims. (Cl. 242—124.)

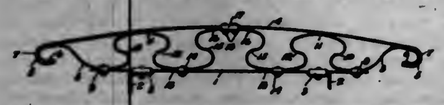


3. A warp beam adapted for rapid rotation and having, in combination, a barrel, two heads and a central shaft extending through the barrel and the heads, each of said heads comprising a central cast-metal disk and a sheet-metal disk rigidly secured together, the cast-metal disk being of substantially larger diameter than the barrel and having upon its inner face an annular flange extending into the end of the barrel to support the barrel concentric with the shaft, the sheet-metal disk having a central opening to receive said flange, and nuts on the outer portions of the shaft for forcing said heads against the ends of the barrel, the portions of the shaft projecting outwardly from said nuts constituting trunnions.

1,484,154. WARP BEAM. BURT A. PETERSON, Rockford, Ill., assignor, by mesne assignments, to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Jan. 18, 1922. Serial No. 530,077. 14 Claims. (Cl. 242—124.)

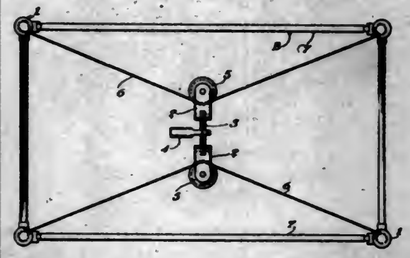
1. A warp beam having, in combination, a barrel and a metallic head, said head comprising a main disk having a peripheral outwardly-extending belt-race flange, a bracing disk the periphery of which is rigidly secured to the main disk near the periphery of the latter, an internal bracing disk the periphery of which is secured to the main disk opposite the end of the barrel, a spacer sleeve between the main disk and the internal bracing disk, and a hub extending through said sleeve and through central openings in said disks, the ends of said hub being expanded to secure the disks and the spacer sleeve rigidly together.

1,484,155. WARP BEAM. BURT A. PETERSON, Rockford, Ill., assignor to Edgar S. Nethercut, Evanston, Ill. Filed Jan. 18, 1922. Serial No. 530,078. 2 Claims. (Cl. 242—124.)



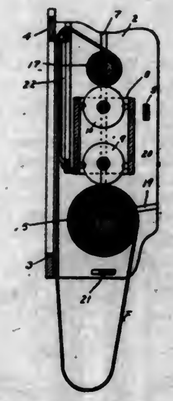
2. A warp beam having, in combination, a barrel, a central shaft and a head, the latter consisting of a metallic central portion and a wooden body, the metallic central portion consisting of a disk which overlies the central portion of the wooden body, a hub which fits upon the central shaft, and an annular flange which fits within a central opening in the wooden body and supports the end of the barrel, and means for securing the head and the barrel together.

1,484,156. ELECTRICAL APPARATUS. LOUIS A. M. PHELAN, Beloit, Wis. Filed Feb. 20, 1922. Serial No. 537,884. 9 Claims. (Cl. 219—34.)



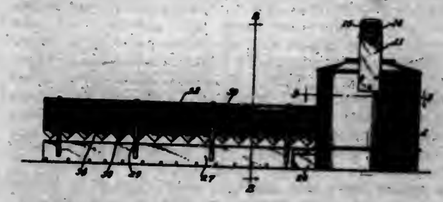
1. A gravity-type electric switch comprising a movable circuit-closing element which, when the switch is in normal position maintains the associated electric circuit closed and when the said switch is displaced from normal position in any direction, opens automatically the associated electric circuit.

1,484,157. BUMPER CONSTRUCTION. J. RAYMOND PLANK, Grand Rapids, Mich., assignor to Frank E. Liverance, Jr., Grand Rapids, Mich. Filed May 28, 1923. Serial No. 641,981. 15 Claims. (Cl. 293—55.)



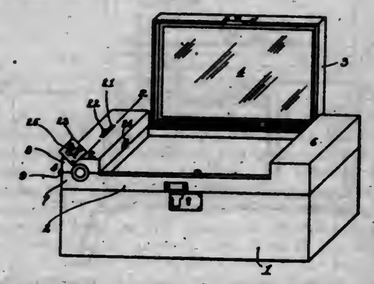
15. A device of the class described, comprising a front rail, spring impact means located back of the front rail and comprising two parts, the outer end of each of said parts being joined to an end of the front rail and extending inwardly therefrom and then bent into resilient loop formation toward the front rail and connected to said front rail between the ends thereof, substantially as described.

1,484,158. BED BRACE. JOSEPH F. STANLEY, Minneapolis, Minn. Filed Jan. 6, 1923. Serial No. 611,032. 1 Claim. (Cl. 5—306.)



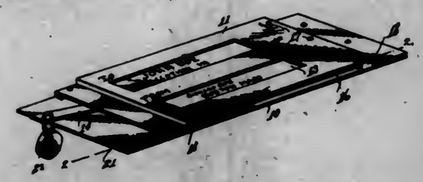
1. In combination with the supporting posts of an article of furniture, a flexible metallic member arranged at each side of the article, a ring coacting with the end portion of the flexible member, said flexible member being directed through the ring and around the adjacent post and then returned over the bar of the ring and around the post and again through the ring and then extending outwardly, and means coacting with the central portions of the flexible members for placing the same under tension.

1,484,159. TOWEL CABINET. GEORGE ADOLPH STEINER, Salt Lake City, Utah, assignor, by mesne assignments, to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed May 14, 1920, Serial No. 381,443. Renewed Aug. 1, 1923. 3 Claims. (Cl. 45—32.)



3. A towel cabinet comprising a casing having guideways therein, a soiled towel roll and a clean towel roll movable in said guide-ways, feed rolls mounted to contact respectively with said clean towel roll and said soiled towel roll for driving them simultaneously, a loop of towel from the clean towel roll being extended between said roll and the back of the cabinet to the soiled towel roll, and bars vertically arranged in the rear of the soiled towel roll and between which bars and the wall of the cabinet the soiled towel is fed to said soiled towel roll.

1,484,160. DRINKING FOUNTAIN OR TROUGH. ORVILLE A. THRASHER, American Fork, Utah. Filed Mar. 15, 1922. Serial No. 543,934. 3 Claims. (Cl. 119—77.)



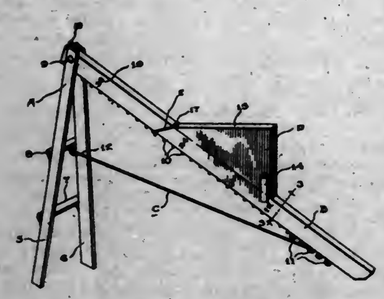
1. A device of the class described including a tank having upper and lower compartments, a closure for the upper compartment, a valve controlled outlet in the bottom of the upper compartment, a stop within the lower compartment, spaced wings outstanding from the wall of the lower compartment, and a trough insertible at one end between the wings and against the stop and into position under the outlet.

1,484,161. VANITY BOX. PEARL VAN DER VOORT, Oakland, Calif. Filed May 15, 1922. Serial No. 561,063. 2 Claims. (Cl. 240—8.4.)

1. In a vanity box, a lower compartment, an upper compartment hinged thereto, end members extending above the upper compartment, one of said members being sectional, means to secure the sections together, a mirror located between the end members and a storage battery and electric light mounted between said sections.

1,484,162. SHIPPING TAG. HARRY VAN STELTEN, Arco, Minn. Filed Apr. 6, 1923. Serial No. 630,262. 4 Claims. (Cl. 40—5.)

1. A shipping tag including a body having slots in one side, a plate slidably mounted on the body and having duplicated names and addresses thereon and visible through said slots in one order, and means for shifting the name and address plate to reverse the order in which the names and addresses appear through the slots.



1,484,163. AUTOMATIC FIREARM. GUSTAVO VINCON, Turin, Italy. Filed Apr. 23, 1923. Serial No. 634,070. 8 Claims. (Cl. 42—3.)

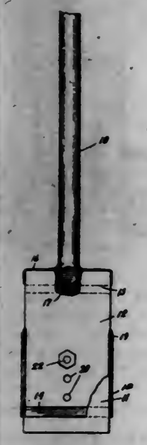
1. In an automatic fire arm, the combination, with a sliding breech block, a striker and a trigger; of mechanism for effecting burst firing, comprising a wheel rotatably mounted on the pivot of the trigger and having a group of teeth equal in number to the number of shots in the burst and also having a special tooth at the end of the group, means operated by the closing movement of the breech block for turning said wheel tooth by tooth, a trigger lever pivotally mounted on the trigger and

adapted to be rocked by each tooth of the wheel except the special tooth but left stationary as that tooth passes by, and an automatic stop engageable with the striker to hold it in retracted position but released by each rocking movement of the trigger lever; substantially as described.

1,484,164. TRESTLE. FRANK L. WICKHAM, Lennon, Mich. Filed May 18, 1923. Serial No. 639,837. 6 Claims. (Cl. 304—5.)

1. A trestle comprising in combination a support, a prop carried by said support in angular relation thereto, said prop provided with a series of abutments at its lower face, a bracket slidable on the upper surface of said prop, said bracket provided with a hook at its upper end portion, a link carried by said hook and adapted to engage a selected abutment on said prop to retain the bracket in an adjusted position on said prop, and an eye at the upper end of said prop to be engaged by said hook when the bracket is in its uppermost position on the prop.

1,484,165. ARCH-SUPPORTING INSOLE. LORRAINE Q. WILSON, Baltimore, Md. Filed Feb. 13, 1923. Serial No. 618,796. 6 Claims. (Cl. 36—71.)



2. An arch supporter including an apertured base, a flexible retaining means on the upper face of the base, a rigid arch supporting member disposed between the flex-

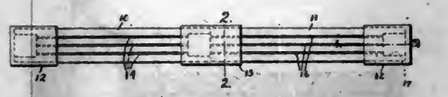
ible means and the base and having a lug disposed in the aperture of the base a resilient means in the aperture engaging with the lug for urging the arch supporting

member upwardly against the flexible means, and means on the lower face of the base for releasably retaining the resilient means within said aperture.

1,484,166. SCRAPER. SAMUEL WOLK, Dorchester, Mass. Filed Mar. 15, 1923. Serial No. 625,358. 6 Claims. (Cl. 195—47.)

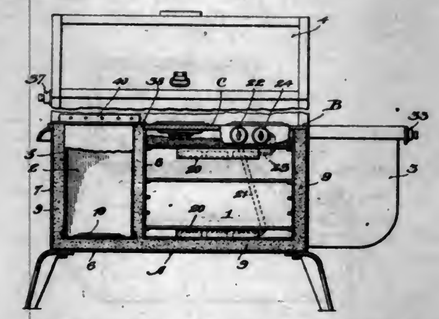
1. A scraper comprising a pair of spaced parallel holding plates integrally united at the upper ends and at the lower side edges thereof, whereby to form a pocket between them adapted to receive a cutting blade, said plates having a line of aligned bolt-openings therethrough extended rearwardly from the lower edges thereof, and a handle integrally united to said plates at the upper edges thereof.

1,484,167. CLEANING SOLVENT. VICTOR S. ALLIEN, Wilmington, Del., assignor to Darco Corporation, Wilmington, Del., a Corporation of Delaware. Filed Jan. 19, 1922. Serial No. 530,453. 3 Claims. (Cl. 196—29.)



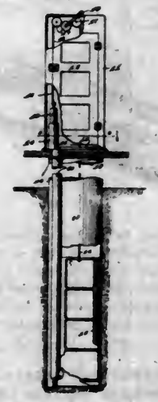
3. The process of recovering dry cleaners' gasoline which comprises settling said gasoline to remove coarse impurities, adding activated carbon and calcium carbonate, agitating and separating by centrifugal action.

1,484,168. BUCKSAW. ERIK BERTAS and ANDREW BERTAS, Minneapolis, Minn. Filed Apr. 25, 1923. Serial No. 634,647. 7 Claims. (Cl. 145—33.)



1. In a bucksaw, the combination with a frame, of a saw blade, and means including main and supplemental links for attaching the saw blade to the frame, said supplemental links being twisted to hold the saw blade in a plane that is oblique to the plane of the frame.

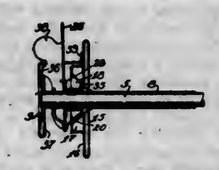
1,484,169. POULTRY PERCH AND LICE TRAP. JAMES F. BRECKENRIDGE, Englewood, N. J., assignor of one-half to Frank E. Brett, New York, N. Y. Filed Feb. 12, 1923. Serial No. 618,648. 3 Claims. (Cl 119—25.)



3. For trapping poultry lice, a perch of a plurality of parts each of which has grooves therein, a trap-member which holds said parts together with ends thereof abutting each other, portions of said parts serving with portions of said trap-member to form a recess to which said grooves lead, and a trap-member carried by the free ends of each of said parts each of which ends has portions which serve with portions of its related trap-member to form a recess to which said grooves lead.

1,484,170. ELECTRIC STOVE. ROSCOE S. CANNON, Rock Hill, S. C. Filed Sept. 6, 1922. Serial No. 586,485. 9 Claims. (Cl. 219—35.)

1. An electric stove, comprising a conventional wood burning or coal burning cook stove having its grate and fire bricks removed, the fire bricks being replaced by heat insulating material, and an electric heater mounted within the fire box.



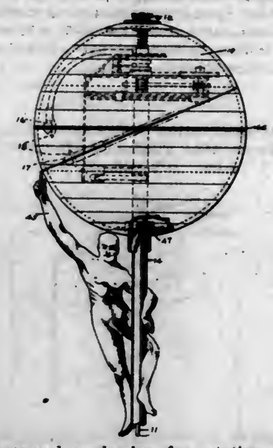
1,484,171. COOLING DEVICE. HENRY A. CARSTENS, Ackley, Iowa. Filed Apr. 11, 1922. Serial No. 551,512. 1 Claim. (Cl. 257—121.)

A cooling device comprising a tube open at its top and closed at the bottom, and designed to be inserted in the ground, a box at the top of the tube and in communication therewith, said box being substantially air tight and

provided on one side with a door opening, a door for closing said door opening, a dumb waiter mounted within the tube and capable of moving from position within the box to position at the lower end of the tube, a counterbalancing weight for the dumb waiter, a tube parallel with the main tube for receiving said counterbalancing weight, said weight being fitted within the tube loosely so that air may freely pass around it, and a ventilating tube arranged exterior to the main tube and having its upper end open within the interior of the box at the bottom thereof and having its lower end communicating with the bottom portion of the tube at a point spaced above the bottom thereof, said ventilating tube being open and unobstructed so that when the dumb waiter descends, air within the bottom of the main tube may pass freely up through said ventilating tube into the box at the top, and as the dumb waiter is being elevated, air within the box may freely pass to the bottom of the tube, substantially as and for the purposes stated.

1,484,172. OIL BURNER. LEE S. CHADWICK, Cleveland, Ohio, assignor to The Cleveland Metal Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 29, 1920. Serial No. 377,467. 8 Claims. (Cl. 67—66.)

1. In a burner of the class described, the combination with the wick raising spindle, of opposed members, the first rotatable with the spindle and the second with respect whereto the spindle is rotatable, an element disposed between said members and rotatable on the axis of the spindle, and a device adapted to rock within said element toward and from the first member, the device having parts for interlocking engagement with parts of the first member and a portion for engagement with the second member to prevent withdrawal of its aforesaid parts from those of the first member, the second member being designed to permit separation of the aforesaid parts when the device is in a given position with respect to said second member.

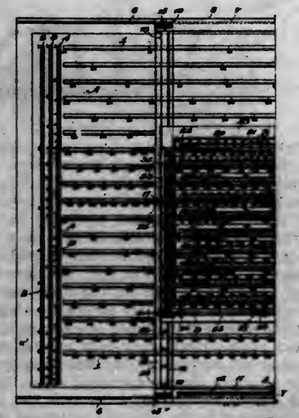


1,484,173. DRY CELL. HAROLD DE OLANETA, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Original application filed Apr. 1, 1920, Serial No. 370,610. Divided and this application filed May 7, 1920. Serial No. 379,515. 7 Claims. (Cl. 204—29.)

1. In a dry cell, a container, a depolarising cartridge therein, and a bottom centering cup for the cartridge, having a continuous stiffened side wall with scallops formed therein.

1,484,174. DEVICE FOR INDICATING THE RELATIVE MOVEMENTS OF THE EARTH, SUN, AND MOON. JOHN J. DIVO, Brooklyn, N. Y. Filed Sept. 14, 1922. Serial No. 588,175. 4 Claims. (Cl. 35—5.)

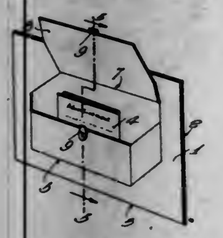
1. A hollow translucent globe having its surface outlined to represent the earth, means for rotating said globe once in approximately every twenty-four hours, a lamp within said globe, mechanism for rotating said lamp once in approximately twenty-nine and one-half days, a second



lamp and a second mechanism for rotating said second lamp once in three hundred and sixty-five and one-quarter days.

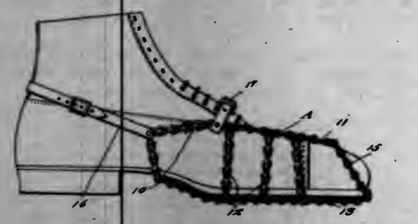
1,484,175. MEANS OF JOINING METAL-SHEATHED BOARDS ARRANGED EDGE TO EDGE. ARMIN ELMENDORF, Chicago, Ill., assignor to Haskelite Manufacturing Corporation, a Corporation of New York. Filed May 28, 1921. Serial No. 471,925. 2 Claims. (Cl. 20—91.)

1. In combination, two boards arranged edge to edge and engaged with each other at the meeting edges, each board having glued thereto a metal sheathing element, said metal sheathing elements being extended laterally of the boards at said meeting edges to form outwardly-directed flanges in engagement with each other.



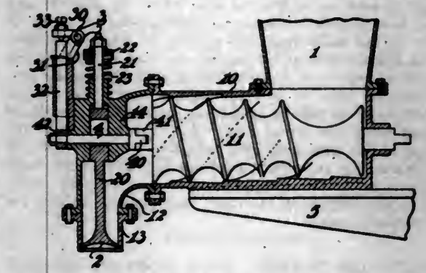
1,484,176. COMPUTING DEVICE. WILLIAM S. HAIMES, Washington, D. C. Filed Jan. 22, 1923. Serial No. 614,275. 21 Claims. (Cl. 235—70.)

1. In a device of the character described, the combination of a flat scale member having a plurality of logarithmically divided scale sections extending over approximately four cycles of logarithms, a second scale member co-



operating therewith, said last-named member having a plurality of scale sections arranged in a single plane and extending over one cycle of logarithms, and means including a scale of equal parts associated with said second scale member for finding the mantissa part of the logarithm of any number on said scale members.

1,484,177. ADVERTISING NOVELTY. WILLIAM S. KELLNER, Baltimore, Md. Filed July 27, 1922. Serial No. 577,925. 1 Claim. (Cl. 229—71.)

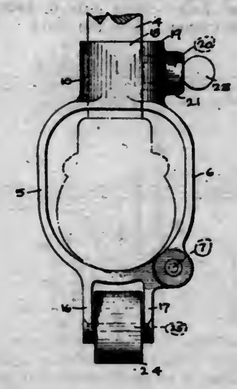


A rectangular, advertisement-containing and mailing envelope sealed throughout its perimeter and having one side upon which to write an address; a portion of the other side of said envelope being provided with a pictorial representation of an object having a hinged closure, the closure-simulating area of the representation being cut on three edges from said other side only on line spaced inwardly from the envelope edges, the other edge of said area representing the hinge line of the closure and forming a hinge permitting direct outward swinging of said area by the recipient to give access to the advertisement, the latter being covered and obscured by said area during transit of the envelope.

1,484,178. ANTISLIPPING MEANS FOR SHOES. JOSEPH N. LAGASSE and MARTIN L. CUMMINGS, Hyner, Pa. Filed Aug. 9, 1922. Serial No. 580,803. 1 Claim. (Cl. 36—63.)

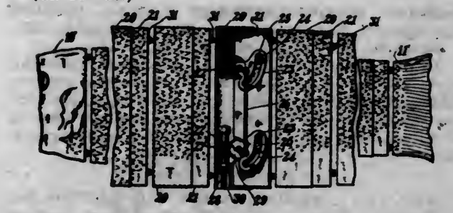
Anti-slipping means for shoes including a chain having its intermediate portion arranged transversely under the instep of the shoe, and extending upwardly along the sides of the shoe, and thence extended forwardly toward the tip to provide convergently disposed portions, an additional chain arranged beneath the sole of the shoe along the longitudinal center thereof and having one end secured to the intermediate portion of the first mentioned chain, a plurality of transverse chains having their corresponding extremities secured to the second mentioned chain beneath the sole of the shoe, and arranged to embrace the sides of the shoe and having their other ends secured to the convergently disposed portions of the first mentioned chain, and a pair of short chains extending from the forward end of the second mentioned chain over the tip of the shoe and connected to the adjacent terminals of the first mentioned chain, and a strap adapted to embrace the heel portion of the shoe and having its ends connected with the vertical portions of the first mentioned chain whereby the attachment is secured to the shoe.

1,484,179. DOUGHNUT MACHINE. HARRY A. MCCLURE and HENRY F. HUNTLEY, Seattle, Wash., assignors to Washington Automatic Doughnut Machine Company, Seattle, Wash., a Corporation of Washington. Filed Sept. 24, 1921. Serial No. 502,899. 4 Claims. (Cl. 107—14.)



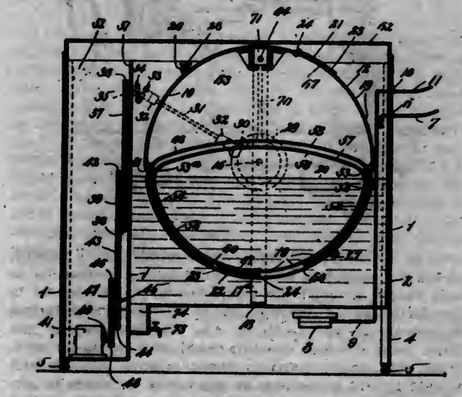
4. In a doughnut machine, a dough hopper, a horizontally placed feed screw connecting at one end with the hopper, a casing for said screw having a downwardly extending discharge spout at the delivery end of the screw, a downwardly opening valve normally closing said spout and having a stem extending upwardly through the casing, said stem having a yoke alined with the axis of the worm, a spring engaging the upper end of the stem to normally hold the valve closed, a lever engaging with said stem to open the valve, a rod mounted to reciprocate on said casing and engaging the other end of the valve to operate it, a shaft coaxially placed with the feed screw and having a clutch engagement therewith and a cam secured on said shaft and engaging the reciprocating rod to actuate it.

1,484,180. PENCIL. LAWRENCE T. MCNARY, Cranston, R. I., assignor to Rex Manufacturing Company, Providence, R. I. Filed Oct. 11, 1921. Serial No. 507,050. 8 Claims. (Cl. 120—18.)



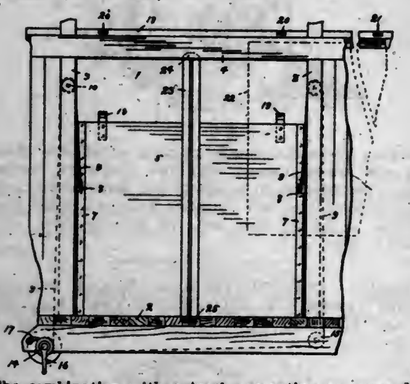
1. In a pencil, a sleeve having an inturned end and having a concavo-convex bead below said end, a guide member engaged with the flange, solder engaged with the guide member, with the extremity of the inturned end, and in concavo part of the bead, a lead carrier in the guide member, a spiral for the lead carrier engaged with the inturned end of the sleeve at one end, a ring engaged with the other end of the spiral and about the guide member, said guide member having its outer end flattened to provide abutments for engaging the ring, to hold the latter and the spiral onto the guide member, said spiral having a staggered series of punched out bosses, and a casing frictionally engaged with the bosses on its inner circumference and having its inner end engaged with the bead.

1,484,181. AUTOMOBILE THEFT PREVENTIVE. AUGUSTUS MANUEL, Alameda, Calif. Filed Dec. 24, 1919. Serial No. 347,071. 7 Claims. (Cl. 70—90.)



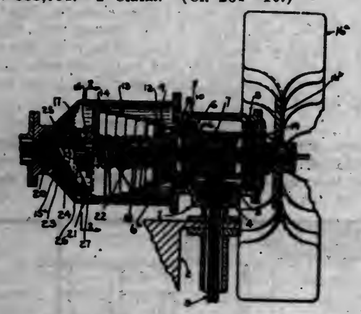
1. A wheel lug comprising a yoke adapted to encircle a wheel tire and engage a spoke of the wheel; and a roller on said yoke extending outward therefrom intermediate the sides of said tire.

1,484,182. FISH TOY. JULIE MARCUS, Berkeley, Calif. Filed Apr. 20, 1922. Serial No. 555,729. 2 Claims. (Cl. 46—40.)



1. A toy formed to represent a fish having the body thereof formed of a series of vertical slats hinged at their sides to one another, each of said slats comprising a pair of casing elements telescoping one into the other longitudinally of the fish, and means for telescopically adjusting said elements.

1,484,183. WASHING MACHINE. NICOLA MASTROMARINO, Boston, Mass. Filed July 25, 1923. Serial No. 653,695. 4 Claims. (Cl. 68—18.)

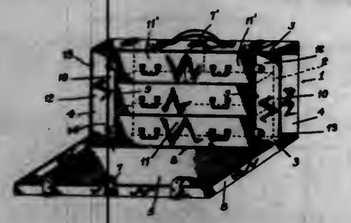


1. A washing machine having a rotary drum to receive and tumble the clothes to wash them, a partition member within said drum which is movable at the will of the operator to divide the interior of the drum into two compartments so that the clothes when washed may be assembled in one of said compartments, a movable presser member located in the compartment in which the clothes are assembled and means for moving said presser member to push the clothes toward one end of said compartment and squeeze them.

1,484,184. GRAIN DOOR. JACOB MATTSON, Duluth, Minn. Filed Feb. 17, 1923. Serial No. 619,546. 1 Claim. (Cl. 20—34.)

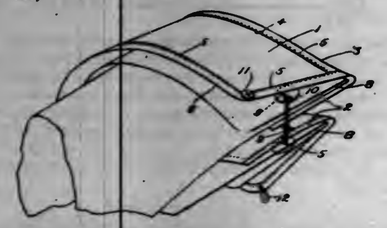
The combination with a track presenting an upwardly directed flange extending transversely of a door opening, said flange having transversely spaced holes therethrough, of a door having upwardly extending hooks for overlapping engagement with said flange for sliding movement of said door, said hooks being spaced to register with the holes in the flange to permit the hooks to engage in said holes for pivotal movement of said door, substantially as described.

1,484,185. SPEED-SENSITIVE CONTROLLING DEVICE. ROBERT F. METCALFE, Erie, Pa., assignor to Skinner Patent Holding Company, Erie, Pa., a Corporation of Pennsylvania. Filed Oct. 27, 1919. Serial No. 333,793. 1 Claim. (Cl. 264—10.)



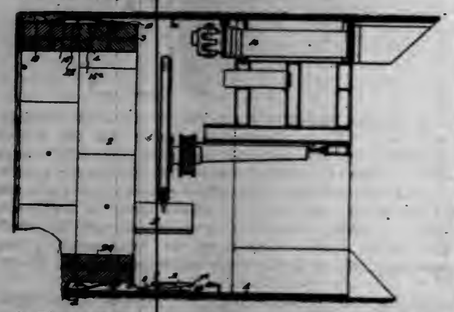
In a speed sensitive controlling device, the combination of a fan; a driven shaft on which the fan is mounted; bearings for said shaft; an externally screw-threaded sleeve slidingly mounted on the shaft; a driving shaft within which the driven shaft extends; a screw on the driving shaft over the sleeve screw on the driven shaft; a spring connection between said driving shaft and driven shaft; and means for communicating the movement of the device from the screw-threaded sleeve.

1,484,186. SUITCASE. HENRY D. MINICH, Alma, Mich. Filed Dec. 30, 1921. Serial No. 525,915. 5 Claims. (Cl. 190—51.)



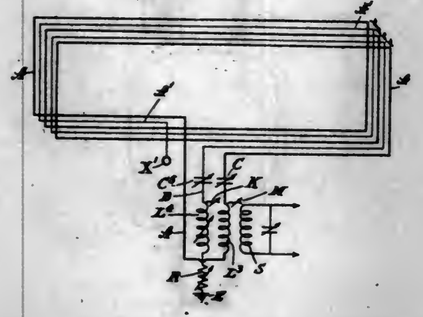
1. In a suitcase, the combination of a container comprising a back, bottom, and top and end portions, a rigid

front closure member hingedly connected to the front edge of the bottom portion and adapted to be swung into open and closed positions, and locked in closed position, said container having partitions therein providing end compartments beyond the same extending uninterruptedly from top to bottom and a central compartment



between the same, and a plurality of slidable drawers in said central compartment and completely occupying the same, adapted to be drawn out horisontally through the open front of said container when said front closure means is swung open and the suitcase rests on its bottom side.

1,484,187. CUFF PROTECTOR. WILLIAM P. O'NEILL and FREDERICK T. GALLAGHER, Rockland, Mass. Filed Apr. 16, 1923. Serial No. 632,201. 6 Claims. (Cl. 2—79.)

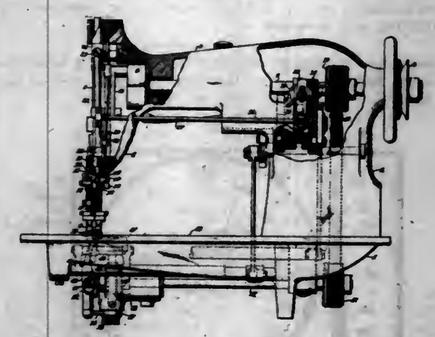


1. A cuff protector consisting of a slip over, comprising a sheet of transparent material and a sheet of cloth, the cloth at one edge lapping for a short distance onto the front face of the transparent material and secured thereto, the cloth then being folded over the front edge and onto the back face of the transparent material thereby forming a slip over for a cuff whereby the covering for the outer face of the cuff is transparent material and the covering for the outer edge and inner face of the cuff is cloth.

1,484,188. METHOD OF AND MEANS FOR ERECTING TUNNELS. JOHN F. O'ROURKE, New York, N. Y. Filed Nov. 11, 1919. Serial No. 337,286. 20 Claims. (Cl. 61—84.)

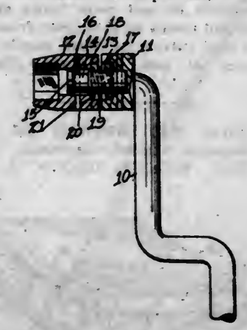
3. The method of erecting a tunnel lining, consisting in successively setting and supporting the lining rings within a shield in required line and grade independently of the position of the shield.

1,484,189. RADIO RECEIVING APPARATUS. JOHN A. PROCTOR, Lexington, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed July 6, 1920. Serial No. 394,063. 18 Claims. (Cl. 250—20.)



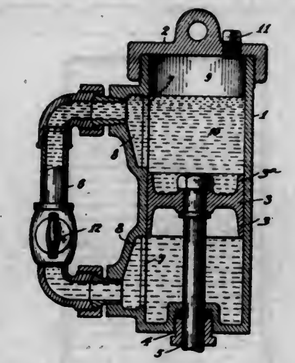
1. A receiving system for wireless signals comprising a tunable closed loop aerial, a tunable open aerial separate structurally from said loop and having a loop in series therewith and in coupled relation with the first loop, and means for adding the currents in said aerials for operating a detector.

1,484,190. SOLIDIFICATION OF ORGANIC LIQUIDS. ARTHUR B. RAY, Flushing, N. Y. Filed Nov. 8, 1921. Serial No. 513,835. 17 Claims. (Cl. 44—7.)



17. In a process of solidifying hydrocarbon liquids carrying gaseous substances, heating same under pressure, adding thereto a small amount of stearic acid, saponifying the stearic acid by adding a solution of an alkali in a water-alcohol mixture and cooling the resulting mixture.

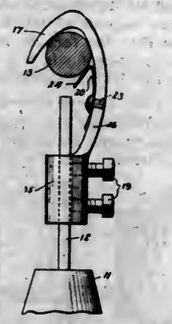
1,484,191. NEEDLE GUARD FOR SEWING MACHINES. JOHN C. RINGE, Stratford, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Apr. 30, 1921. Serial No. 465,720. 5 Claims. (Cl. 112—81.)



1. In a sewing machine, in combination, a needle, means for imparting endwise reciprocating movements to said needle, a loop-taker complemental to the needle in the formation of stitches, means for imparting lateral movements to the needle in and relatively to the material being stitched, a needle-guard, and means for actuating said needle-guard in timed relation with respect to said lateral movements of the needle to insure in successive stitches a substantially constant relative position of the needle and loop-taker at the time of seizure of the needle-thread loop by said loop-taker.

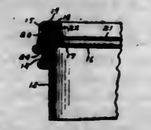
1,484,192. REVERSIBLE WRENCH. ALVIN O. RINGQUIST, Fitchburg, Mass. Filed Apr. 27, 1923. Serial No. 635,189. 1 Claim. (Cl. 81—60.)

A reversible wrench comprising a handle, a body fixed thereto, a stud fixed relatively to said body and handle, said stud, body and handle forming a rigid unit, a head formed with a nut socket at one end and a cylindrical axial opening at the other end to receive said stud, holding means on said head co-operating with said stud to form a lost motion connection between the parts, and means to normally yieldingly separate said parts, said body and head provided with co-operating clutch teeth.



1,484,193. SHOCK ABSORBER. WALTER C. SCOTT, Plainfield, N. J. Filed Jan. 17, 1918. Serial No. 212,256. 6 Claims. (Cl. 188—88.)

1. A shock absorber comprising: a casing having a port adjacent to but below its upper end and a port adjacent to but above its lower end, a connection between said ports extraneous of the interior of the casing, said casing being partially filled with a body of liquid free to flow through said connection, and a piston, constituting a valve for the ports, immersed in said liquid, said piston having upper and lower concave faces, to form a liquid pocket on its upper side and an air pocket on its lower side, and dividing the casing into an upper and a lower chamber that are in communication with each other through aforesaid connection, said casing and piston being movably related to each other in response to shocks.



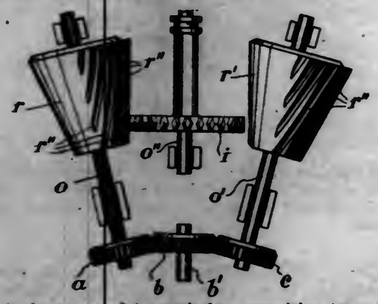
1,484,194. ELECTRODE SUSPENSION DEVICE. OSCAR E. SERVIS, Chicago, Ill. Filed Jan. 28, 1921. Serial No. 440,716. 6 Claims. (Cl. 204—4.)

1. The combination with an electrode having a suspension shank, of a suspension device therefor, comprising: a sleeve member having a socket for receiving the electrode shank, means carried by said sleeve member for engaging a shank inserted in said socket to secure the shank to said sleeve member, a hook extending from one end of said sleeve member and adapted to be hooked over and to engage two circumferential portions of a con-

ductor rod, and a spring adjustably secured to the hook portion of said suspension device and adapted to engage with a yielding pressure a third circumferential as specified.

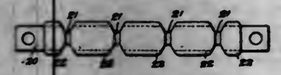
1,484,195. SHEET-METAL CAN. ISAAC E. SEXTON, Winchester, Mass. Filed Feb. 17, 1923. Serial No. 619,657. 4 Claims. (Cl. 220—29.)

1. A sheet-metal can comprising, in combination, a tubular mouth having an annular internal stopper seat, an annular external cap flange seat, and an annular end shoulder between said seats; a stopper having a circular head and a tapering upstanding flange, adapted to be wedged into said stopper seat, and form therewith an inner joint; and a cap having an annular face, coinciding with said end shoulder, an annular flange projecting downward from the outer portion of the annular face, and a central boss projecting downward from the inner portion of said face, said boss including a tapering annular wall inserted in and conforming to the tapering stopper flange and separably engaged therewith, so that the cap and stopper are applicable as a unit to the mouth, and are movable by pressure exerted on the cap to frictionally engage the stopper flange with the stopper seat, thus forming an inner joint, and frictionally engage the cap flange with the said external seat, thus forming an outer joint, the arrangement being such that when the cap is removed from the mouth, the stopper remains therein.



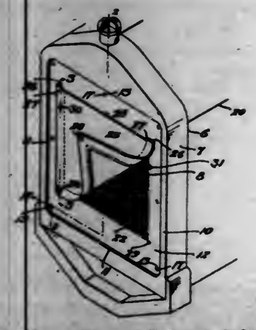
1,484,196. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 15, 1923. Serial No. 619,088. 1 Claim. (Cl. 197—176.)

In a typewriting machine, the combination with a spring-driven letter-feeding carriage having a rack whose teeth are at letter-space intervals, of a pinion meshing with said rack, an escapement wheel driven by said pinion, and a key-controlled dog device co-operating



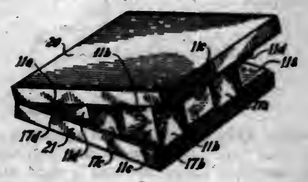
with said escapement wheel, said pinion having two teeth normally in mesh with said rack, and said rack having a gap to permit a jump of the carriage, said gap being lengthened by the omission therefrom of one tooth in excess of the number of letter-spaces that the carriage jumps, so that the rack in re-engaging the pinion engages the tooth thereof which is next but one to the tooth that was last in engagement with the rack.

1,484,197. CHANGE-SPEED TRANSMISSION. CARLO STEFANI, Milan, Italy. Filed Oct. 18, 1922. Serial No. 595,450. 3 Claims. (Cl. 74—58.)



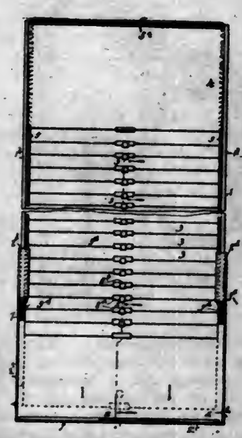
1. A change speed transmission comprising two conical wheels having teeth of uniform pitch throughout extending along the length of the cone and covering substantially one half of each conical surface, an intermediate toothed wheel meshing with the toothed conical wheels, and means for rotating the two conical wheels simultaneously so that the teeth of the one move out of mesh with the intermediate wheel as the teeth of the other move into mesh with the said intermediate wheel.

1,484,198. ELECTRICAL FUSE AND METHOD. HAROLD E. TRENT, Lansdowne, Pa. Filed July 10, 1918. Serial No. 244,243. 5 Claims. (Cl. 200—135.)



3. An enclosing casing and terminals therein, in combination with a renewable fuse therefor, comprising a fusible conductor having a plurality of exposed sections and a plurality of intermediate coverings mounted and supported thereon by reason of their own cohesion, composed of cushioning material.

1,484,199. AUTOMOBILE RADIATOR COVER. FREDERICK SAMUEL TYSON, Lock Haven, Pa., assignor to Tyson Mfg. Co., Lock Haven, Pa. Filed Feb. 4, 1922. Serial No. 534,651. 2 Claims. (Cl. 257—132.)

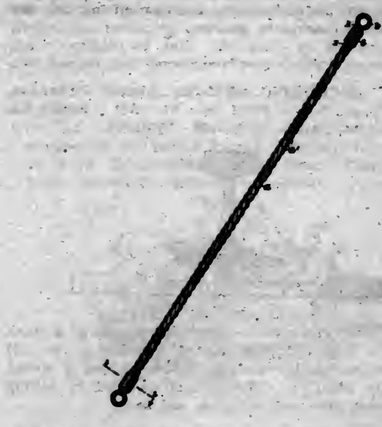


2. The combination with a radiator including a frame and a portion therein provided with air ducts, of a flexible cover mounted over said portion and within the confines of said frame, means for fastening said cover in position, said cover comprising an apertured frame of a plurality of layers and a curtain stitched with one edge between the layers of said cover frame at one edge of said aperture, and means on said cover frame and curtain for fastening said cutrain in rolled position to expose a desired number of said air ducts, substantially as described.

1,484,200. TILE AND METHOD OF PRODUCING SAME. ENRIQUE VINCKE, Barcelona, Spain. Filed Feb. 24, 1923. Serial No. 620,955. 5 Claims. (Cl. 18—48.)

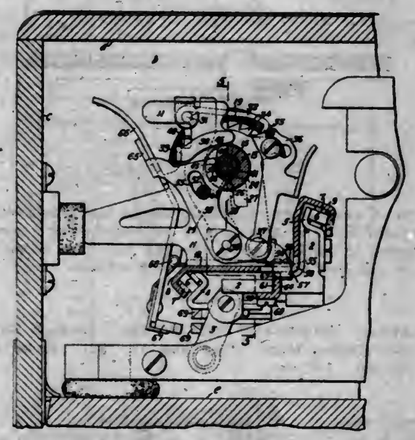
1. A flooring unit comprising a base formed of particles of cork bonded as a unit, certain portions of which extend to the exposed surface of the unit and integrally bonded with said base, the exposed surface of said articles being provided with recesses and portions of suitable material located within said recesses.

1,484,201. FILING RACK. ZEMACH AUERBACH, New York, N. Y. Filed Mar. 15, 1923. Serial No. 625,287. 10 Claims. (Cl. 129—16.)



1. A rack for cards comprising two members slidably connected together and provided with opposing end walls to receive a series of cards therebetween, and means to retain the cards flatwise in the rack.

9. A card having a clip provided with a hook-like member at one edge, and a lateral projection extending through the card, the outer end of said projection being turned to extend over the card.

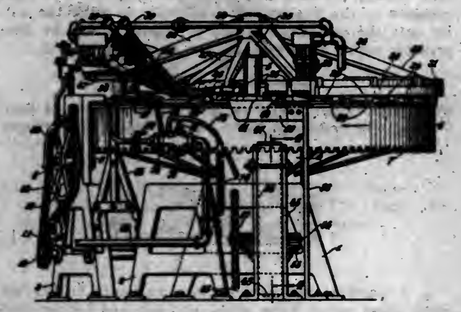


1,484,202. FLEXIBLE CONNECTION. JOHN BAKER, Paterson, N. J. Filed May 9, 1923. Serial No. 637,779. 2 Claims. (Cl. 24—128.)

1. A flexible metal connection comprising intertwisted flexible strands, an attaching member having a shouldered metal shank extending longitudinally of and embedded in one end portion of the group of strands, and a metal ferrule embracing said end portion and holding

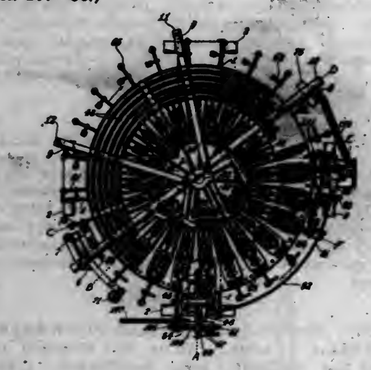
the same constricted and thereby pressed inward against the shank, said end portion being soldered to the shank and the ferrule being soldered to said end portion.

1,484,203. TYPEWRITING MACHINE. EDWIN E. BARNEY, New Rochelle, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Dec. 30, 1922. Serial No. 610,057. 38 Claims. (Cl. 197—114.)



1. In a typewriting or like machine, the combination of a platen; a line spacing pawl; and means for actuating said pawl comprising a finger piece, and means whereby said finger piece may be moved bodily axially of and towards the platen from the position for use into a compact position where it may remain indefinitely and whereby while maintained in the position for use said finger piece is effective to actuate said line spacing pawl.

1,484,204. PASTRY-CONE MACHINE. CHARLES F. BETZ, St. Louis, Mo. Filed Jan. 4, 1919. Serial No. 269,706. 22 Claims. (Cl. 107—58.)



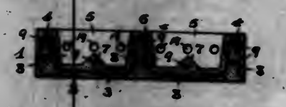
1. In a machine of the class described, the combination with a pair of cooperating baking elements, of mechanism for imparting a violent blow to one of said baking elements and in a direction to separate it from the other element.

10. In a machine of the class described, the combination with a traveling frame, of a pair of relatively movable cooperating baking elements thereon, and gearing arranged in the path of the movable of said elements, adapted to close said elements.

14. In a machine of the class described, the combination with a baking mold, of means for directing an air blast at the edge of the baked product, adapted to separate the latter from the mold.

1,484,205. METHOD OF AND MACHINE FOR MAKING PASTRY CONES. CHARLES F. BETZ, St. Louis, Mo. Filed July 10, 1919. Serial No. 309,851. 40 Claims. (Cl. 107—58.)

1. The method of making pastry cones in cooperating mold-core baking elements comprising, depositing the batter in the heated mold, inserting the core into the mold, permitting said core to rest in said mold for a predetermined period in order to permit escape of steam and air, thereafter applying to the cooperating elements and for a predetermined period, an additional yielding closing pressure increasing gradually from a light pressure to the final pressure, in order to work the batter into the mold and maintaining the final pressure while the batter is baking.



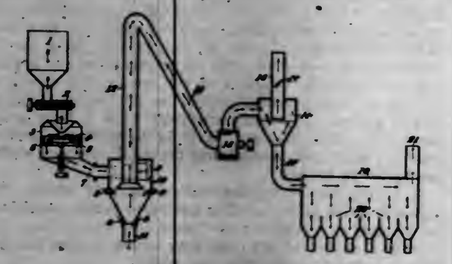
8. In the art of making pastry cones in which the batter is baked in cooperating mold-core baking elements, the process of separating the baked core comprising, imparting a violent blow to the core and in a direction to move it quickly away from the mold.

27. In a machine of the class described, a rotating frame, cooperating relatively movable baking elements arranged radially of said frame, and means for resiliently mounting the movable of said elements on said frame.

39. A pastry cone baking machine comprising, an oven, a traveling frame, cooperating mold-core baking elements mounted thereon and adapted to pass through said oven, means for depositing batter in the heated mold, means

for inserting the cores into the molds adapted to permit the same to rest therein for a predetermined period in order to permit escape of steam and air, means operating thereafter for applying to the cooperating elements and for a predetermined period an additional intermittent closing pressure increasing gradually from a light pressure to the final pressure in order to work the batter into the mold, and means for maintaining the final pressure while said elements pass through said oven.

1,484,206. BUILDING UNIT. JOSEPH A. BIRKHOLZ, Orange, N. J. Filed Oct. 9, 1920. Serial No. 415,897. 6 Claims. (Cl. 72—40.)

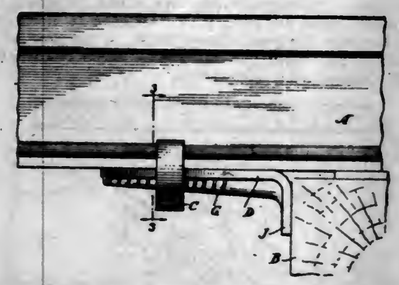


1. A portable pre-cast concrete wall-unit having upright edges which form studs, and top and bottom portions comprising the plate and sill members of a wall-structure, respectively, said stud-members being adapted to carry substantially the entire weight that is imparted thereto.

1,484,207. ADJUSTABLE CYLINDER REAMER. ERNEST P. CAMPBELL, Stockton, Calif. Filed Feb. 20, 1922. Serial No. 537,721. 5 Claims. (Cl. 77—76.)

1. A [illegible] a rotatable head provided with a [illegible] disposed slots, cutters slidably disposed [illegible] number of said cutters being even, means for [illegible] the cutters outwardly, and a spring for each two successive cutters mounted in the head between the cutters and acting on the latter to move them inwardly.

1,484,208. METHOD OF TREATING FIBER-BEARING MATERIAL. NORRIS K. DAVIS, San Francisco, Calif. Filed Nov. 30, 1921. Serial No. 518,912. 1 Claim. (Cl. 83—54.)



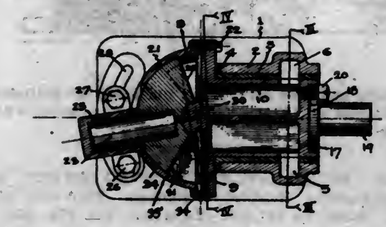
The method of treating fiber bearing ores reduced to a proper size for the separation and recovery of the fiber therefrom, which resides in shattering the ore by an impact blow of the ore to release the fiber therefrom, subjecting the released fiber to the action of air under pressure to permit the baser refuse material to settle out by gravity, subjecting the separated fiber and lighter particles to air under pressure to remove the dust and light particles therefrom and classifying the fiber according to length by forcing the same in a horizontal direction by air under pressure and permitting the discharged fiber to settle by gravity.

1,484,209. ANCHORING DEVICE. AUGUST DINKLAGE, East Orange, N. J. Filed Dec. 31, 1921. Serial No. 526,230. 14 Claims. (Cl. 238—279.)

1. In a creep check device, the combination of a track rail base, a road bed part located opposite to the rail base and an unattached wedging member which is moved downwardly when the track rail is occupied by rolling stock between the road bed part and base.

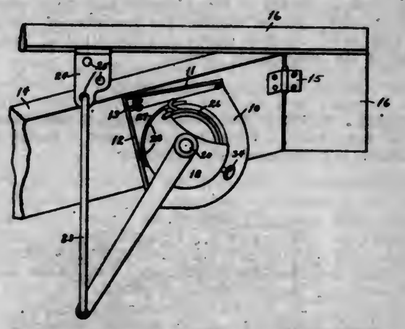
1,484,210. RAIL ANCHOR. AUGUST DINKLAGE, East Orange, N. J. Filed Feb. 6, 1923. Serial No. 617,306. 27 Claims. (Cl. 238—324.)

24. A creep check comprising a yoke having oppositely disposed inturned ends, each of the ends having a recess adapted to receive and fit the rail edge and means to force and hold the rail edges in said recesses.



1,484,211. SHOWCASE REFLECTOR. LEONARD ERIKSON, Malden, Mass. Filed Aug. 17, 1921. Serial No. 492,989. 1 Claim. (Cl. 240—6.)

A trough-shaped show-case reflector comprising a substantially vertical side member and a substantially horizontal top member, said side member terminating in a flange angularly related thereto and said top member terminating in a flange angularly related thereto, the last mentioned flange terminating in a down-turned end member angularly related to said top member, a conduit for



electrical conductors removably secured to said reflector in the corner thereof between said side and top members and having its sides angularly related thereto, respectively, and reflecting members removably secured to the inner surfaces of said side and top members between said flanges and the sides of said conduit respectively.

1,484,212. ENGINE. RALPH G. FEAR, Oakland, Calif., assignor to Jacobson & Fear, a Copartnership consisting of H. O. Jacobson and R. G. Fear. Filed Mar. 30, 1920. Serial No. 369,900. 2 Claims. (Cl. 131—53.)

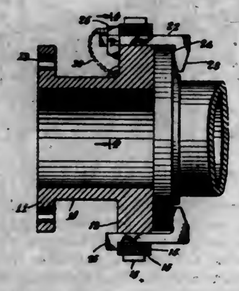
1. An engine comprising a base having a bearing, a casing having a combined inlet and outlet journal shaft journaled in the bearing, said casing having a substantially flat wall and an opposed hemi-spherical wall formed at its center with an opening, said base having an arcuate slot, a bearing adjustably secured in the slot, and a piston within the casing having a stub shaft extending through the opening in the casing and journaled in the second bearing.

1,484,213. MOVEMENT-CONTROLLING DEVICE. PAUL R. FINCH, Des Moines, Iowa. Filed July 24, 1922. Serial No. 577,002. 9 Claims. (Cl. 188—90.)

1. The combination with a fixed and a movable object, of a receptacle adapted to be fixed rigidly to one of said objects, a shaft journaled in said receptacle, a lever fixed to said shaft, a link flexibly connecting said lever to the other of said objects, said receptacle being provided with a transverse partition, a wing or paddle on said shaft within said receptacle and movable to approach or retreat from either side of said partition, said receptacle adapted to contain a liquid offering resistance to movement of said paddle relative to said partition.

1,484,214. SEPARABLE FASTENER. LOUIS W. GATES, New Haven, Conn., assignor to C. Cowles & Company, New Haven, Conn., a Corporation of Connecticut. Filed Jan. 2, 1923. Serial No. 610,181. 17 Claims. (Cl. 24—211.)

1. In a fastener for two separable members, an element carried by one of said members having a head, an element carried by the other member and adapted to engage the first element beneath said head to prevent separation of said members, and means engaging said

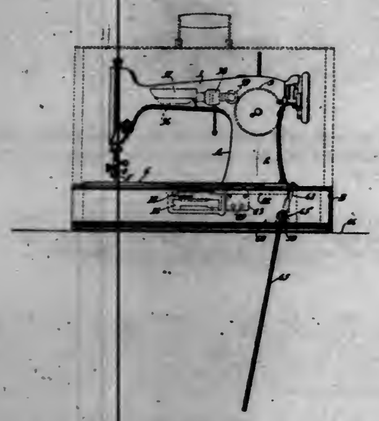


head to hold said elements in engagement and movable longitudinally of the head to allow separation of said elements.

1,484,215. SANITARY BATH BRUSH. MORRIS L. GOLDBERG, Brooklyn, N. Y. Filed Jan. 26, 1923. Serial No. 614,952. 2 Claims. (Cl. 15—130.)

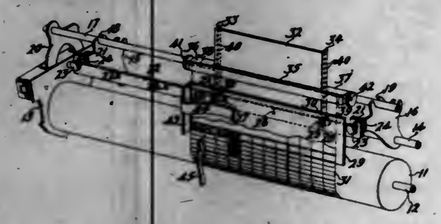
1. A bath brush, comprising a body portion and rubbing members on opposite sides thereof, said body portion having an axial opening extending therethrough and communicating with both rubbing members, said body portion also having a radial opening connected with the first mentioned opening, means for connecting a supply conduit to either of said openings, a handle, said body portion having a socket to receive the handle, said socket being of the same diameter as the radial opening, whereby the handle can be positioned in said radial opening and function as a closure therefor.

1,484,216. FLANGED PIPE OR HOSE CONNECTION. MARTIN J. HEKKING, Brooklyn, N. Y. Filed May 19, 1922. Serial No. 562,066. 5 Claims. (Cl. 285—191.)



1. A connection or coupling comprising a member having a notched flange with its periphery screw-threaded, jaws mounted in the notches of the flange and adapted to engage the flange of a coöperating member, and a clamping nut screwed onto the periphery of the flange, and adapted to tighten the jaws.

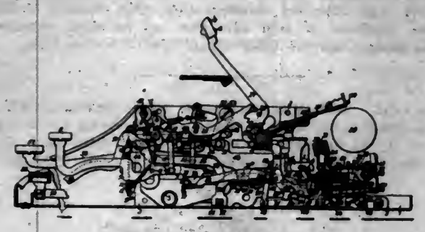
1,484,217. ELECTRIC SEWING MACHINE. MARTIN HEMMER, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed May 9, 1921. Serial No. 467,835. 10 Claims. (Cl. 112—220.)



1. A motor driven sewing-head adapted for reception by a portable base or drop-head cabinet and comprising a frame, stitch-forming and feeding mechanisms incorporated in said frame, a driving motor and a motor-con-

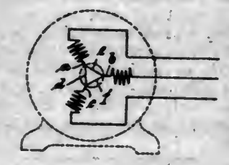
troller carried by said frame, and a shiftable controller operating element carried by said frame, said element

being adapted to register with a coacting manually controlled element carried by the support by which the sewing-head is received.



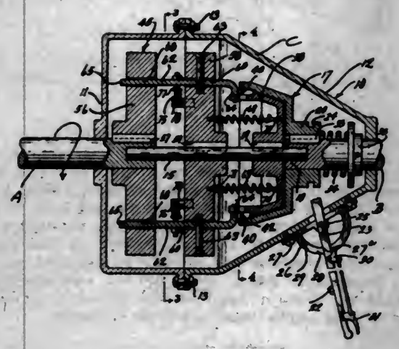
1,484,218. COMBINED TYPEWRITING AND COMPUTING MACHINE. CHARLES M. HILSER, Philadelphia, Pa., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 17, 1921. Serial No. 453,079. 10 Claims. (Cl. 197—127.)

1. In a typewriting and computing machine comprising tabulating mechanism for making entries on sheets having like columnar divisions, each of which divisions comprises several subordinate columns, the combination of a front paper-table having a leading-edge gage and a fixed side-edge gage, and selective means for mechanically locating the paper-table in different columnar locations, laterally of the machine, to enable the paper-table to locate the work-sheets with different columnar divisions in co-operative relation to the computing mechanism and the tabulating mechanism for tabulating, typing and computing in different zones on the work-sheets.



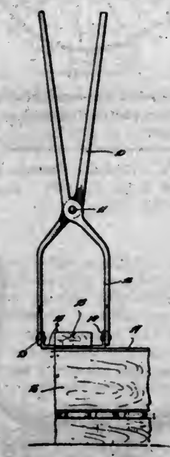
1,484,219. TYPEWRITING MACHINE. JOSEPH B. HOLDEN, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed May 6, 1922. Serial No. 558,951. 22 Claims. (Cl. 197—82.)

1. In a typewriting machine, the combination of a case shift frame, a platen carrier carried by said case shift frame, a feed rack carried by said platen carrier and shiftable therewith, a dog rocker arranged beneath said platen carrier where it is accessible from the bottom of the machine, said dog rocker being shiftable with said case



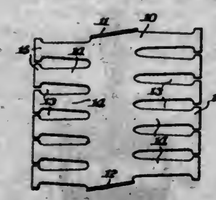
shift frame and feed rack, and a universal bar shiftable with said case shift frame and operatively connected with said dog rocker.

1,484,220. MULTIPHASE TRANSLATING DEVICE. K. R. INAMUOTILA, Helsingfors, Finland. Filed Jan. 31, 1921. Serial No. 441,462. 2 Claims. (Cl. 175—294.)



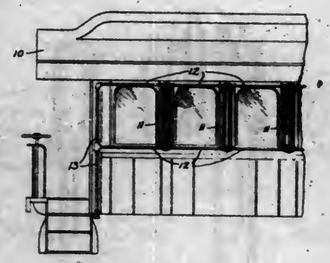
1. In a multi-phase translating device, the combination with a plurality of operating windings, of a plurality of safety devices connected in delta, said operating windings being connected in star through said delta connection of safety devices whereby the operation of any one of said safety devices causes the operation of one or more of the other safety devices.

1,484,221. SAFETY CLUTCH. FLOYD EDSON ISRAEL, Le Roy, Kans. Filed Feb. 11, 1922. Serial No. 535,847. 5 Claims. (Cl. 192—56.)



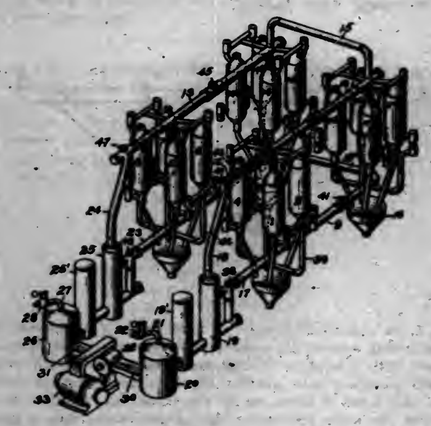
1. In a safety clutch, the combination with a pair of shafts defining drive and driven shafts, a third shaft bearing in said drive and driven shafts, a pawl, means pivotally and resiliently supporting said pawl on the third shaft, a clutch part on one of said pair of shafts, a second clutch part mounted on the third mentioned shaft, means normally forcing said second clutch part into engagement with said pawl, and means on the second of said pair of shafts for engaging said pawl whereby upon overload on the driven shaft, the pawl will be swung to release the second clutch part from engagement with the first clutch part to release a driving connection between the drive and driven shafts.

1,484,222. CLEAT REMOVER. WALTER RALEIGH KIGHTLINGER, Parsons, Kans. Filed July 19, 1922. Serial No. 576,133. 2 Claims. (Cl. 294—118.)



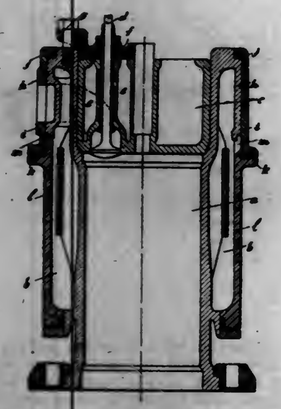
1. A cleat puller comprising a pair of tongs including two Z-shaped shanks each providing a handle portion, and a jaw portion hinged together at the bend adjacent the handle portion, and an L-bar rigidly secured to the free end of each of said jaw portions and having greater length than the same, the thin opposing ledges of said bars constituting gripping elements.

1,484,223. PROCESS OF MAKING PRESSED-STEEL WHEELS. JOSEPH LEDWINKA, Philadelphia, Pa., assignor, by mesne assignments, to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Original application filed Feb. 21, 1917, Serial No. 150,084. Divided and this application filed Aug. 16, 1921. Serial No. 492,767. 7 Claims. (Cl. 29—174.)



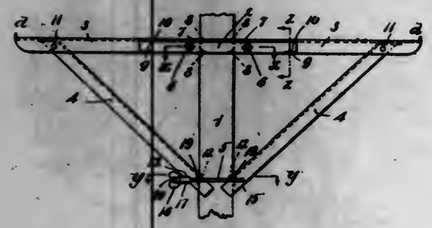
1. In the manufacture of pressed steel wheels, the process which comprises stamping out a sheet metal blank to form a central body portion and spoke portions on opposite sides of the body portion, rolling the stamped blank into the form of a tube, expanding the end of the bore of the tube adjacent one edge of the body portion, and bending outwardly the spoke portions.

1,484,224. DUST AND CINDER TRAP. CHARLES I. LENIG, Danville, Pa. Filed May 10, 1923. Serial No. 638,031. 5 Claims. (Cl. 98—21.)



8. The combination with a vehicle having side windows, of a series of dust and cinder traps adjacent the sides of the windows, each of said traps being hollow and substantially semi-circular in cross section, conduits connecting the traps and leading to the ends of the car, and slidable means for closing either side of the trap and at the same time opening the other side.

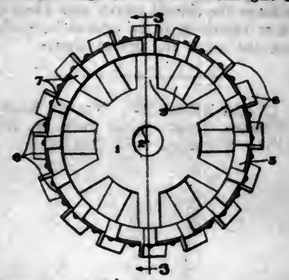
1,484,225. METHOD OF PRODUCING GAS. CARL LUNDIN, Pittsburgh, Pa. Filed Jan. 18, 1922. Serial No. 530,129. 8 Claims. (Cl. 48—210.)



5. The method of producing a gas rich in carbon monoxid and hydrogen and substantially free of nitrogen, which consists in producing gases by distilling carbonaceous material out of contact with air, furnishing oxygen to said gases and generating heat by passing the same in a plurality of divided streams into contact with a metallic oxid, passing the hot gases into contact with carbonaceous material and subsequently through an excess heat-absorbing chamber, and periodically reversing the direction of flow of the gases whereby the heat of oxidation is utilized for distilling the carbonaceous material without the necessity of applying external heat.

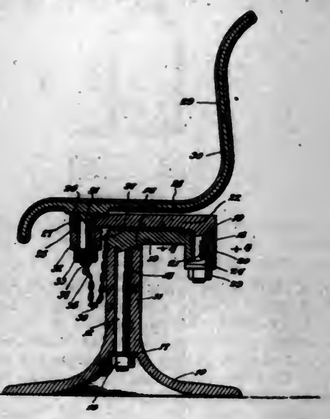
1,484,226. CYLINDER CONSTRUCTION OF INTERNAL-COMBUSTION ENGINES. OLIVER MARGETSON, London, England. Filed July 3, 1923. Serial No. 649,313. 3 Claims. (Cl. 74—108.)

1. A cylinder construction for internal combustion engines in which the outer or exposed walls of the water jackets or pockets are supported or constituted by castings or shrouds of steel.



1,484,227. SCAFFOLD BRACKET. DONALD M. MARTIN, Winthrop, Mass. Filed May 9, 1919. Serial No. 295,870. 7 Claims. (Cl. 304—33.)

1. In a scaffold bracket a main beam, two oppositely extending supporting arms pivoted thereto so as to contact with a scaffold bracket on opposite sides with each arm engaging said upright so that the thrust of each of said arms is taken up by the thrust of the other arm when the arms are swung into operative position, a pair of struts pivotally connected therewith, each strut being provided with a spur adapted to form a biting contact with the scaffold upright and means for firmly effecting said contact with said scaffold upright.



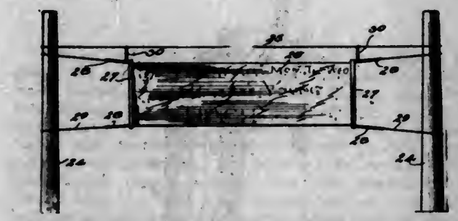
1,484,228. WHEEL. JUAN B. MATTESON, Jefferson, Iowa. Filed June 2, 1922. Serial No. 565,284. 1 Claim. (Cl. 301—52.)

A metal traction wheel including sides comprising outwardly bulged disks having their peripheries formed with spaced flat spokes disposed at approximately the same curvature as that of the disks but having their ends straight, the spokes on one of the disks passing between two of the spokes on the adjacent disk, said disks having their peripheral portions between the spokes in contacting engagement, angle rings to which the straight ends of the

respective series of spokes are connected, and transversely arranged calk carrying plates disposed angularly over and secured to the rings.

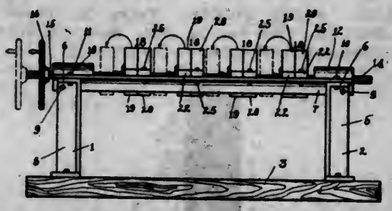
1,484,229. SWIVEL CHAIR. GEORGE B. MILES, Washington, Ill. Filed Sept. 8, 1922. Serial No. 586,903. 3 Claims. (Cl. 155—95.)

1. The combination of a relatively stationary pedestal, a jointed support pivotally mounted on the pedestal with its joint normally at the rear of the pedestal and its free end normally in front of the pedestal, and a seat having a pivot on its under side near its front edge engaged in the free end of the jointed support.



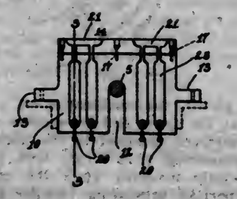
1,484,230. PAINTBRUSH. JOSHUA KING NORTHRUP, Ellicottville, N. Y. Filed July 18, 1922. Serial No. 575,845. 2 Claims. (Cl. 15—169.)

1. A paint brush of the character described comprising a stock provided with a laterally elongated socket at one side and an integral handle extending from its opposite side, said handle having a longitudinal bore opening into said socket, a bristle-unit adjustable lengthwise in said socket to increase or diminish the effective length



of the bristles, said unit including a substantially flat transverse bristle-attaching head having a screw bolt extending through said handle bore, backing means interposed between the butt end of the bristle-unit and the bottom of the socket and forming a seal for preventing the paint from working through the handle bore, said backing means being compressible and detachable from said handle-socket, and means applied to the end of said screw bolt for clamping the bristle-unit in place.

1,484,231. SIGN SUPPORTING AND SUSPENDING MEANS. VENO L. PISTOCCO, Wichita Falls, Tex. Filed Dec. 11, 1922. Serial No. 606,132. 4 Claims. (Cl. 40—128.)



1. In combination, a sign member, a pair of supports between which the sign member may be disposed, distensible connections between the side ends of the sign member and their associated support, a third and yieldable support disposed above the sign member and contiguous thereto, and a distensible connection between the upper corners of the sign and said yieldable support.

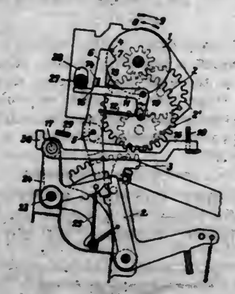
1,484,232. MOLDING MACHINE. JOHN J. PLESSMAN, Oakland, Calif., assignor of one-half to Alfred Johnson, Oakland, Calif. Filed Nov. 8, 1921. Serial No. 513,634. 10 Claims. (Cl. 22—153.)

1. In a molding machine, a series of molds, each comprising two members, one member of each mold being stationary and the other being movable, a shaft to which the movable member of each mold of said series is individually yieldably connected, and operating means on said shaft for moving it to cause said movable mold members to move against or away from the stationary members to respectively open or close the mold.

1,484,233. MOLD. JOHN J. PLESSMAN, Oakland, Calif. Filed Aug. 14, 1922. Serial No. 581,658. 9 Claims. (Cl. 22—153.)

1. In a molding machine, a pair of mold sections formed respectively with coinciding slots extending upwardly from their lower edges, and a shaft extending through adjacent slots at the upper ends thereof and connected to one of said sections.

1,484,234. MEANS FOR ATTACHING LABELS TO SPOOLS OR OTHER ARTICLES. WILLIAM A. PRENTISS, Holyoke, Mass. Filed Apr. 28, 1923. Serial No. 635,342. 6 Claims. (Cl. 40—2.)

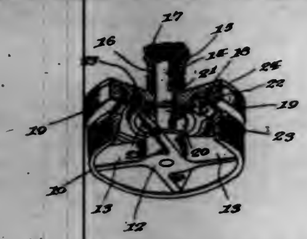


2. A label for the purpose described, comprising an elastic member, as cardboard or the like, having a radial slit cut therein, whereby the disk may be formed into a cone shaped position for insertion into an annular channelway, as described.

1,484,235. MIXING DEVICE. ERNEST RABA, Pawnee, Okla. Filed July 12, 1923. Serial No. 651,102. 1 Claim. (Cl. 48—180.)

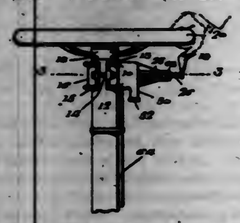
In a mixing device, a pair of plates placed together adapted to be inserted in the passage leading from the carbureter to the manifold, each radially slitted from its centre to form tongues and having the tongues so formed inclined in a direction towards the manifold, the tongues being each bent into trough shape along the line midway between its edges, the central lines of the tongues of one plate being in line with the spaces between the tongues of the other plate.

1,484,236. TRANSFER MECHANISM FOR CALCULATING MACHINES. FRANZ RAUCHWETTER, deceased, late of Berlin, Germany, by Anna Rauchwetter, née Böhme, administratrix, Berlin-Friedenau, Germany, Alfred Flater, present administrator of the estate of said Franz Rauchwetter, deceased. Filed May 19, 1921. Serial No. 471,014. 6 Claims. (Cl. 235—133.)



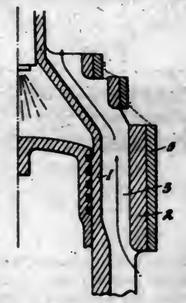
1. Transfer-mechanism for calculating machines, comprising, in combination; a switching-gear having toothed segments; a counting mechanism adapted to be lifted and lowered and having its cog-wheels in their lower position mesh with said segments; racks located below said cog-wheels; coaxial pivots supporting said racks at their one end; bell-crank levers supported upon pivots of the machine frame and supporting in their turn said coaxial pivots; supporting levers for said counting mechanism; and a common supporting rail coupled with the said racks at their other ends and being adapted to lift and lower them, substantially as described.

1,484,237. ADDING MACHINE. FRANZ RAUCHWETTER, deceased, late of Berlin, Germany, by Anna Rauchwetter, née Böhme, administratrix, Berlin-Friedenau, Germany, Alfred Flater, present administrator of the estate of said Franz Rauchwetter, deceased. Filed May 19, 1921. Serial No. 471,015. 6 Claims. (Cl. 235—60.)



1. In an adding machine, the combination, with number keys; operating gearings having toothed segments; operating bars adapted to control said gearings; and angularly shaped levers adapted to be preliminarily adjusted by said keys and to limit the path of said bars, said levers having three members and being adapted to oscillate upon pivots and being coupled with said number-keys; locking rails adapted to be controlled by the machine shaft and to co-operate with two of the members of said angularly shaped levers; pawls attached to said rails; and said operating rails, having abutments provided on them at different distances, and being adapted to co-operate with said toothed segments, for the purpose as described.

1,484,238. REVERSIBLE PUMP VALVE. GEORGE E. R. ROTHENBUCHER, Chicago, Ill. Filed May 21, 1921. Serial No. 471,355. 4 Claims. (Cl. 251—145.)

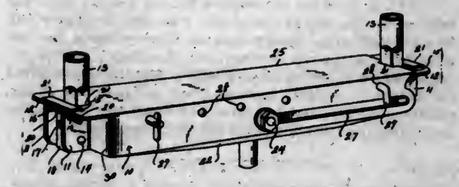


1. A valve comprising a disk having an annular rib on one side which is threaded on both sides, facing rings on said side of the disk, and securing rings for carrying said facing rings, one of said securing rings being threaded internally to screw on the outside of the rib, and the other ring threaded externally to screw on the inside of the rib.

1,484,239. LIGHT-CONTROL SWITCH. WALTER J. SPIRO, White Plains, N. Y. Filed Apr. 7, 1920. Serial No. 372,062. 7 Claims. (Cl. 200—59.)

1. In a control switch, the combination with a steering post and wheel, of a stationary switch casing mounted upon the post and provided with a lever having a plurality of operating positions and disposed to travel in substantially the circumferential path of the hand hold of the wheel and spaced therefrom for actuation in all positions by a depending finger of an operator's hand resting in normal position upon said hand hold.

1,484,240. CONSTRUCTION OF INTERNAL-COMBUSTION-ENGINE CYLINDERS. WILLIAM JOSEPH STILL, London, England. Filed May 28, 1923. Serial No. 641,986. 2 Claims. (Cl. 74—108.)



1. A cylinder for internal combustion engines comprising a simple casting having a thin inner wall and a thicker outer wall the inner and outer walls being integrally connected by partitions the spaces between which form passages for the circulation of the cooling water or other fluid.

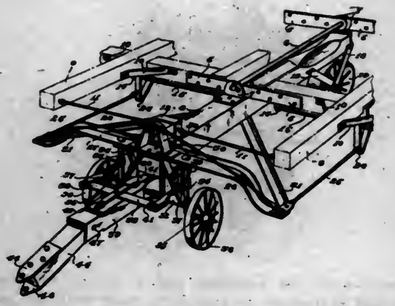
1,484,241. FRUIT PICKER. FRANK M. TOMPKINS, Duffield, Va. Filed Nov. 16, 1921. Serial No. 515,601. 4 Claims. (Cl. 56—334.)

1. A fruit picker, the combination of a tubular casing adapted at its upper end to encircle a fruit to be harvested, a stripper mounted in the upper end of the casing and consisting of a single wire strand having its ends pivotally mounted upon the casing and its intermediate portion presenting parallel spaced fingers, means carried by the casing for yieldably holding the stripper in a lowered position with its fingers extending across the casing and manually operable means mounted on the casing for withdrawing the stripper from across the casing.

1,484,242. BOLSTER. ELMER O. VEBRAATEN, Vang, N. Dak. Filed Apr. 21, 1923. Serial No. 633,663. 7 Claims. (Cl. 280—144.)

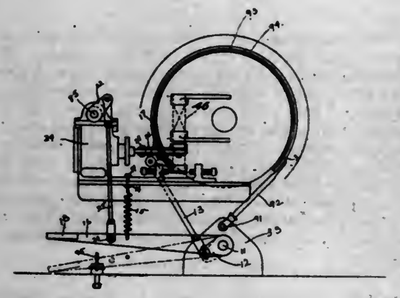
1. In an extensible bolster, a bolster body having a guide bolt extending therethrough approximately centrally thereof, a pair of channel iron frames, one slidably fitting the bolster and longitudinally shiftable thereon and the other slidably fitting the first named frame, said frames having slots therein receiving the ends of said guide bolt, said bolster body having openings formed therein adjacent the ends thereof, said frames being provided with aligned pairs of longitudinally spaced openings selectively alignable with the openings of the bolster body and retaining pins adapted for extension through aligned openings of the frames and body.

2. In a bolster, a stake mounting comprising a pair of vertically disposed spaced flanges extending outwardly from the ends of the bolster and between which the stake is pivotally mounted and swingable to operative and inoperative positions, horizontal flanges connected with the upper ends of the vertical flanges and extending in opposite directions therefrom and having slots therein, and a plate slidable upon the stake having portions engageable in said slots when the stake is in vertical position.



1,484,243. ELECTRODE FOR LIQUID RESISTANCES. RUDOLF FREIHERR VON BROCKDORFF, Munich, Germany. Filed Mar. 28, 1921. Serial No. 456,127. 8 Claims. (Cl. 219—40.)

1. An immersion electrode for liquid resistances comprising in combination, a pair of vertically spaced conducting rings, and a plurality of conducting rods supported between and electrically connected to said rings, said rods and rings forming a cage whereby liquid being heated will flow upward through the lower ring and radially outward between the rods.

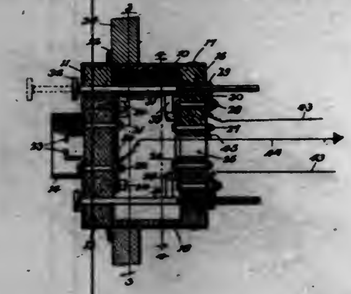


1,484,244. PLANTER. ALBERT R. WARK, Rexford, Kans. Filed May 16, 1922. Serial No. 561,408. 4 Claims. (Cl. 111—54.)

1. The combination of a pair of axially alined planters, wheels supporting the outer ends of the planters, a draft tongue disposed below the inner ends of the planters, auxiliary tongues fixed to and projecting forwardly from the planters, a pivotal connection between the inner ends of the planters and the main draft tongue whereby the inner ends of the planters will be supported by the main draft tongue for free relative movement, flexible

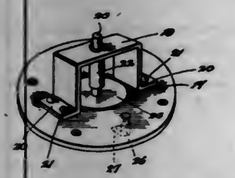
connections between the front ends of the main tongue and the front ends of the auxiliary tongues, and wheeled supports for the main draft tongue.

1,484,245. POWER SHOVEL HOISTING MECHANISM CONTROLLING MEANS. CHARLES A. WEBER, Lorain, Ohio, assignor to The Thew Shovel Company, Lorain, Ohio, a Corporation of Ohio. Filed Oct. 3, 1921. Serial No. 504,995. 6 Claims. (Cl. 192—12.)



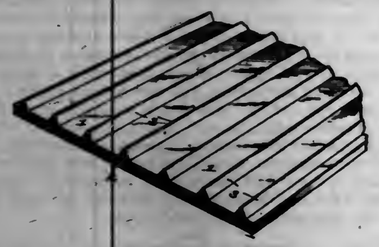
1. In combination, a hoisting mechanism comprising a hoisting drum, a source of power, a clutch, said clutch when operated adapted to cause the rotation of the said drum by the said source of power, a foot operated lever, a brake, said brake adapted to oppose the rotation of the said drum, a source of fluid pressure, a cylinder, a piston, a piston rod, and mechanical link connections between the said piston rod and the said clutch, means to admit fluid under pressure from the said source of pressure to the cylinder on either side of the said piston, said foot operated lever being adapted to control the flow of fluid pressure to the said cylinder and other link connections between the said lever and the said brake, whereby the lever controls the operation of the said brake.

1,484,246. SPARK INDICATOR. LEONARD ZIEGLER, Nutley, N. J. Filed Dec. 21, 1921. Serial No. 523,909. 8 Claims. (Cl. 175—183.)



4. A spark indicator including spaced blocks, a switch plate carried by each of said blocks, a terminal upon one of the blocks, a sleeve extending through said block and

provided at one end with a plate engaged by said terminal securing the sleeve upon the block, the sleeve being in



circuit with the terminal, and a switch rod slidable through said sleeve to selectively coact with the switch plates.

1,484,247. ATTACHMENT FOR MIXING CHAMBERS. JOHN HERMAN AHLERS, Pender, Nebr. Filed Apr. 18, 1922. Serial No. 555,498. 3 Claims. (Cl. 123—142.)

3. The combination with a mixing chamber open at its upper end and provided with a lateral inlet nipple and at the bottom thereof with an outlet nipple, and an air valve guide fitting in the chamber and removable at the upper end thereof, of a plate secured to the upper end of the chamber closing the chamber, stops depending from the plate and provided at their lower ends with laterally directed lugs overhanging the upper edge of the valve guide securing the guide against upward displacement, the plate being provided with a vent opening, a yoke upstanding from the plate straddling said opening, and a vent valve sustained by said yoke normally closing said opening.

1,484,248. CONVEYER. DAVID L. AUSTIN, Honolulu, Territory of Hawaii, assignor to Theo. H. Davies & Co., Ltd., San Francisco, Calif., a Firm. Filed Mar. 6, 1922. Serial No. 541,401. 1 Claim. (Cl. 198—193.)
